It all happened because Chris Hartman, the butcher of our town in the days when the bunchgrass had commenced to follow Enoch into oblivion, had asked me to go up on the coulee wall and run a steer he knew of to his slaughter house north of town. I went after the steer, goaded on by thoughts of what I could do with the 50 cents he offered me for the job. The steer went the other way, because he loved liberty, maybe, and also his life. He found liberty, maybe, when he slipped 600 feet over the coulee wall; but not life, unless everlasting life counts in the hereafter for good steers.

This steer, by the way, was not a very good one. He was built rather on the lines of a racing automobile. Nature had started to make airplane wings of his horns, and had succeeded, so far as length was concerned. I suppose that there were a few pounds of edible beef on the critter, excluding the horns, though we used to say that Chris cut the horns into round steak and sold the hoofs for soupbones.

What the coyotes found at the foot of the coulee wall was some very well pulverized hamburger steak in which horns, bones, hair and hide mingled with the red meat. Chris used to make it the same way, the folks said. Really though, Chris was a fairly honest butcher, and nowadays if we could buy his steak at the price he sold it twenty years ago in Hartline we would think we had found it.

The Grand coulee of those days, just as it is now, and just as it was a million years ago and, maybe ten millions, ran through sixty miles of bunchgrass country in a deceptive way. It opened up at your feet, eight hundred feet deep, before you knew it was around. What you mistook for a hillock of bunchgrass with a gulch on the other side was a thousand-foot jump-off. This is the mistake the steer made, and he slid over. My cayuse happened to be a good safe distance in the rear, so he and I were able to profit by the steer's bad luck. The cayuse sat down on his tail like a dog and took a look at eternity. I saw a glimpse of the same by looking over the cayuse's ears; then, as already related, I slid over the horse's tail and went the other way.

Some people think that the grapevine twist is a modern dance. It isn't; at least I know that I danced it to order in getting away from the coulee brink with my knees knocking together at every step. It gave me a pretty good scare. Chris had warned me that that steer could run "like hell a-beatin' tanbark"; that my job of getting him cut out of his band up there on the coulee wall would be fully worth my 50 cents.

He was right, and I didn't get the 50 cents, though I cut the steer out of his bunch. Chris had to buy another steer, and economized by going after this one himself. So I got my scare for nothing.

I should like to tell you something about the Grand coulee, and would if I knew. Curiously enough, when I think of the coulee I think also of Kipling's poem, "The Story of Ung." Ung and the "Deep Sea Cables" are my choice among Kipling' poems, though I doubt if any one else in a million whom you might ask would pick these two at least Ung, as their choice. Here, I begin Kipling's "Story of Ung."

Once, on a glittering ice-field, ages and ages ago,
Ung, a maker of pictures, fashioned an image of snow.
Fashioned the form of a tribesman—gaily he whistled and sung,
Working the snow with his fingers. Read ye the story of Ung!

Pleased was his tribe with that image—came in their hundreds to scan—
Handled it, smelt it, and grunted: "Verily this is a man!
Thus do we carry our lances—thus is a war belt slung.
Ay, it is even as we are. Glory and honor to Ung!"

Later he pictured an aurochs—later he pictured a bear—
Pictured the sabre-toothed tiger dragging a man to his lair.
Pictured the mountainous mammoth, hairy, abhorrent, alone—
Out of the love that he bore them, scribing them clearly on bone.

Swift came the tribe to behold them, peering and pushing and still,
Men of the berg-battered beaches, men of the boulder-hatched hill,
Hunters and fishers and trappers—presently whispering low:
"Yea, they are like—and it may be * * * But how does the picture-man know?

"Ung—has he slept with the aurochs—watched where the mastodon roam?
Spoke on the ice with the bow-head—followed the sabre-tooth home?
Nay! These are toys of his fancy! If he have cheated us so,
How is there truth in his image—the man that he fashioned of snow?"

Leave Kipling for the present.

In Ung you see prehistoric ice-fields, prehistoric man, everything prehistoric. And that's what you see in the Grand coulee when you look at it right.

How old it is no man knoweth. There are some things about the foundations of the world that we do not know, and age is one of them. We say so many epochs, so many periods, so many eras. But a century or a thousand years are too short a second to count in the age of the world. That is why we retire in humility, in spite of all our wisdom, when we stand on the coulee brink and from its age-worn walls try to read the secret of its age. It is merely old.

In the shimmering ice-floes depicted in his poem of Ung Kipling has in mind "the ice age." Man seems to have rambled into view, prehistorically speaking, about this time. One of a fairly vivid imagination can easily see in his mind's eye prehistoric man clothed in hair, tiger teeth about his neck and swinging a stone club in pursuit of his game. I have lain on the brink of the coulee wall and seen these things over and over again in the ice age, when the coulee was made—maybe? We are not sure it was made then. It may belong to history removed by epochs, periods and eras from the ice age.

This ice cap, which according to the geologists at one time extended from the Arctic where it now is to northern parts of the United States, is given some responsibility in reference to the Grand coulee. The Columbia river was flowing before the ice age. It had existed for so many millions of years before the ice age that its present channel around the Big Bend and against the eastern slope of the Cascades was deeper than it is now. When the ice came it came across northern Washington, dammed up the prehistoric Columbia and threw the great stream out of its bed. Naturally, it had to go somewhere—and it went to the Grand coulee.

Whether the coulee was then as big and deep as it is now is a good deal of a mystery; but it is quite certain that the Columbia once flowed down the Grand coulee. The ice floes, Ung, the woolly elephants, the polar bears and the Arctic animals receded, eventually, leaving the Columbia stranded in the coulee. It resumed its bed around the Big Bend and against the Cascades.

All this happened yesterday, geologically speaking; for the river, mighty as it is, has not yet cleaned out of its channel all the debris thrown into it by the glaciers; which is to say that at points along its stream the Columbia has not worn down to the depth of the bed it made in the days before Ung roamed the ice fields of northern Washington.

When the Egyptian kings were building their pyramids along the Nile I expect that the coulee walls were just as high and old looking as they are now. Kings and pyramids and the mystic river Nile all pass in review before the coulee walls—rather, the kings and the pyramids do. Maybe the Nile and the coulee walls are on speaking terms, so far as antiquity goes.

It was interesting, in bunchgrass days, before moving pictures and railroads and the other things that have sent the bunchgrass after Enoch and the steer I chased over the coulee brink, to edge, inch at a time, up to the coulee precipice and peek over.

One saw many things. The birds always appealed to me. You could hunt through the dry bunchgrass for days and never see any bird of brilliant plumage. But hardly would you look over the coulee brink till you would see down its crumbling sides the flash of yellow, or crimson, or blue that told you of a nest down there.

One could not see the nest, of course. If ever any birds in the world were

(Continued on page twenty-three.)

# City Women Can Help

Assistant Secretary Clarence Ousley of the United States department of agriculture recently made an appeal to women in the cities to go to the farm this summer and offer their services in helping their country sisters in performing the heavier duties that devolve upon them during the rush of the harvest season.

"I can imagine no finer thing," said Mr. Ousley, "for a city woman to do in this war emergency than to go to the farm for the harvest or for some other period of labor strain to help her country sister bear the burdens of kitchen and farm."

Mr. Ousley says there is opportunity for the women of the city to help by assuming many positions in the city that are now occupied by men and thereby allowing or compelling the men to go to the farms and take up heavier manual toil. In this regard he says:

"There are thousands of men in the towns and cities doing things that women can do as well. There are men cooks, men waiters, men clerks, men bookkeepers, whose places might well be filled by women.

"I will despise American manhood if the great body of our men permit our women to be drafted for the hard tasks of agriculture until we have sent every able-bodied creature in breeches to the trenches or driven him to the fields, but women are to be encouraged, so far as their physical condition will permit or the circumstances surrounding them will advise, to engage in the lighter tasks of the farm, particularly in dairy work, in vegetable cultivation and in fruit harvesting."

Speaking of the work that the farm woman has done, Mr. Ousley says:

"I have seen them hoeing in the hot sun while their babies lay in the shade of nearby trees. They are truly, and to the limit of their strength and with marvelous patience, the helpmeets of their husbands."

# SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

## Baths and Recreation Reduce Danger in Hot Work

Dr. Hirshberg.

Heat has so striking an effect upon living tissues that women and men exposed too much to it in kitchens, furnace pits, stoke holes and the like have read faces, pimples and other eruptions upon the flesh.

Physical labor nowadays makes absurd the superficial claim of some that "modern life is much more strenuous and exciting than in former times." Without doubt, the average wage earner has his work so cut out for him now that it is lighter and easier to accomplish more with less effort than ever before.

While the muscles are less strained, however, the intellect has been compelled to be more alert. Men in the steel industry, which, thanks to the war, may be taken as typical of most concerns, do less actual physical work than ever. Of course, there are exceptions. Steel mill rollers work as hard today as they did a generation ago and under an added strain due to the more complex machinery and greater speed needed.

The noise in a steel mill has a tendency to cause deafness. The screeches and other noises seem to disturb the machinery of the ear and this in turn disturbs the emotional elements of the individual.

The abnormal heat of mills, according to Dr. J. A. Fitch of New York, leads to several maladies. Some of these are the result of the perspiration and the evaporation which follows; some are directly caused by the heat.

**Safeguards Against Sickness.**

No man with his work clothes on should venture out of a hot factory directly into the open air, even in summer. A cold shower and rub-down will increase the endurance of the worker and reduce his liability to disease.

A daily bath and a full change of underwear are more than worth the time consumed.

The heat from blast furnaces, the sparklets and other fiery particles assail the workers and keep their flesh fairly a-quiver. It is said that no man can stand before the furnace and perform this back-breaking toil continually. Even when working between frequent pauses and in short shifts, the man is often nearly "all in."

Accidents are very common in such industries. The worker, when tired or exhausted, overheated or otherwise unduly influenced by the strain imposed, has his attention distracted. It wanders from the important business on hand and an untoward accident occurs.

The list of accidents in iron and steel mills is therefore shockingly large. It is said to be due to the carelessness or negligence of the employe, but it is due to these little things, which have reduced the endurance and power of the human tissues.

**Making for Alertness.**

Negligence, after all, is a sign of ill-health. It means that the mental and physical balance of the individual is not all that it could or should be.

It is a rare wage-earner who can maintain equally all through his work an even and enduring alertness. An employe may justly be called "careless" when his attention lapses from the work in hand, yet the resultant accident or sickness is often due to unsatisfactory working conditions.

If proper hours of rest and relaxation, bathing and diversions are granted at frequent intervals, there will be less sickness and fewer accidents; endurance of the workers will be greater and their attention will be more sustained.

## WHY WORRY?

### The French Soldiers Guide.

They say the French soldiers have adopted the following as a guide in the troubles through which they are passing:

"One of two things is certain: either you are mobilized or you are not mobilized."

If you are not mobilized, there is no need to worry. If you are mobilized, one of two things is certain: either you are behind the lines or you are in front.

If you are behind the lines there is no need to worry, because you are in the safest possible place for a mobilized man.

If you are on the front one of two things is certain: either you are resting in a safe place or you are exposed to danger.

If you are resting in a safe place there is no need to worry. If you are exposed to danger one of two things is certain: either you are wounded or you are not wounded.

If you are not wounded there is no need to worry. If you are wounded one of two things is certain: either you are wounded seriously or slightly.

If you are wounded slightly there is no need to worry. If you are wounded seriously one of two things is certain: either you will recover or die.

If you recover there is no need to worry; if you die you can't worry.

It is a pretty safe proposition to do the best possible to avert a calamity and then meet the consequences with a smile.

# All the World's a Stage, and All the Men and Women Merely Players

## Arizona's Prize Boy Farmer

Harry G. Miller of McNeal is the prize boy farmer of Arizona. From a garden patch 40x50 feet he raised and sold vegetables worth $120.10, which is at the rate of $2642.20 per acre. Besides winning the first prize in the boys' state garden contest, he won a free trip to the Tuscon Agricultural college.

The garden spot selected by young Miller adjoins his father's truck garden in the McNeal basin and the water is secured for irrigation from a windmill and a burro pump. The water is shallow and when the wind will not keep the mill going the small Mexican burro has to keep the pump working by going round in a circle with a blind over his eyes so he can't tell he is going in a circle.

This is a primitive method of pumping water in Arizona and Mexico and is fast being supplanted by modern gas engines and centrifugal pumping plants. Mr. Miller will install a modern plant from his profits of this season.

Young Miller is 16 years of age and this year is in for a pig club. In his garden he raised beans, radishes, tomatoes and onions which were sold readily at the mining camp of Bisbee, 12 miles from his ranch.

## They're Selling Bones for Food in England

Over in England they are selling bones at the rate of five pounds for 1 shilling. Policemen regulate long lines of people patiently standing out on the sidewalks, waiting, not for their favorite matinee idol to pass, but for a chance to enter a food shop and buy a small quantity of food. It takes about three minutes for the shopkeepers to dress their windows over there, merely because there are, perhaps, but a few cans of condensed milk and a box or two of corned beef to be displayed.

Yet over here in America, bones, hay, even fats and precious scraps of meat are going into the garbage pails! Although in many cities there were long lines of people waiting last winter for supplies of coal, there has as yet been no pinched-faced mob pleading for food. True, there are frequently long lines of people on the street, but mostly they are buying tickets to shows! In the busy streets in towns and cities, shop keepers display elaborate arrangements of all kinds of delicacies in their show windows. They would scorn a "display" of corned beef and condensed milk.

These British photos were sent to the United States to teach us to prevent waste.

**The Adventures of Two Young Pioneers in the Wilds of Upper Louisiana. Now the State of Missouri.**

By LOUIS B. MILLER

Copyright, 1914, 1915, by Lewis B. Miller

**Summary of Preceding Chapters.**

In September, 1811, two young men who lived near St. Louis, Ben Armstrong and Jodo Henderson, taking with them their two dogs and donkey Spunky, started on an all-winter's hunt in what was at that time an unsettled region, where Indians held full sway, in the wilds of upper Louisiana, now the state of Missouri. After a perilous trip over old Indian trails and dangerous streams, they reached their destination—a salt spring close to the river Big Niangua, which Ben had visited before and from which they expected to secure salt for sale with their furs when they returned to civilization the following spring. Here they erected a rough cabin for their winter quarters close to the mouth of a large cave that was full of water and bats, and started their salt making and hunting. After an exciting experience with a bear in a cave they find their first fresh sign of Indians—moccasin-tracks in the snow about their camp and the morning after they find moccasin-tracks in the snow about their camp. The Indians attempt to enter their barricaded cabin at night but are frightened away by a great earthquake. The boys are captured and taken to the Osage village. One day they are given one bullet and one charge of powder each and allowed to go hunting. They dare not attempt to escape for fear of starvation, but lose their way and are found the following day by the Indians who think they tried to escape and are taken to the camp under guard. Ben is tied to a stake and a fire built under him but it is only a ruse to induce him to take as his squaw Watermelon, for the time being an Indian widow, who cuts his bonds and proclaims herself his squaw. Ben declines. The boys make plans to escape by canoe. They accumulate some parched corn and dried meat, steal a canoe at night and paddling far up the river turn into a branch stream and hide in a cave. After two days and a night there they go back down the river, safely past the Indian village and turning into a branch find a cave high up in the rocky face of a cliff. Here they place all their belongings except the canoe, which they conceal. They are discovered by the Indians, and, retreating deep into the cave with their belongings, they find, over a mile from the opening through which they entered the cave, an exit, and start southwest, the Indians undoubtedly in pursuit. The second day a blizzard sets in and hungry wolves follow the boys. Toward dusk they reach a deserted settler's camp, the cabin burned but chimney standing. Here they build a fire and plan to stand off the wolves. A long, hard fight with wolves and cold ensues. This fight was hardly won when Snapping Turtle and his warrior band surround the boys, who later effect their escape unseen by their enemies, but only to renew their struggle with the cold and wild animals. Once again they made good their escape, at last reaching the stockade camp of other white hunters in the wilderness.

## CHAPTER XX.

### Three Wild and Woolly Hunters.

First there was a noise of bars being removed, and the gate opened a few inches. After a peep out, a wild-looking head—a pair of eyes set in a bushy tangle of hair and whiskers—thrust itself through the opening. When the eyes had looked first to the right and then to the left, to make sure that nobody else was nigh, the head was withdrawn and the gate swung wide.

"Come in!" the man inside invited.

But now it was the visitors' turn to hesitate. The hatless, shaggy figure, standing with a rifle in his hand, looked more like a wild man of the woods than he did like a civilized human being. Dressed in bear-skin clothes, he was as shaggy all over, except his booted feet, as was his head. Had they seen him while they were back in the woods, it is a little doubtful if they would have come to the gate at all. But now it was too late to retreat, and they stepped inside.

The space enclosed by the stockade was not large. The double cabin stood in the northwest corner, and its walls made part of the west end and most of the north side. The chimney was at the cabin's east end, and the doors were in the south side. In one door, which was open, stood a man, and near the door in the yard stood another man, both as shaggy and wild-looking as the figure who had opened the gate.

The man in the door wore a 'coon-skin cap. The man outside the door, like the one at the gate, was without a hat or a cap. The two without caps had their heads covered with great, tangled masses of hair, which looked as if they had known neither scissors nor comb for years. And all their faces were concealed in big, bushy beards.

"Three wild and woolly hunters," thought Ben.

"Three wild and woolly hunters," thought Jodo, in exactly the same words.

The hunters stared at their visitors. "Come on in!" the man in the doorway soon invited, as they stepped back into the cabin to leave the entrance clear.

Not without some misgivings, Ben entered, and was followed by Jodo. A fire was burning in a wide fireplace. The house had no floor but the ground; and its only furnishings were some bunks in the back corners, and some benches. The bunks were filled with blankets and furry skins. Two rifles rested on racks against the upper walls. Belts with knives and tomahawks in them, and also ammunition-pouches and powder-horns, were hanging on the same racks. On both the inside and outside walls furry skins were tacked up to dry.

"Step up to the fire and set down," invited he of the 'coon-skin cap, with a motion of his hand toward a bench.

Ben and Jodo stood their rifles in the nearest corner, but kept their blankets on as they seated themselves before the fire. The smell of frying venison, issuing from a pan on some live coals, made a pleasing sensation in their nostrils.

"Purty late for breakfast," apologized the man under the 'coon-skin. "But the fact is we all went out an hour or two before day to visit a turkey-roost we knowed of. And when we came in 'long about sun-up, we quiled down in our bunks for another little nap. I'd only just waked up ag'in when you fellers hollered."

The visitors told their story, and the hunters listened.

"And so you tracked me home, did you?" remarked the man with the 'coon-skin, whose name, as soon came out, was Jacks.

"Yes. And very glad we were to come upon a white man's trail," Ben assured him. "We should never have found your tracks, though, if we hadn't heard the report of your gun late yesterday afternoon."

"Do you reckon them low-down Osages is still on scent of you?" inquired Jacks.

"It's entirely possible that they are," Ben informed him. "Though you can be sure we've done everything in our power to shake them off."

"We're in awful pore shape to make much of a fight," put in the man who had opened the gate. His name was Murphy. "Mighty night plumb out of powder and lead, the whole caboodle of us air."

"That's unlucky for us," Ben told them. "We've got just three bullets between us."

Now Jacks said: "We're figgerin' on settin' out for a tradin'-post in a few days, to market our furs, and to lay in a new supply of powder and lead and breadstuff. We've got only a few balls and a little powder; and there ain't so much as a dustin' of flour or meal in our shanty. We have got a little corn left, for huminy and for parchin'. That's our best excuse for bread."

"Have you made a pretty good catch of furs this winter?" Jodo inquired.

"Not to brag on—nothin' to brag on." It was Murphy that answered. "We hain't got no steel-traps. We depend on deadfalls and on our rifles for what we take. Still, we hain't done so bad—no, we hain't done so almighty bad. We've got a right smart sprinklin' of good furs bundled up and stacked away in the loft of the other room thar."

A new friend

Breakfast, when ready, consisted of venison, fried in bear's fat, and hominy and honey. Two of these articles were now luxuries to Ben and Jodo, who had been subsisting wholly on meat, and recently not enough of that. Both were very hungry.

"Eat hearty, boys! Eat hearty—eat hearty!" urged Jacks. And the other hunters were equally hospitable in their invitations. "Eat every bite you can stuff down. Plenty more in the other room thar, whar this come frum."

Both visitors accepted the invitation. When the meal was ended, a highly satisfied feeling had taken the place of the hungry gnawing that had haunted their insides during the last few days. They had eaten on tin-plates held in their laps, with their fingers for forks and their hunting-knives to cut things. After the meal was ended, they and the hunters sat on the bench before the fire, swapping experiences.

"What kind of capers did you boys cut up that you had to come out here?" Jacks finally ventured.

Ben laughed good-naturedly. "Oh, none—none at all. We just came because we couldn't make much at home during the winter, and were not particularly needed there. And we believed we could earn something trapping and boiling down salt water."

"Then you can go back home whenever you feel like it. That's lucky—tarnation lucky! Thar's some older fellers that wish they could say as much."

The visitors looked at the speaker, but asked no questions. However, the third hunter, whose name was Wolf, explained:

"We hain't done nothin' our own selves to skeer us away from whar we used to live. But the snake-juice we poured down our fool throats done lots."

"And worst of all, our neighbors, they must hold us responsible for what their p'ison liquor done!" Murphy laughed slyly at his own joke.

Ben smiled. "Red liquor has made fools of millions, and will make fools of millions more," he observed. "When I was only a chunk of a boy, I went on a several weeks' hunt with old Daniel Boone, and he turned me against the stuff.

"Stay turned ag'in' it, young man! Stay turned ag'in' it! I only wish to the good Lord somebody's done as much for me when I was a chunk of a boy!" declared Jacks.

"For me, too," said Wolf. "I've larnt to love the p'ison stuff."

"Yes, and for me," put in Murphy. "A feller like us'n's, that gits his livin' by his rifle and his huntin'-knife, when liquor turns his head he's got a mighty hankerin' to use them same weepons on his feller-men."

Finally the hunters declared that they must get out and visit their dead-falls. Otherwise wolves would be sure to rob them during the night, if not sooner.

"Just make yourse'v's at home here, boys," urged Jacks, as they were taking down their rifles. "We won't be back till 'way 'long t'wards night, I reckon, gittin' such a late start. But when your stomachs begin to grumble at you, just step into that other room and he'p yourse'v's to whatsomever you find hangin' thar."

"And thar hangs the fryin'-pan if you want to fry it. And that sets the huminy-pot," suggested Murphy.

And Wolf added: "Don't feel noways bashful 'bout eatin' a plenty. Fellers that's been traipsin's their laigs off without enough to eat, is apt to have uncommon good appetites for a while."

"And it'll be well to keep the gate barred and keep an eye out for red-skins," suggested Jacks, as the three were starting out.

"We'll certainly do that—do that very thing," Ben was prompt to assure them. And he followed the shaggy three to the gate. Jodo came, too.

"Don't you ever wear hats or caps?" that young fellow inquired. For two of the hunters were starting off without any head-covering except their shocks of hair.

It was Murphy that answered: "Nobody but Jacks. And he's got a prairie on top of his head." He made a gesture toward the man with the 'coon-skin, who, as the visitors afterwards noticed when his cap was off, had a large bald spot around his crown.

The hunters scattered, each going to his own trapping-ground, and Ben and Jodo barred the stockade gate fast and went back in doors.

"Well, what do you think of our three friends?" They were again sitting on the bench before the fire.

"Three fugitives from justice, but pretty good sort of fellows for all that. As they say themselves, snake-juice brought them here. As long as they let that alone, they're nice, clever fellows. If officers came for them, they'd fight like catamounts, I imagine. But for trappers like ourselves they're harmless enough."

"Better than harmless. They're friends in time of need," declared Jodo.

"They certainly are. I'm glad we've stumbled upon them and their blockhouse."

"And what shall we do now?"

"Stay here for a few days, till we can rest up, and till we see what the Osages are going to do. After that, if our shaggy friends can spare us a few rounds of ammunition, I'm of the opinion we'd better strike a straight shoot for our camp on the Big Niangua."

"And when we get there?"

"First and foremost, we'll set to work and provide ourselves with plenty of powder and bullets. After that we'll go for our traps; or maybe we'd better pick them up on the way back. Then, if the weather is favorable, we'll do some more trapping and salt-cooking. That is, if the Osages will let us. Otherwise we'll load our canoes and set sail for home."

When dinner-time came, the two, as they had been told to do, pushed open a door of slabs and entered the adjoining room, that room was not quite so large as the room with a fire-place. Besides a door connecting it with the main room, it had another door opening into the stockade enclosure. Overhead was a lift, which seemed to be filled with bundles of furs. An abundance of cured meats—bear-meat, buffalo-meat and venison—was hanging from the joists that supported the loft.

In one corner of this room, they noticed, was a well. The well was covered with a large, flat stone with a not very large hole in it. The hole also had a stone cover, but that was now off. Near by lay an old pot, with only one leg, and with a buffalo-hide rope attached to its bail. The well was too dark to look into; but when Jodo led down the pot, it came up full of clear, cold water.

After broiling some of the hunters' meat, and making a hearty meal, Ben and his partner went back to the bunks and lay down. They slept till near sunset, and might have slept longer had not a shouted summons from the outside called them to the gate. They opened it and let in Jacks, carrying several bloody pelts.

Wolf came in a few minutes later, and Murphy just at sunset. All five of them now chopped and carried in a good supply of wood from the forest. After that they went in, shutting the door, and cooked and ate their supper.

The three hunters, as soon came out of their conversation, had been living in the vicinity for nearly three years, and in this particular house for a year and a half. Every spring they took their winter's catch of furs in canoes down a small river, which was only a mile or two away, to White river, and then down to the Mississippi, where was a trading-post. There they exchanged their furs for powder and lead, and for such other articles as they needed.

When the party first came here, each had brought a horse. But the horses had disappeared one night, supposedly driven off by Osages. The first cabin the hunters had built had been burnt down by Osages, one day while the hunters were absent. Naturally the three were bitter against Indians.

The homes they had run away from were all somewhere "yon side the old Mississip'," just where they did not say.

"Guess maybe we're better off here than we would be back in the settlements," Jacks remarked. "Thar everybody drinks, and we'd be shore to drink and cut up didoes. That's our weakness. Out here we don't even git to smell the infernal stuff. We're birds of a feather that's flocked together. That is the best place for us. But we all git lonesome sometimes, and I guess maybe, if the truth was told, a leetle mite homesick."

When bedtime came, two of the hunters, in spite of the visitors' protests, surrendered their bunks for Ben and Jodo to sleep in. All three seemed glad to have company.

After breakfast next morning, when the hunters were ready to start out to visit their deadfalls, Jacks invited the young men to accompany them. Both accepted promptly. But when the party was about to start, Jacks said:

"On second thought, I'm wonderin' if, after all, you two hadn't better kind of hang around here and look after the cabin today. If them tarnal Osage varmints is trailin' you boys, they ought to show up today or tomorr'."

"They might," Ben agreed. "But my partner and I will be almost helpless if they do come. It's not certain that we can fire a shot."

"Then we'll leave you some powder and a few bullets. I'd forgot you was so nigh out. The main thing, though, is to keep the gate barred fast. They won't be apt to try to climb over that high wall. But if they do, salivate 'em on the spot!"

When the hunters had gone, and the gate had been barred behind them, Ben and his companion went in and sat before the fire. As the day advanced and the sun climbed higher, the air warmed, and they noticed that the snow was melting fast, both in the sun and in the shade.

Not long before noon, being rather tired of resting, the two unbarred the gate, opened it, and stepped outside, intending to walk about a little. They had left their guns in the house, and had no thought of getting far from the stockade.

They had advanced about 50 yards from the gate, and were turning back, when several Indians sprang from behind trees, and with wild yells made a dash to cut them off. Both white men ran for their lives, reached the gate, pushed it open and sprang through. But several guns cracked loudly, and several bullets and more arrows struck the wooden walls and the gate as the two banged the gate shut. They got it barred only a few seconds before the savages began to shake it and push against it.

Now Ben and Jodo hurried into the cabin for their rifles. Jodo's was unloaded, and he made haste to load it. Ben's was loaded, and he only emptied out the priming-powder and refilled the pan with some that was fresh. They also reprimed their pistols.

"I'm sorry our three hunters went away," Ben said. "If they were all inside here, and we had powder and lead in plenty, we'd make those red rascals hide out."

"But powder and lead in plenty is just what we haven't got, Ben. And without that it's a feeble fight we could make."

"Just now I'm more concerned for the hunters than for ourselves. Wish we could give them warning somehow."

"Don't you s'pose they heard all those shots?"

"That depends upon how far away they were. If they heard, they'll be cautious enough to lie low till after dark, I imagine."

Soon the gate was heard rattling noisily. At length that stopped for a few moments, but started up again, louder than before.

Ben was standing in the door. "Stop that racket out there!" he yelled.

The noise ceased promptly. "I know you, Strong Arm!" a voice called. "You open quick! Let Osages come in!"

"What do you want, Snappy Turkle?"

"You open gate quick! That what I want!"

Ben walked out to the gate, followed by Jodo. "Chief," Ben now said, "if you want to come in by yourself, and unarmed, to talk, we'll let you in. But you'll have to send all your warriors back into the woods, and leave all your weapons outside. And after that, if you try any monkey-business on us, we'll shoot you!"

"No send warrior 'way. Warrior all come in same like chief. Now open quick!"

"No, we won't open quick. We won't open at all! If you've got anything to say, say it where you are! We can hear you well enough."

"I say you no open gate; us stick fire old house! You t'ink you mighty smart, Strong Arm, 'cause you fool big chief Snappy Turkle, run 'way while Snappy Turkle sleep. You no fool Snappy Turkle nudder time! Us got Strong Arm and Dodo now. You no run 'way us this day —no! Open gate mighty quick. No open gate, Osage burn gate down, burn house down! You bet!"

"Don't you dare try any fire-business around here, Snappy Turkle! For just as sure as you do, you or some of your troublesome gang will get shot! You're wearing our patience threadbare! The sensible thing for you to do is to turn round, the whole layout of you, and mosey back to your village and let us alone! We're not harming you—yet."

"Osage no go back till Strong Arm and Dodo go back 'long by us. Open gate! Open gate quick! Big Chief Snappy Turkle say you no open gate quick, Osage stick fire house!"

"Try burning this house if you dare!" yelled Ben, more defiantly than he felt. Then he added; "Jodo, bring that bench here!"

To keep anybody from shooting through, the joints between the stockade timbers had been covered with rived pieces of wood, which reached up to the cross timbers. But above the cross timbers one could see out between the upright timbers, and in place even thrust a rifle through. But it was necessary to stand upon a high bench to do that. When Jodo had brought the bench, Ben called out:

"Now, Snappy Turkle, you fellows had better streak it into the woods while you can! We'll give you just time to get out of sight! Then if you dare show your heads again, you're likely to get shot! Now run—run for dear life!"

As he spoke, both Ben and Jodo leaped upon the bench and thrust the muzzles of their rifles out. To their great relief, the Osages turned quickly and fled, scattering as they ran. Soon they had all disappeared. But some of them—there were more than a dozen—must have dodged behind trees, for rifles began to crack, and arrows and bullets began to strike the stockade.

Ben and Jodo jumped to the ground, lest a missile should come between the open stockade timbers. One arrow did pass through a few minutes later, and several arrows came over the stockade and struck the roof of the house.

(To be continued.)

## Poor Man's Cow

### Goat Furnishes Milk for Family

The goat has had a place in literature which is not enviable. In the Bible he was always on the left hand, and even modern slang places him low. Frank Welles, deputy state school superintendent of Oregon things this repute is not deserved, and that goats make better household pets than cats, lambs or canary birds. At least the lady goats —the goatesses.

Over a year ago Mr. Welles inquired about goats of the Farmer. He lives in Salem, Ore., and likes milk, but hasn't room to keep a cow. He was given the addresses of the nearest breeders, and after some correspondence, bought a grade doe, bearing the name of Lady Gray. A few weeks ago she presented her master with a doe kid, the sire being a purebred Toggenburg. This kid is a great pet with both Mr. and Mrs. Welles; it is playful, active affectionate and full of life and fun.

"Goats," said Mr. Welles, "are not going to take the place of cows, but for a

Frank Welles' doe goat, "Lady Gray," and her kid.

small family and limited space they solve the milk problem nicely. I haven't kept accounts on the expense, but it is comparatively light. I feed her about a quart of grain a day and some alfalfa hay. In addition we give her lawn clippings and table scraps.

A goat will relish any ordinary food. She is very gentle and intelligent, has no bad habits except a fondness for ornamental shrubbery if she gets out, is healthy, easily cared for and requires little space. Goats are extremely fond of leaves and twigs of trees and brush.

"At milking times Lady Gray jumps up on her box, puts her head in the stanchions I made and eats her grain. If she gets through first she chews her cud. She is giving a little less than four quarts of milk a day right now."

Mr. Welles says that the does are inoffensive, gentle and clean. There is no offensive odor. The milk has a characteristic taste, but no odor. The cream has no yellow color, it is white. The cream separates from the milk very slowly as the fat globules are very small. The cream "whips" very rapidly. They like the milk for drinking and cooking very much and are highly pleased with their bargain, and the kid furnishes endless amusement.

"Whenever I tell anybody about my goat and kid," said he, "they always want to see them and begin to ask where I got them, how much I paid and all the particulars. There are thousands of acres between here and Portland that are extremely well suited to goat raising. They are the poor man's cow."

YOUR

# LOCAL HOME PAPER

AND

# THE WASHINGTON FARMER

## For the Price of Your Home Paper Alone

Through a special clubbing arrangement with a large number of newspapers in Washington, we can now send you **The Washington Farmer** and your Local Home Paper at the regular subscription price of your home paper.

## THE HOME PAPER

You alone know the great value of your local town paper. The part it plays in local affairs, the news of the happenings of your community, the gossip, social and commercial life that you wish to keep posted on. It brings the story of the home boys at the front who are fighting for you and our country.

## THE STATE FARM PAPER

The Washington Farmer is your family paper. It keeps you posted on the agricultural developments of your state. It is a complete family farm paper—all the farm news, latest and best serial stories, department for every member of the family—feature sections of every branch of farming, dairying, stock raising, fruit growing, etc. Also colored comic pages and a children's and family page. It is the biggest and best farm paper published in The Pacific Northwest.

**The Washington Farmer Is Issued Every Week**

We are pleased to state that by subscribing now to any of the following papers and paying the regular annual subscription price of that paper your payment will also include a subscription to The Washington Farmer.

## RAISE SOMETHING.

### On Every Little Piece of Ground.

Dear Family Circle: In my early childhood no such thing as a hand corn planter was known, to say nothing of the horse planters with which farmers now put in their corn and potatoes.

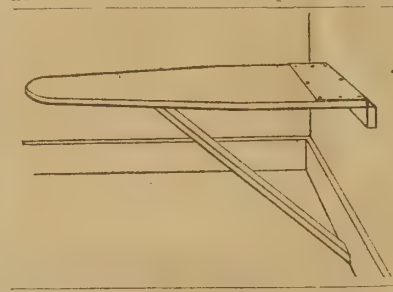
Many a weary mile I have walked carrying a small basket and dropping five kernels in a hill, with my father or big brother close at my heels to cover the corn with a hoe. Oh, how long those days seemed, and how very hot the sun was, but I trudged on, proud that I could keep the man with the hoe busy behind me.

Cheer up, dear young folks, if farm life seems dully, dirty and lonesome. There is no school in all the world that will compare with the farm for teaching patience, thoroughness and self-reliance. A child drinks in world-old truths with the air he breathes.

The farmer boy learns without effort a multitude of things which will stand him well in hand as the years go by. I have had a recent opportunity to watch for three weeks the grand scramble for existence in one of the greatest cities in our country. I watched people rush to take street cars, rush to take buses, rush to their places of business, rush home again. I saw men with young faces and white hair settle wearily back into a seat in a street car, if they were fortunate enough to get one, or stand and hang to a strap for half or perhaps one whole hour. I saw tired girls and women doing the same things.

Then down in the very heart of that great city I made a part of the mass of human beings who jam and crowd and push each other; who must shout at the limit of their lungs to make themselves heard above the deafening rumble of the elevated cars and all the rest of the noise of a great city. I went directly from there into the country, and for 10 days I rode all over the southern part of Wisconsin in an automobile. I stopped a little while in every country village through which I passed. Everything was so quiet and peaceful. People had time to talk, had time to be civil, had time to take deep breaths of the sweet spring air, full of the odor of bursting buds and fresh turned soil. Farmers were busy sowing grain and planting corn and potatoes. There were many flocks of sheep, where little lambs frolicked about.

I compared all this beauty and peace with the dirt and turmoil of the great, heartless city. I said "Surely God never intended men and women to be crowded together so closely that they never see a bit of green grass and are deprived of the joy of seeing a world awaken and put on spring foliage." It is hard work, I know, to till the soil, to care for stock and to keep the whole machinery of a farm moving smoothly, but to one who loves nature, who can find satisfaction in planting seed and caring for crops, and, in short, being his own master and business manager, the farm is the place to find joy in work and satisfaction in life. This year, especially, every one who raises food must have more than common satisfaction in his work, for a whole hungry, suffering world is holding out pleading hands for food.



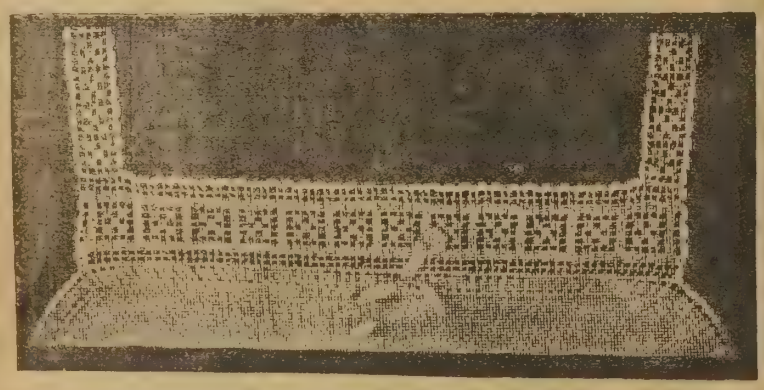
Farming has always been the most necessary business in the world, and farmers the most useful business men and women, but at the present time the fate of the world rests with the American farmers. Stand firm, raise all you can, and save, save, save!

Raise something on every little piece of ground. I know how many little strips and corners used to go uncultivated on our farm because it did not seem worth while to bother. Don't let good ground lie idle this year, but plant beans, popcorn, anything that will make food. A. W. B.

## Folding Ironing Board

The ironing board shown in the accompanying illustration can be fastened up against the wall and is out of the way when not in use, says Madge J. Reese in Farmers' Bulletin 927 of the U. S. department of agriculture. It should be made of well-seasoned 1 or 1 1-4 inch material. A board of convenient size can be made by the following dimensions: 4 feet 8 inches long, 15 inches wide at the attached end, and 8 inches at the free end. About two feet from the attached end the board begins to taper gradually. The free end is rounded.

A strip 1 1-4 by 4 by 15 inches is securely fastened by screws to the wall at a convenient height. The height at which the board is placed varies



with the height of the user. For a woman of average height it should be 31 or 32 inches. The board is hinged to the wall strip with two No. 3 butt hinges.

The leg or brace, made of material 1-inch thick and 4 inches wide, is fastened with a No. 3 butt hinge to a board strip 1 by 4 by 8 inches. The board strip is screwed to the underside of the board 11 inches from the free end. The length of the brace depends upon the height of the board, and when the board is in position the brace rests against the baseboard of the wall. Skirts may be easily ironed without changing the position of the brace. A piece of galvanized iron may be tacked to the board, on which the hot iron may rest when not being used. The board is folded up against the wall.

## Knitted Vest Yoke

By WINIFRED WORTH.

You will be agreeably surprised at the ease with which you can makethis yoke.

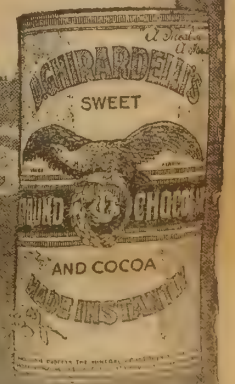
"The store where I do my trading"

THROUGHOUT the West—go where you may—big town, small town, cross-roads store—there you will find Ghirardelli's.

This West-wide distribution has been made necessary *by demand*—a demand for a delicious, sustaining food-beverage; a demand that is met by Ghirardelli's, and by this alone.

Result? Today Ghirardelli's Ground Chocolate is in daily use in more homes in the West than all other brands combined.



As a beverage it is beneficial; as an aid in baking and cooking it is invaluable.

Be sure to ask for it—at "the store where you do your trading."

*In ½ lb., 1 lb. and 3 lb. cans; a tablespoonful—one cent's worth—makes a cup.*

D. GHIRARDELLI CO.
Since 1852 San Francisco

Ghirardelli's Ground Chocolate

During the last week Aunt Nellie has received letters from the following cousins: Mildred Heidegger, Velma Martin, Lois Hodges, Flora Reed, Elizabeth Van Trojen, Mildred Tormey, Beatrice Clay, Letha Peterson, Edna Hager, Eugene Cannon, Frances Cannon, Frances Duchert, Lucy Wittine, Helen Hakanson, Irene Clarke, Tilda Berntsen, Laurena Muth, Marguerite Weston, Bertha Gash, May Hanson, Doris King, Vesta Short, Lucille Reinbolt, Beryle Adair, Edith Christensen, Ella Mae Payton, Hazel Gleich, Florence Gleich, Grace Lemmon, Louise Kramer, Rose Kramer, Alice Moore, Virginia Gibson, Glenn Hiday, Beulah Hiday, Marjorie Lacy, Herman Abeling, Robert Austin, Anna Aronin, Sarah Aronin.

**All the Potatoes She Can Eat.**

Dear Aunt Nellie: I am 9 years old and in the fifth grade. My birthday is on July 5. Have I a twin? I am going to tell you about my war garden. This year I am going to have a war garden. I am going to raise all the potatoes that I can eat in a year. I eat about six medium sized potatoes a day. If I can eat that many in one day, in a year I will eat 365 times six, which equals 2190 potatoes. So that is the number I have to raise. I am also going to raise a few cabbages, parsnips, peas and beans. I think that will be enough for me to look after if I take good care of them. I hope all the cousins will raise war gardens.—Alice E. Johnson, Union, Wash.

**Marjorie Loves Music.**

Dear Aunt Nellie: As this is the first time I have written to the Corner I will give my description. I have dark hair, hazel eyes and am of medium weight. I have one sister, Marguerite, three brothers, Glen, Willis and Jack. I have joined the Red Cross and put $6 into stamps. I have a talent for music which I love. I am 15 years old and am in the eighth grade. My father has a car in which I like to ride. I will stop.—Marjorie Starcher, R. F. D. 1, Fairview, Yakima, Wash.

**The Secretary of Her Club.**

Dear Aunt Nellie: I thought I would write to the Corner again. This is the third time I have written. I am in the seventh grade. I was 13 years old April 27. There are 35 children in our school. We are doing Red Cross work at school. I am saving quilt blocks for a quilt now. We also have an agricultural club. I belong to the Poultry club. I am the secretary of our club. The club meets once in every two weeks. We certainly had a nice large Children's Corner the last time and I am very glad to see that. Our school closed May 24.—Mabel Iverson, R. F. D. 3, Box 105, Mount Vernon, Wash.

**Blanche Is Saving Money.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I enjoy reading the letters very much. I am 10 years old and am in the fifth grade. My birthday is June 29. I have one sister and two brothers. Their names are Edith, Frank and Thurman. One of my brothers is in the army. My brother and I walk one and a half miles to school. When it is nice weather we walk and when it is muddy and snowy we have a pony to ride. I am saving money. I have two thrift stamps. — Blanche Hamilton, Prosser, Wash.

**Rides a Pony to School.**

Dear Aunt Nellie: I am 10 years old and am in the sixth grade. I live one mile from school. There are 22 pupils going to my school. I ride a pony to school. I like my pony very much. His name is John. I have no brothers or sisters. I have a cousin in the war. Our teacher's name is Miss Lehan. She has a cottage right by the schoolhouse and she stays there all the time, but Saturdays and Sundays, and those two days she goes to some of the neighbors. I read the letters of the Children's Corner.—Ivan Graham, Washtucna, Wash.

**Likes to Shoot Gophers.**

Dear Aunt Nellie: This is my first letter to the Children's Corner. I was 10 years old October 18. Have you a twin for me? I am in the fourth grade. I have one horse. His name is Tip. I have three cows and two calves, and I have one hen. I have an air gun and I like to shoot gophers. I have one sister. She is 6 years old. Her name is Dorothy Evadna. We live on a 320-acre stock farm. My father has 97 head of cattle and seven head of horses.—Carl Allison Tubb, Corfu, Wash.

**Reads the Corner Letters.**

Dear Aunt Nellie: I was 9 years old April 16. I am in the fourth grade. We have 14 pupils in our school. We live on a farm. Papa will be home Friday and he is a well driller. Our teacher's name is Mr. Vinning. I have three brothers. Their names are Carl, Glen and John. They all go to school but Carl. Have I a twin? I have been reading the letters of the Children's Corner.—Lucile Reinbolt, Box 15, Grant Orchards, Wash.

**Goes to Sunday School.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I have two dogs and one cat. The cat's name is Kitty and the dogs' names are Lady and Watch. We have one cow and her name is Purrents. I live on a 10-acre farm. My birthday is April 11. I was 10 years old then. I have four brothers, but no sisters. I live one and one-fourth miles from the beach. I am in the third grade. My teacher's name is Miss Cecil Wallace. I go to Sunday school every Sunday. We have one pig. There are 25 children at school.—Emma Louis Mehus, Fragaria, Wash.

**Birds Sing and Flowers Bloom Now.**

Dear Aunt Nellie: This is my second letter to the Corner. It is a very long time since I wrote last. I have not found a twin yet but there is a girl that is 10 years old and her birthday is May 19 and mine is the 18th, so I think I could call her a twin. I am in the fifth grade and there are two girls, Gunhild and I. She has been sick so she had to stay home from school and then I was alone in the fifth grade. Are any of the cousins helping the boys over there to win the war and stamp out the kaiser? In our school we do Red Cross work every Tuesday and Thursday afternoons. I have learned to knit. Have any of the other cousins? In school we cut gun wipers and pick lint and some knit. There are seven boys who have learned to knit in our room and all the girls have learned. I have a thrift card and I have bought five stamps and I am going to buy four more stamps. I have joined the Junior Red Cross also. Everybody should help Uncle Sam win the war. I have also joined the poultry club, and I think it is going to be very much fun. Last year I did not join, but there were several other children who joined. This year there are not half so many. There are only two or three girls and three or four boys. I can always tell when spring comes because the birds sing so sweet and all the flowers bloom and all the fruit trees are in bloom. I think the Farmer is the best farm paper we get and I think every one should have it. I hope the cousins will write to me and I must not forget to thank Aunt Nellie for letting me join and be a cousin in the Corner. I hope we get more members who want to join. I will write again. —Violet Marion Johnson, R. F. D. 5, Box 33, Mt. Vernon, Wash.

**Ida Loves All the Flowers.**

Dear Aunt Nellie: I am 11 years old and my birthday is October 19. I am in the fifth grade at school. My teacher's name is Miss Spark. She is good to me. There are 18 pupils at our school. There were 19, but one of the boys died. I have four brothers and one sister. My brothers' names are Richard, 17 years of age; Arthur, 8 years of age; Fred, 7 years old; Walter, 19 months old, and my sister is Bertha Louise. Have I a twin? If I have I would like very much if they would write to me. I will gladly answer their letters. There are all kinds of flowers growing here; there are bluebells, yellowbells, pansies, birdheads, buttercups and some others that I don't know the names of. Pansies smell awfully nice and birdheads look so beautiful. I love flowers, don't you, Aunt Nellie? We have one dog named Prince, and four cats. We haven't named our cats. When we call them we say: Kitty, kitty, kitty, and all of them will come. We have about a dozen head of horses and about six colts. We live on a farm of 160 acres. Say, dear Aunt Nellie, may I join the Corner? The letters are very interesting. I like stories. I am reading "Trappers of the Ozarks," in the Farmer. Please put more stories in—Ida Irmer, Withrow, Wash. (Yes, Ida, you may join the Corner. Aunt Nellie loves the flowers, too.—Aunt Nellie.)

**Do Well With Their Garden.**

Dear Aunt Nellie: As I have not seen any letters from Granite Falls I thought I would write a few lines to you. I am 16 years old and I have been going to high school for about five months, but I gave it up. I live on a 40-acre farm three miles from Granite Falls. My brothers and I have quite a large garden this year. We have had the same garden for four years this summer, and have done well with it. This year we are also raising chickens. We have just six now and only two of these are laying eggs, as the others are setting. I am reading the serial story in the Farmer entitled "The Trappers of the Ozarks." I wonder if very many of the cousins are reading it. It is quite interesting. I do plenty of reading. Among the good books that I have read are: David Copperfield, The Scarlet Letter, Benjamin Franklin, Anne of Green Gables, When Knighthood Was in Flower, and a number of others. I saw a letter from Luella Venneberg. I would like to correspond with her, if she would write soon. I certainly would answer her, or I would be glad to hear from any of the cousins. It won't make any difference who they are, twins or no twins. Why don't more of the older girls write? I am sure we will enjoy their letters, too, as well as the others.—Linda Anderson, Granite Falls Wash. Box 225.

**Club Sews for Armenian Children.**

Dear Aunt Nellie: This is the first time I have wretten to the Children's Corner and I hope it will not be my last. Have I a twin? If I have I wish they would write to me. I have four sisters and one brother, and one brother-in-law. Their names are Jane, Mae, Murney and Bertha. My brother's name is Earl. We have two ponies and four work horses. We have three milch cows and three little calves. One of them is my pet calf. My uncle gave it to me. The pinies' names are Bud and Babe. The work horses' names are Hatty, Grace, Dory and Tiney. The cows' names are Reddy, Rose and Dine. My pet calf's name is Johnnie. We have nearly 100 old chickens and 28 little chickens. We have nine little pigs. We have a small dog named Skipper, and an old dog named Robert. We live on a 160-acre farm. I am 12 years old now and will be 13 August 9. I have a cousin named Lorena Thompson. Her birthday is August 14. My sister's birthday is August 24. I have my hair bobbed. I have a cousin named Ray. He is a soldier at American Lake. He is a blacksmith. At school all the girls joined the sewing club, so we girls are sewing for the little Armenian children.—Zelorna Tuttle, Goldendale, Wash.

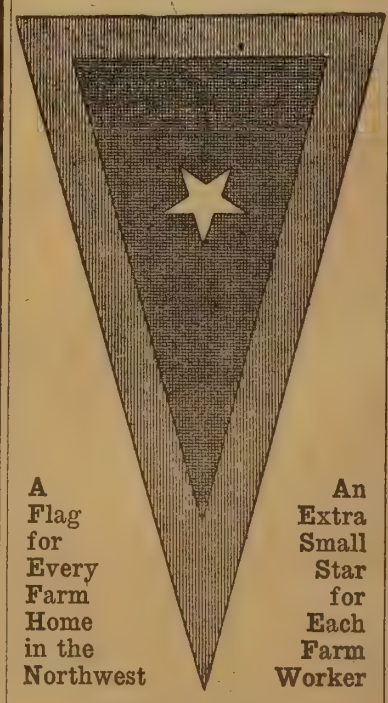
**Must Do Her Bit at Home.**

Dear Aunt Nellie: Today as I was reading over the cousins' letters I decided to write. I am not going to school now, as my school was out about a month ago. I will be 13 on July 24, and would like to have a card shower on by birthday. I see that some of the cousins are buying thrift stamps. I am buying thrift stamps, and also bought a Liberty bond in the second drive. I have no brothers to go to war, and my father is too old, so we will have to do our bit by staying at home. I have a cousin fighting in France. I have only one sister, and she is attending state normal school at Monmouth this winter. I am a member of the Junior Red Cross and have knitted two washcloths and am going to knit a sweater soon. I live three miles from school and rode to school eight months. My pony's name is Lindo (meaning "pretty" in Spanish). My father is a stockmain. We live on a 680-acre farm and, like most of the cousins, I like the farm life fine. With love to Aunt Nellie and all the cousins.—Ruby Hayes, Lawen, Ore. (Yes, Ruby, many of the cousins, and, I believe, the greater part of them, have some thrift stamps, and many of them have war savings stamps and Liberty bonds It is such a pleasure to do our bit when we think that our boys are giving their lives. I have a poster near my desk with the picture of our first three boys who gave their lives, Hay, Enright and Gresham, and it reads: "The First Three! Give Till It Hurts—They Gave Till They Died." Write me again.—Aunt Nellie.)

**One Mile to Go to School.**

Dear Aunt Nellie: This is the first time I have written. I am 9 years old. My birthday is July 12. I am in the sec-

## A Well-Known Cousin and Three Friends



Dear Aunt Nellie: Here's one of our pictures which was taken at our Fourth of July ground. It was taken by our minister, the Rev. Gerard M. Van Pernis, who is away back in Michigan by this time. These other girls were my great, loving friends. Their names are Agnes Phillip, Margaret Phillip and Julia Flett. We were having a real nice time when we had this taken. I guess you can imagine which one is me—the third in the picture. I am doing my bit in helping about the farm work this spring. I help papa. I water his horses and do all I can for him. I have to do the milking every morning. I've got some of our garden in already. We are going to put in some potatoes, corn, beans, squash, cucumbers, pumpkins, radishes, beets, carrots, onions, turnips, cabbage, peas and parsnips, besides wheat and oats. Indeed I am getting to be a little farm girl now, don't you think so? I also got five of my hens setting now. They'll soon hatch. I bought an organ about two weeks ago. I pair $45, but I gave a cow for it. Now I have an organ and three phonographs, but I sold one to Mr. Alvah Sutton for six hens. I have two phonographs left. I have 60 records to one machine and 37 disc records.

I have a girl friend by the name of Miss Mildred Sutton. She wants to write to the Corner. Can she write, too Don't you think I am lucky? My cat, Blackeye, got four little kittens again. I don't know what to name them yet, but I will later on.—Sallie Salena Garry, Day School No. 1, Miles, Wash.

(Of course, your friend, Mildred, may write and we would be glad to have her, all of us. We love to get letter from you, Sallie, dear, and want you to write and tell us all about how the four little kittens are getting along and what you have decided to name them. I should say you were getting to be quite a little farm girl, planting that big garden. Lovingly—Aunt Nellie.)

**FARM SERVICE WAR FLAG**

A Flag for Every Farm Home in the Northwest

An Extra Small Star for Each Farm Worker

(Patent applied for.)

**Designed by The Washington Farmer in connection with The Oregon Farmer and The Idaho Farmer for the farm and farm home that is increasing food production in helping to win the war.**

**OFFER NO. 1.**

A farm service war flag, 9x22, printed on heavy enamel paper, in full colors, will be postpaid to any one securing and sending in ONE NEW subscription to this paper. (One year 25c, three years 50c, five years $1.00.)

ond grade. I go to Lambert school. I have one mile to go to school.—Dorothy Bickel, Ridgefield, Wash.

**Uncle Ben Is in France.**

Dear Aunt Nellie: This is the first time I have written to the Corner. I have one brother. His name is Alvin. He is 6 years old. I have one sister, dead. I am 10 years old. My birthday is August 11. I am in the third grade. We have two teachers in our school, Miss Allen and Miss Schrender. She is a good teacher. My uncle Ben is in France. Mama got a letter from him. He is well. It takes one month to get a letter. We have a dog. Her name is Ruby. I stay with my grandma and go to school. I have dark hair and blue eyes. My brother has light hair and blue eyes.—Ethel Norman, Tenino, Wash.

**Rides to School Every Morning.**

Dear Aunt Nellie: I thought I would write to the cousins. This is the second time I have written. My sister Nellie is writing too. I go three miles and a half to school. I ride every morning. My teacher's name is Mr. Guernsey. The name of the schoolhouse is Millcenter. I almost forgot to tell you what grade I am in and how old I am. I am in the fifth grade and I am 12 years old. I will be 13 the first of June. Have I a twin? I have got five sisters and one brother. My sister's names are Cora, Nellie, Ethel, Gertie and Mayme, and my brother's name is Victor. He will be 21 this fall and I suppose he will go to the training camp then, but I hope not. I will have to stop and go out to the barn and help feed the calves. I will write some more when I come back. I have come back now so I will finish my letter. I will say some riddles now. I know something that is round as a dollar and busy as a bee, the prettiest little think you ever did see. Round as an apple and deep as a cup and all the king's horses can't pull it up. Got a tongue and can't talk, four legs and can't walk. I would like to know how many cousins know the answers to the riddles.—Effie Salvage, R. R. 2, Addy, Wash.

**Not Far to Go to School.**

Dear Aunt Nellie: I am 11 years old and in the fifth grade. I have two sisters. Their names are Annie and Gladys. I have no brothers. My birthday is September 20. My father owns lots of land. He rented his place for three years and we are going away. I am going to see my aunt this summer. We have some chickens. We have three goats. We play with them. We have a shepherd dog. His name is Fox. We have two bloodhounds. Have I a twin? We have lots of fun at school. My teacher's name is Thelma Schrender. We all like her. We do not have very far to go to school. My oldest sister does not go to school. Gladys is in Miss Allen's room. We have two rooms in school.—Mary Davies, Tenino, Wash.

**Sorry When School Is Out.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I have two ponies. One is a Shetland and her name is Midget. The other one's name is Bob. I ride him three miles to school. Papa has two big horses and their names are Silver and Babe. We have one cat and one dog. Their names are Tom and Pat. We are milking two cows and their names are Cherry and Red. We have 11 head of range cattle. We have 24 chickens. I am in the fourth grade in reading and the third in arithmetic and spelling. I am 9 years old. I will be 10 November 3. My teacher's name is Mrs. Wallace. I like her very much. I am looking for company today. I hope they come. Mama got me a pretty pair of brown shoes. They are very pretty. I had a tooth pulled Tuesday. I had to stay out of school. I am sorry when school is out.—Genevieve Randall, R. F. D. 1, Meyers Falls, Wash.

**Live in the Wheat Country.**

Dear Aunt Nellie: I have been reading the letters of the other children in the Children's Corner and I decided to write to you. I go to school to my mother. She has been teacher for the last four years and I have gone to her all the time. I am in the seventh grade. For three years I was neither absent nor tardy, but this year I was out two weeks with the measles. I am 12 years old and my birthday is March 30. Have I a twin? I hope I have. I have a sister who is married, a little nephew 9 months old and a brother who will be in high school next year. We live out in a wheat country and the wind blows almost all the time. We have six pupils in our school. I will write again.—Dorothy Mumford, Touchet, Wash.

**Twin Mules Are the Cutest.**

Dear Aunt Nellie: My sister Hazel wrote to your Corner and told you where I live so I will tell you about my pets. I have lots of calves and colts for pets, also little ducks, but I think a span of twin mules, we have, the cutest. They are so little; one is brown and one is black. The black one is a mare. I want the cousins to send names for them. My papa bought a Liberty bond. We do all we can to help the soldiers. I haven't any brothers in the war. My birthday is October 21 and I am 10 years old and in the fifth grade at school. My teacher's name was Florence Shall. If I have a twin I wish they would write to me.—Edrie Lois Colbert, Tonasket, Wash.

**Took the State Examination.**

Dear Aunt Nellie: I am 12 years of age and my birthday is January 10. A girl wrote to the Corner, who is only one day older than I. Her name is Muriel Vetters. I am in the seventh grade at school. My teacher's name is Mr. Foulon. There are 18 pupils in my room. I took the state examinations in physiology and got 89. Three of my sisters and I go to school. Their names are Edna, Minola, Elsie and myself. Edna is 7 and is in the second grade. Minola is 9 and is in the fourth and Elsie is 14 and is in the 10th. I like to read the letters.—Agnes H. Stoller, Quincy, Wash.

**Alice Rides Horseback.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I have three sisters and one brother. My sisters' names are Mary, Margaret and Lula. My brother's name is Charlie. Our ages are 12, 16, 18 and 21. I go two miles to school. I am 12 years old and in the fifth grade except in arithmetic. My birthday is August 14. Have I a mate? We had 10 cats and two dogs. I ride horseback to school every day in the winter. I go after the cows now. The dogs' names are Buster and Brownie. — Alice Graham, Rocklyn, Wash.

**Thelma Has Two Guineas.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. Papa takes the Farmer. I am 9 years old, January 2. Have I a twin? I have two brothers, one died two years ago. He was 10 years old. My other brother is 2 years old. We have a 40-acre farm. We have three horses and one cow and we have 14 White Orpington chickens and 28 little chickens. I have a pair of guineas and we have two dogs. Their names are Puncie and Fido.—Thelma Brazelton, R. F. D. 2, Goldendale, Wash.

**Has a War Saving Stamp.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 9 years old. My birthday is August 4. If I have a twin I would like to hear from her. I am in the fourth grade. There are two girls and 10 boys. My teacher's name is Ida Easly. I have one war saving stamp. I know how to tat and how to knit, but I haven't knitted anything yet. I have a brother in France.—Minola Stroller, Box 338, Quincy, Wash.

**Are Milking Eight Cows.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 9 years old. I have one sister and one brother. Their names are Donald and Mary. I live on a 20-acre farm. We are milking eight cows and have three heifers and five calves. Their names are Sally, Martha, Jennie, Tiny Star, Daisy, Dot and Pansy.—Muriel Stein, Burley, Wash.

**Interested in the Letters.**

Dear Aunt Nellie: I am interested in reading those letters. I like to go to school. I wish some of the cousins would write to me. I have lots of fun but sometimes I get sick.—Esther Schulenor, Mead, Wash.

**Flowers That Bloom in the Spring.**

Dear Aunt Nellie: May I join the Children's Corner? I am 13 years old and will be 14, June 19, 1918. Have I a twin? I have blue eyes and light brown hair. I am about five feet tall. I am in the seventh grade at school. My teacher's name is Miss Fleeta Kinder. I have one brother named Carl. He is 15 years old. The buttercups and grass-widows are out. There are a few yellow-bells out. The bluebells and mountain lilies are just about out.—Edna Short, Route 1, Waitsburg, Wash.

**Flossie Likes to Ride.**

Dear Aunt Nellie: I am going to write to the Corner for the first time, but I haye been reading the letters all the time as mother takes the Farmer. I am 11 years old. My birthday is August 6. Have I a twin? If so I would like to hear from her. I am in the seventh grade. I have about a mile to go to school. I went a whole six-month term without being either tardy or absent. I have a large certificate. I live on a 560-acre farm, my brothers' farm, and raise hogs, cattle and horses. I have one horse. Her name is Lucy. I like to ride her very much. I have two cats. Their names are Tom and Blackie. I have a pup. His name is Sport and I think he will be a good stock dog.—Flossie Johnson, Almira, Wash.

**Went in Bathing Every Day.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner and it is not going to be the last I hope. I was 9 years old April 14. Have I a twin? If so I would like to have them write to me. We get the Farmer and I always turn to the Children's Corner first. I would like to correspond with some of the cousins. I have one brother, but no sister. My brother is 22 years old. He is going to war. He is in the ambulance corps. We have two cows and two calves. The cows' names are Francis and Margaret and the calves' names are Pansy and Betty. We have a little dog. Her name is Trixie. I have dark brown eyes and dark brown hair. Last summer I went down to Tenino to visit my cousins, Ruth and Laura. We went down to the river almost every day and we went in bathing.—Elizabeth Williams, Route 2, Box 3, Tumwater, Wash.

Address all letters to Aunt Nellie, care of The Washington Farmer, Spokane, Wash.

# My Road-House of the Birds

(Continued from page sixteen.)

safe from cats it was these winged cliffdwellers.

There were swallows, robins in early spring, hawks, curlews, eagles, crows, buzzards, everything in the winged and feathered creation that had found its way to the bunchgrass.

I fancy that these birds were attracted to the great brown and water-stained coulee precipices on account of the safety they offered as nesting places, the cool shade of them, the frequent seepages of water that came out and collected in crevices or in little hollowed out places in the benches down the side, making ideal bathing places. Wind never reached these retreats, for it blew the wrong way to strike the face of the precipices. So the birds were happy and safe.

I have seen a swallow dart from the blue sky, shoot like an arrow over the rocky brink, which it cleared by the width of your hand; down and down it would dart into the dizzy gulf, and then soar back light as a feather. Young hawks often were out trying their wings. I suppose that the larger birds preyed upon the smaller, though I never saw them doing this. I once saw a young hawk lose control of itself in the air, and it fluttered down in much the same manner that an airplane comes down, I suppose, when something goes wrong with the machinery. On the rocks below I could see the white little speck that was the hawk. The creature bravely essayed to fly upward, which it did, rising in a spiral circle toward me. It certainly had a tough time of it, but it made the grade, and finally landed in the nest about a hundred feet below where I was peering over.

Most charming of all, I think, was the incessant singing and twittering of the birds. Out in the bunchgrass they were usually silent and full of business. But on the coulee wall they gave themselves over to sport. It was a sort of birds' playground—one I envied them. All growing boys pass through the period when they want to fly. They usually stand on the railing of the porch, flap their hands in imitation of wings, and jump off.

Peering over the brink of the coulee, I often longed to fly; yet was never tempted to stand up as I once had on the porch rail, flap my hands and leap. The steer I spoke of a while ago went over, though was not actuated by any desire to fly—nor was I about that time.

The most I would ever do was to crawl up on my hands and knees and peek over, hanging to the grass or to a sagebrush all the while. Once I tied a rope to my waist and made the other end fast to a big sagebrush sixty feet back. Safety first was my policy.

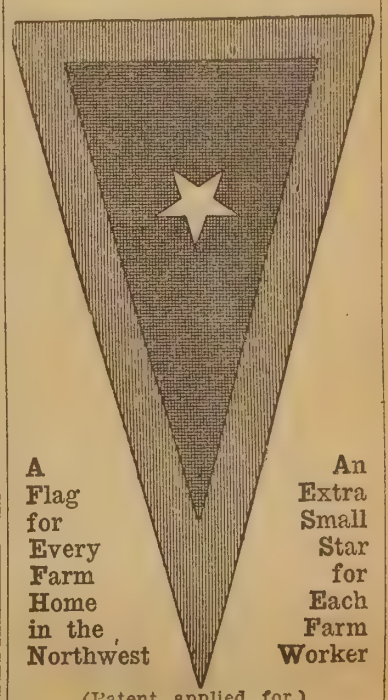
Some of the other boys were bolder. One of the boys used to sit boldly on the brink and hang his bare legs over. To scare us who were more timid he would pretend to slide over, edging out as far as he could without losing his balance. Another of the boys, an expert in the matter of standing on his hands, used to walk on his hands up to the edge, look over, then run backward on his hands. Doug Fairbanks has nothing on these boys. They could have shown him tricks on the brink of the coulee that would have made his hair stand straight up.

But none of these boys, daring as they were, would ride a pony, no matter how surefooted he was, any closer to the brink than absolutely had to be. Fifty or a hundred feet was near enough.

Now and then queer looking traveler birds came through and stopped at the coulee wall for a chat and gossip with the stay-at-homes. I don't know enough about birds to tell their names, but remember how they looked. One of the feathered tourists was a plain but speedy looking creature that flew in with a businesslike air, and departed in the same manner without saying much to anybody. These, I think, were plovers stopping in on the way from Central America to the Arctic circle, whence they would jump the North American continent to Labrador, from which point their migratory course lay across the Atlantic via the Azores, and back down over the Caribbean sea to the land of the Moctezumas.

Great travelers, they, and not of our bunchgrass crowd. They shot down from their pathways among the clouds, rested a bit at the Coulee Road House of the birds, and then took the wing.

Then there arrived, now and then, immense white birds. Their arrival created great commotion among the swarms of swallows, blackbirds, jays, bluebirds and crows that most often were to be seen at the Road House of the Birds. They would not stay long, either. A seagull came in one day, oddly enough. How it got so far inland is a mystery. But I am sure it was a seagull, for it resembled exactly the seagulls I saw in later years on the Pacific ocean beach. It certainly had a "lost, strayed or stolen" look, and soon flapped away amid a chatter of gossip among the birds who ran the road house.



The sparrow hawks were the Apache birds of the road house. They had no friends there. They would dart in like a bolt from the sky to strike down the weaker birds. They darted at their victims in midair, and a cloud of feathers and a helpless shriek resulted from the collision. The weaker bird, when thus struck in the air, would flutter helplessly to the rocks hundreds of feet below, followed by the hawk in a sweeping spiral.

But many a time the hawk darted at an intended victim in midair and missed. Some of these battles on the wing were thrilling to see. The hawks would dart down from a great height, shooting straight at the face of the precipice. At the instant you expected them to crash against the solid rock they would shoot straight upward, or sideways, skimming the very face of the precipice with the speed of an arrow. They were robbers, holdups, highwaymen, killers, regular bandits of the wild were these sparrow hawks, and their skill on the wing was wonderful to behold. They lived to kill and by killing.

Maybe you have been in a throng some time when the big man of the day arrived. He may have been the president of the United States, a world-renowned statesman or orator, or scientist—one whose name had been for years known to you and your associates, who was held by you in respect and veneration, tempered by awe. Did you

# Grain Condition Good

In an official survey of the grain situation in Washington under date of June 7, E. T. Marchetti, field agent of the United States department of agriculture with offices at Spokane, says that the crop generally is in a favorable condition except for occasional fields. The statement was issued before the heat wave of the past few days and is therefore subject to corrections where the heat may have done damage to certain crops. The following is the official statement:

Fall wheat, although retarded considerably by cool weather during May, has acquired a fairly favorable growth and has headed in many areas of the state. The crop generally is in a favorable condition, excepting in occasional fields through the Palouse country and in small acreages planted in the Big Bend counties where germination was spotted on account of an unusually dry fall and the wheat is more weedy than usual. Many fields normally sown to fall wheat in the Palouse, Walla Walla and adjacent counties were sown to spring wheat this year on account of an abnormally dry, unfavorable fall for wheat seeding, and the Big Bend counties were practically entirely sown to spring wheat for the same reason. Large acreages of alfalfa which were not producing normal yields have been plowed up and resown to spring wheat, especially in the Yakima and Kittitas valleys. Occasional fields throughout the Big Bend counties germinated spottedly on account of an unusually dry period immediately succeeding planting and the seeding of inferior quality wheat which had been injured by hot winds last year, and many fields of spring wheat throughout the Palouse counties, especially late sown, germinated spottedly and rains are required immediately to insure a normal stand in these fields.

The acreage of spring wheat and total wheat are the largest ever planted in this state. The condition of spring wheat has been adversely affected by a backward May, permitting considerable weed growth, and heavy winds during the month have dried out the soil materially. Although local areas throughout Columbia and Garfield counties indicate increases in barley acreage, these large barley producing counties as a whole planted less acreage to barley than a year ago. Considerable areas of abandoned wheat acreage which were rotted and frozen out were sown to barley last year in these large barley producing counties, whereas the desire to comply with the government's request to seed all available acreage to wheat and the early favorable spring for wheat seeding this year has resulted in a decrease of the unusually large barley acreage sown last year in this locality. Walla Walla, Asotin and Whitman counties have increased barley acreages this year, sown principally on land plowed in the late fall and early winter, and usually summer-fallowed, which did not interfere with the seeding of wheat acreage.

The barley acreage for the state as a whole has been increased slightly. The condition of barley has been unfavorably affected by lack of favorable growing weather. The acreage of oats has been increased in the large oat producing section of Skagit county on account of floods during the winter, which drowned out pasture and hay which land has been reseeded to oats. Smaller oat producing sections in the counties west of the Cascades increased acreages of oats considerably, in their desire to produce all foodstuffs possible. Throughout the large oat producing section of the Palouse country and including areas in Stevens county there is a tendency to decrease oat acreages. The decrease of oat acreage in this section was stimulated by the favorable early spring for wheat seeding, where as the adversely late spring of last year compelled the seeding of oats on account of the inability to plant wheat. The growth of oats has been retarded by unfavorable growing weather and rain is necessary to insure favorable results. The condition of hay is unfavorable on account of cool weather which retarded growth and encouraged cheat growth and aphides injury in alfalfa. Pastures have been injured by lack of rains and unfavorable growing weather. All crops are generally in need of imminent rains in practically all non-irrigated counties east of the Cascades.

1101-09 Railroad Ave., Spokane, Wash.

# Buyers Are Indifferent

Indifference on the part of the dairymen of eastern Washington caused a large share of the Glen Tana herd to be withdrawn from the sale held at Glen Tana farm near Spokane, last week, and allowed a few buyers to take home some unusual bargains in good dairy stock. Only one cow went as high as $300, that being Bonny Berry 249369, which was sold to J. P. Graves of the Waikiki dairy farm of Spokane at that figure. Six others sold as high as $200, one reaching $260. Eminent Jimps Owl, the record producer, was withdrawn from the sale because of the lack of interest on the part of the small crowd attending the dispersion.

T. S. Griffith, proprietor of Glen Tana, offered 100 head of purebred Jerseys and about 150 head of grade Jerseys and Holsteins. About half of the number sold, including a score or so of young stuff, six months to a year old.

Ira P. Whitney, bidding for J. P. Graves of Waikiki farm, was the principal purchaser, adding several head of good stock to the Waikiki herd at bargain prices.

Mr. Griffith is selling the cattle he held over at private sale.

The auction was conducted by George Gue, assisted by Harry Cranke.

The following are the sales of purebreds, showing price and purchaser:

Glen Tana Morocco 135432, A. M. Cannon, Bissel, Wash., $90.
Glen Tana's Pet King 143930, J. P. Graves, Spokane, Wash., $125.
Glen Tana of Athens, D. Rogers, Spokane, Wash., $40.
Airy's Poppy 295571, E. Sommers, Colfax, Wash., $80.
Golden Maid's Clarabelle 269568, J. P. Graves, $230.
Jolly Daffy Scott 290975, E. Sommers, $120.
Favourette 264179, J. P. Graves, $250.
Bonny Berry 249369, J. P. Graves, $300.
Brigadier's Duchess 272400, J. P. Graves, $215.
Glen Tana's Lily 295624, A. G. Woodward, Fairbanks, Wash., $250.
Glen Tana's Gertie 4th 293584, J. P. Graves, $105.
Maitland's Princely Legacy 266613, J. P. Graves, $225.
Glen Tana Gamboge's Lady 315545, J. P. Graves, $105.
Glen Tana Clarencia 326476, P. D. Tull, Spokane, Wash., $260.
Glen Tana Bessie Lee 340682, E. Sommers, $80.
Glen Tana Sunshine 337819, E. Sommers, $75.
Glen Tana Golden Berry 245188, Charles Waggoner, Post Falls, Idaho, $95.
Glen Tana Fern 349304, Glen Hamann, Buckeye, Wash., $75.
Glen Tana Victorious 359197, Fred Rolly, Addy, Wash., $60.
Glen Tana's Maid of Altamont 375217, J. P. Graves, $75.
Glen Tana Morocco Duchess 374381, J. P. Graves, $75.
Glen Tana Blue Berry 374382, J. P. Graves, $105.
Glen Tana Orange Lily 374383, J. P. Graves, $90.
Glen Tana Mabel 407342, Glen Hamann, $60.
Glen Tana Girl 376097, J. P. Graves, $50.
Glen Tana Morocco Bessie 375218, J. P. Graves, $75.
Glen Tana Pearl 407344, J. D. Williams, Reardan, Wash., $90.
Glen Tana Pioneer Beth, J. D. Williams, $75.
Glen Tana Lillian 415186, J. P. Graves, $90.
Glen Tana Nancy 413791, F. L. Dill, Hillyard, Wash., $45.
Glen Tana Elaine 415185, J. P. Graves, $80.
Glen Tana Quaker Dolly 314914, J. D. Williams, $50.
Glen Tana Juliet, 414917, F. M. Lothrop, Colbert, Wash., $50.
Glen Tana Golden Glow, J. D. Williams, $50.
Glen Tana Suzanne 414920, J. D. Williams, $35.
Glen Tana Favourette 414922, J. P. Graves, $75.

## ESTIMATES FRUIT

### Market Official Gathers Information.

Estimates of the fruit that will be produced this season in the various fruit districts of Washington have been compiled by R. M. Rutledge of the federal market department. While the figures are altogether unofficial, Mr. Rutledge is of the opinion that they are fairly reliable, having been obtained from what he considers well informed sources. The following is the estimate as compiled by him:

**Apples.**

Yakima district—Last year's crop reduced to carloads of 630 boxes each, amounted to 9256 cars. On the same basis it has been estimated that the yield of apples in 1918 will amount to 500 to 1000 cars less. However, most other estimates range higher and place the approximate yield from 10,000 to 11,000 cars in 1918. Powdery mildew is apparently worse than last year. Newtown, Spitzenburgs and Winesaps are in light blossom, but the size of apples may be larger and offset the apparent reduction in the crop. Considerable depends upon the spraying now in progress.

Wenatchee district—It is estimated that the crop in the Wenatchee section, including Chelan and Okanogan counties, etc., will amount to 6,250,000 bushels, which is well up to the average of the last five years. The Jonathan crop is about 40 per cent of normal. Nearly 50 per cent of the planting in this district is of two varieties, the Jonathan and the Winesap.

Spokane section—Estimated crop will be 1200 to 1400 cars, or about three times as much as was produced last year. Last year's crop was 472 cars, which was considerably below normal. However, it is hard to estimate because no one can tell the full effect of the June crop.

**Peaches.**

Yakima district—Estimated 1918, 500 to 650 cars, as against 1960 cars of last year, due mainly to frost damage.

**Pears.**

Yakima section—Estimated 60 per cent of normal crop, partially due to frost. Some districts hit this year escaped frosts in other years. The set is lighter, but the size will probably be larger.

Spokane section—Estimate on pears is that the 1918 crop will be 50 per cent of the 1917 crop.

**Cherries.**

Spokane section—Estimated 1918 crop will be 80 per cent of last year's crop.

# NEWS FOR BREEDERS

## With Her Eight Young Duroc Jerseys

The photo herewith shows one of the good Duroc Jersey sows and her litter of eight pigs, owned by Root & Mason of Hermiston, Ore. The herd is headed by Gunn's Defender 186933, a grandson of Defender, bred by Key Bros. of Kentucky. He has a good head, good hams, plenty of bone and deep body. They have sows of Overbrook, Poston and W. R. White strains and have a very nice lot of young pigs. Gunn's Defender was champion at the Hermiston dairy and hog show in 1916 and last fall their sow, Queen of Butter Creek, then owned by C. P. Adams, was champion female. Mr. Mason, who is the principal hog man of the firm, expressed the opinion that an alfalfa country is the best place to raise hogs, though they must have some grain. Mr. Mason feeds mainly shorts and mill feed and begins almost as soon as a hog will eat. He fixes a creep so they can eat away from the sow. He likes a little oats at first and thinks there is nothing better for a growing pig. H. A.

## Senior Herd Bull

The accompanying is a photo of Holger, senior herd bull of the McArthur & Stauff Jersey herd of Rickreall, Ore. Holger is a son of Gertie's Lad and is one of the many Jersey bulls in the Willamette valley very strongly bred along producing lines. Believing he would prove to be a great sire these gentlemen have kept his daughters and now have a herd of practically all his offspring, and he seems to be justifying the faith in him. Six of his daughters have completed a year's official test, all outside of the McArthur & Stauff herd, none of them with any special preparation, and all have made excellent records. Thomas Williams and D. G. Lily of Forest Grove, Ore., have the following records to the credit of his daughters: Dina Dorf, as a 3-year-old, 622 pounds of 85 per cent butter; Olalla at 3 years, 767 pounds; Jersey Style, at 3 years, 676 pounds; Jersey Compass, at 2 years, 445 pounds, and Queen Badoura as a 2-year-old, 408 pounds. N. H. Smith of Oregon City, Ore., has a record of over 500 pounds, begun under 2 years old. Two or three more are soon to be reported and McArthur & Stauff have eight that will qualify, with good records.

For a junior herd sire these gentlemen are using a son of Gertie's, Fern Princess, that had a record of almost 800 pounds and was capable of doing considerably better. He is by Ed Cary's great bull, Rosaire Olga Lad. H. A.

## POLAND CHINA SWINE

### Big Type Poland Chinas

Peter Mouw and John B. Lawson strains. Young boars and bred or open gilts. Good individuals.

CLIFFORD RIGGS, Touchet, Wash.

## JERSEY CATTLE

### Foundation Herd of Jerseys

To reduce our herd to a size proportionate to the available labor supply we make the following offerings: First of all the great Tennessee cow.

**Moyane Moline,** 803 lbs. butter, 10,406 lbs. milk in one year. Also
**Creole Bess,** 684 lbs. butter, 12,363 lbs. milk.
**Stockwell's Dahlia,** 619 lbs. butter, 8890 lbs. milk.
**Lucy's Convent Lassie,** 484 lbs. butter, 7568 lbs. milk.
**Princess of the West,** 477 lbs. butter, 6996 lbs. milk in 341 days.
**Pearl of Riga,** 458 lbs. butter, 7489 lbs. milk in 297 days.
**Diamond of Fair Acres,** now on test, milking 59 lbs. a day, as junior 3-year-old.
**One heavy producing** untested cow and one 2-year-old heifer.
(All butter regular Jersey standard, 85 per cent.)

This includes all our American bred cows and three choice imported cows, including the many times grand champion, Stockwell's Dahlia.

Free from abortion and will furnish certificate of health from federal veterinarian.

Prices, pedigrees and photos on request.

**J. B. STUMP & SON, Monmouth, Ore.**

### Best of Breeding

Two bull calves, one by Comassie Lulu's Noble, full brother to 2 register of merit cows with good records. Dam was junior champion Pacific International stock show and has R. M. record of 365 lbs. butter, begun at 1 year, 10 months, class AA.

The other by Oxford Torono 2d, a Hood Farm bred bull. His dam has a heifer making private record, begun under two years of almost 500 lbs. butter. Both very cheap, in proportion to quality.

WM. BEHRMANN JR., Hillsboro, Ore.

### Young Jersey Bulls

SEVERAL OF MY BEST OFFERINGS. from 3 months to a year and a half, all from high-producing dams. These fellows are bred right and they will be sold right.

Correspondence solicited.

C. E. LONG. Buhl, Idaho.

### GWENDOLA OLGA LAD

Sire Beauty Lala Lad, he by Rosaire Olga Lad, sire of over 30 register of merit daughters, including St. Mawes Beauty, 934.9 lbs. butter as junior 3-year-old (all butter in this ad being computed on basis of 80 per cent fat.) Beauty Lola Lad's dam, Beauty Lola. R. M. record, 724 lbs. butter, milked twice a day, ordinary herd care.

GWENDOLA OLGA LAD'S dam, Gwendola Olga Chimes, R. M. record 1015.5 lbs. butter as junior 4-year-old. She is by Silver Chimes of S. B., sire of 9 other R. M. daughters, including Silver Chimes Rua, 988,78 lbs. butter. Her dam, Coffee's Gwendola, R. M. record 770.07 lbs. butter and she is a granddaughter of the great bull King Koffee's Count.

GWENDOLA OLGA LAD was dropped March 7, 1917. He is a well grown, good individual, fit to head and improve the best pure bred herds. Other young bulls of best breeding.

DEL PERKINS, Carton, Ore.

## SHORTHORN CATTLE

### Herd Bulls

Imported Donne Radiance No. 609412
and
Gainford Perfection No. 442173.

ELBERT M. CHANDLER, Burbank, Wash.

## ABERDEEN ANGUS

### Aberdeen Angus Cattle

A. H. EAGLESON & SONS.
Boise, Idaho

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, June 10.—Corn developed notable strength today owing largely to prospective curtailment of receipts. The market closed firm, 2 7-8c to 3 1-8c net higher, with July $1.39 7-8 to $1.40, and August $1.40 7-8. Oats gained 7-8c to 1 5-8c. The finish in provisions ranged from 30c decline to 5c advance.

Upturns in corn prices began soon after the opening and were first ascribed chiefly to unfavorable weather conditions, such as lack of warmth and excessive moisture. Predictions of generally fair skies and of higher temperatures for the next two or three days brought about a temporary bearish reaction, but the readiness with which offerings were absorbed soon led to a fresh advance.

Oats reflected the changes in corn. Cereal interests were good buyers and it was said export business amounted to 400,000 bushels.

Big exports of lard and meats made provisions average higher. However, realizing by longs set in and the finish was weak.

### Cash Quotations.

CHICAGO, June 10.—Corn, No. 2 yellow, $1.65@1.65; No. 3 yellow, $1.58@1.63; No. 4 yellow, $1.40@1.46. Oats, No. 3 white, 75¾@76½c; standard, 76@77c. Rye, No. 2 nominal. Barley, $1.12@1.50. Timothy, $5@8; clover, nominal. Pork, nominal. Lard, $23.95. Ribs, $21.72@22.40.

Sheep — Receipts none; market steady. Prime lambs, $16@16.75; good lambs, $14@15; prime yearlings, $10@11; prime wethers, $9.75@10.50; best mutton ewes, $8@9.50.

## Portland Market.

PORTLAND, Ore., June 9.—Wool is arriving in liberal quantities and being stored here, pending the next steps by the government in its distribution. A valuation commitee is expected to be named in a few days, and as soon as the new clip is appraised, it will be allotted to the local mills. Orders are also awaited from Washington in regard to the distribution of the old wools, which have been already valued. Local dealers have word that shearing in the eastern counties may extend into July, owing to the scarcity of labor.

The cube butter market is firm and higher with 41 cents being paid for extras. The buying is for storage as the quality of the butter now is at its best.

Eastern fresh eggs are being offered freely at 37@38 cents and this has checked the advance in Oregon eggs.

Poultry prices are weak and would be still lower but for Seattle buying of hens and broilers. Hot weather has had a depressing effect on the dressed meat trade and caused some losses.

Good shipping strawberries are firm at $2.75, but there is much sun scalded fruit on the market and some of this went as low as $1 a crate. Unless rain occurs in a day or two the local berries season will come to a speedy close. Green vegetables of all sorts are scarce and firm. A large part of the crop was cut off by aphis.

Butter—Cubes, extras, 41c; prime firsts, 40c; prints, extras, 44c; cartons, 1c extra; butterfat, No. 1, 43c, delivered.

**Oil Meal**—$78 per ton.

**Hay**—Timothy, $36 per ton, $35 ton by carload alfalfa, $28 ton, $28 ton by carload.

## The Wool Market.

BOSTON, June 7.—The Commercial Bulletin tomorrow will say: Slowly, with some uncertainty, the wool clip of the country is moving eastward to the consuming centers, especially wherever the clip is subject to purchase, since the terms upon which it can be purchased under the government plan have not been clearly understood by many of the country dealers, who have on that account hesitated about putting their money into the staple upon an uncertain basis. Consignments from the territory sections are being accepted steadily. The government machinery for handling the wool in the centers of distribution is being augmented more or less steadily, as necessity requires.

Scoured basis: Texas—Fine, 12 months, $1.72@1.75; fine, eight months, $1.50@1.55. California — Northern, $1.70@1.75; middle county, $1.55; southern, $1.45@1.50. Oregon—Eastern, No. 1 staple, $1.78@1.80; eastern clothing, $1.62@1.65; valley, No. 1, $1.63@1.66. Territory—Fine staple, $1.80; half-blood, combing, $1.53@1.68; three-eighths blood combing, $1.40@1.45. Fine clothing, $1.65@1.70; fine medium clothing, $1.55@1.60. Pulled—Extra, $1.80@1.85; AA, $1.65@1.70; A supers, $1.60@1.65.

## Seattle Market.

SEATTLE, June 9.—The strawberry market is steady for the week-end.

The week concludes with a stronger tone in fresh ranch eggs, choice white shell locals bringing 45c at the selling and 40c at the buying end. There was a noticeable falling off in the receipts and a steady increase in the demand. There has been a strong demand for eastern eggs, several carloads having been cleaned up on the local high markets. This is the first time in the history of the trade here that it was necessary to draw on outside centers for eggs in May and June.

### BUYING PRICES.

Unless otherwise stated the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots, f. o. b. Seattle:

Eggs—Local, 40@41c per dozen; eastern Washington, Oregon and Idaho, 37c.

Poultry—Broilers, 30@35c lb.; spring roosters, live, fat, 26@27c lb.; geese, fat, live, 18@25c; ducks, live, fat, 27@30c; hens, 24@26c lb.

Beef—Buying prices: Prime beef, steers, 14@15c; cows, fat, 13@14c lb.; heifers, 14@15c.

Hogs—Light, 21c lb.; heavy, 19@20c lb.

Veal—Fancy light, 18@19c lb.; 15@18c lb.

Hides—Salted, 13c lb.; flint-dry hides, 23c lb.; salt kip, 13c lb.; green hides, 11c lb.; green calf, 28c lb.; dry calf (under 6 pounds), 35c lb.; bulls and dry salts, 4c lb. less; green bulls, 8c lb. Clean, long wool, western Washington flint-dry pelts, 39c per lb.; heavy to clean eastern Washington flint-dry pelts, 30@35c lb.

Asparagus — Kennewick, 12½@15c lb.; Oregon, 15@20c; Granger, 15c.

Apples—Winesaps, $3.50@3.75.

Potatoes—Puget sound, $17@22 per ton; eastern Washington, $35 per ton.

Feed—Bran, $34 per ton; shorts, $35.50; scratch feed, $73; all-grain chop, $71; oats, $72; sprouting oats, $69; rolled oats, $73; whole corn, $76, cracked corn, $77; rolled barley, $67; clipped barley, $70; alfalfa meal, $36; oil meal, $70; egg mash, $62.

Hay—Eastern Washington timothy, $36@37 per tons; do. double compressed, $37@38; alfalfa, $26; Puget sound, $26@27; straw, $15.

Strawberries — Kennewick, $3.50@3.60; White Salmon, $4; Okallas, $4 per crate.

### LINSEED.

DULUTH, Minn., June 10.—Linseed, $3.89@3.92; arrive, $3.89@3.90; July, $3.92; October, $3.49.

HIDES

WOOL, PELTS, MOHAIR, CASCARA BARK

We do the largest consignment business in the northwest. Equally fair treatment on all shipments, large or small. Returns at full market value mailed same day as goods are received. Trial shipments wanted and appreciated, but are handled as regular shipments and not at inflated values.

# My Road-House of the Birds

(Continued from page twenty-three.)

ever notice the rustle of expectancy in the crowd when such a man arrives?

This is what happened birdwise when the American eagle arrived at the road house of the feathered people. The sparrow hawk ceased his depredations; the gossipy crows ceased their clamor; the blackbirds ceased to swarm and chatter; even the restless swallows quieted down. The whole bird crowd stood off to one side. Why, I should like to know, but never found out. I never saw an eagle attack the other birds, though very few of them came to the road house when I was looking down from my eerie perch in the peanut gallery. It may have been that the other birds instinctively recognized the power and dominant qualities of the eagle. These birds were always leisurely and calm in their behavior at the coulee roadhouse; but when they moved from perch to perch on the coulee precipice, and as they arrived or flew away, there was something in their motion which later I saw in a high-power racing auto moving slowly up to the race course. The very calmness and sureness of their actions suggested the immense reserves in strength, courage and action of the eagles. Among the feathered flock at the road house some chirping, some squalling, some chattering, all noisy and bustling, the great eagle was every inch a king, and the feathered people knew it.

My coulee playground of the birds is both modern and prehistoric. The handwriting of him who made the world and the living things thereon is large and plain upon its towering, water-stained precipices. Read between the lines of this writing and you will see, maybe, if you have understanding elevated by imagination, the world in the old jurassic days when crocodilian reptiles swam the seas and the rivers of the newborn earth, and the dinosaur balanced on two legs and his tail to browse on treetops sixty feet high.

I have not slept with the prehistoric auroch, nor watched the mastodon roam, nor talked to the bow-head, nor followed the sabre-tooth tiger to his den. Neither had Ung, who drew pictures of these things. Ung's tribesmen doubted the realness of his pictures. He stayed in his boulder-hatched studio and drew pictures of the animals while they fared forth and slew them.

"Wroth was that maker of pictures—
hotly he answered the call:
'Hunters and fishers and trappers, children and fools are ye all!
Looks at the beasts when ye hunt them!'
Swift from the tumult he broke,
Ran to the cave of his father, and told
him the shame that they spoke."

As follows, did Ung's father console him:

"'Thou hast not toiled at the fishing
when the sodden trammels freeze,
Nor worked the war-boats outward
through the rush of the rock-staked seas,
Yet they bring thee fish and plunder—
full meal and an easy bed—
And all for the sake of thy pictures.'
And Ung held down his head."

Here I leave Kipling. Look at my coulee playground of the birds when next you see it. As I said before, if you look with understanding elevated by imagination, you may see presently dart from yonder bench on the face of the old, water-stained precipice where sits a modern American eagle, not the eagle, but the eagle's prehistoric ancestor less removed from its reptilian ancestors by several million years than is the present-day eagle that decorates the gold coin of our republic. The bird that you see should be dog-tailed, without feathers, winged like a bat, beakless and fanged like a cat; and it should dart down into the waters of the prehistoric Columbia and bring forth a fish. The fish will not be your modern salmon-trout. It may have eyes set so closely together that they look like one, and such an armament of bony scales and plates that, were you to catch it, you might have to crack it open with a camp ax to get at the meat inside.

Ung had not arrived then. The world was made in the rough, and being sandpapered for the arrival of Ung and you and I. This coulee playground of the birds, prehistoric and modern, seems to have survived much of the sandpapering, and is about as prehistoric as ever. On the time-seamed precipices is the handwriting of him to whom a thousand years is as a day, and a day as a thousand years. This writing is paragraphed in eras, periods, epochs and ages.

## Want Ad Rates 30c Per Line

Want ads are run at this rate in The Washington Farmer and its associate papers, The Oregon Farmer and The Idaho Farmer, thoroughly covering the three states.

# Want Ads

Send for card giving lower rates for ads running one month or longer.

## How to Figure Cost of Ads

Figure four words for the first line, which is set in capital letters, and six words for each succeeding line. Multiply number of lines by 30 and you have cost each issue.

### FARM LANDS—FOR SALE 651

ATTENTION, LANDBUYERS!

Here's an excellent proposition:

40-acre farms, selling for $15 to $25 per acre; long-time payments, 6 per cent interest; in the best agricultural part of Snohomish county, where you have all the modern conveniences—paved roads, railways, schools, churches, mills and factories. This district has proven its worth by the many successful farmers now located there.

We also have some beautiful 10-acre waterfront tracts.

OPPORTUNITY knocks at every man's door ONCE, but, believe me, it does not continue to knock forever, nor does it pound the door down. For further information address the owners, BROWNELL LAND CO., 904 Third ave., Seattle, Wash.

200 ACRES; 150 GOOD FARM LAND, BALance pasture; 40-acre water right; 100 acres in fall-sown grain; will harvest about 1500 bushels. Good house, all necessary outbldgs.; some fruit and berries; ¾ mile to school and church, 10 to railroad town, 1½ to P. O. All farm tools needed, chickens, turkeys, furniture. Immediate possession at $25 per acre; terms on one-third. Owner, David Milburn, Lower Bridge, Oregon.

DAIRY FARM FOR SALE—NOW DOING $250 to $300 cash business a month; 14 dairy cows and all equipment for handling milk route. Price $3700 cash or terms. Young stock and horses can also be bought reasonably. A good opportunity to raise cattle. Lots of free range. For particulars write A. Enstrom, Box 330, Ephrata, Wash.

62-A. IMPROVED WHEAT FARM; SEVEN miles south of Hartline, Wash.; on Sunset highway; good land; all in cultivation except 15 acres; 300 a. in summer fallow; all fenced; large house, fine barn, good outbuildings; plenty water. Only $45 per acre. $6000 cash will handle. A. L. Tucker, Coulee City, Wash.

TWO BROTHERS, NOT FARMERS, OWN 160 acres, with good water rights; near good town; mile to station and school. Will produce big grain and alfalfa crops. $16,000; cash $3500; $1000 holds till fall. One with good security can buy with less cash. Other farms. O. E. Carman, Vale, Ore.

FOR SALE — ALFALFA, WHEAT AND stock farms. If you want good, well-improved, irrigated farms at a price that will pay for itself in two crops, write me. John Hardwick Realty Co., Vale, Ore.

FOR HAY, GRAIN OR STOCK RANCHES in famous Rosebud county, eighty acres to twenty thousand acres. Write Rosebud Realty Co., Rosebud, Mont.

### FARM LANDS—WANTED 654

I WANT TO HEAR FROM OWNER OF farm or unimproved land for sale. Mrs. W. Booth, Pulaski, Iowa.

WANTED—TO HEAR FROM OWNER OF farm or unimproved land for sale. O. K. Hawley, Baldwin, Wis.

### FARM LANDS—Wanted to Rent 660

EXPERIENCED DAIRY MAN WANTS TO rent or work dairy ranch with stock, one to five years. Address Box 142, Deer Park, Wash.

# FOR THE ENTIRE FAMILY

## ALL ENJOY THE STATE FARM PAPER

One of the reasons for the rapidly growing popularity of this paper is the fact that it appeals to every member of the family circle.

We will appreciate your telling neighboring families about its stories, articles and features.

When we introduced the "direct-to-the-consumer" idea in our subscription business we hoped to have hearty cooperation from our readers and we are not disappointed. The new system is working splendidly. Already thousands have taken advantage of the big saving which our offer makes possible.

Much of this success is due to the efforts of our friends. They have aided us by telling their neighbors about our offer and by passing along copies of the paper to those who they feel will be interested in a high-grade family publication. If you are a supporter of the cooperative principle, we hope you will help us make the new subscription plan an even greater success. We will appreciate your assistance very much and we feel sure that if your neighbor does not know about his state farm paper he will be glad to make its acquaintance. Your cooperation helps eliminate the middleman, with all the attendant expenses of the subscription agency system. The reader gets the benefit of every dollar saved, as you will note from the schedule of prices.

## A Real Saving

Following Rates Now in Effect for Subscriptions to The Washington Farmer:

VOL. XLI. NO. 25. JUNE 20, 1918. ** WEEKLY.

THIS war is one of nations—not of armies, and all of our 100,000,000 people must be economically and industrially adjusted to war conditions if this nation is to play its full part in the conflict. The great results which we seek can be obtained only by the participation of all men of the nation, young and old, in a national concerted thrift movement. I therefore urge that our people everywhere pledge themselves as suggested by the secretary of the treasury to the practice of thrift; to serve the government to their utmost in increasing production in all fields necessary to the winning of the war; to conserve food and fuel and useful materials of every kind; to devote their labor only to the most necessary tasks, and to buy only those things which are essential to individual health and efficiency; and that the people, as evidence of their loyalty, invest all they can save in Liberty bonds and war savings stamps. With the desperate need of the civilized world today for materials and labor with which to end the war, the practice of individual thrift is a patriotic duty and a necessity. The man who buys government securities transfers the purchasing power of his money to the United States government until after this war and to that same degree does not buy in competition with the government. I earnestly appeal to every man, woman and child to pledge on or before the 28th day of June to save constantly and to buy as regularly as possible the securities of the government, and to do this as far as possible through membership in war savings societies. The 28th of June ends this special period of enlistment in the government volunteer army of production and saving here at home. May there be none unenlisted on that day.

Woodrow Wilson

# U. S. SOLDIERS ARE IN ACTION

The number of Americans who are playing a valiant part in the great war is steadily increasing. There will probably be a total of 2,000,000 American soldiers in Europe before the end of the present year.

You want news that is accurate, complete and up to date regarding these brave soldier boys who are fighting for you and your country.

You will get all the worth-while news of the war and those who are carrying it on by reading

## *The Twice-a-Week Spokesman-Review*

This is a splendid semi-weekly home newspaper which brings you every Tuesday and Friday a complete, accurate, condensed review of local, national and world events. It gives you a reliable narrative of history in the making. Being a member of the Associated Press, the important happenings are flashed to it instantly from every capital and village, and from every far-flung battle line.

We are very glad to be in a position to offer THE TWICE-A-WEEK SPOKESMAN-REVIEW at a big saving when taken in combination with THE WASHINGTON FARMER. It is a paper especially appropriate for our subscribers because it is a paper primarily designed for busy readers.

## *A REMARKABLE CLUBBING OFFER*

***Twice-a-Week Spokesman-Review, 1 Year***
***The Washington Farmer 3 Years, Both for* $1.00**

These are days of high and rapidly rising costs in the publishing business. Clubbing offers are rare. This fact makes the clubbing proposition of The Twice-a-Week Spokesman-Review with your state farm paper especially noteworthy. Our advice is not to delay but to accept this liberal offer at once. Remember that the summer is the time of greatest activity at the front.

***Please Tell a Neighbor About This Offer***

## *Greatest Saving Campaign in American History Is Now Being Waged*

A WAR savings stamp is as good as a five-dollar bill. It is backed by the whole resources of the greatest nation on earth just as is the greenback. It is this nation's promise to pay, a promissory note, a "baby bond," maturing January 1, 1923, and bearing until that time interest at the rate of 4 per cent compounded quarterly. It is more like cash than either a note or a bond, however, as it is always good for its purchase value with accrued interest up to whatever time the holder wants to turn it into the government and receive his cash. During the month of June the cost of the war savings stamp is $4.17. It increases one cent a month from now until January 1, 1923, when it will be worth $5.

Those, in brief, are the facts about the war savings stamp. Right now there is a campaign on in every state of the Union, in every county of every state and in every precinct of every county to sell the largest number possible of these government securities by June 28. That day is National Thrift day, so designated by President Wilson, who closes his appeal for this form of service to the country with the words: "May there be none unenlisted on that day."

The quota to be raised before January 1, 1919, is $2,000,000,000. Those who pledge themselves to purchase are allowed until that time to complete payment, paying part each month. The campaign for pledges, however, closes Friday, June 28.

During the next few days, if they have not already, active workers will call on every man and woman in the country for the purpose of receiving their subscriptions.

On this page is shown the form of the pledge to be signed, indicating the cost of a stamp if bought during any month of this year.

While the purchase of war savings stamps can be justified wholly from the standpoint of saving and investment (they are the best small investment in the world), the appeal is made upon a much higher plane, that of pure patriotism. There should be no other thought in the mind of any man or woman or boy or girl than this: How can I do most to help win the war? War is America's one business today. Nothing else counts. Till the war is won, no other activity can rest on a sound basis. If it is lost, business as America knows it is forever a thing of the past. Till it is won, honor and justice and liberty are in jeopardy. If it is lost, new generations will have to rise up and begin an age-long struggle for the reinstatement of these things which civilization has given us. This is the big reason for Liberty bonds and war stamps. The government needs our money and our producing strength as much as it needs our fighting strength on the field

When we purchase these war stamps we are merely transferring to the government the purchasing power of our money without doing ourselves the slightest injury. In fact, we are benefiting ourselves in many ways when we buy them.

While French and Belgian women and children are suffering inhumanities unprecedented even in the darkest ages, what hardship is it for us to save our dimes and dollars and lend them to help defeat their torturers? While British and French and our own American soldiers are facing peril and suffering and are actually dying by thousands, what hardship is it for us to give down to our last dollar, reserving enough to subsist on and no more, if necessary, to crush Mitteleuropean fiendishness?

Let no man and no woman and no boy or girl be unenlisted in humanity's cause when the sun goes down June 28. Let every one buy these stamps and thus help justice win. Buy them of your banker, your postmaster, your mail-carrier, through this paper—anywhere, but buy them!

# Mr. Hoover Has Been Misinformed

It seems beyond belief that Mr. Hoover, when advised of all the facts, could refuse to grant further flour milling privileges to the Pacific northwest.

For want of mill feeds the live stock industry is seriously endangered here, but when that situation was laid before the food administration at Washington, Mr. Hoover replied that he had information that there is an abundance of mill feed in the northwest. Mr. Hoover has been misinformed. The true situation is well stated by Dean O. L. Waller of the State College of Washington. In a report to the Spokane Chamber of Commerce Mr. Waller says:

"The mill feed situation is acute. Most of our wheat has been shipped east; there is very little oats at any time; there is virtually no corn, and a great deal of barley is being used for human consumption.

"The hog and poultry industries are facing a crisis. Farmers with hogs must reduce their herds and ship their stock east as feeders unless there is some immediate relief, and poultrymen must go out of business."

Mr. Hoover says that the mills of the Pacific northwest have already been allowed greater milling privileges than the mills of the middle west, and that if he now were still further to increase their allowance of wheat, it would be an act of injustice to mills further east.

But this is a problem that rises far above the selfish interests of the millers. The only question now is what is best for the nation. If national interests could be better advanced by milling all the wheat of the Pacific northwest in mills of the middle west, it should be milled there. If national interests call for continuous milling here, even though eastern mills should be closed, then that should be done.

**The plea for extended milling here, to provide feeds for stock, is backed up by national welfare at every point.**

For want of mill feeds the live stock industry is seriously endangered in the Pacific northwest. The nation can not afford that loss.

President Barnes of the grain corporation, says our stockmen can use corn; but this is not a corngrowing region, and to bring in corn would lay an added and unnecessary burden on the railroads when they are already overtaxed.

To haul corn from the Missouri river valley to the Pacific northwest, coal must be burned, and the country has no coal to waste.

The wheat in question must be milled somewhere. It was grown here, and all other factors balanced, it should be milled here. If milled here our stockmen will be tided over a trying hour, railroad congestion will be relieved to that extent and coal will be conserved. If shipped east in bulk, to be milled there the railroads will have to move a greater tonnage than if they carried only the flour, thus adding another waste of transportation and coal.

Against these weighty considerations the selfish interests of the eastern millers should not prevail.

Mr. Hoover has been wonderfully efficient and made few mistakes; but if he should hold to his mistaken ruling in this instance he would make a very grave blunder.

## APPLES, 20,000 CARS.

### Company Official Makes Estimate

The apple crop of Oregon, Washington, Montana and Idaho will approximate a little less than 20,000 cars this season, according to the estimate made by P. R. Parks, general manager of the Spokane Fruit Growers' company, which represents a considerable portion of the fruit growing industry of the four states.

Mr. Parks said that last year's apple crop approximated 23,000 cars. He says that evidences are that the crops in the Yakima valley, the Wenatchee valley, western Montana and western Oregon will be good. Southern Idaho, however, has been seriously damaged by frost and the crop will be correspondingly reduced. Certain isolated sections of eastern Washington are also reported to be frost damaged.

### Must Keep It Up.

The following statement is issued by the United States food administration:

The May shipments of cereal foodstuffs to the allies from North America aggregate 700,278 tons as against 836,034 tons for April. They comprise:

| | Tons. |
|---|---|
| Corn and corn products | 67,276 |
| Oats and oat products | 155,961 |
| Rye and rye products | 8,684 |
| Barley and barley products | 87,642 |
| Wheat and wheat products | 371,253 |
| Rice, beans, peas, etc. | 9,462 |
| Total | 700,278 |

## Fix Wage Scale

### Farmers Meet and Make Schedule

At a meeting of the farmers representing eight counties of eastern Oregon and two of southeastern Washington, a general agreement was entered into at Pendleton June 10 covering the wages to be paid for various farm jobs this season. The schedule provides that common hay and grain harvest hands shall receive $3.50 a day; stackers and loaders in harvest $4; header and combine harvester drivers $5; sack sewers on standard machines $5; cooks $3. These wages include board as well.

The meeting did not attempt to fix a definite scale of wages for such skilled labor as separator tender, engineer, tractor operators and the like, it being considered that the demands in each position of this nature should regulate the wages paid in large measure.

Considerable discussion as to limiting the length of day for farm labor was entered into, but no agreement on this point was reached. A vote was taken on a proposal to make a day 10 hours, but the resolution failed.

There was manifest at the meeting the belief that labor shortage was over-estimated so far as farms in Oregon were concerned, although it was agreed that other fields of industry, such as shipbuilding and war work in general, was taking a great percentage of the ordinarily available farm labor. Many farmers who have been somewhat retired for the last few years expressed themselves as ready to undertake to do regular farm work this season if necessary.

Among those attending the convention aside from the 75 or so farmers present were: Dr. E. O. Wilson, farm specialist of the department of agriculture, and Farm Help Specialists Lyons of Wyoming, Thomas of Colorado, J. C. Scott of Washington, M. O. Evans, supervisor of work of 11 northwest states; George Thometz of Idaho, and Watson of Utah, and J. W. Brewer, farm help specialist for Oregon, who was in charge of the meeting.

The counties of Oregon represented were Baker, Union, Wallowa, Umatilla, Morrow, Gilliam, Sherman and Wasco. Garfield and Walla Walla counties of Washington were represented.

## Ship 1000 Cars of Vegetables.

Vegetables and truck farming is one of the big industries in Walla Walla county. About 1000 carloads are shipped out in a normal year. The Walla Walla Gardeners' association, of which William A. Ritz is manager, controls about 80 per cent of the acreage.

This guarantee applies to live stock, except that we will not be responsible for claims for damages on acconut of disease in stock sold through these columns.

## *It Pays From Every Viewpoint*

Next week will mark the first observance of what ought to become a great day in America. Friday, June 28, is national thrift day, so proclaimed by President Wilson.

Amid all the horrors of this war there stand out a few things that will make the world better. One of them is the development of the spirit of thrift and saving. America needs that spirit, and it is slowly installing it in the place heretofore occupied by the spirit of carelessness and wastefulness. The people of America can well afford to eliminate 25 per cent of their spending. Even the most frugal can get yet closer to the simple life and better for it physically, mentally and morally—and financially!

It is good business for every one of us to save. Eliminate luxuries! Purchase only what is needed for efficiency in the conduct of business! Eat simple, wholesome foods! Dress comfortably and healthfully, but without costly and useless styles and nonessentials?

And let us put away the pennies and the dimes and the dollars that we can thereby save, investing them regularly in United States government securities—the thrift stamp, the war savings stamp or the Liberty bond. And let us not wait until national thrift day to begin. Begin now!

## *Inflated Prices Are Detrimental*

All over this land there is the declaration of dairymen that they can not afford to produce milk and cream for what they can get for it. There is the accompanying declaration on the part of the consuming public that it can not afford to pay even the present high prices. And now there comes a report that a 6-month-old dairy bull calf sold for $106,000 in the middle west the other day.

Can the dairy industry pay that price for any dairy animal that ever lived? What is $30 hay and $70 mill feed compared to prices like that for foundation breeding stock? What is $75-a-month labor, even inefficient labor, compared to that? What is the high cost of meals for the hired man and the family, compared to $106,000 bull calves that are not ready for service for several months yet?

Strictly good stock is essential to dairy success. No dairyman can afford to keep an ordinary cow now, much less an ordinary bull. But when it costs $100,000, or $50,000, or even $10,000, to get a strictly good sire, or the makings of one, the dairyman that needs the good stock to keep from going bankrupt can not afford to invest. He must necessarily accept the ordinary animal. If any prospective sire on earth is worth $100,000, the sire that can be purchased for $1000 is not worth having. He is a scrub, just plain scrub. There is no sire good enough to be worth 100 times as much as the sire that is good enough for the successful dairy of these turbulent days of the industry.

The question forces itself upon us: Are not the professional breeders or dealers who manipulate things to be able to give or to receive these inflated prices for individual animals doing the great dairy industry an injustice? The answer likewise forces itself upon us: They are.

## *Farm Labor Situation*

W. F. Calvert, in charge of the federal employment agency in Yakima, says that without being serious the present labor situation in his part of the country is what may be called "tight."

"There certainly is no surplus of farm hands," says Mr. Calvert. "Within the last 20 days we have found it difficult to supply all the requests for hands. The town jobs are not so hard to fill, but men and women do not seem to like country work. A compulsory labor law would be a big help."

Several Walla Walla county farmers report no difficulty in securing abundant help for haying. One man stated that he was paying $2.75 a day and had plenty of men. N. M. Williams says he is paying $3.00 for a 10-hour day, and has had more applicants for jobs than ever before.

"I would be perfectly willing to work my men eight hours if the others would do it," added Mr. Williams. "In the end the consumer would have to pay the extra cost of harvesting, however. He is the man who always pays in the end."

## *It Would Be a Wonderful Sight*

If the people of the northwest had an opportunity to see a great herd of hippopotamuses, a hundred head or more, corralled and up for inspection, what a scrambling there would be to get a view of them! Hippos are quite uncommon except for an occasional one in the circus menagerie.

But right here in our own state we have scenes just as wonderful. Suppose the people who live on Fifth avenue, or down in the slums of New York city, had an opportunity to see a hundred head of purebred Shorthorns or Holsteins or Herefords, or any other of the cattle breeds that are so common to this live stock growing northwest. It would be as wonderful to them as the wild animal show would be to us. It is hard to realize that there are hundreds and hundreds of people in the large cities of our own country who have never seen a cow, or at best have seen only one or two.

EVIDENTLY those philosophers who maintain that we are now entering the "woman's age," when women will hold the balance of power and will do pretty much as they please, are right. Women are everywhere taking up men's tasks. Women elevator operators are a commonplace. In Seattle women are going to work for the streetcar company as conductors. And at least one enterprising hotel, the Commercial, of Wenatchee, has replaced the ubiquitous bell boy with a bell girl. If the habit is well established by the time the war ends, possibly the men will take to doing the family mending, and to attending kensingtons.

NO man is so foolish as to think he can write checks against his indefinitely without bank account making an occasional deposit, but many of us think we can draw wheat and hay from the soil forever without giving anything in return.

LIVING and making a living are distinct aims in life; the satisfaction of living being largely the enjoyment of things you can not buy, while making a living gets you in the habit of enjoying only that which is bought with money.

WE'LL take a couple of dozen of those 6-months-old bull calves that are selling somewhere in Wisconsin at $106,000 each, as reported by recent dispatches.

ONE dime a day, put away in a cup in the pantry and invested in a war stamp each six weeks, would be nearly $20 in your Christmas stocking.

WHAT you have not done is of more importance to yourself than what you have done.

## *Solving the Farm Labor Problem*

The business men of Lowell, Ind., a town of 1800 people, will close their business houses two days a week during July and August, and the bulk of the merchants, clerks and professional men will help the surrounding farmers harvest their crops. Shortage of labor led to this decision.

This method of meeting labor shortage indicates a fine, patriotic spirit, but it would be a mistake to put too much dependence upon it. In emergencies it will be found much better, of course, than no labor, but the farmer would rather have the services of workers for a continuous or definite period, and nothing should be left undone to supply him with them.

In the state of Washington, the State Council of Defense is tackling this problem, we think, along wise lines. An appeal has been issued to city and town governments to pass ordinances that will discourage and even penalize loafing by able-bodied men. The pool halls are an enticement to idle labor in the cities and larger towns. They should be closed by ordinance during daylight hours.

More vigorous enforcement of the laws against vagrancy will also have a tendency to deter able-bodied men from loafing around the towns and of sending them out to hunt jobs in the harvest fields.

County commissioners and city and town governments can help solve the farm labor problem by suspending contract work that is not absolutely necessary. Road and bridge building, street improvements, etc., all draw labor from the harvest fields. Wherever possible public works should be carried over until after harvest, thus helping the cause of food conservation and distributing employment over a longer period for the benefit of the workers.

In the cities and the larger towns the Young Men's Christian association is organizing the United States Boys' Working Reserve, a splendid movement. It aims at the organization and direction of town and city boys between the ages of 16 and 20, inclusive, and holding them in reserve for calls from the farming regions.

We must not permit any food products to be lost anywhere for lack of labor. Full utilization should first be made of trained farm workers, and then if any gaps remain, they should be filled by drawing on such reserves as are best suited to the needs of the hour. If put to a pinch business should be suspended in country towns and the schools closed in the upper grades. But it will be better, before resorting to emergency methods, to work out ways for the fullest possible utilization of the idle and semi-idle men and youths of the country.

## *The Root System*

Several years ago, in my search for the causes of apple rosette, I made more than an ordinary study of the root system of apple trees. I dug around 600 trees in the Yakima and Wenatchee valleys, and studied the root systems of trees that had been dug up. In the Congdon orchards 150 trees or thereabouts had been dug out from places not adapted to orchard, and they revealed a close connection between certain root conditions and certain manifestations on the top. Lately we have dug out about 200 trees in our own orchard, most of them having grown to be so large that they crowded one another, and in order to grow better fruit we had to sacrifice some of the trees. My interest centered chiefly upon the relation existing between the top and the root systems, and certain conditions of the root as manifested in the top.

The principal offices of the root are to hold the tree in place and to gather food.

The fine feeding roots are the most abundant in a rich soil, being attracted by the amount of food distributed in the soil. The feeding surface of roots is near their ends. As roots become old and hard they serve only as channels for the conduct of food and as supports for the tree. Whatever injures the tender root hairs injures the feeding qualities of the root system.

G. L.

# Austria Tries Drive on Italy

## *May Be to Help Brace Up Morale of Austrian People*

After nearly nine months of comparative silence on the Italian front the battle has begun to rage there again, with Austrian troops trying a drive on practically the entire Italian battle line. At this writing it is hardly possible to estimate the magnitude of the fighting, but it is apparent that the Austrians have undertaken a major offensive against the Italians. Their first onslaughts, however, failed to do any serious damage to the latter, who were not surprised, They have, in fact, been surprised that the drive was not launched earlier. The opinion is freely expressed that the drive is primarily for the purpose of strengthening the public morale of the Austrians. It is reported that considerable discontent in that country is noticeable owing to the conditions brought about by the war, and by the desire of several of the Austrian dependencies for more liberal government. To what extent this will prove true is wholly problematical so far as the outside world is concerned, and should not be depended upon in the slightest degree in the calculations of the allies as a factor in the winning of the war.

There has been comparatively little fighting along the French front for several days. No advances of any consequence have been made by the Germans since their first great drive toward Paris more than two weeks ago ceased. The attempt to straighten out the line to the northwest of the River Marne was largely a failure because of the strong allied defense.

### Another Blow Is Sure to Come.

Where the next blow will be struck is not hinted with any degree of authority at this writing, though it may have been struck before this reaches the reader. But this fact is certain: Germany will strike again, and she will strike with her utmost power. The best that the allies have will be required to keep the Teutonic enemy from capturing Paris or the channel ports, either of which would be a disastrous loss, one that would require a million or more men additional at least from America to recompense for. The situation remains as it has for the past year—America must get the largest number of men possible and the greatest amount of military equipment possible to France in the shortest time possible. It is rapidly becoming recognized now that this country decided to enter the war at the latest hour when it was possible still to save the allied cause. England and France and Italy would have lost and the Hun hordes would have attempted an invasion of America. This can hardly be doubted by the most doubtful. Had Russia remained stable it is possible that the allies could have won without America's help, but not otherwise. To be pessimistic now is folly, but to be over-optimistic is criminal. Nothing but the most vigorous aid America can give, and that right now, can stave off defeat. Never was there a time when the word "now" meant so much. Strength to withstand the onslaught till after another winter is the great need. After that—well, after that remains to be seen, but this country can put something like 3,000,000 troops in France by next spring and equip them for the kind of combat that they are capable of. From then on, barring situations and developments that can not now be forecast in this rapidly changing world allied strength will increase until in time an overwhelming force will face Germany. But to falter during the next few weeks and months is to let all of Belgium's and France's and England's unspeakable sacrifice count for naught, to add ten years to the war or to actually kneel to German authority, the authority of inhumanity.

### American Army Losses Not Large.

The war department has issued an official statement showing that the total losses of the American army in France is now 8085, of which 3192 are deaths, 4547 wounded and 346 missing, the last figure including the prisoners in German hands. Of the deaths, 1172 were killed in action, 364 died of wounds and 1234 died of disease. It is shown that with 800,000 men transported from this country, only 291 have been lost at sea, they being on the two torpedoed ships, Tuscania and Moldavia. The loss of only 1234 from disease out of 800,000 indicates the excellent physical condition of the army and the care given them in camp, while the loss by wounds of only 364 out of a total of 4547 wounded indicates the rescue work that is being done by the Red Cross and other surgical and medical agencies.

### German Fleet May Come Into Open.

There is a growing belief that the German naval authorities are contemplating at no distant date the launching of a great naval offensive directed against the British navy and its allies. The most definite evidence of this comes through messages from Switzerland. Ever since the opening of the war the British fleet has kept the German naval forces with the exception of the submarines blocked up in German harbors. It is wholly problematiacal what course the naval offensive would take if launched, but there appears to be a strong sentiment of optimism among the naval authorities of Great Britain and America. Should such offensive be launched the American navy would throw its entire power, if necessary, into the combat, reserving only such portions as are necessary for home defense and operations against the submarines in local and allied waters.

### May Make U. S. Waters War Zone.

Reports from Berlin indicate that very soon Germany will issue a proclamation to neutral nations warning them against operations of their vessels in American waters, declaring the Atlantic coast of the United States a war zone where unrestricted warfare will be carried on in the same manner as it has been in the war zones of European waters. It seems hardly necessary, however, that such proclamation should be issued in view of the fact that many of the vessels that have been sunk by German submarines in American waters during the past two weeks have been neutral vessels. A formal proclamation could scarcely be a more effective warning than the launching of the unannounced submarine campaign.

### Sugar Limit Is Reduced Again.

In order to insure a plentiful supply of sugar during the fruit season for canning and preserving the national food administration has issued new orders reducing the amount of sugar that may be purchased for every day home use. No dealer may now sell more than two pounds of sugar at any one time to any customer who lives close to the point where the sugar must be purchased. Five pounds may be sold to a person living at a greater distance, such as a farmer living a few miles from the store at which he must trade. The former regulation permitting the purchase of 100 pounds of sugar per family for canning purposes is still in effect, however. Those making purchases for canning under this regulation must sign an agreement that the sugar will be used for canning purposes.

### Protest Increased Freight Rates.

The public service commissions of Oregon, Washington and Idaho have joined in a formal protest to Director McAdoo against the wholesale 25 per cent increase in freight rates made recently. They set forth that the agricultural industries of the northwest as well as the consuming public in general will be done a great injustice if the increased rates are allowed to stand. As has been previously pointed out practically all of the railroads operating in the northwestern territory have been making reasonable profits under the rates as they have heretofore existed. Justification for the increase is found, if at all, in the failure of the eastern roads to make a profit on their investments. The northwest makes its protest on the basis that its people should not be penalized for conditions that exist in other sections of the country.

### Unprecedented Harvest Wages.

The wheat harvest is now on in Oklahoma and Kansas and unprecedented wages are being paid. Six thousand workers are now in the Oklahoma harvest fields, and the going wage there is $3.50 to $4 a day, with board. In Kansas, where 30,000 workers will soon be needed, $4 to $5 is being offered.

### I. W. W. Trial at Chicago Continues.

The trial of more than 100 members of the I. W. W. charged with sedition and disloyalty is still in progress in Chicago, having continued already longer than it was believed would be required to complete the case when it opened. A great mass of evidence has been introduced and compiled for submission to the jury that is hearing the case. Much of the testimony has dealt with operations of the I. W. W. in the northwest, touching upon their alleged destruction of wheat fields, threshing machinery, lumber mills, logging camps and the like. No predictions is made as to when the trial will be completed.

### New Hemp Twine.

Professor R. A. Moore of the Wisconsin university, after completing a series of experiments to make twine from hemp, declares that these experiments are entirely satisfactory. The result of the new system of making twine will be to relieve the old sisal fiber situation which has carried prices sky high more than once. It is not improbable that all of the hemp states will report increased acreages. The estimates of hemp acreage for 1917 are: Wisconsin, 7000 acres; Kentucky, 18,000; California, 10,300; North and South Dakota, 7500; a total for the United States of 49,200 acres.

### Farmers Are Last.

A larger proportion of brokers than of any other occupational class reported incomes of more than $3000 in 1916 and farmers made proportionately the smallest number of returns, according to an analysis of income tax returns for 1916. One out of every five brokers made returns, but only one in 490 farmers. Nearly one-fifth of all lawyers and judges made returns.

### Another Liberty Loan Coming.

The U. S. treasury department has issued information indicating the coming in October of the fourth Liberty loan, which is unofficially announced to be a $6,000,000,000 issue.

### Get a Farm Service Flag.

The man, woman, boy or girl who stays at home and works hard to produce necessaries for the soldiers in Europe are entitled to real war service recognition. That is the idea back of the Washington Farmers' farm service war flag. It is pennant-shaped, made of the good old red, white and blue, and has a star representing the producing farm home. Small stars are added to represent each worker of that home.

.....

**Convenient Order Blank.**

THE WASHINGTON FARMER, ——————1918.

Review Building, Spokane, Wash.

Enclosed find five cents (5c), for which please send me a Farm War Service Flag (printed on enamel paper) with ..... extra small stars for farm workers.

Name .....

R. F. D. ..... Postoffice .....

Box ..... State .....

## *Washington Gleanings*

From all indications there will be at least 30 silos this season in Grays Harbor county.

A supply of 100,000 cutthroat trout fry has been promised for the streams of Grays Harbor county by State Game Warden Darwin.

County Agent L. S. Keyes of Cowlitz county reports that the newly organized Kelso Live Stock club is going in strong for poultry.

The Whitman county council of defense was recently organized at Colfax, with Dr. W. B. Palamountain as chairman of the new organization.

Keen interest in Dr. S. B. Nelson's talks an animal diseases in Clallam county during farmers' institute work is reported by County Agent M. R. Alleman of Clallam county.

The sheep school at the Washington State fair at Yakima will be held every morning between 10 and 12 o'clock. Among the lecturers will be Professor E. J. Iddings of the University of Idaho.

W. O. Freese, one of the pioneers of Lincoln county, has sold his ranch of 280 acres to Ben Jayne of Edwall, the price named being $95 per acre. Mr. Freese settled on part of this farm in 1882 as a homestead.

The stockholders of the Farmers' Union Mockonema Warehouse company held a meeting recently at Colfax, and a 40 per cent dividend was declared. Every one of the old officers was reelected for another year.

Reports from many sections indicate that there is greater tendency toward preparedness on the farms this season than ever before—preparedness in the way of early repair of farm machinery, early construction of silos and grain storage facilities, early laying in of fuel for winter.

Sunday picnickers from Bellingham are to be asked to hunt for sphagnum moss while spending the day in the woods. Whatcom county has been asked to supply 10,000 sphagnum moss dressings for the Red Cross, and the Bellingham chairman, George H. Bacon, has hit on this plan of facilitating the collection.

The agricultural class of the Castlerock schools, in their final list of shipments of moleskins, report more than $75 received by the school for pelts during the last winter and spring, not only representing a profit to the school children, but ridding farms of hundreds of pests. The money was invested in war and thrift stamps.

The school exhibit held recently at Doty was the largest of its kind in that part of the state. The work in manual training was unusually attractive. Otis Pendergraft, who is now in the army, had on display a buffet made of Honduras mahogany, valued at $600. A complete bedroom suite, valued at from $1100 to $2000, was also exhibited.

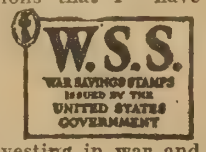
Fruit of many districts has again been hit hard by pestilence in the nature of frost. Many districts have escaped, but the losses merely go to show again that a farmer can not afford to have all his eggs in one basket. He must have two or more sources of income if he is to be successful year after year. No crop is certain every year, and neither is the price of every product adequate every year.

In spite of rumors that the potato acreage in all parts of the state had been reduced this year on account of unsatisfactory financial returns from last year's crop, conservative authorities in Yakima county now claim that premier potato district of the northwest has not decreased its acreage. It is estimated that there will be 12,000 acres in potatoes again this year. Last season's yield was about 2500 cars.

That the present attack of aphis on the alfalfa fields of Yakima county is one of the worst he has ever seen is the declaration of County Agent J. N. Price. The damage is worst on those fields which are being grown for seed, as these tracts are irrigated as little as possible. On the other hand, Yakima has not been visited by the green worms which are making the lot of the beet grower in Walla Walla county a hard one.

Twenty-four thousand acres of wheat are being grown in the Yakima country this year. This is a big increase over last season. A further indication of the same tendency is seen in the statement that out of 15,500 acres of new land put under cultivation this year, 7500 or nearly half, has gone into wheat. Part of the rest of this new land has gone into cereals, also 3000 acres being planted to barley and 1000 acres to oats.

Complaints are heard from many sources that, although there is real need for total abstinence from the use of wheat until after harvest, bakers are not required to put a totally wheatless bread on the market and the so-called Hoover recipes for war breads all, or nearly all, call for at least half wheat flour. Some one who will prepare a repipe for a "light bread" made entirely out of substitutes will do many loyal patriots a favor.



Employers of labor and students of the labor situation expect high wages in the harvest fields of the Pacific northwest. The Spokane agent of the United States employment bureau forecasts a $4 minimum for the grain fields of eastern Washington and northern Idaho. He bases this prediction on a study of wages in the harvest fields and lumber camps of this region for the past 12 years. In harvest time men come out of the lumber camps, and there has always been a close relation between the wages paid in the woods and the harvest fields. If lumber camp wages were $2 a day without board, he says, harvest wages were $2 a day and board, and as lumber camp wages are now $4 without board, he expects harvest hands will get $4 and board.

# Have Cake and Eat It, Too!

## *With W.S.S., Uncle Sam Makes This Possible*

The different departments of the Farmer are edited with special reference to those who are interested respectively in live interest to this issue, and we have stock or orchards or family circles, and so on. Here is an article that is of special value and taken the liberty of bringing it into the first part of the paper, although it is immediately addressed to the large number constituting the "family circle," who are always glad to hear from Mrs. Barland.

Dear people of the Family Circle: I have been so busy lately along active lines of war questions that I have scarcely had time for other thoughts, but between times I am wondering if my farm friends are alive to their privilege, not to speak of their duty, of investing in war and thrift stamps. Here is a case where we can have our cake and eat it, too; that is, we can buy thrift stamps from week to week, converting them into war stamps as the cards are filled, comfort ourselves with the knowledge that we are helping the government all the time, and by and by get back all we have loaned to Uncle Sam and take our compound interest. And this is the smallest part of the advantage of thrift stamp buying. Do you know, dear folks, that we people of the good old U. S. have been woeful spenders and very wasteful.

Our country is so great, so wonderful in providing everything we need in such abundance that we have forgotten what our forefathers endured and how they denied themselves to give us their country. We have forgotten all about brotherhood of man. We have declined to be interested much, in any one outside of ourselves and our own families. Worse than that some have not extended their interest to reach the needs of their very own mothers. To prove my statement I will tell you that I have visited an old lady in a county poor house in the state of Washington who has raised 13 children and she does not know the whereabouts of one of them. Can you imagine anything any more selfish than that?

That is extreme, I am sure, but I have known several cases almost as disgraceful. Are you wondering what all this has to do with thrift stamps and thrift generally? Well, the idea of the stamps or war savings is two fold: It furnishes money to the government to carry on the war and teaches the present generation to save. As I said before we have been a selfish and wasteful nation. We do not save methodically, we do not teach our children to save. Too many reach old age dependent on charity.

Go where you will, in town or city, and notice how the children clamor for pennies for candy and gum and nickels and dimes for the movies. It is interesting to me to watch children these days in families where the thrift stamp habit is being fostered. A case in point comes to my mind. The oldest girl won a prize in college for the highest scholarship. She immediately invested in two war stamps. The next younger received as a graduation gift $5. She immediately bought another war stamp. The youngest, a boy of 12 years, had a birthday and received $2.50 as a gift and he immediately added 10 thrift stamps to his collection. Now as I said before we have still another advantage in making this investment in W. S. S. (Everybody in the United States by this time should know that W. S. S. stands for war savings stamps). By and by, after we make a perfect job of licking the Germans and our boys come marching home, there must come a great readjustment of all commercial economic conditions. About all the money in the world is circulating now and every one can work if he wants to. But after the war is over and all the vast armies are once more back in civilian life then will come changes. There will be more people for jobs and wages will be less, without doubt, and especially prices for produce will be less. About this time our dear old Uncle Sam will put his hand down into those striped trousers of his and hand out good hard cash for these war stamps, which will come in mighty handy and will make of us a thrifty nation instead of being struck all of a heap with a hard times panic.

Another thing to consider is this: The purchasing power of a dollar now is very small. One can hardly see what can be bought for $1, because war-time prices are always inflated, but by and by when the war stamps come due prices will have been adjusted to somewhere near a proper proportion, and then, when we cash in our stamps we will be able to buy much more for a dollar than now, so we will have, in addition to what we have put into stamps, our compound interest and all the additional purchasing power of our money. But best of all we will have formed the habit of saving. We will have learned that nickels and quarters saved soon makes dollars and that we can go without a lot of things that do us no good.

And now, dear friends, let us be thrifty and sensible and buy these stamps week by week, all we possibly can. Let us make up our minds that we will do it and plan accordingly, for this is now our war for our freedom and for our country. Our government is just us, you and I and all of us, and we are simply helping ourselves when we aid the government.

ALICE BARLAND.

### Mike Horan's Purebreds.

In an article in The Washington Farmer on the notable progress of the Wenatchee valley, and mentioning the fact that live stock was more and more dividing the attention of formerly exclusive orchardists, it was incidentally mention: "Mike Horan, for instance, has a fine herd of grades with a sprinkling of purebred Ayreshires."

According to a letter received from Mr. Horan, he has a perfect right to take exception to this sentence. He says: "Of grades and Ayreshire cattle I have none. I have not a grade cow on the ranch, nor bull." The Washington Farmer will also take its earliest opportunity of accepting Mr. Horan's invitation to make a visit to his farm and "the largest herd of purebred white-and-black cattle in the Wenatchee valley."

### Hats Off to Garfield.

Garfield county claims the honor of first reaching its war savings stamp quota in the present campaign, so far as this state is concerned. With a quota of $88,060, the people of that county under the leadership of L. M. Knettle, had subscribed nearly $97,000 for stamps prior to June 1. The first state in the nation to go over the top was Nebraska. With a quota of $26,000,000, a total of more than $30,000,000, has been subscribed and the greater part of it already paid in.

### GREAT WHEAT LAND.

#### Walla Walla Makes Big Records.

When Mother Nature dealt out the supplies of plant food to various northwestern areas, she must have absentmindedly spooned out a double dose for the wheat lands of Walla Walla county. Consider, for instance, the case of the old Russell farm, on which in 1859 was planted wheat which may have been the first grain of the kind raised in Washington, and certainly was not far removed from the first. A few years ago this farm was owned by Frank Richmond, who reported a 64-bushel yield.

One of the foothill farms, owned by the Drumhellers—it was George Drumheller, whose $200,000 wheat check made everybody's eyes blink a few years back, you remember—has been farmed for 30 years, and during the entire three decades only two crops have averaged below 50 bushels to the acre.

And while we are on the subject, it might be added that Walla Walla, according to W. H. Reed, formerly state grain commissioner, is the first part of the state in which the now famous "Bluestem" was raised. The seed was brought to America from Australia, and soon established such a name for itself in Walla Walla, both because of its milling qualities and its ability to yield well in light soils, that it was sought for all over the country.

# A Western Washington Berry Farm

**Part of Charles Hemming's two-acre berry farm at Puyallup, Wash. Mr. Hemming finds that it keeps him busy seven days a week doing the work, indoors and out, on this small farm. The entire place is in applepie order, indicated by the corner shown in the photo.**

# Washington Boys in War Service

From the Twice-a-Week Spokesman-Review.

**EDWIN L. CALDWELL, Prosser, Wash.**—Is now in France, with the headquarters company of the 41st division. He enlisted August, 1917, with his brother, George Caldwell, who died in France March 4. His parents, Mr and Mrs. J. W. Caldwell, live on a farm near Prosser.

**JAMES E. WILLIS, Tekoa, Wash.**—Was called for service at Camp Lewis, October, 1917, where he now is a first class private, in the headquarters detachment, 216th engineers. Before entering the army he was engaged with his brother, J. H. Willis, in farming near Tekoa, Wash.

**RAY T. KERSHAW, Wenas, Wash.**—Entered military service October, 1917, and now is serving in the veterinary corps, Camp Kearney, Cal. Before entering the army, he was engaged in agricultural work in the Wenas valley. His parents are Mr. and Mrs. R. H. Kershaw, farmers, near Wenas.

# Wheat Minimum $2

## Julius Barnes Confirms Report in a Special Message to the Washington Farmer.

The grain buying corporation of the national food administration is working out a plan, which, if carried out, will guarantee to every farmer, no matter where located, at least $2 for his wheat. This ruling will not affect the northwest in any great degree, if at all, as $2 a bushel or more is now guaranteed under the present regulations, but if the proposed additional regulation is completed it will carry out what most people believe to have been the original intention of congress when it passed the $2 wheat price act a year or more ago.

Upon receiving an unconfirmed report that a flat rate of $2 a bushel was to be made to all growers everywhere, the Washington Farmer wired Julius H. Barner, head of the U. S. grain buying corporation at New York as follows:

"Dispatch from San Francisco June 16 quotes R. A. Levin saying grain corporation is planning $2 flat wheat price f. o. b. shipping point. Is this action contemplated, and if so, what territory will be affected?"

To this inquiry the following telegram was received from Mr. Barnes:

**"Referring to your message, we are trying to work out a plan by which $2 per bushel for No. 1 grades in store at public elevators, or, where no public elevators exist, free on board outgoing cars, should be MINIMUM price at any point in the United States least advantageously located as to freight rates in reaching terminal markets. We expect to succeed in working out such a plan and hope to have details prepared in the very near future."**

### GROWING TWO CROPS.

#### At Same Time On the Same Land.

By CARL J. MENZE.

I have read with interest the account of an English farmer who raised two crops on the same piece of land at the same time. Under certain conditions, I believe that this method would prove successful in localities west of the Cascade mountains, where there is plenty of moisture, if a few experiments were made to determine the exact time to plant the grain and what variety to plant, and if one had the right machinery.

A few years ago we had a small piece of ground which we seeded down with clover and timothy, with spring wheat as a nurse crop. As the wheat was seeded late and we were afraid it woludn't ripen that year, we cut it for hay. After the hay was off the ground and the grass was well rooted we grazed the piece for a short time. The following winter was mild and the wheat, not having produced seed, started to grow with the clover and timothy. We cut this combination for hay. A point that I can recall to mind in particular was that the heads of the wheat were above the tops of the clover and timothy and therefore could be cut separate if one had the right machine.

Another point was that the wheat was not fully matured for grain when the hay was cut. The difference between this method and the method of the English farmer was that he planted a winter cereal. However, the English farmer was experimenting with a definite end in view; we were merely following an established custom, and on reading the account I realized both methods had much in common. Just what variety of grain to plant so that it would ripen and could be cut with the clover and timothy, and when to plant are points that could only be determined by observations, experience and practice.

### Coming Events.

June 28-29—Convention Lincoln County Farmers' union, Odessa, Wash.
June 28-29—Dairy institute, Wenatchee, Wash.
August 19-25—Convention National G. A. R., Portland, Ore.

**Fairs, Shows, Exhibits.**

September 2-7—Spokane Interstate fair, Spokane, Wash.
September 16-21—Washington State fair, Yakima, Wash.
October 1-6—Western Washington fair, Puyallup, Wash.
November 7-13—Northwest live stock show, Lewiston, Idaho.

**Live Stock Sales.**

June 26—Guernseys, E. R. Brady, Satsop, Wash.

# Black Soil of the Ukraine

## *Maintain Production Without Artificial Fertilizers*

We find the name Ukraine mentioned often in the dispatches now in connection with Russia's woes. It is a vast, rich region of southern Russia, given largely to the growing of wheat and other grains, and since the kaiser's armies are in control the hungry German people have eager hopes that it will afford them bread.

The production of wheat from the black soil of the Ukraine has been maintained for centuries and yet the soil has never been artificially fertilized. It is said to be today as rich in the qualities which nourish and produce great crops as it was hundreds of years ago.

What is the secret of that inexhaustibility? Some observers say it is nothing more than simple dust, and that theory is now being tested out on a farm near Detroit, Mich.

In the course of the discussion an American who has gained high reputation in research work said that it would probably be found, if scientific investigation were made, that these black lands are plastic or soft, excepting in the very dry season. Then they become dry and crack and the surface, by this natural action of the elements, is covered with the finest kind of dust particles. This dust, by certain chemical attractions, draws from the atmosphere carbonic acid gas, absorbs it and in that way communicates it to the soil. There is no other explanation of which men of science have any knowledge of something that has been regarded as a mysterious phenomenon associated with the unimpaired fertility of Ukraine black lands.

It occurred to scientists, after the war began and the Ukraine began to bear such an important relation to it, and especially in view of the scarcity of fertilizers in the United States, that it might be worth while to make an experiment here. Some of the farm lands of Michigan are very rich and yet it has been found necessary, in order to secure the highest production, to fertilize them artificially. Would it be possible, scientists asked, to coax nature to furnish the ferfilizing quality that is necessary.

The experiment was made by converting ordinary clay into dust or the smallest particles possible and, having done that, by depositing a small quantity of this dust upon the soil. It was also necessary, in order to make comparison or to perfect the experiment, that a part of the farm should not be treated in this way. The dust was sifted over a portion of the farm and then in due time corn was planted. So, also, corn was planted in an adjacent lot which had not been treated in this monner. To the gratification of those who were making the experiment, the corn planted in the plot furnishing the test sprouted earlier, grew rapidly and gives promise of coming early to maturity and of being in a very healthy state.

Today the corn on that portion which was to furnish the test is considerably more than a foot high; the corn in the other portion is only two or three inches high. The experiment is regarded as giving excellent promise of furnishing a formula whereby farmers may in the future be able to rely upon inexhaustible natural resources for the fertilization of their farms.

This experiment is due to the experience of American scientists who visited Russia shortly before the European war began. They were entertained by scientific men of Russia. At one of the gatherings discussion was centered upon the wonderful black lands of the Ukraine district.

The theory is not entirely new to the Pacific northwest, for the thought has frequently been suggested that favored areas of the Inland Empire enjoy soil enrichment from action of the winds and dust. C. L. Smith, agriculturist of the O.-W. R. & N., has advanced that theory as possibly explanatory of the long-maintained fertility of the wheat lands sloping up toward the Blue mountains in Walla Walla and Garfield counties of Washington.

## ATTACK CATERPILLARS

### Should Lose No Time in Delaying.

The time to destroy what is known as the tent caterpillar is while he is "tenting," says a farm pest expert. While it is probably late for any warfare on this pest in most localities of the northwest, there are still some that can be destroyed. They are known as tent caterpillars because they make their temporary homes in little tent-like webs on the trees, rose bushes, berry bushes and the like. If they have developed a little they may be seen crawling about on the surface of their little tents and in a short time they do serious damage to the tree or shrub on which they live, being voracious eaters of leaves. At the time they first appear on their tents or just before, a match, assisted by a piece of paper on the end of a pole, if the pests are out of reach, is an excellent weapon of offense against them. The expert advises that everybody take care of his own trees and shrubs, thereby preventing the spread of the pest.

## Get Bulletin No. 942.

The United States department of agriculture is urging clover seed growers in the northwest to send in their names for copies of farmers' bulletin No 942, which deals with the clover flower midge, one of the most destructive clover seed pests known. While this pest may not be troublesome in many localities of the northwest, farmers who gro wclover are urged to watch carefully for it in order to begin a systematic campaign against it as soon as it is discovered. The pest originally appeared in eastern and central states, but of recent years has been discovered moving westward. The pest is found as a tiny maggot in the clover blossoms during the springtime. This maggot is the clover midge in the larva stage. The department of agriculture says that the clover blossoms infected are easily distinguished by their imperfections when inhabited by the pest. They have a ragged appearance where any considerable number of the little wrigglers are present. One of the methods of control advocated is the prevention by pasturing or otherwise of early spring blossoming of the clover.

## FEED DRY MASH.

### Would Regulate Poultry Feeding.

The federal food administration is doing its utmost to enable the poultryman to feed his flock without the use of as much grain as he has heretofore been accustomed to use. The administration recommends reducing the amount of whole or cracked grain feed and the substitution of an increased amount of mash made from the by-products of the coarser grains.

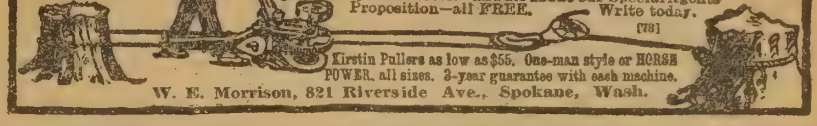
The present regulations prohibit feed dealers having on hand more than 60 days' supply of mill feeds. While this would permit the farmers to gradually lay in considerable of their winter supply, it is urged that no great effort be made to do this during the hot weather as there is danger of spoilage, but it is urged that as the cooler weather of fall comes on farmers undertake to lay in very liberal proportions of the winter requirements, especially of the coarse feeds and their byproducts. The administration makes no forecast as to the actual cost of poultry feeds during the coming year, but promises that they shall be more nearly in conformity to the price of the product from which they are made than has been the case heretofore.

### Actors to Do "Bit."

American actors are going to France to entertain American soldiers in American Y. M. C. A. sandbagged huts close to the front.

**Try It 30 Days Free**
**Don't Send Any Money**

To prove Kirstin makes the most powerful, speedy and efficient Stump Pullers, we will ship you any size or style on 30 Days' Free Trial. Send no money. When Puller comes, hitch it to the biggest stumps you can find—let it prove that it will do the hardest work easier and quicker. If satisfied, keep Puller, take a half year to pay, or if not, return at our expense.



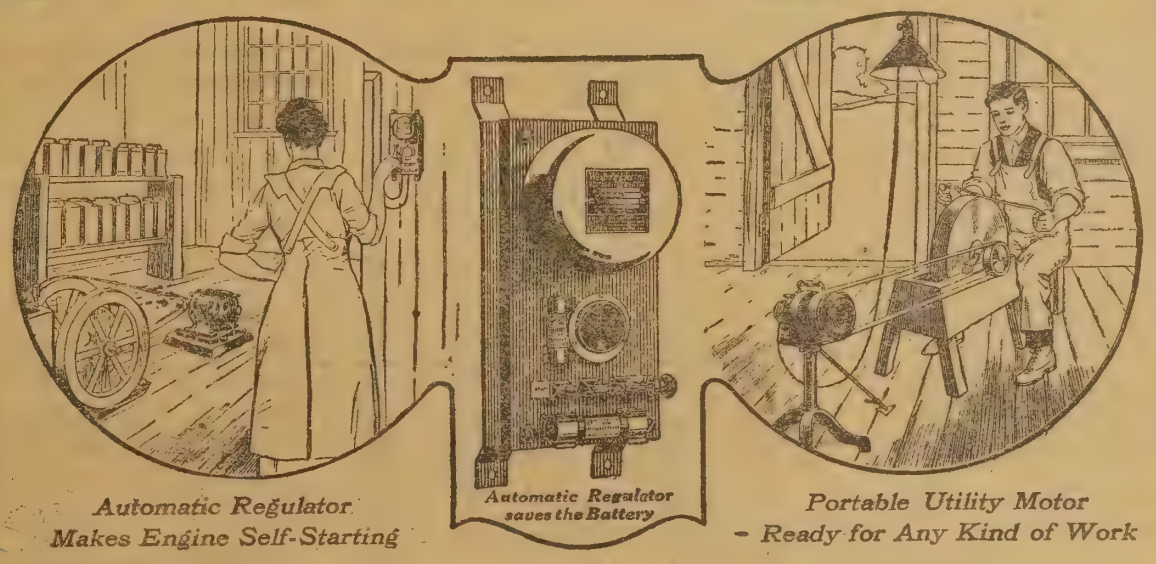
**Send for Free Book**

**One Man Alone Pulls Any Stump**

**Kirstin One Man Stump Puller**

operates on a wonderful leverage principle. One man alone handles and operates. Just a few pounds on the handle means tons on the stump. When stump starts throw machine into high speed and out comes the biggest stump, roots and all. Positively no other machine like it.

Send for most valuable Stump Puller Book ever published—pictures—prices—terms—and all about our Special Agents' Proposition—all FREE. Write today. [73]



Kirstin Pullers as low as $55. One-man style or HORSE POWER, all sizes. 3-year guarantee with each machine.

W. E. Morrison, 821 Riverside Ave., Spokane, Wash.

# *Western Electric*
# POWER and LIGHT

*Automatic Regulator Makes Engine Self-Starting*

*Automatic Regulator saves the Battery*

*Portable Utility Motor - Ready for Any Kind of Work*

THE *automatic regulator* device on Western Electric Power and Light is found on no other electrical plant. This exclusive feature places this outfit in a class by itself.

This wonderful little device simplifies the making of electricity and represents an entirely new method of charging a storage battery.

It removes the human element and the chance of overcharging the battery; thus insuring longer life to this—the most delicate part of every lighting system.

It does away with the complicated switchboard and makes this plant unequalled in simplicity of starting and operating.

## Uses Any Engine

And, best of all, this Western Electric plant will operate successfully with any kind of an engine. If you already have one you can use it with this outfit.

*Let us tell you about this plant, and how easy you can get electricity on your farm. Mail the coupon for Booklet.*

## Community Bull Association.

The most practically organized and the most harmonious and successful community bull association in the United States is the Jersey Breeders' association of Hermiston, Ore. This assertion was made by Mr. Wyhkues of the United States department of agriculture, who has traveled extensively over the dairy regions of the country. The name adopted indicates the breed selected, as it is purely a community bull association. The members are divided into blocks, each member paying $5 a share and each share representing one cow. No bull is allowed to serve more than 65 cows and younger bulls are limited to a smaller number. A board of directors, consisting of one representative from each block, with the officers, is the governing body.

When the association was organized it had the good fortune as well as good judgment to secure two high-class bulls from Ed Cary. One more has since been purchased from Mr. Cary and one from D. C. Howard of Cary breeding. One has been purchased from D. Brooks Hogan of Ladd breeding—Golden Glows Chief strain. It is doubtful if five better bred bulls along producing lines can be found in any one community in the northwest. Each bull is used in one block two years, then changed, No. 5 going to No. 1's place, No. 1 to No. 2's place and so on around the circle.

The first heifer to freshen took first place in the show ring and first in the milking contest in her class at the dairy cattle show at Hermiston. It can be seen that there is enough line breeding to make most satisfactory crosses. There were no registered dairy cattle on the Hermiston project when the association was formed. There are only a few pure-bred Jersey females yet, but there has been a remarkable improvement in dairy cattle since the shows and the bull association were started. The constitution and by-laws of the association were drawn up by W. H. Kerli, U. S. field dairyman, to whom is due much credit for the association's success.

When the Hermiston irrigation project was opened, fruit growing was the paramount idea. But now there is great interest in dairying. A good creamery in Hermiston is supported almost entirely by the cows on the project.

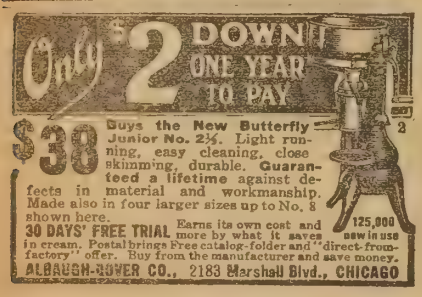
There were about 6500 acres in cultivation on the Hermiston project last year. Of this 4049 was in alfalfa and more land is going into alfalfa every year. Over 1000 acres of alfalfa are in orchards and this, of course, is not solid alfalfa. Alfalfa grown last year amounted to 14,000 tons. There were 822 dairy cattle on the project, exclusive of calves, according to the census of the reclamation service.

The following are the directors of the Jersey Breeders' association: George Cressy, president; George Ellison, vice president; C. M. Jackson, secretary and treasurer; W. H. Starr, director block 1; F. P. Phipps, director block 2; C. E. Spencer, director block 3; P. P. Sullivan, director block 4; William Bensel, director block 5. H. A.

## To Put Jersey on Test.

A. Adolphson of Chehalis, Wash., is putting his good Jersey cow, Golden Lactea 3d, on official test. Last year when she freshened in January she produced 94 pounds of fat, or 110 pounds of butter, but inadvertently all of Mr. Adolphson's records were lost and his tests were all discontinued. Golden Lactea 3d is now 10 years old and, although not specially prepared, it is Mr. Adolphson's desire to see what she is capable of doing, before she is too far past her prime.

Mr. Adolphson now had 12 purebred Jerseys. One daughter of his herd bull, St. Mawes of Oak Springs, milked 34 pounds with her first calf. Besides the herd bull and one cow of Ed Cary breeding, Mr. Adolphson has a few of the Adam Stevens and Ladd Breeding and has a good producing herd.



Mr. Adolphson is a strong advocate of silage as a cow feed. His corn matured well last year and he got better results from silage and alfalfa hay than with any grain or mill feed and good home grown hay. He says he can grow silage more cheaply than kale, besides it takes time in the winter to cut kale and the tramping injures the ground, to say nothing of the discomfort. Mr. Adolphson is inclined to believe that vetch and oats with silage will give as good results as alfalfa hay, if rightly cured. It is sometimes hard to get them cured just right in the Chehalis valley, but Mr. Adolphson expects to this summer. He uses a mechanical milker and finds it helps greatly in solving the labor problem. H. A.

## Tests 480 Cows During May.

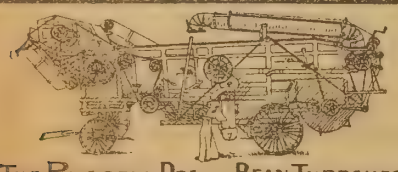
During the month of May there were 480 cows tested in the Stillaquamish (Wash.) Cow Testing association, of which S. Shoultes is the official tester. The average pounds of milk per cow is 826.4 and the average pounds of butterfat per cow, 36.22. The average feed cost per cow was $5.41. One hundred forty cows produced over 40 pounds of butterfat, one of these producing over 70 pounds and 12 between 60 and 70 pounds.

Nine of the fifty cows were owned by W. G. Grimm; C. Olson, 7; Max Eitzenberger, 6; Hans Tompsen, 5; C. Tompsen, 5; Furness, 3; J. E. Wrage, 3; J. Knutson, 2; F. H. Neitfield, 2; Strotz, 2; Stubb, 2; Weerda, 1; Schloman, 1; Coe, 1.

The three highest herds for butterfat production are owned by Max Eitzenberger, Hans Tompsen and C. Tompsen.

YOU CAN MAKE MORE MONEY
with cows if you have the large yielding, profitable purebred
HOLSTEINS

Others are doing it.



Their enormous yields of milk and butterfat make them extremely profitable. Dairymen throughout the whole U. S. are getting rid of their scrubs and purchasing purebred Holsteins.

Purebred Holsteins have been definitely proven the most profitable breed.

Your need of a
DE LAVAL
CREAM SEPARATOR
is greater right now than ever before

These are the days of the full milk pail.

But if you are trying to get along without any cream separator, or with an inferior or half-worn-out machine, the more milk you get the more cream you lose.

And no farmer can afford to lose even a little cream when butter-fat is selling at from 40 to 50 cents a pound.

With butter-fat at present prices, and our country begging us to stop waste, "cream slacker" methods of skimming milk must go.

Get a De Laval right away and put all the cream in the cream can.

There is no other cream separator that can compare with the De Laval in clean skimming, capacity, ease of operation, freedom from repairs and durability.

Order your De Laval now and let it begin saving cream for you right away. Remember that a De Laval may be bought for cash or on such liberal terms as to save its own cost. See the local De Laval agent, or, if you don't know him, write to the nearest De Laval office as below.

DE LAVAL DAIRY SUPPLY CO.

Clean and Clear as Water

Awarded Gold Medal Pan.-Pac. Expo.

For Milking Machines

B-K keeps rubber tubes and teat cups sweet and clean. It penetrates milk solids and makes milker parts easier to clean—kills the bacteria that spoil the milk.

B-K leaves no taint or taste of itself—makes rubber parts last longer—does not injure metal—is the cheapest in actual use. Sold under absolute guarantee.

Recommended by All Milking Machine Manufacturers

B-K has been used by thousands of milking machine owners, including certified milk producers, with complete satisfaction for over six years. It is the original purifier.

Get B-K today—end cleaning troubles and sour milk losses. If your dealer does not have B-K, send us his name with your order. We have a dealer near you.

Send for information — "trial offer" — and dairy farm bulletins.

# Sheep Good Investment

By J. R. STOTTS.

Will the correlation of sheep raising with agriculture pay? The farmers of the country immediately surrounding Meridian, Idaho, which has become noted throughout the Pacific northwest in recent years as one of the leading purebred sheep sections of Idaho, Oregon, Washington and Montana, say that it will. They are very generally engaging in it upon an extensive scale, but to such an extent as to make it commensurate with their agricultural operations. From 20 to 50 sheep are to be found upon the majority of the farms in the Meridian section, and the movement to rehabilitate the sheep raising industry is of constantly increasing proportions. The farmers engaged in this industry are finding sheep as good an investment as, if not better, than cattle, and they are more easily handled. Two crops are derived from them—meat and wool. Moreover, the industry promises to be of increasing remuneration.

It is the production of fine purebred sheep for men engaged in raising sheep on extensive lines that the farmers of this section are emphasizing. Among the farmers engaging in the industry are Colonel Elias Marsters, Leo Marsters, Daniel Barker, A. R. Stalker, George V. Leighton, A. R. Estes, J. R. Clark, Charles Cairns, Jay Brown, Charles Stephenson, George Nourse, Frank Nourse, Logan Grice, D. M. Beery and a Mr. Dunton. In June, 1916, Mr. Clark purchased five ewes, with lambs at their sides, paying for the flock $100. In April of the following year he bought five more ewes for $125, and in November of that year he sold the sheep, and for them and the wool he secured he received the sum of $725. The wool more than paid for the feed of the sheep during the time Mr. Clark kept them. He estimates that the cost of the feed for a sheep is about 2 cents a day, and it is commonly estimated that one acre of pasturage will support 10 sheep. In past years the problem of marketing the wool has been a great one, but through cooperative methods it has been very largely solved. Last year those engaged in the industry in the Boise valley organized what is known as the Baise valley Sheep Growers' association, and, through pooling their wool clips, they received 63 cents a pound, considerably more than the prevalent price. A pool has been formed again this year by the members of the association, of which the total amount is approximately 82,000 pounds, with pooling depots at Meridian, Nampa and Caldwell. The officers of the association are as follows: President, M. Sebern of Nampa; vice president, S. L. Kennedy of Nampa; secretary, C. H. Eagleson of Boise; treasurer, Charles Cairns of Meridian.

## Veterinary

Dr. S. B. Nelson

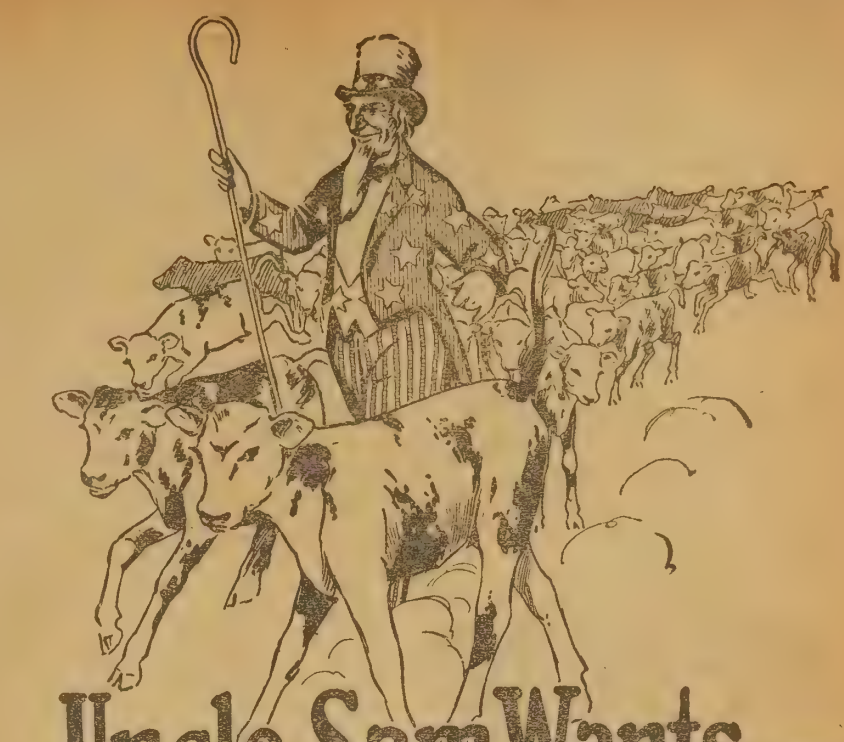
**Have to Use Milk Tube.**—I have a cow that we have had to take the milk out of one teat with a milk tube for about six weeks, ever since she has been fresh. It seems to be just in the end of the teat. Milk is as good as any milk. Is there any way of opening up the hole in teat so that we will not have to use the milk tube? W. T., Leavenworth, Wash.

Try dripping the teat in tincture of iodine. Then go to the jeweler and buy the largest violin string that you could possibly get. Tie a knot in one end; cut off three inches. Place this piece in a 10 per cent solution of carbolic acid and leave it there during the time that your are milking. Immediately after milking pick this up by the knot and dip it in boiled water, rinsing it. Then insert it in the teat after you have dipped the teat in tincture of iodine. Leave it there until the next milking period, and repeat. This may give you the relief desired for the cow.

**Cow Won't Get With Calf.**—I have a cow that won't get with calf. She is 7 years old and has had four calves. What could be done for her? F. S. S., Irby, Wash.

There are three or four things that would cause the trouble mentioned. Some of these can only be remedied by the services of a man especially trained to recognize them and to perform the operation necessary for the treatment. The others sometimes yield to medical tretament, and for that reason I am going to suggest two treatments for you to try. You can try one first and then the other if the first one fails: The first is the easiest treatment. Put a cake of yeast in a quart of water and place this on the back of a stove and allow it to ferment. Use this as a vaginal injection the first and second day prior to breeding. The second treatment is known as the sodium bicarbonate treatment. Put a teaspoonful of sodium bicarbonate into a quart of lukewarm water, or rather warmer than lukewarm, and wash out the vagina with this solution two or three days prior to breeding the animal.

**Blood In Milk**—I have a heifer two years and four months old that has a fine heifer calf seven months old. The last three weeks her milk has had just a little blood in it. She is with calf again five months. She has been chased quite a little. She is in the best of health. We feed her cooked potatoes with bran and shorts mash twice a day. She runs in the pasture during the day and we keep her up at night. It is the milk she gives in the evening that is so bad. The morning milk has scarcely any sediment. She slipped in the barn and fell down about four weeks or so ago. Would that cause such a condition?—A Subscriber, Worley, Idaho.



I would suggest that you give the heifer one pound of epsom salts in three quarts of water. Then, beginning the following day, give her one teaspoonful of sodium hyposulphite in a pint of water once daily for 10 days to two weeks. I hardly believe that the slipping in the barn had anything to do with the appearance of a little blood in the milk.

**Milk the Heifers.**—I would like to know what you advise in the following case: I have two 2-year-old cows, just calved. Would there be any difference by allowing the calves to run with them as to being good milkers another year, or would they be better milkers if the calves were taken away and raised by hand? O. B. M., Rosemont, Mont.

It makes all the diffenece in the world whether or not a young cow is allowed to nurse her calf or whether a young cow is milked. If you wish to make milkers out of the heifers take the calves away from them and milk the heifers as long as you possibly can, 10, 11 or 12 months if possible, the first year, having them, however, on very good feed during this time. You must, of course, carry over the breeding period in order that the milking period will be extended. Breed them so that the milking period will be lengthened. At the end of the milking period they should rest two months. That will mean that there should be possibly 15 months between the first and second calving.

**Blind Teeth**—I have a young sow and her pigs have teeth called blind teeth. They were born with them. Some said they should be pulled, others say not. Should they be pulled? When sow doesn't give enough milk should cow's milk be given when real small, 2 or 3 days old? W. G. H., Eagle, Idaho.

It is not necessary to pull the small milk teeth. They will be forced out at the proper age of the pig. If the sow does not give enough milk you will have to either change her feed to more milk-producing substances or you will have to try and raise the pigs by hand. This latter has often been done.

Uncle Sam Wants an Army of Calves

To make into beef, fats, hides.

Raise calves on Lilly Calf Meal. It takes the place of milk because it has all the necessary elements for calf nutrition.

It is not only a scientific, but it is common-sense food, endorsed by Pacific Northwest dairymen everywhere. Dealers sell it.

# POULTRY

Write to the Editor.

JAMES DRYDEN,
Editorial Contributor.

Eggs have been "legal tender" long enough for groceries. Make something else legal tender now and eat the eggs, which will help win the war.

Eat, can or market the surplus roosters. They are eating food and fertilizing the eggs, and the fertile egg does not keep well in warm weather.

The business in frozen eggs is assuming large proportions. Millions of eggs are checked or broken when they reach the market in the cities, and large numbers of these are now frozen and sold to bakers and confectioners during the season of high prices. They are usually put in large cans holding 30 pounds minus the shells. In some cases the whites and yolks are canned separately. On the 1st of May there were some 10,000,000 pounds of such eggs in storage.

The warm weather and the broody hen together waste enormous quantities of good food—eggs. Prevent this wastage by gathering the eggs twice a day and put them in a cool cellar. Then shift the broody hen to another sector.

J. D.

## Table Fowl

### Edward Brown Urges Production

The lectures of Edward Brown, the renowned poultry authority of England, or rather of the world, were of great interest to all poultrymen and students of real poultry husbandry in the northwest. He spent a few days each in Idaho, Washington and Oregon, and then went on to California, and those who had the pleasure of meeting him and hearing his lectures regretted that his stay was so short.

This was Mr. Brown's first visit to the Pacific coast, but several years ago he had visited the eastern states and had made a report on the poultry industry in America to the British board of agriculture. This report and his reports on poultry conditions in various European nations before the war are of great value to students of poultry culture everywhere.

Mr. Brown is essentially fundamental in his poultry lectures. He is after permanent results. He gives no attention to fads, and he brushes aside methods and year-old notions that have not been put to the test of time. He places much importance on climate and soil, and said that the Coast country, with its humid, mild climate, was better fitted to the production of a superior chicken than the large middle west country and the prairie country. As I rode through the Willamette valley with him he was especially enthusiastic of the possibilities in the way of climatic and soil conditions for the production of high-class market poultry. This section, he said, resembled the famous poultry sections of England and France more than any other section of the United States.

The people of the United States, he said, do not know what a good table fowl is. Our attention here has been given all to egg production. We have bred up superior strains of egg producers, but we have given no attention to breeding or producing special strains or breeds of table fowls. This section, he said, might well become in the future as famous for fine table fowl as Sussex, England, and Malines, Belgium.

In all his lectures Professor Brown emphasizes the importance of avoiding soil contamination. He believes that overcrowding of the ground or intensification is altogether bad. He said he was amazed on a former visit to the United States that in this great big country many poultrymen crowded more chickens onto an acre of ground than they did in little England. He said there should be a proper balance of animal and vegetable life—so many crops grown for so many chickens.

Speaking about balancing things, he told of calling at a "farm" in Belgium before the war where there were 200 fowls of the excellent table kind, and on asking the wife why she did not keep more fowls she was doing so well with them, he received the answer, "I have only two cows." But what have the cows to do with it? he asked. She then said that if her husband would buy another cow she could keep another hundred chickens. They had been raising chickens in that way for generations, and the idea, handed down from generation to generation, that good table fowls could not be produced without buttermilk was so fixed with them that they could not imagine a chicken worth eating that had not been fed buttermilk made from milk produced by their own cows.

But the poultry industry in Belgium had been destroyed by the war, and in Mr. Brown's opinion it will take years to restore it. America must help restore it. After the war breeding stock must be secured from America to restock the farms, and the poultrymen on this side who have good productive strains will find a great demand for it from Belgium and other European nations.

J. D.

## Killing Hawks

### By Feeding Poison to Chicks

I have had several letters recently about the feeding of a small quantity of strychnine or other poison to the chicks as a method of getting rid of chicken hawks. The theory is that the chick can eat a certain amount of poison without injury, but the poison in the chick will kill the hawk that eats it. A reader at Eugene has sent us the following:

"About 12 years ago I raised a lot of chickens and I was troubled with the hawks and cats. A preacher told me to give my chicks poison. Now I don't always believe what others tell me, even if they are preachers. So as the saying goes I took it with a grain of salt. I shut up five chicks and put strychnine in both their water and feed, and they grew fat on it. So I gave it to all my chicks in their water, and soon I saw no more cats or hawks and lost no more chicks. Now the theory is that the poison goes to the crop, and there is a poison that kills any poison that the chick takes before it goes into the blood. A hawk or a cat eats all of a young chick, thereby is poisoned by the strychnine in the crop of the chick. I always give my young chicks a little strychnine to kill rats, cats, hawks, etc., but find it best to dissolve about a half teaspoonful of strychnine in a quart of water; then put about a tablespoonful of this into a quart of drinking water. I find this to do the work quite well and does not hurt the chick."

Whatever may be said of the theory advanced above, it is the actual trial or experiment that counts. This correspondent seems to have proved that strychnine can be fed to chicks without injury, but where are the hawks and the cats? He hasn't proved that the eating of the chicks caused the death of any hawk, so far as he states. He doesn't say how many chicks he gave the poisoned water to, but the dose was evidently a small one, so small that it would be doubtful if it would have any effect either on the hawk or the chick.

There is no experimental evidence bearing on this subject that I have knowledge of, except that I am informed that a gentleman at one of the eastern stations tried it without result. But it is an open subject so far as actual experiments have been reported. Meantime be careful with the poison. J. D.

**Biscuit Makers Save Wheat.**

The national food administration has commended the cracker and biscuit manufacturers for the patriotic manner in which they have reduced their use of wheat flour during the last year. The flour they used in March of this year totaled 171,000 barrels as against 335,000 barrels used in March a year ago. Not only this, they reduced their allotment over 60,000 barrels below that specified for their use by the government.

**Twelve Workers Killed.**

Twelve Y. M. C. A. war work secretaries have been killed while serving allied troops close to the front line in France. Two American women, canteen workers, have also been killed.

BEST IN THE LONG RUN

# Get Money Out of Your Tires

FOR some years you men who grow the wealth of our country have been *putting money into* tires. Isn't it time to think about getting money *out of them?*

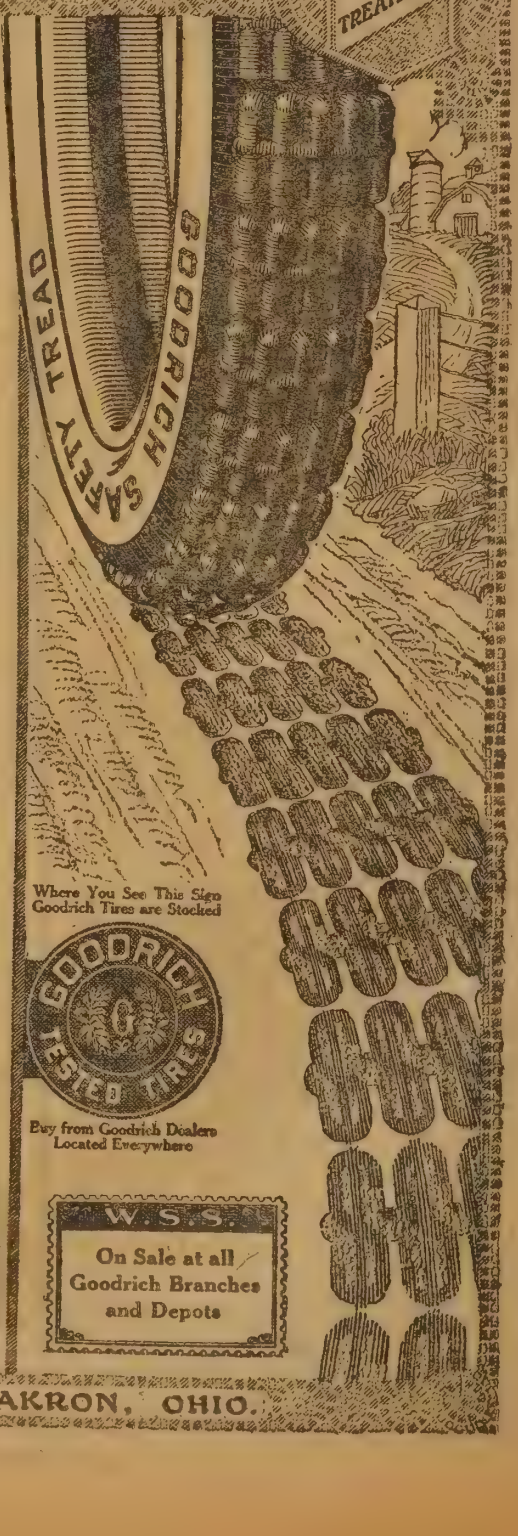
You buy your plows, reapers, threshing machines, and your wagons to get money out of them. You *measure* the money you get out of them by the *kind of service,* and the *length* of service they render you in the *business of farming.* Measure the money you get out of tires the same way. Count the *pleasure* you get from them *excess profit.*

Tires today are the common factor in the business of farming transportation. Let Goodrich Tires *make money out of tires* for you in your *hauling problems.*

They will, because Goodrich Tires are built to give the *maximum* of the kind of service which coins into money, as real as the money you get out of your farm implements.

This is not a boast, a mere promise, or a dream. It is fact, proved in a nation-wide, year-long testing of—

**GOODRICH SERVICE VALUE TIRES**



The Goodrich brand on a tire—and you men of the farm know the value of a trustworthy brand—is a guarantee of high service. Goodrich has stood for what is *best in rubber* for a half century. That half century of experience starts Goodrich Tires with tire bodies built right, and treads tough to stand the roughest going.

But Goodrich, to take the last risk out of its tires, sends them forth with its Test Car Fleets, and batters them over every kind of road in our country; *perhaps over the roads that pass your farm.* Their *strength* and *dependability* are sure because they are proved.

It makes no difference what kind of tires you need, pneumatic tires large or small, truck tires, motor cycle and bicycle tires, Goodrich has the tires which on the farm *coin themselves into money.*

The big, generously sized pneumatic tires roll up phenomenal mileage. The truck tires outwear steel under the heaviest loads. Get money out of tires by making sure you get Goodrich Tires.

# Ants in the Orchard

I have had an inquiry as to how to kill ants in the orchard.

My answer is, I do not know. I have experimented and tried out a number of plans, but none seem to me satisfactory.

Ants love sweet substances. Knowing this to be true, I tried bread soaked in syrup made from sugar, and a strong mixture of arsenate of lead; but they seem to fatten on it.

I tried black leaf 40, same strength as that used for scale and other insect pests, or "One to 800." This did them no apparent harm, although it kills almost any other form of insect life. I then doubled the strength, making it one to 400. This seemed to affect them unfavorably, but did not kill them. I tried one to 200, and a few of the weaker ones died. I then tried one to 100, and about half the number, apparently the younger and weaker, died. This solution is too expensive to use in the killing of ants.

Cyanide of potassium, mixed with water and sugar, will kill them, but it is so deadly a poison that I do not like to have it about the premises, lest by some accident some member of the family might get it. I am still experimenting, and may find some solution to the question.

Ants dislike water, and they may be driven from place to place by irrigation. G. L.

## POWDERY MILDEW

### Causing Damage to the Fruit.

I have been in several sections of the fruit districts within the last few weeks and am convinced that in a majority of cases powdery mildew is causing more than ordinary damage.

Powdery mildew is a fungus, which develops mainly on the growing tender twigs and leaves, sending rootlets or feeding threads into the external cells. For this reason it causes damage to the cells, which retards the growth of the tree, hinders the gathering of plant food from the air and its manufacture into available form.

**Function of Leaves.**

Leaves make or manufacture materials for plant growth from carbon dioxide and water. They inhale and exhale, thus performing the functions performed by lungs in animals. They manufacture food materials into starch and then digest the starch, turning it into sugar by the action of a ferment, that it may be carried in soluble form to the various parts of the tree or plant for building purposes. They are to the tree both stomach and lungs. It will, therefore, be seen how important it is to keep the leaves in healthy condition for the growth of the tree and the production of its fruits.

**Mildew a Parasite.**

A plant which is dependent upon another living plant or animal is a parasite. Rusts and mildews are parasites. Vegetable parasites not possessing chlorophyl, or green coloring matter, can not use carbon dioxide taken from the air, and must take it from the cells of the plants upon which they feed. They are, therefore, equipped with suckers, or modified roots, which penetrate the cells and draw up the cell contents in much the same manner as the roots of a tree draw soluble food from the soil. These roots or threads, clog the breathing spaces of the leaf and plug up the stomata, which are the organs for the reception of food. They also appropriate and disorganize the cell fluids.

It will be seen from this description that mildew injures the tree, and that if it occurs in sufficient quantity it will prevent a proper development of its fruit. Not only so, but it attacks the fruit itself, and often is so conspicuous as to cause considerable quantities to be rejected as culls.

**The Remedy.**

Now that the season is past for a dormant spray, the best remedy is to use atomic sulphur with the arsenate of lead spray for codling moth. The proportions are one quart of atomic sulphur to every 25 gallons of arsenate of lead solution. In other words, if you will put eight quarts of atomic sulphur into a 200-gallon tank of arsenate of lead solution and apply the mixture you will check the codling moth and the powdery mildew with the same spraying. G. L.

# The Goodell Strawberry

Perhaps the best time to transplant strawberries is in July, after the berries are harvested and the vines have sent forth a new crop of "runners." For this reason I call attention to the fact that the period for propagation is approaching.

A further want to call attention to a new variety, which is being propagated by a Mr. Hanks in the Naches valley. Mr. Hanks as I understand, can not more than supply the home demand; but to give the scientific and practical fact, that the New Goodell is a cross between the old Goodell and the Clark's Seedling, and that it has some of the qualities of each variety from which it sprung, that in some particulars make it superior to either.

First, the Goodell was a very sweet berry, but a poor shipper. The Clark's Seedling was a good shipper, but was tart, rather too sour for the taste of most persons. The New Godell has a mild sub-acid flavor, is a fairly good shipper, not quite so good as the Clark's Seedling, but much better than the old Goodell, and is a beautiful deep red, that when on exhibition in the show windows or fruit stands, attracts attention.

In conversation with Mr. Hanks at Nanches City a few days ago, I learned that he was the originator of the new variety. G. L.

In London a munitions Y. M. C. A. has been established for the men and women in that line of war work.

## Kentucky Strawberry Center.

President J. Whit Potter of American National bank, of Bowling Green, Ky., in a recent friendly note to the writer, says that they are just finishing their strawberry crop in that locality. While the crop was short, still a good many of the berries sold as high as $5 per crate, but the latter part of the season the price was around $3.50 per crate. In the aggregate, the returns from that one county will amount to about $750,000. This illustrates the importance of the strawberry, as a commercial fruit in several of the southern states. Kentucky either leads now in acreage, or is close to the front, the industry having taken on a big movement there within the last few years. So the strawberry seems to hold a leading place, as it has in the past, and the writer on pomology appears to have been on safe ground when he declared that "the Lord might have made a better fruit than the strawberry, but He never did." A. E. G.

## Yakima Cannery Busy.

The big Libby, McNeil & Libby cannery in Yakima is now working on spinach. As soon as the small spinach crop has been cleaned out, however, between 300 and 400 men and women will be placed in charge of the big machines that will daily turn out approximately 50,000 cans or 30 tons of canned cherries, mostly for the allied armies in Europe.

Big Increase in Porcelain Efficiency

The Romance of Experiment 3450

TEN YEARS of constant research and experiment—day after day of unremitting laboratory work—with the laboratory furnaces glowing night after night!

Thousands of different combinations and mixtures of materials gathered from all over the world!

Each carefully recorded formula tested in the laboratory furnaces under different degrees of heat!

Steady improvement in spark plug porcelains all this time—but no great gain upon the increasingly severe requirements of new developments in gasoline motors!

3449 different experiments—until—finally—the startling results of Experiment 3450 showed a long stride ahead in all the essential requirements for spark plug insulators.

Champion 3450 porcelain is so far ahead of any other insulators that it stands today clearly and distinctly in a class by itself—unchallenged.

Literally, Experiment 3450 has developed undreamed-of qualities in porcelain for spark plug insulation.

So Champion Dependability takes on new meaning—for no spark plug can be more dependable than its insulator.

# Will Cooperate in Farm Work

## Many Would Make Use of Electricity if a Power Line Were Run Through Community. Good Rain Is Needed in Most Places

MEAD, Spokane County, Wash., June 15.—The principal crops of this vicinity are wheat and oats. As compared with a year ago wheat will not be so good, but oats will be better if we have favorable weather from now on. Market value of wheat will be higher and oats lower in all probability. Farmers here will go into harvest with a scarcity of men, and will cooperate in the work more than in the past. Machinery is generally adequate and most of it in good repair. There is a shortage of fruit boxes and sacks. Most all are provided with granaries and there are no bins used. Facilities for handling crops in the way of wagons and trucks are adequate. It would be difficult to say which one thing one could recommend as a general measure to improve conditions in this community as to crop production or community life. A good sized hall, owned by the township, furnishes a meeting place for any and all purposes. Many would take advantage of the opportunity to use electricity if the power line was extended across the community. GEORGE HINGSTON.

### Pastures Become Short.

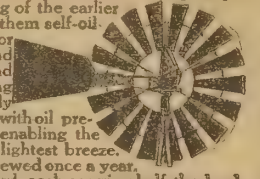
TWISP, Okanogan County, Wash., June 10.—The labor shortage question hasn't been very serious in this section yet. Many men and boys have gone from this locality to the shipyards and other places to work where wages are better than are paid here. The high price of farm produce has stimulated such an activity thata notwithstanding the fact that many have been called to the colors and others gone to the shipyards and factories there has been a greater acreage planted than ever before in this valley. The farmers here are not using tractors for the reason that the farms are too small and rough. There seems to be plenty of workhorses here and at present there seems to be no demand for them. The price of farm machinery has advanced and most farmers are getting along with their old machinery. The drouth continues and the pastures are getting short and dry and the prospects for crops are not very flattering. As a rule stock is in good condition and farmers are prospering. A good rain within the next 10 days would come in time to make good crops. GEORGE LA RUE.

### Rain Is Badly Needed.

OTHELLO, Adams County, Wash., June 14.—Our wheat crop at present writing has a pretty good indication of a lighter crop by 20 per cent than last year, which was a very light yield. There are thousands of acres of grain land that will never be touched by a header as the wheat has blown out and the land is now a coat of thistles. Take these conditions into consideration together with the cost of production this year and the net profit to the farmers is practically nil. I think there will not be much difficulty to get men to harvest the crop. There will be no difficulty in getting bins to hold the grain. The price of sacks took a three-cent drop last week. What this community is suffering from more than anything else has been a lack of rain and excessively high winds. There will be no rye to harvest as it is nearly all dead on the stalk. The potato crop is gone as the leaves are dead, brown to the ground. Rain would improve conditions wonderfully. A. O. LEE.

### Labor Shortage Delays Work.

MONTESANO, Grays Harbor, Wash., May 27.—The weather has been somewhat cool with frosts in certain localities. I have talked to farmers about the amount of land being cropped this season as compared with 1917. They say that there will be practically as much land put into crop, but that the seeding is later than usual owing to labor shortage. This is more true on the larger farms where labor is employed. The one-man farm has not been hit so hard on the labor question. Much interest is being shown in regard to farm tractors, especially on the larger farms.



O. T. M'WHORTER.

### Need Warm Rains.

RAINIER, Thurston County, Wash., June 1.—May, as a whole, was cold, with frequent cold rains and frost up to the 20th. Then a few warm days which started the grass and grain to growing. Pastures are now good, but the meadows show the effect of the cold and backward spring. While some pieces of newly seeded clover will be good there will be many fields that will be light. Good warm rains are needed. We farmers are most too busy to be talking about anything, but when two or three farmers get together it is cows, and what are you making out of them, with milk way down and everything very high that we have to buy. L. F. DAVIS.

**THE SELF-OILING WINDMILL**

has become so popular in its first three years that thousands have been called for to replace, on their old towers, other makes of mills, and to replace, at small cost, the gearing of the earlier Aermotors, making them self-oiling. Its enclosed motor keeps in the oil and keeps out dust and rain. The Splash Oiling System constantly floods every bearing with oil preventing wear and enabling the mill to pump in the lightest breeze. The oil supply is renewed once a year. Double Gears are used, each carrying half the load. We make Gasoline Engines, Pumps, Tanks, Water Supply Goods and Steel Frame Saws.

**In answering advertisements don't fail to mention this paper.**

**Whole Crop Insurance**

YOU CARRY insurance as a matter of course. It is good business to be protected from loss, so you keep your policies in force and pay the premiums regularly.

But there is one kind of insurance you may not know about, which requires no premiums, on which you realize every year, and which this year is fully as important as any other insurance you carry. **When your crops are ready for cutting, International Harvester binders and twine insure the harvesting of the whole crop.** No matter whether the grain be heavy or light, tall or short, standing or down, lodged and tangled, an International Harvester binder cuts and binds it all without waste. That is what we mean by whole crop insurance.

**Champion, Deering, McCormick, Milwaukee** and **Osborne** harvesting machines and binder twine, always efficient, are better than ever this year when every bushel of grain is needed. Remember this when you come to buy your binder and twine for the season's work. Remember, too, that the larger sizes conserve labor. An 8-foot is better than a 7, and a 7 better than a 6 or 5. Buy the largest binder you can use, and buy a new machine if there is any question about the efficiency of the old one. A new International Harvester binder is absolutely reliable.

Through ninety branch houses and over 30,000 local dealers, we give the farmers of this country prompt service on harvesting machines, twine, and repairs. You can be sure of having your new machine on time by placing your order with the local dealer as soon as possible, or writing us now for catalogues.

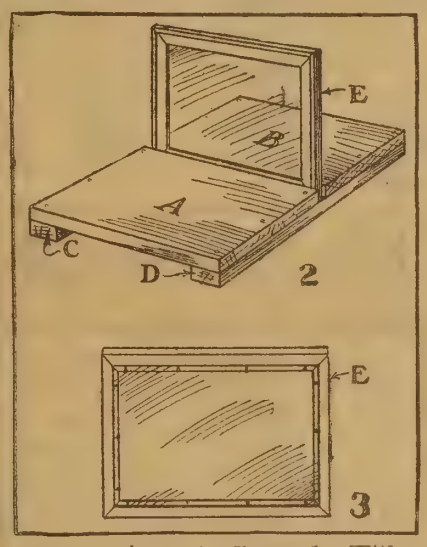
## How to Copy Pictures

By means of the glass reflecting frame shown in Fig. 1, it is possible to make an exact drawing of any

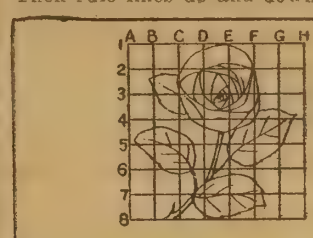


1

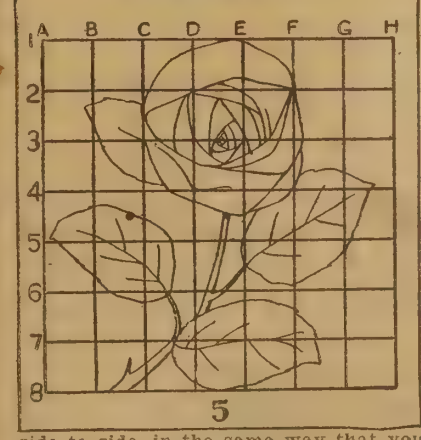
picture that you may wish a copy of, and this unique piece of apparatus is very simple to make, as you will see by the detail drawing (Fig. 2).

All that you need for the construction are two boards (A and B), two crosspieces (C and D), and a small picture frame with the glass fastened securely in place (E, Figs. 2 and 3). Almost any small-sized picture frame will do, though one that has an opening about eight inches wide and 10 inches long is of the best size if you can get it. The boards A and B should be about one inch longer than the picture frame, and they should be square or nearly square. Place the pieces upon the pair of crosspieces C and D, with the edge of the picture frame slipped between them, as shown, and nail them tight up against the frame to hold it securely in an upright position. The copying apparatus will then be completed. To make a copy of a picture, place it upon the left-hand side of the frame, and a piece of drawing paper on the right-hand side. Then, standing so that you can look into the left-hand side of the glass of the frame, you will see the reflection of the picture to be copied, in the glass, and the piece of drawing paper on the other side of the frame will be seen as a background to the reflection of the picture. Keeping the same position, it will be but a simple matter to draw out on the piece of drawing paper each line that you see reflected in the glass. The copied picture will be the reverse of the original, as is indicated in Fig. 1.

A very simple and exact method of making a larger or smaller drawing of a picture is that known as "enlarging and reducing by squares." We will suppose that the picture of the rose in figure 4 is to be enlarged twice each



2



3

way, as shown in figure 5. With a ruler and pencil, measure off a series of points across the top of the picture, and another series along one side, spacing them exactly one-half inch apart. Then rule lines from the top to the bottom of the picture, and from side to side, starting each line from one of the points. When the picture has been squared off in this way, mark off a similar series of points along the top and down one side of a sheet of drawing paper, but, instead of one-half inch, space them one inch apart (figure 5). Then rule lines up and down and from

4

5

side to side, in the same way that you did across the original drawing. Letter the ends of the up-and-down lines and number the ends of the cross lines, so it will be easy to locate corresponding squares on both the small and the large drawings. To make the enlarged copy of the original drawing, it is but necessary to reproduce in each of the large squares exactly what you see included in corresponding small squares;

## Farm Service War Flag

To give a further idea of the widespread demand for the farm service war flag in Washington we have taken an order from each of the additional counties not before named:

**Mrs. John Byers Jr.,** Ferndale, Whatcom County, Wash.—Please find enclosed the coupon and 5 cents in stamps, for which send me the farm service flag, on enamel paper.

**Fay Lowell,** Roy, Pierce County, Wash.—Enclosed find 5 cents, for which please send me a farm service war flag, printed on enamel paper, with five extra small stars for farm workers.

**Mrs. F. M. Martin,** Mount Vernon, Skagit County, Wash.—Enclosed find 5 cents, for which please send me a farm service war flag, printed on enamel paper, with two extra stars for farm workers.

**Mrs. J. W. Summers,** Wauconda, Okanogan County, Wash.—Enclosed please find 5 cents for one pennant with four small stars on it.

**Mrs. Dick DeWitt,** Oak Harbor, Island County, Wash.—Enclosed find 5 cents, for which please send me a farm service war flag, printed on enamel paper, with three extra small stars for farm workers.

**R. F. Parsons,** Cloverland, Asotin County, Wash.—Enclosed find $1, for which please enter my subscription to The Twice-a-Week Spokesman-Review for one year and The Washington Farmer for three years, and 5 cents for a farm pennant.

**Henry Weber,** Marcellus, Adams County, Wash.—Enclosed find 5 cents, for which please send me a farm service war flag, printed on enamel paper, with three extra small stars for farm workers.

### Cow-Testing Report.

During the month of April there were 432 cows tested in the Ferndale Cow Testing association. The average pounds of milk per cow were 762, average pounds of fat per cow, 31.8. Ninety-three cows produced 40 pounds of fat or more, 90 cows produced 1000 pounds of milk or more. The highest producing herd for the month is owned by Tom Alderson of Ferndale.

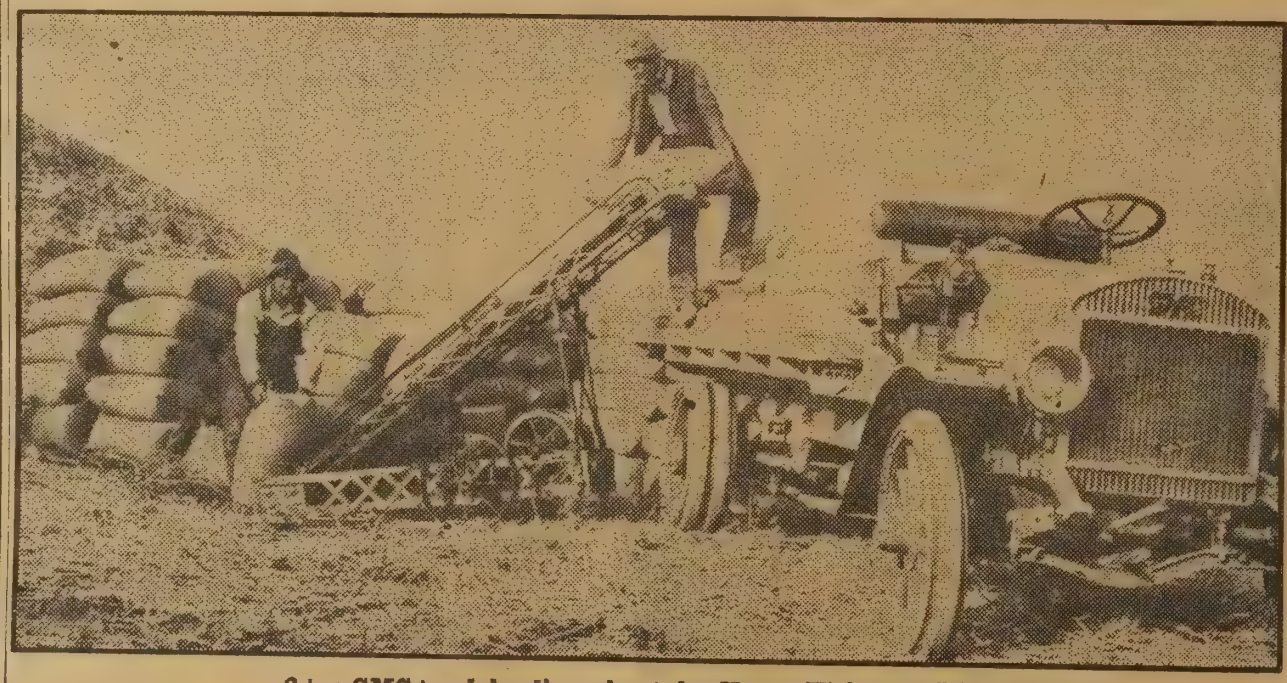
Cow testing associations are right now in a position to do more effective work than ever before, says Victor Morgan, the official tester. High prices of feed and labor have put the low-producing cow in a bad light, and has made the farmer eager for such information concerning his herd as only a testing association can supply him. The unprofitable cows in the Ferndale association that survive another winter are going to be few and far between.

**Happy Memories.**

Tired Tim—Of course, ye wouldn't think it, mum, but I rode in a carriage during my youthful days.

Old Lady—Poor man! Here's something for you. When was it your happy lot to ride in a carriage?

Tired Tim—'Bout 40 years ago, mum. Me mother pushed it.—Pearson's.



ENCLOSED please find five cents for the Farm Service War Flag and four small stars. I have moved from the ranch near Eatonville to one closer to Tacoma.

Tacoma, Wash.

GMC

TRUCK TALK

**Truck Hauls Heavy Load for Farmer**

**2-ton GMC truck hauling wheat for Henry Hickman, Colfax, Wash.**

Washington farmers have been quick to appreciate the advantages of motor trucks and today there are many farmers and ranchers who rely on gasoline to get their products to market. Among them is Matthew Beal of North Yakima, Wash., who owns a three and one-half ton GMC.

Mr. Beal's farm is thirteen and a half miles from town and he made three round trips, a total of eighty-one miles, in one day, hauling eighty-six sacks of barley to the trip, a total weight of 9500 pounds.

The trips were made during a blinding dust storm and over heavy grades, some averaging as steep as 18 per cent. Where these steep grades were encountered, it was necessary to drop to low gear, a severe test for the cooling system of any truck, but the water in the radiator didn't even steam. The next day 10,125 pounds of wheat and eleven men were taken over this same road on one load.

# Must Be Farmer

## *Poultryman Must Grow Half Feed*

By PAUL E. TRIEM.

A little, gray, earnest man, gold spectacled, and singularly free from any touch of the melodramatic, held a mixed Seattle audience breathless for nearly two hours while he described war-time conditions in England. The man was Edward Brown of London, and the date was May 15.

Mr. Brown is recognized the world over as an authority on poultry matters. He is in this country to help the United States department of agriculture in its educational campaign to increase the production of poultry. He is typically a Briton in the restraint which he puts upon his feelings, and the effect produced upon his Seattle audience certainly lost nothing by the general perception that his attitude was thoroughly conservative, that he was overstating nothing.

Some of the facts detailed by the London speaker were new to most of his hearers. He described the coast defenses of England and told of the three futile attempts the Germans have made at invading the island. In describing the typical features of an air raid, through 30 of which he himself has been, he pointed out that the planes used at present are worse than the Zeps formerly employed for raiding operations.

"In spite of the imaginative descriptions in some American papers," Mr. Brown declared, "there is nothing to hanker after in an air raid. The spirit of this wanton destruction of civilian life and institutions is pure deviltry—I can find no better word for it. Nothing that Germany could have done would have been more effective in arousing British spirit," he added significantly.

"France, the nation that has been reborn," as the speaker characterized the great European republic, has lost a million and a quarter of her sons. Other millions of Englishmen and Italians are dead or hopelessly crippled, the bones of many of these who have given their lives as a blood ransom for civilization lying at the bottom of the sea.

"And today famine is stalking through Europe," commented Mr. Brown.

The whole difficulty in England and much in France and Italy has arisen from submarine activity. The island of Briton has become more and more dependent on the outside world for supplies of food, a dependence apparently harmless enough up to the opening of the sub campaign. Now conditions are changed, and the speaker from London added one brief and grim commentary on the present food situation.

"Always remember," said he, "that one week of starvation will break down the morale of any people!"

Turning to the question of the direct effects of the war on English poultrymen and the lessons which Americans can learn from these experiences across the sea, Mr. Brown declared that the first lesson was an old one, rendered imperative by present conditions:

"Poultrymen must be farmers," he explained. "They must grow at least 50 per cent of their feed. The proper balance between animal and plant life, as represented by poultry raising and gardening, for instance, is one of the big principles that have come out of war-time conditions in England.

In regard to poultry culture on a big scale, Mr. Brown has very definite ideas.—

"The development of the poultry industry will not be by building up great plants," he predicts. "Personally I would rather see 200 people each raising 100 chickens annually than to see one new plant with a capacity of 20,000 chickens created."

Speaking a good word for back-yard poultry raising, which he declared would not interfere with the sale of poultry from professional plants, the speaker called attention to the disadvantages, economically, of confining chickens to a too-limited range. In England, the stress of war time conditions has induced poultrymen to enlarge, rather than diminish, their range.

"In conclusion," said Mr. Brown, "I can sum up my message to you by saying that it is the same as the spirit of England during the present crisis: Hold on!"

### WOULD CONTROL FEED.

#### Government Tries to Regulate It.

Under a ruling of the food administration, bran should sell in carload lots, bulk price at the mill which manufactures it, at a figure not to exceed 38 per cent of the cost of the wheat out of which it is manufactured. Differentials have been established for other mill feeds based on this maximum price for bran, which in turn, it will be noted, is determined by the price of the whole wheat. Shorts or standard middlings must not exceed the price of bran by more than $2 per ton. Mixed feeds shall not exceed the price of bran by more than $4 per ton, while flour middlings and what is known to feed men as "red dog" shall not exceed the price of bran by more than $9 and $15 respectively per ton.

The same regulation provides that brokers in mill feeds that are made from wheat shall make no charge for their services greater than 25 cents per ton. Commission men who sell, deliver and collect for the feeds are allowed to charge not more than 50 cents per ton as their commission for making the transaction. There is no definite limit placed on wholesalers and jobbers, though the regulations provide that they shall be limited to a reasonable advance of the price of the feed at the mill.

The food administration has apparently struck a knotty snag in the matter of regulating the quality of feed placed on the market under these prices. The complaint is well nigh universal that the mill feeds purchased are in general of a highly adulterated character. Charges have been made that what is bought as shorts is actually composed of a small percentage of shorts mixed with a larger percentage of finely ground bran. It is likewise charged that all manner of foreign material is allowed to be ground up in the so-called feed which is placed on the market at the maximum price allowed by the food administration.

### Operate Large Orchard.

One of the largest orchards near Walla Walla is that owned by Baker & Langdon. There are about 600 acres under cultivation. Several commercial varieties are raised.

# We've found it!

It took us nearly three years to find a line of stock feeds that was of sufficiently high grade to permit us to back it up with our broad guarantee.

We investigated a score of feed mills, examined hundreds of feed samples, and communicated with a great number of practical stock men, agricultural experimental stations and poultry raisers.

In our search we have found many excellent feeds, but none to equal these; for no feeds on the market show, in our opinion, such a uniformly high amount of valuable feed contents, and none of them can be depended upon to deliver a greater value for the money than

# Fruit in Doubt

## Horticulturist Reviews Prospect

Under date of June 1 State Horticulturist M. L. Dean of the state department of agriculture issued the following statement relative to the fruit prospects in the various districts of the state:

Reports have been received, gathered by observations and consultations with growers, dealers and others interested in the fruit growing industry.

Generally speaking, there was a shortage of moisture in 1917 and some varieties, in fact all varieties in some sections, suffered to the extent that they failed to develop a normal setting of fruit buds. This was especially true in the nonirrigated sections and in orchards where the trees were carrying a heavy crop, unless the fruit was carefully thinned.

In some orchards the powdery mildew infection was serious last season and where it was not properly sprayed it prevented fruit bud formation. This injury is far-reaching and should be given closer attention by the growers.

Had it not been for frequent frosts in April we would have had a larger crop than in 1917, but present indications show a falling off of all tree fruits, except possibly prunes. The weather conditions at blossoming time were ideal for a heavy set of prunes, and, unless unforeseen conditions prevent it, we will have a heavy increase over last season's crop. It is impossible at this time to estimate the June drop. About July 1 another report will be issued.

### Yakima Valley.

April 3d in some parts of the lower Yakima valley the temperature dropped to 19 degrees. The peaches and cherries were about in full bloom and in the lower sections the damage was severe on all soft fruits. The early strawberries were seriously injured. Frost periods were quite frequent up to May 7th and of sufficient severity to reduce the crop of all fruits in Benton county at least 50 per cent of that of 1917

In the Parker Heights section some orchards promise as high as 90 per cent of a peach crop.

In the upper Yakima valley conditions are more promising and the total crop of apples will probably be about the same as the 1917 yield. Pears may exceed last year's crop, but peaches and other soft tree fruits will show a heavy shortage.

Winesaps promise at present to be the heavy yielders for this season; Romes, Arkansas Black, Newtown, Jonathan and Spitz following in the order named.

Considering the entire valley, present conditions point to a shrinkage of 1000 cars below the 1917 crop.

The dormant and calyx sprays have been very generally applied, although lack of water in some of the irrigation canals prevented early spraying.

### Wenatchee and North Central.

The Wenatchee district has escaped severe frost injury and, except where there was a shortage of moisture last season a slight increase of crop is promised. Based upon present conditions, peaches promise 85 per cent of 1917 crop; apples and pears 110 per cent. Jonathans and Spitz promise a light crop, but Winesaps and others are heavy.

The Okanogan county sections have a heavy setting of fruit and, with sufficient moisture, their crop will exceed that of 1917.

As a whole the crop promises about the same tonnage as last season.

### Spokane District.

This entire district had a very heavy bloom, but some portions of the territory have been visited by frosts so that it is difficult to estimate the crop. Early indications pointed to a heavy increase over the 1917 yield. Seventy-five to 90 per cent of the orchards were given the early sprays, followed by the application of the calyx spray.

### Western Washington.

In the White Salmon district the dry weather of 1917 seriously prevented the formation of fruit buds in some orchards, consequently the crop will be below normal. These conditions have encouraged growers to install irrigation systems, where pumping or reservoiring is feasible. The strawberry crop is promising; the first berries being marketed May 25.

In Clarke county the outlook is very promising for a heavy prune crop.

The berry sections around Puyallup, Sumner and the northern points promise good crops. Tree fruits will be about normal.

Orcas and Vashon islands promise good crops.

Over the state as a whole the potato acreage rates about 60 per cent as compared with 1917, yet with this decreased acreage, if weather conditions are favorable, it is possible to get a normal crop yield.

The acreage of oats and corn shows a large increase.

Beans and peas promise a larger crop than in 1917.

Wheat shows an increase of 25 per cent over last season's acreage, but the cold weather in some sections has prevented stooling, so that the stand may be thin.

### Walla Walla District.

Had it not been for the occurrence of April frosts the Walla Walla valley would have had a bumper crop this season. May 15 apples, prunes, cherries and berries promised from 40 to 60 per cent of a full crop, but recent frosts have reduced these figures so that it will be impossible to give any estimate until after the June drop, but the crop will fall much below the 1917 yield.

At Clarkston the red spider, mildew and drouth seriously affected the orchards last year, but they promise to have an average of better than 60 per cent crop of all fruits. There is a marked improvement in the care of the orchards of this section this season. More than 90 per cent were given the dormant spray, followed by thorough calyx sprays.

## Tries Out Sugar Beets.

If experiments now under way are a success, Walla Walla county will become one of the sugar beet producing communities of the northwest. About 700 acres are now under cultivation, and this acreage will be automatically increased if the crop does well.

**STOCK AND DIVERSIFIED FARM**

400 acres of fine land, with two sets of buildings, completely equipped for dairying, hog raising and chickens, with machinery and tools for working the place. About 250 acres in high state of cultivation, some in timothy and clover; 100 acres of timber, good soil when cleared; on fine roads and close to good town. This is one of the best located and most complete farms of this class that you could find. Fine 6-room plastered house with furnace, fireplace, etc.; good dairy buildings; 6 thoroughbred Jersey cows and 20 thoroughbred sows go with place; water under pressure to dairy buildings; excellent location. Price for good reasons, $33,000. Terms to right party.

**The Fred B. Grinnell Company**

Spokane, Washington.

**Turn stump land into Money**

Increase your acreage and thereby increase your income.

Clear your stump land cheaply. No expense for teams or powder.

HAND POWER **Stump Puller**

One man with a can outpull 16 horses. Works by leverage—same principle as a jack. 100 lbs. pull on the lever gives a 48-ton pull on the stump. Made of the finest steel—guaranteed against breakage. Endorsed by U. S. Government experts.

Write today for special offer and free booklet on Land Clearing

Works equally well on hillsides and marshes where horses cannot operate

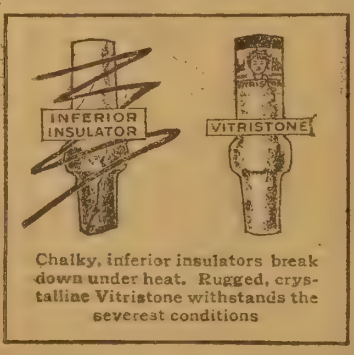
Porcelain-ware

Inferior insulators, like cheap porcelain-ware cups, break under sudden changes of temperature

Stone-ware

Stone-ware withstands extremes of heat and cold. That is why Vitristone insulators do not break

**Why 92 out of 100 spark plugs fail**



***Insulators of inferior material cannot withstand modern engine conditions***

OUT of 100 discarded spark plugs, taken at random, careful examination by experts showed that 92 were rendered useless by breakage of the insulators.

Both laboratory and road tests have proved this insulator breakage is due almost entirely to inferior material.

Inferior insulators cannot withstand the severity of modern engine conditions. In spark plug service they are subjected to intense heat —2000° to 3000° F.; rapid changes of temperature; high speeds; and hammer-like blows of compression. It is only natural that they should crack and break down.

Last year 42,000,000 plugs were thrown away, largely due to breakage of inferior insulating material.

Chalky, inferior insulators break down under heat. Rugged, crystalline Vitristone withstands the severest conditions

**The development of Vitristone**

After eight years of experiments in the Red Head potteries, spark plug experts perfected an insulating material that would not crack under the heat and vibration of the engine —the greatest advance made in spark plug construction in the past ten years.

Vitristone—the new insulator—is an artificial stone. Its rugged, crystalline structure is unaffected by rapid changes from extreme heat to extreme cold. It withstands the most intense vibration.

**Built for years of service**

Rigid tests insure gas-tightness and insulator efficiency in all Red Head plugs. If a Red Head misses, clean it, and nine times out of ten it will fire 100% right. It is easy to clean. Don't wait till your spark plugs crack and miss fire. Put a full set of Red Head plugs in your engine today. There is a Red Head plug for every requirement.

Your dealer has Red Head plugs in stock or can get them for you. If he does not, write to us for the name of the nearest dealer who can supply you.

# Pests May Win

## *Must Make War Against Rodents*

The well-known American squirrel and his cousin, the American gopher, may win the war—for Germany. They are among the most pronounced pro-Germans in this country. They should be lined up and shot at sunrise, or any other time that one can be lined up with the sights of the rifle or shot gun. Or, better yet, they should be fed a sleeping potion with strychnine alkaloid as the sleep producing element.

Some may believe that these pests are not war winners for the Germans and Turks. But they are, and here is the way they work:

They destroy grain crops in this country every year estimated from the best figures obtainable at $100,000,000. Some estimates place the loss as high as $200,000,000.

Take the first figure, made when wheat was $1 a bushel. It means a loss of the equivalent of 100,000,000 bushels of wheat.

**While Squirrels Get Fat.**

Since last harvest the people of this country have been conserving wheat loyally to supply the allied armies. This conservation was and continues to be absolute necessary. Without it the allies absolutely can not win. If a real food shortage hits the armies of America and France and England, they are whipped.

As a result of food conservation America has been able to ship something like 125,000,000 bushels of wheat to Europe since last harvest, just one-fourth more than the amount destroyed by the rodent pests of this country. If these pests last year had not destroyed any grain, this country could have shipped nearly twice as much to the allies and the American soldiers as it was able to do. If the crop should be short this season for any cause, and the pests destroy their usual quota, it will mean insufficient grain for shipment and the possibility of the allied armies, including our own sons or brothers, being pushed back to defeat by the heartless Huns.

The same in a general way can be said of other things. If crops fail, the allies will fail; if shipping fails the allies will fail; if munition manufacture fails the allies will fail; if food conservation fails the allies will fail.

The point is, no one of these things can be allowed to fail, and the rodent pest is one of the vital factors in creating the possibility of crop or food failure.

**Cooperation Is Necessary.**

Says Walter P. Taylor, rodent expert of the United States biological survey, now completing a tour of the west including Washington, Oregon and Idaho, gathering information and working up sentiment against the pests: "On the proper solution of the rodent pest problem may depend the margin of food safety for America and the allies in this war. A given amount of money spent in systematic, thoroughly organized campaign work on a cooperative basis will probably go farther to increase food production than if spent in any other way.

**"The permanent solution of the rodent pest problem can only come through systematic, comprehensive campaigns on a cooperative basis, with the individual farmer as one cooperative unit, state officials, extension service, county agents, county commissioners and so on as a second cooperative unit, and the government through the bureau of biological survey as the third."**

There is the whole matter—cooperation. Cooperation everywhere. Individual farmers can not win alone. They can do much to protect their own crops, but complete success can not be obtained until the whole country is made a war zone against the pests.

Sentiment is crystalizing in favor of this cooperation. The government is rapidly getting ready. It is doing its part in some places now. The states are getting ready. They are enacting enabling legislation. The farmers must join in the movement as a whole.

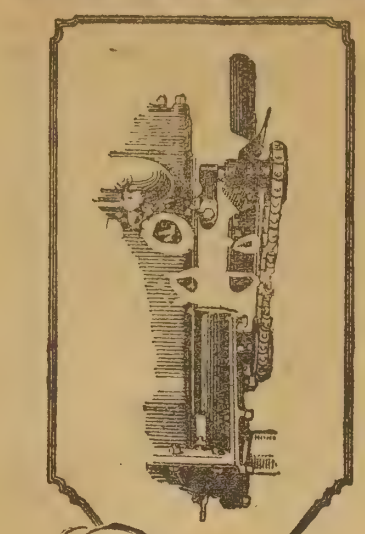
**Feed Them Devil's Food.**

In the meantime, every farmer must fight his own personal battle on his own farm. While pests of the squirrel type can best be fought early in the spring, every one that is still alive should be exterminated now if possible, for a bushel of grain is a small estimate of what he will destroy yet this season. There are some "recipes" for squirrel and sage rat food as prepared and urged by the biological survey:

**For Columbian Ground Squirrels (the common red legged squirrel of the Palouse Country.**—Mix together dry, one ounce of powdered strychnine (alkaloid), one ounce of baking soda, one teaspoonful of saccharine and three tablespoons of flour. Add a little cold water and stir thoroughly to a smooth, creamy paste. Apply to 12 quarts of clean oats and mix thoroughly to distribute the poison evenly.

**For California, or Digger Squirrels.**—Mix thoroughly one ounce of powdered strychnine (alkaloid), and one ounce of common baking soda. Sift this into 3-4 pint of thin, hot starch paste and stir to a smooth, creamy paste. (The starch paste is made by dissolving one heaping tablespoonful of dry gloss starch in a little cold water which is then added to 3-4-pint of boiling water. Boil and stir constantly until a clear, thin paste is formed). Add 1-4-pint of heavy corn syrup and one tablespoonful of glycerine and stir thoroughly. Add 1-10 ounce of saccharine and stir thoroughly. Pour this mixture over 16 quarts of clean barley and mix well so that each grain is coated.

**For Sage Rats.**—Mix one tablespoonful of gloss starch in one-half teacup of cold water and stir into one-half pint of boiling water to make a thin, clear paste. Mix one ounce of powdered strychnine (alkaloid), with one ounce of baking soda (bicarbonate), and stir with the starch to a smooth, creamy mass, free from lumps. Stir in one-fourth pint of heavy corn syrup and one tablespoonful of saccharine. Four tablespoonfuls of table salt added to the boiling water before making the starch increases the effectiveness of the poison during crop growing season. Apply to 20 quarts of oats and mix thoroughly to coat each kernel.



Each quart of poisoned grain is sufficient for 40 to 60 baits. This quantity, scattered one teaspoonful to a place, along squirrel trails or on clean, hard surfaces, near the holes, will not endanger stock.

Note—Strychnine in any form other than the commercial powdered alkaloid is not effective in the above formulas.

**Makes It Snappy.**

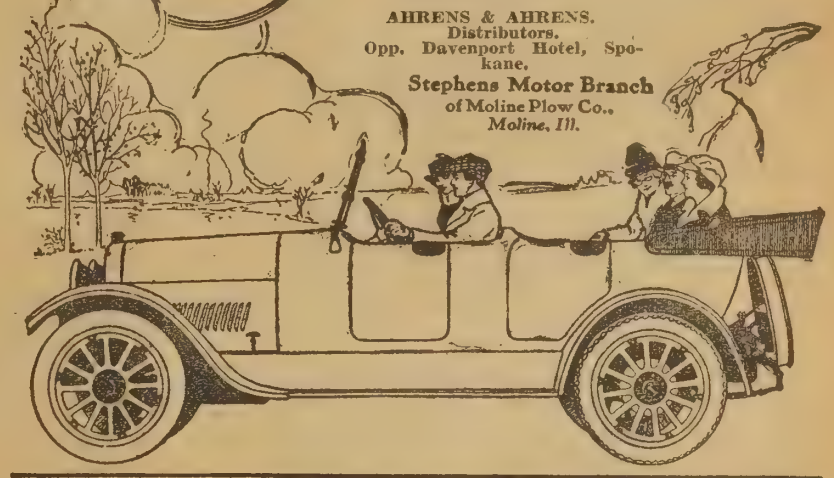
At Camp Lewis, a Y. M. C. A. secretary reports that a dog has been taught to salute officers.

STEPHENS *Salient Six*

THREE VISIBLE MOVING PARTS

The time was when overhead-valve engines were not as quiet as now. The valve operating mechanism was exposed, and the clicking of its action consequently was unmuffled.

*The only audible sound in the perfected overhead-valve engine of the Stephens Salient Six is the whir of the fan—practically noiseless.*



Quiet, powerful, especially constructed to burn the low grade fuels of today and the still lower grades to come, it takes front rank among the foremost gasoline engines of the day.

In body design, the Stephens Salient Six emphasizes the beauty, grace, and good taste of conservative individuality. Its comfort is the result of our master skill in coach building.

## Farmer Boys Make Fine Fighting Men

The athletic director in camp looks to the boy from the farm for some of his best material, because the farmer boy's healthful, outdoor life has kept him physically fit, says Edward Frank Allen, in "Keeping Our Fighters Fit—For War and After" (Century company), written in cooperation with Raymond B. Fosdick, chairman of the commission on training camp activities of the war and navy departments. With the new draft, thousands of men are laying down their plows, or more modern farm tractors, to take up the gun. They, as well as their families and friends back home, will want to read all about how athletics is going to make them better soldiers. They will want to know more of the camp life generally and what has been provided for their leisure time. All this is interestingly told in the first full official statement of the mass singing, theatricals, social life and other forms of recreation in camp and adjacent community. Fathers and mothers will read with interest of the wide range of opportunities their sons are having.

Going into particulars about the athletics which appeals strongly to out of doors men, Mr. Allen says:

It is a big work, this organizing and directing the athletic activities of 40,000 men (in an average cantonment), and each of the divisional athletic officers has a man-sized job. But the reactions are remarkable. Football, baseball, basket ball, soccer, boxing, track and field athletics—in fact, nearly all the sports known to Americans—are indulged in by all the men in training. Never before in the history of this country has so large a number of men engaged in athletics; never before has its physical manhood received such a stimulus. Men are learning to get bumped and not mind it. The quality of persistence is being developed.

"The sports included in the camp curriculum," says Dr. Raycroft (director of athletics in the army camps), "such as boxing and football, and other personal contact games, have been selected primarily to prepare the men for the struggle to come and the value of this training they have received will be fully realized when they go 'over the top.'"

They play leap frog, too, prisoners' base and a dozen other games that their younger brothers have forgotten, and they enjoy them. There are plenty of games of this sort that besides promoting good feeling, develop self control, agility, mental alertness and initiative, all bases on which to build military efficiency.

Many of the boys from the farm are having their first opportunity to participate in organized sports with large numbers of other men. Many of them are for the first time enjoying club life furnished in all the Y. M. C. A. and Knights of Columbus buildings in camp, and in the Soldiers' and Sailors' clubs in nearby towns. In the educational work, in which already 100,000 men participate, in mass singing, in amateur shows, Mr. Allen's descriptions will show how they are comnig in close contact with other men from every walk of life, and learning to give and take in the finest sort of freemasonry.

President Wilson, in his special statement about the work, appearing in the book, says:

The federal government has pledged its word that as far as care and vigilance can accomplish the result, the men committed to its charge will be returned to the homes and communities that so generously gave them with no scars except those of honorable conflict.

And the federal government is doing this by making camp conditions not only clean and decent, but positively educational and inspiring as well. Furnishing the men with the things they have been accustomed to at home is a big part of the program. One feature which appeals especially to the boy from the farm is the post exchange.

Post exchanges are a series of stores dotting the grounds of the national army cantonments, where they may purchase any of the small articles from a button to a song book that contribute to their contentment and comfort. Goods are sold there at lower prices than obtain in cities, and the hundreds of thousands of dollars made by small trading on a vast scale are turned back into the soldiers' coffers, for Uncle Sam is storekeeper.

With its assortment of everything under the sun it recalls vividly the village emporium to the country recruit.

And indeed, from a social point of view, the post exchange is the counterpart of the good old cross-roads store, where good fellows gather round to pass the time of day together.

In the free atmosphere of the common store a fellow is always at ease with his new and often strange companions; what he buys is often a matter for much jest and jollification; if it is an edible he shares it with the others; and there is great sociability and good will. It is a natural ice-breaker. It gives rise to many friendships and constantly strengthens them with its encouragement of our social habit of dropping in at a convenient place for some light refreshment after physical exercise, a show, or what not.

## Hand Weaving

### Pioneer Methods on Exhibit

The hand-weaving exhibition at the great textile show just held in New York was not quite complete, as the wool used was carded in an old mill in Vermont and made into rolls for spinning. Many people now living can remember seeing their elders card wool by hand on the long nights of winter. It is interesteing to note, however, that the old mill in Vermont is run by water power and is in exactly the same condition as many years ago when carding by this method was the acme of perfection—a wonderful advance, it was considered then, over the old and tedious method of hand carding.

But in all other details the spinning and weaving in the New York exhibition was true to pioneer methods. The carded wool in rolls was spun on an ancient spinning wheel, run by hand. After the spinning it was reeled on an ancient clock reel, 165 years old.. The old familiar click, occurring when 40 turns of the wheel are made, could be heard as in the olden days and is still used as a gauge to measure the amount of yarn that has been reeled.

The old fashioned hand loom that was in operation at the show is worthy of special mention. All day long it was working, turning out cloth that had been ordered and as one order was finished another was started. The weaving is primitive, but it produces homespun that is really homespun and the ready sale for it testifies to the fact that it is in demand.

Suitings and overcoatings were made at the exhibit and a comparatively large variety of patterns made at that. The suitings range in price from $3.75 to $4.25, while the overcoatings on account of the larger quantity of wool that is necessary range in price from $5.50 to $6. One particular example of overcoating is on display that is attracting considerable attention. After being woven on the hand loom it was sent to a finishing plant where it was soaked in a vat of soft soap. This wsa afterward washed out and after a process of "fulling" the cloth was pressed with the result that the finished product is most attractive.

## Sidelights

**The Unconquerable Habit.**

"Believe in signs?"

"Everything but "fresh paint" signs. I always try them out to see if they're telling the truth."—Detroit Free Press.

**Two Bites of a Cherry.**

A breakfast question we expect soon to hear: "A little of the yolk or a little of the white, dear?"—From the London Opinion.

**In the Past.**

He—You used to say you would delight to obey me.

She—And you used to swear you were mine to command.—Baltimore American.

**A Great Misfortune.**

"If Germany is defeated, the kaiser will be deprived of one human excuse."

"What is that."

"He can't say it was all his wife's fault."—Exchange.

**Orders Is Orders.**

Orderly Sergeant—Lights out, there.

Voice from the hut—It's the moon, sergint.

Orderly Sergeant—I don't give a damn what it is. Put it out.—Punch.

**His View on the Subject.**

An Irvington mother told her young hopeful to tell the teacher she didn't wish him to study German any longer.

"Just tell your teacher I don't want you to study German, that's all. She'll understand," the mother said.

The youngster pondered several seconds, then turned to his mother and said:

"Well, mother, while I'm at it, I might as well cut out arithmetic, too."—Indianapolis News.

**Tommy Explains.**

A couple of Charlestown kiddies were celebrating Bunker Hill day by exploding a few torpedoes. Said Nellie: "I don't see how the Germans can blow up a big ship with one of these things."

"Oh, you girls can't expect to understand about such things," said Tommy, with a superior air. "Of course, the torpedoes they use are about a hundred times as big and they use a derrick to lift them and drop them on the ship."—Boston Transcript.

**Wonders of Cookery.**

A new pupil in the cooking school sat at the instructor's desk copying recipes from cards. She wrote busily for some time and then approached a fellow student and asked wonderingly:

"Do you have to have all these things to make fruit punch?"

Her card read:

"Fruit punch—Two pounds powdered sugar, 12 lemons, nutmegs, paprika, tarragon, vinegar, two heads of lettuce, raisins, buttermilk."

It appeared that she had copied the teacher's grocery memorandum for the next day.—Youth's Companion.

**The Truth at All Costs.**

He was a hard-working school teacher and had just told the class that wool comes off sheep and is made into blankets, clothing, etc. He proceeded to question little Willie, who had been rather inattentive during the lesson.

"Now, Willie," said the teacher, "where does wool come from?"

"Off the sheep's back, sir."

"And then?" queried the teacher. Willie could not answer.

"What are these made from?" asked the teacher, touching Willie's trousers with the cane.

"Uncle John's old ones."—Exchange.

## WATER WATCH.

### For Use in Irrigating Ditch.

A man in Los Angeles, Cal., has invented what he calls a "water watch." It is designed to measure the water in an irrigating ditch. I wonder why I was not the inventor of that machine. I have puzzled over the question of methods in the division of water and in its measurements until I have almost been lost in the mazes of confusion, because there has not been in the northwest or in any other place, so far as I know, a correct, a scientific, a universal standard of measurement. Almost every irrigating system has some unit of measurement, or some method of measurement that differs from every other, and it is impossible to reduce them to a unit of measurement that will apply everywhere, and give any correct idea of how much water is being received.

Water is the valuable thing in an irrigated country. Almost anywhere in the northwest where there is not rainfall enough to grow wheat we can buy sagebrush land for $1 to $5 per acre, provided water can not be obtained, but if water can be obtained the land is worth $100 to $200 per acre. It can be easily seen, therefore, that water is the thing of principal value, yet the land can be measured with accuracy and the water can not.

It is, therefore, a great pleasure to me to find that some one has invented a machine which stands encased in an open ditch, with its face above the water, to be read by all persons at all times, and that it gives a correct and complete record of all the water that passes through its gages. It contains a spiral wheel, similar to a ship's log and through which the water is directed. The wheel revolves by the action of the rushing water on its beveled surface. The speed of the spiral is governed by the flow of the water; therefore, if the canal is full the pressure on the vein is increased by the heavy flow. Its velocity must, of necessity, be increased, in proportion by the increased speed of the water and lessed by the diminished flow and pressure.

G. L.

## SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

## An Air or Water Pillow of Rubber a Sanitary Sleep Aid

Dr. Hirshberg.

Whether to sleep with or without a pillow—that is the question each individual has to decide for himself. One person needs must roost high, with his head well above the level of a bolster and two pillows, while another can not abide either and sleeps well only when the head is on the mattress itself.

Physiologically, the average person may prefer to visit Morpheus with the head a bit above the line of the body, but there are so many exceptionally healthy individuals who enter the land of nod in other ways that the "physiological pillow" idea of Dr. Sheldon Leavitt of Chicago may solve the problem. For three years he had discarded the old-fashioned pillow with most happy results.

Ordinarily the posture in which most persons sleep for many hours at a time, cramps the heart and blood stream, strains many chest and neck muscles and compresses important structures generally.

Sleepers are often seen with congested faces, snoring loudly, and as restless as a roasted popcorn on a red hot coal. Many of the postures assumed by sleepers as the direct upshot of the pillow they rest upon may well be productive of numb fingers, tingling arms and pine-and-needles sensations in the chest and legs.

**What the Pillow Is.**

The common garden variety of pillow pushes the head into unsymmetrical poses, squeezes nerves, veins and arteries and helps to cause bad dreams by the tension maintained in the neck and shoulders.

The ideal, sanitary and physiological pillow, according to the Chicago savant, is one that is not as soft as the ordinary pillow nor as hard as a cushion. It is as high as the outer edge of the shoulder and fits into the space by the side of the head, neck and protuding shoulder.

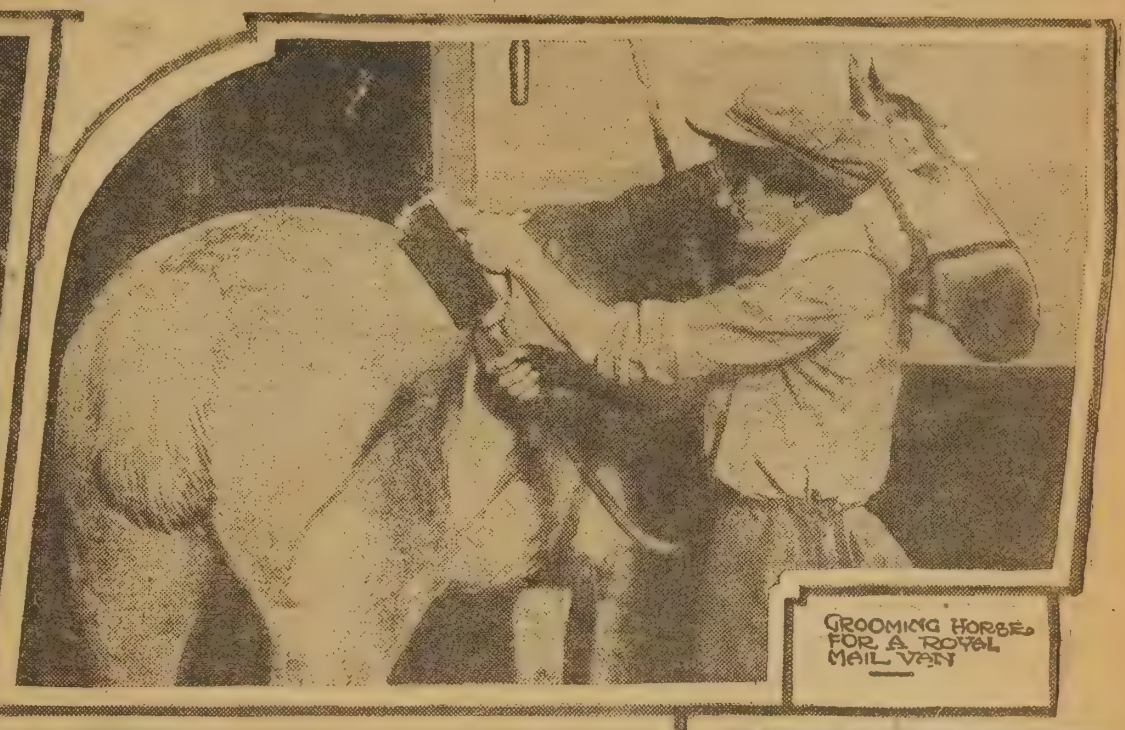
Dr. Leavett's pillow is made of rubber or some similar material, which can either be inflated like an automobile tire casing—not the inner tube—or filled with cold or hot water like a rubber bag or thermos bottle. In appearance and form it is not unlike a foot cushion, but is more resilient, and gives somewhat like putty to hold the shape of the head and shoulders of the sleeper.

**Habit the Factor.**

Dr. Leavett claims that this new physiological pillow can be made by almost any one capable of making a pin cushion. It does not contribute to that overindulgence so characteristic of many persons of giving them a bed of roses and too soft a pillow to lie upon.

The matter in question, whether high pillows or low pillows are preferable is not any more important than whether you sleep better on the right side or left side.

Some years ago I was convinced that I could sleep better without a pillow than with one; also that I could never sleep soundly on my left side. Determined to test both my will power, my ability to overcome a habit and my reasoning that there could be no physiological difference, very abruptly one night I made up my mind to sleep on two pillows and on my left side.



After a few hours wrestling with the broken habit of years I went to sleep and established the opposite hapit, which has not yet been disturbed or switched into the other one.

Obviously, the human fabric in health acquires a happy faculty by which it can change and adapt itself to an infinite variety of circumstances. A daffydown-dilly, or a feather pillow, hard-flint or a bolster, may each, as occasion offers, serve as pillows.

# All the World's a Stage, and All the Men and Women Merely Players

## War Work of English Women Covers Wide Field

U. S. Food Administration.

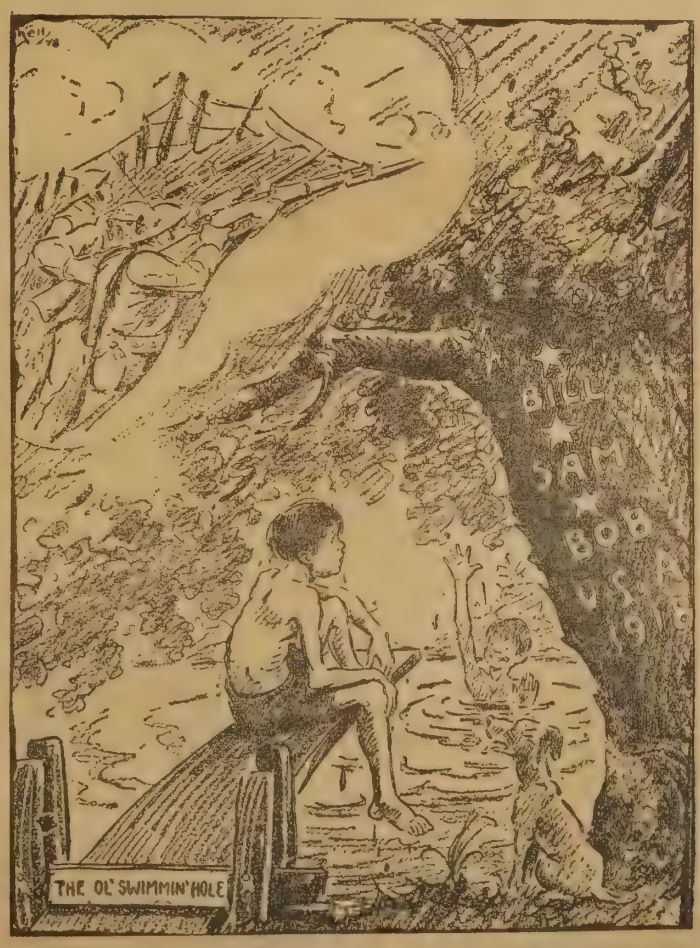
Thousands of able-bodied women have passed beyond the knitting-bandage-making stage over in Merrie England, leaving to children, cripples and the aged these earliest of war duties.

The war work of English women, translated in part, means grooming horses, doing forestry work, working on farms, making a business of not-house vegetable raising, pitching hay, and in general taking the places left vacant in the agricultural world by the absence of men workers who are at the front.

From almost every walk in life, these women who are physically able have taken their places in the fields.

Grooming horses isn't the pleasantest task in the world, but the women of England never hesitate. They know that to "carry on" means to do what one is best fitted for.

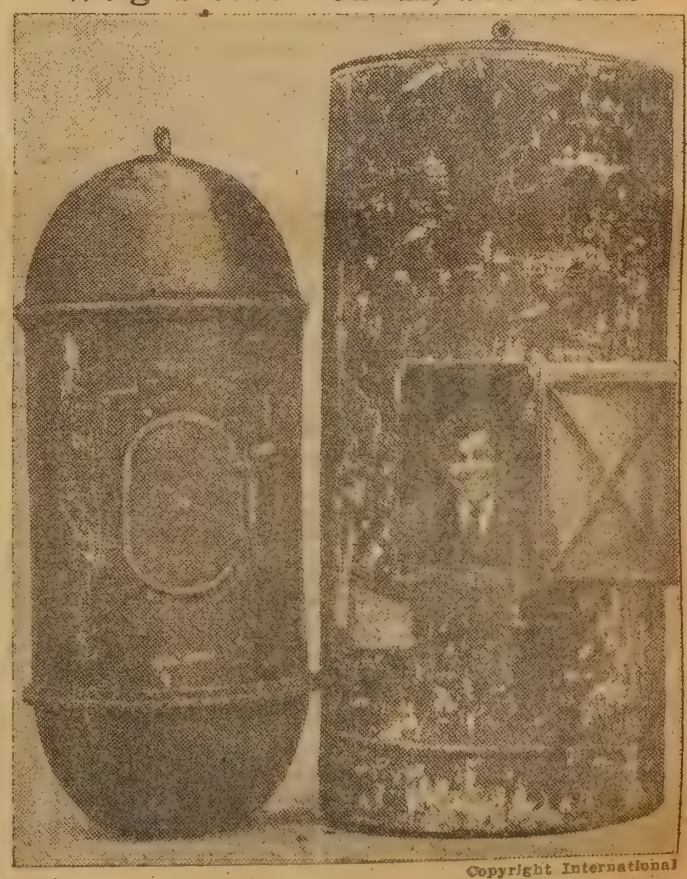
Clearing wooded land so that crops may be planted is harder than sweeping floors or serving tea.



Not so strenuous, but quite as tiring and important, is the raising of fresh vegetables, under cloches, and in hot-houses, so that an early supply of green things may be assured.

### Rhondda a Vicount.

The British food controller has been elevated to be viscount by King George V. "for conspicuous public services as food controller." The king's birthday honor list, issued June 3, contained the announcement. Lord Rhondda's policy, broadly speaking, has been to fix prices of those articles of prime necessity over the supply of which he can obtain control at all stages, from producer down to the retailer. The purpose is to fix such prices on the principle of allowing a reasonable pre-war profit to those engaged in the production and distribution of the particular commodity.



### The Ol' Swimmin' Hole

—Oakland Tribune.

"Gee, it's no fun any more without th' big fellers here t' duck y'u an' tie yer clothes in a knot."

### Weighs 6000 Pounds, but Floats

Copyright International

To prove that his invention is unsinkable, Menotti Nannik, a Chicago inventor, locked himself into a 6000-pound safe, which was thrown overboard at Battery park, New York. After being submerged in 85 feet of water for more than a minute, the safe reappeared on the surface and the inventor was released. The safe was enclosed in a large steel cylinder, whose top automatically came off when it struck the water. The inrush of water forced the safe to the surface, where it bobbed about until recovered.

**The Adventures of Two Young Pioneers in the Wilds of Upper Louisiana. Now the State of Missouri.**

By LOUIS B. MILLER

Copyright, 1914, 1915, by Lewis B. Miller.

**Summary of Preceding Chapters.**

In September, 1811, two young men who lived near St. Louis, Ben Armstrong and Jodo Henderson, taking with them their two dogs and donkey Spunky, started on an all-winter's hunt in what was at that time an unsettled region, where Indians held full sway, in the wilds of upper Louisiana, now the state of Missouri. After a perilous trip over old Indian trails and dangerous streams, they reached their destination—a salt spring close to the river Big Niangua, which Ben had visited before and from which they expected to secure salt for sale with their furs when they returned to civilization the following spring. Here they erected a rough cabin for their winter quarters close to the mouth of a large cave that was full of water and bats, and started their salt making and hunting. After an exciting experience with a bear in a cave they find their first fresh sign of Indians—moccasin-tracks in the snow about their camp and the morning after they find moccasin-tracks in the snow about their camp. The Indians attempt to enter their barricaded cabin at night but are frightened away by a great earthquake. The boys are captured and taken to the Osage village. One day they are given one bullet and one charge of powder each and allowed to go hunting. They dare not attempt to escape for fear of starvation, but lose their way and are found the following day by the Indians who think they tried to escape and are taken to the camp under guard. Ben is tied to a stake and a fire built under him but it is only a ruse to induce him to take as his squaw Watermelon, for the time being an Indian widow, who cuts his bonds and proclaims herself his squaw. Ben declines. The boys make plans to escape by canoe. They accumulate some parched corn and dried meat, steal a canoe at night and paddling far up the river turn into a branch stream and hide in a cave. After two days and a night there they go back down the river, safely past the Indian village and turning into a branch find a cave high up in the rocky face of a cliff. Here they place all their belongings except the canoe, which they conceal. They are discovered by the Indians, and, retreating deep into the cave with their belongings, they find, over a mile from the opening through which they entered the cave, an exit, and start southwest, the Indians undoubtedly in pursuit. The second day a blizzard sets in and hungry wolves follow the boys. Toward dusk they reach a deserted settler's camp, the cabin burned but chimney standing. Here they build a fire and plan to stand off the wolves. A long, hard fight with wolves and cold ensues. This fight was hardly won when Snapping Turtle and his warrior band surround the boys, who later effect their escape unseen by their enemies, but only to renew their struggle with the cold and wild animals. Once again they made good their escape, at last reaching the stockade camp of other white hunters in the wilderness. They are admitted and find rest and shelter with three older men, kindly, but fugitives from justice.

## CHAPTER XXI.

**Escaping by a Way Mysterious.**

"Let 'em shoot as much as they please," said Ben, calmly seating himself on the bench. "I only wish we had all the powder and bullets they're wasting. And I wish we had some way to give those hunters warning."

"Ben, yonder lies a long, slim pole. And one of their blankets is a bright red. Don't you think, if we elevated the blanket on the pole that they'd see it when they come home and understand what it meant?"

"I rather believe they would. At any rate, it's worth trying."

Soon they had the blanket on the pole, and the pole fastened against the upper part of the stick-and-mud chimney. The blanket waved in the south wind, like the big red flag of danger that it was. The two walked about in the yard. Sometimes they mounted a bench and peeped out between the stockade timbers to see if they could discover any Indians. But the Osages were prudently keeping out of sight.

The hours of the afternoon dragged by. Occasionally an Indian could be seen, out in the forest, and dodging from tree trunk to tree trunk. Besides watching for redskins, Ben and his companion kept a lookout for the absent hunters. But not one of them appeared.

When at length the sun was setting, the two guards knew that the owners of the house had either heard the shots or seen the flag and fled for safety; or they had encountered the Indians and been captured or killed. At any rate, it seemed a fact that Ben and Jodo must shift for themselves. And they wondered what the Osages would do or attempt to do when darkness came down. They tried to be hopeful, but feared the worst.

At dusk, after assuring himself that no Indians were near the stockade, Ben unbarred the gate and threw it wide open. If any of the hunters happened to be hiding close by, this would be their opportunity to make a dash and get inside. Then he called aloud:

"Mr. Jacks, streak it for home if you can! The way is clear!" And so he called each of the others.

But nobody came dashing out of the forest. Ben shut the gate and barred it again. But he stood by it, ready to open at a moment's call.

"Boys, anything the matter with that gate?"

Startled, both turned like a flash. And they could scarcely believe their senses.

There in the cabin door stood Jacks. And just outside, leaning against the cabin wall, were Murphy and Wolf.

Ben stared and Jodo stared. "Well, in the name of all that's reasonable, how did you get in here?" burst out Ben.

"Just what I'd like to know," declared Jodo.

The hunters grinned. "Didn't you see us open the gate and walk right in, bold as ever you please?" demanded Jacks.

"No, we didn't! And, what's more, you didn't come in through the gate!" Jodo insisted. "W've been watching this gate with hawk's eyes—watching it for hours."

Wolf stepped out and gazed up at the blanket on the pole. "What does that mean?" he wanted to know.

Jodo replied: "That's a danger signal."

"Danger of what?" Murphy asked.

"From redskins," Ben explained. "They're here, the Osages—nearly 20 of 'em. And they're keeping watchful eyes on this place. But you haven't told us how you got inside."

"Well, now, I'll tell you, boys," said Jacks. "We heard some shots, and when we got back clost enough and seed your red flag, we guessed somethin' must be wrong. As it wasn't safe to come in the usual way, we 'lowed we'd better slip in some unusual way. So we turned a trick, and here we air!"

And with this by no means enlightening explanation, Ben and Jodo had to be content. For the hunters began to talk of something else. But the matter had mystified the two visitors. After letting the blanket down, they even took a look around the stockade. But they could discover no other entrance.

Jacks and Wolf now went inside to prepare supper. But Murphy was standing on a bench looking between the stockade timbers and out into the darkening forest. His rifle was in his hand.

"I'm tryin' to ketch sight of a Osage," he explained when Ben approached. "Them's the very same red boogers that druv off all our horses and stuck fire to our first cabin. If I can git half a chanct I'll make one of the greasy varmints mighty tarnation sick of this clearin'."

"They'll be hard to see now," Ben answered, as he started toward the cabin door.

But just as he stepped through the door Murphy's rifle cracked, and a yelp in the woods followed promptly.

"Did you fetch one, Bill?" Wolf stepped to the door to inquire.

"Yep. I only teched 'im gentle, though. But he started for tall timber like a horet had lit on 'im, sharp end first."

"Unless we had ammunition enough to fight it out with them I doubt if it's good policy to shoot any of them," Ben remarked. "I've had chances to kill some since we talked with their chief, but I held my fire."

Murphy jumped to the ground and began to reload his rifle. "It's little they know how much powder and lead we've got. And unless we knock a few of the red rogues silly they'll hang around here as long as they please."

Night now settled down, and Murphy went indoors. Supper was prepared, and all ate together. After supper it was agreed that one should remain up and one guard and that the others should lie down and sleep until their turn came.

Murphy was taking the first watch, and the two visitors went to bed and to sleep. The guard sometimes sat before the fire, which was little needed, and sometimes he went out into the yard and walked around. Not a suspicious sound could be heard, and he half believed that the Osages had gone away.

Ben and Jodo would not come on guard duty till late in the night, and they slept soundly. But it was not yet midnight when Jacks shook them awake.

"Up with you boys!" he said, though very quietly. And when they had sat up drowsily he explained: "It's not for guard duty that I'm wakin' you. The red niggers have fired the cabins, and we've got to hustle out or be roasted alive!"

Ben started up in alarm. "Fired the cabins? How could they do that? And why didn't the guard prevent it?"

"Narry s'picion did he have of what they's up to, they worked so tarnal sly. We didn't make any loopholes in our cabin walls. That was our mistake. Instid, we tried to make 'em bullet-tight. The Osage boogers packed bresh and dry wood and piled it ag'in' the outside walls, and now they've up and set fire to it. Don't you hear it a-cracklin'? And if you'll take a peep out through this hole we've just made in the mud-dobbin' you can see what's coming' to pass."

Ben put his eye to the hole. All the ground near the cabin was brightly lighted. Jodo also looked out.

"Can't something be done to extinguish the fire?" Ben inquired.

"Not without exposin' ourselves. And the moment we stuck our heads outside the red creechers would open fire. That's just what they're waitin' fur."

"Then what can we do?" demanded Jodo. "We don't all expect to sit down here and fold our hands and wait till we're broiled alive, do we?

"No, we won't do that—not by a jugful!" answered Jacks. "Only one other thing we can do, though—git up and dust from here."

"But if the Osages are outside, ready to shoot us down, how can we git up and dust?" again demanded Jodo.

"That's the easy part—as easy as rollin' off a log."

Now Ben spoke up: "I don't see how that can be."

"You don't see yit, but you will see before long. Leave that part to us."

"Is it dangerous?"

Jacks shook his head. "As safe as safe can be."

Ben and Jodo were much puzzled. But they recalled the mysterious way these men had entered the stockade in spite of the Indians, and knew that they must be speaking the truth.

"There's no great hurry, I reckon," Jacks told them. "It ought to take a good while for the fire to burn through these logs. But it will burn through by daylight or not long after'ds. And night's a better time to escape than daylight would be. The sooner we git started the better. Every feller of us ought to be miles from here by daybreak. The question is, what do you boys want to do? Go with us down White river to our tradin' post or strike back t'wards your trappin' camp?"

"We'll be the gladdest kind to have you go with us if you feel like it," Murphy spoke up.

Ben weighed the matter. "If we just had a little ammunition I think we'd travel a bee-line for the Big Niangua," he soon announced. "But without powder and lead we shall have to go with you till we can find some. It would be foolhardy for us to try to make our way through this wild country without anything to shoot with."

"Well, we can't spare you much, boys—hain't got it ourse'v's," Jacks answered. "But we'll split up what little we've got. We'll do the best we can for you."

"How many bullets and charges of powder can you spare us, Mr. Jacks?"

The three hunters held their powder horns to the fire and looked through them. Then they counted the bullets in their ammunition pouches. Now Jacks said:

"You've got a load apiece in your rifles, hain't you? And we can let you have five more bullets apiece—ten in all—and the powder to push 'em and prime 'em. And that's more than we're savin' for ourse'v's."

Ben and Jodo talked together for a minute or two. Then Ben said:

"If you can let us have a chunk of meat, so that we shall not have to waste our ammunition hunting, but can save it for the Osages, we'll take the risk."

"He'p yourse'v's to all the meat you want, and welcome. Thar's bear bacon in thar, and elk hams and venison hams. Likewise some buffalo meat. Take all you feel like packin'. We cain't git off with a great sight of it, I guess. And what's left will soon be ashes."

"But you needn't worry much about the Osages," Wolf told them. "If we all git out cautious they won't know thar's any us to foller. They're not apt to find out but what we've been burnt up in this house."

Ben looked his surprise. "That so?" Then we'll certainly strike back for the Big Niangua. But what puzzles me is how we can escape from here without being seen by the Osages and without leaving any trail."

Jacks laughed. "Don't you fret about that part, young feller. We'll mighty soon show you how the trick's turned. But let's bundle up and be off."

The hunters now divided their powder and bullets with their visitors. Ben had a little money, and offered to pay them. But they waved the suggestion away. Then Ben and his partner stocked their provision bag with all the meat they expected to need. While they were doing this the three shaggy fellows were taking down their bales of furs from the loft.

Jodo watched them wonderingly. "Can you escape with all those?" he asked.

"Yessiree-bob! We can take out anything not too heavy for a man to tote," Jacks assured him.

Escape is effected through the indoor well of the stockade.

Soon all the furs were lying on the floor—the ground—and the hunters' tools, cooking vessels and other things had been bundled together, ready for carrying. By this time the fire outside was roaring loudly. And in spite of the mud-daubed walls smoke was beginning to find its way in. Now Jacks brought some pine knots and lighted one at the fireplace. Then he held it up and gazed around.

"Well, old cabin, you've been our home for a right smart while—the only home we could stay in. But now comes the end. We won't see you any more, ever, I reckon. So goodby to you, and peace to your ashes!"

He waved his torch, then turned and walked into the adjoining room, where all their things were. The others followed him.

"I'm still wondering how we're going to get out of here," Jodo remarked.

"Yes, I reckon you air—

I reckon you both air," chuckled Murphy. "But you won't have to wonder any longer. You see that hole in the ground, thar? That looks like a well, and it is a well. Thar's plenty of water in the bottom of it. But down close to the bottom a cave leads off. And that cave comes out of the ground nearly two miles from here and right close to a little river whar our canoes are hid."

"And so that's how!" exclaimed Jodo.

"Simple enough when you understand it," Ben remarked.

Jodo pointed to the well. "And that's how you got in here while we were watching the gate?"

"That's exackly how," Jacks assured him. "But we'd all better be on the go. Take us sever'l trips to tote our things through. Bill, you light another pine knot and go down first. Then the boys can go down with what they've got. After that me and Wolf will let down our furs and things."

Murphy lighted his torch. Then he reached down to a ladder that was standing upright against one side of the well and leaned it over against the other side. Now he lowered himself through the hole in the flat rock that covered the well and disappeared. Looking into the hole, Jodo and Ben saw him and his torch going down, down, down, till they stopped more than twenty feet below.

Presently Jacks said: "Now, boys, your turn to try the cellar route. "I'll hold the pine knot for you. You don't know the way as well as we do. Might miss your footing in the dark. I can let your rifles down with the well rope, like I'm goin' to do our'n if you think that's better."

Ben answer: "We'll take our rifles in our hands, but you may let our packs down to us if you will. We couldn't squeeze through this hole with them on our backs. You'd better wait till I'm all the way down, Jodo."

Ben lowered himself through the hole till his feet were on the ladder. Then he went down, the two flaming pine knots lighting his way. At the bottom he found himself on dry ground. But the ladder leaned over a deeper part of the well, which had water it the bottom of it. Jodo came down after him.

They and Murphy were now in a cave which was not much higher than their heads.

While Jodo held the torch Murphy and Ben moved the ladder aside. When the way was clear the men above let down, first, Ben's and Jodo's traveling packs and then bale after bale of furs. Murphy loosed the bales from the rope and Ben laid them back in the cave.

When all the furs were down Jacks lowered about two hundred pounds of their best and driest meat. Then came their bedding—blankets, buffalo robes and bearskins—followed by their tools and cooking vessels. Last of all their rifles were tied together and lowered, and after that the men themselves came down.

With a glance around Jacks said: "Now we'd better shoulder up what we can pack handy and hurry on to the cave's mouth, so that the boys can be on their way as soon as possible. As they're goin' by land, it's important that they git as long a start as they can by daylight. After we light them out we'll come back and pack our things out."

"No," spoke up Ben. "We'll help you carry your things out before we go. We appreciate what you've done for us; and that, too, after we've led the Osages here and got your house burnt."

"The red boogers would have burnt it anyhow, sooner or later. Guess maybe this is just as good a time as any," Jack said.

"At any rate," Ben went on, "it's no more important that we get far away by daylight than it is that you men get far away. This country is just as dangerous for you as it is for us. So we'll stay with you till all your things are carried out and loaded into your canoes."

"But we've got the advantage of you," Jacks explained. "We go by water and don't leave any trail. And the river's swift just now. We can paddle a whole lot faster than you boys can foot it."

Here Wolf spoke up. "I'll tell you sump'n', fellers. Why couldn't these young chaps ride with us a few miles till they're out of the dangerous neighborhood? The river runs southeast—purty nigh east—for a good long stretch—at least twenty miles, I 'low. They could ride till we're about to turn south, then land and strike out north or northwest."

Now Ben inquired: "How long will it take to run the twenty miles?"

"If we git started prompt we ought to make the run by daylight easy enough."

"Yes, easy enough," agreed Jacks. "And that's just what you boys had better do."

"All right, Mr. Jacks! We'll ride with you to the river bend, and thank you for the lift. And we're ready to shoulder loads whenever you men are."

Without further delay the party took up each what he could carry and they started. Jacks took the lead with one torch and Murphy brought up the rear with the other.

After following the narrow, winding passage for more than half a mile they put down their loads and went back for more. And after putting down their second loads all returned for the third, which would be the last.

Now it was seen that other pine-knots would be needed, and Jacks went up the ladder for more. As he came down, he covered the hole with the flat stone kept for that purpose.

"We didn't move out a minute too soon," he told the others. "The air's hot and thick with smoke up thar, and the roof's already blazin'. Little afeard it would fall in on me. As I came down I slid the rock over the hole. The rock will soon be buried under fire and ashes, and like as not the Osages will never find out thar's any hole here. They'll be gone before the fire goes out enough for 'em to scratch around. And even if they did happen to unkiver the hole, they'd see the water down here and take it for a well. We'll pack this ladder back a piece and try to hide it."

When the ladder had been let down and disposed of, the five men took up what remained of the stuff and were off. On coming to where they had left the other things, they did not stop, but went about as far again, to where a stream came out of a crack in the wall. From here on the floor of the cave would be covered with water.

Here they put down their loads and rested. Then they went back, twice, and carried up their other things.

"Here's whar we've got to pull off and wade," Jacks announced. "The water won't be so overly deep, but it's a leetle mite chilly. Likewise, the bottom's slick in places. Your feet's apt to slip from under you. So, to save accidents, we'd better walk slow and step cautious."

Down sat every man, and off came boots and socks. When their clothes had been rolled above their knees, the five took up what they could carry and went splashing on.

(To be continued.)

## Free Information

### Also Some Valuable Books

The service rendered by The Washington Information Bureau, at Washington in distribution of publications is designed to be continuous.

From time to time new books have been listed, but those previously announced are still available.

Either of the following may be obtained for a 2-cent stamp to cover cost of mailing. There is no charge of any kind.

Book on Canning.
"German War Practices."
Book on Colds.
Garden Book.
Book on Knitting.
War Cookbook.
Book on Navy.
Book on Drying Fruits.
Book of Recipes.
Bread Book.
"How War Came to America."

Write today and ask for free copy. Inclose a 2-cent stamp for return postage and be sure to write your name and address plainly. Direct your letter to The Washington Farmer Information Bureau, Washington, D. C.

P. S.—The information bureau at Washington will answer any question you may submit. Answer will be sent by letter. Just inclose a 3-cent stamp for return postage. Note carefully the address given above.

**Resourceful Woman.**

"Seems a woman can't wear a gown more than three times with the same crowd. My wife is a splendid manager, though.

"Ignores that rule, does she?"

"No, but when the limit is reached she breaks off with that crowd and starts in with an entirely new set."—Exchange.

## For the Price of Your Home Paper Alone

Through a special clubbing arrangement with a large number of newspapers in Washington, we can now send you **The Washington Farmer** and your Local Home Paper at the regular subscription price of your home paper.

## THE HOME PAPER

You alone know the great value of your local town paper. The part it plays in local affairs, the news of the happenings of your community, the gossip, social and commercial life that you wish to keep posted on. It brings the story of the home boys at the front who are fighting for you and our country

## THE STATE FARM PAPER

The Washington Farmer is your family paper. It keeps you posted on the agricultural developments of your state. It is a complete family farm paper—all the farm news, latest and best serial stories, department for every member of the family—feature sections of every branch of farming, dairying, stock raising, fruit growing, etc. Also colored comic pages and a children's and family page. It is the biggest and best farm paper published in The Pacific Northwest.

**The Washington Farmer Is Issued Every Week**

We are pleased to state that by subscribing now to any of the following papers and paying the regular annual subscription price of that paper your payment will also include a subscription to The Washington Farmer.

# Lesson on Thrift

## War Teaches Us Art of Saving

By Margaret Palmer.

"Conservation had always been my lot—but we never seemed to have anything. We were ever in debt, and it was nothing but from hand to mouth for us.

"My, but what a difference in a year," remarked a woman who was waiting for a train to take her on a short trip to the city.

"Just what do you mean?" I asked her.

"Well, after we really began to feel this was our war and that we must not fail in doing our part, it taught us thrift. We managed somehow to buy a Liberty bond the first time. The second we took two, the third we took our quota. Why, even I myself could buy one the second time—just couldn't keep from it. It was a mighty hard struggle to get it paid for, but I did, and when the third one came I knew how to save and I just took one as easy as swallowing a glass of water. When the thrift stamps came I began to buy them, too. I have to do it just like the children do, but what of it? I feel happy in doing it.

"We were asked to conserve on cotton and woolens. Well, I know more now than I ever did about prolonging the usefulness of everything we possess or buy. I make over things that I used to think was a waste of time. I make all my kitchen aprons out of men's cast-off shirts or of wornout dresses. I often get a little apron or rompers or boy's suit out of the men's shirts for the children. One can learn a lot about making over things by going through the salvage department of the Red Cross.

"Last spring I read everything I could lay my hands on about conservation, and as a result I have not only helped my country but ourselves as well, for what we saved has gone for Liberty bonds and thrift stamps."

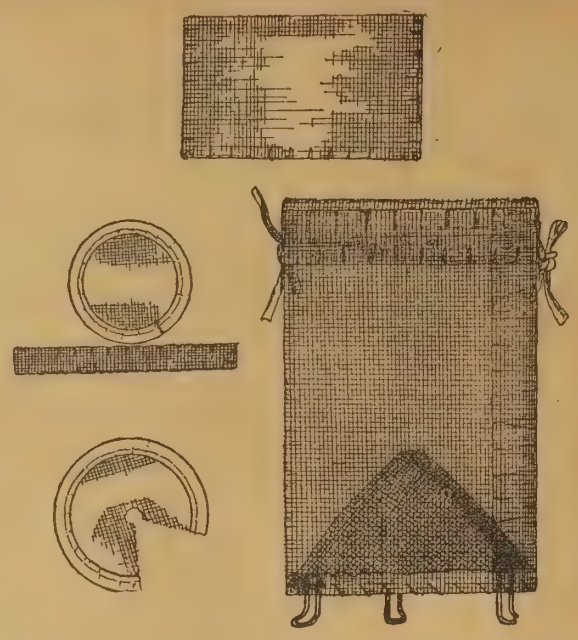
"Tell me more about this, it is very interesting," I remarked to her, as she seemed inclined to say no more.

"Well, first I went to the library and asked about food regulations and government bulletins, and in less than 10 minutes I had a whole bundle of information just for the asking, on food regulations, methods of conserving and on canning. Then I went to the Red Cross headquarters and got some yarn and directions for knitting, for I had made up my mind we must do all we could, and I knew how to knit, and that was my first step in the Red Cross work.

"I read those bulletins from cover to cover, when the farm papers came I did the same. I went to our agricultural college and saw a government expert demonstrate the cold pack method of canning vegetables and fruit, also his method of canning chickens and other meats and drying vegetables and fruits.

"After I felt I had 'absorbed' a little of this information I went to work. I did not wait for the garden to grow, but I began canning weeds for greens, such as pigweed, dandelions—even dried some. I kept right on until fall. I roamed the fields in search of wild fruits, and I canned everything I could lay my hands on. When winter was at hand my cellar was a sight fit for the gods. I had can upon can of vegetables, chicken, jelly, jam, sauce, pickles—enough to feed my family for a year. Happy?

"As I look back a year, I find that we have not only helped our country, but ourselves. The lesson of thrift has been learned or rather we have just begun to learn the first steps in it.



"Why, I have often asked myself the question did war have to teach us this lesson?

"Mothers whose sons are gone or soon to go are making great sacrifices. Talk to any of them and see. It is not only 50 per cent substitutes with them, but 100 per cent. They were the first to learn they could feed their family richly on corn, barley, rice, hominy, potatoes, vegetables, eggs, fruits, cheese, milk, fish, etc. Those mothers even deem it an honor to do anything the government asks of them even to donning overalls and working hard all day.

"If they can, why can't we? We can, and we are proving more and more that we can give up wheat, sugar, fats and meat and conserve our cotton, woolen and leather material to help win this war so that the world will be a safe place to live in."

# Place Fly Traps Around House and Stable

Fly control should begin at the breeding places. All refuse or other substances in which flies may breed should be disposed of immediately, says Farmers' Bulletin 927 of the United States department of agriculture. Fly traps should be placed around the house and stable in places frequented by flies, so as to catch them whenever they appear. It is necessary to use bait to attract the flies. After they are caught they may be destroyed by pouring hot water over the trap and then burning the flies.

Any woman, without hammer or saw, can easily make the kind of fly trap shown in the accompanying illustration. The dimensions will depend upon the size of trap desired. Nonrustable screen wire should be used. A straight rectangular piece of screen wire is used for the cylinder or body of the trap. This is blanket stitched with heavy thread to prevent the wire from raveling. The cone is made of a circular piece of screen wire from which a sector or V-shaped piece has been cut, and a small hole is cut at the center, which permits the entrance of the flies. A binding of heavy muslin or denim is sewed around the edge of the cone. The cone is slipped up into the cylinder. It must be large enough to fit tightly. It is made secure by the bound edge being sewed to the cylinder. The top of th etrap is made of a circular pierce of wire which exactly fits the top of the cylinder. On the edge of this piece is sewed a binding. On this edge is sewed a straight piece of wire two inches wide, which forms the rim of thetopofthe trap. This top fits on the cylinder snugly and is held in place by pieces of tape. The legs of the trap are made of bended wire.

The trap should be thoroughly scalded every few days. The following may be used f orbaits: Sour or skim milk, to which a little sugar has been added, meat or fish scraps, bread and milk to which sugar has been added, and sugar, vinegar and water.

# Rose Maltese Yoke

By WINIFRED WORTH.

You can crchet this attractive yoke very easily by following the concise instructions given here:

**Second Row**—Same only other one have 4 sc, with dc. in middle of oval, ch. 2 join top. ch. 4 1 dc.

**For Ribbon,** t. 1, ch. 3.

**Edge,** ch. 2, 1 dc. ch. 5 drawn around dc. 4 times, ch. 2 join, ch. 5 join.

**To Make Leaves**—Take up 2 L. ch. 5, 5 times, ch. 2 drawn thread through L, 6 ch. ch. to back, join, rp. 2 times, ch. 2, 2 dc. to back 3 times. Ch. 2 join to back twice. Lap braid until 4 s. and make one b longer for 2nd leaf.

**Rose**—Ch. 5. 5 dc. 6 s. of 2 ch. Petal 1 sc. 6 dc. 1 sc. in each s. ch. 4 and join in middle at back. 1 sc. 7 dc. 5 ch. 9 dc. in next. (Join with sewing needle.)

# Washing Knitted-Wear

By LISSIE C. FARMER.

To prevent their pulling out of shape when washed and dried, knitted garments require special treatment. All ordinary knitting and crocheting is based on the loop stitch and since the loop stitch is a curved line, its tendency under pulling or pressure is to straighten out. In handling such garments they should be pulled or wrenched as little as possible. Do not twist them in the rinse and when putting to dry, do not hang them on a line, but spread out flat on an even surface such as the top of a table or board and allow to dry slowly, keeping smooth and in shape whlie drying. If hung on the line the weight of the wet lower part of such garments pulls them out of shape and they dry in this distorted condition.

The whole secret of washing woolen knitted garments without shrinking is not to allow the temperature to be suddenly or greatly changed in them while wet. If washed in cold water they should also be rinsed in cold water and dried in a cold atmosphere, but since the atmosphere in which they are handled is apt to be of a moderate temperature the best plan usually is to wash and rinse them in tepid water and dry slowly in a moderate atmosphere.

# Ways to Aid Red Cross

All winter and spring women in different parts of the country have been aiding the Red Cross by sewing and making surgical dressings at Red Cross headquarters and knitting garments at their homes, as well as giving of their time and means.

"Now that the canning season is coming on," says Mrs. B. E. Kizer, herself an active worker in the Spokane, Wash., chapter of the Red Cross, "women, in the country especially, have an opportunity for still larger service and many of them are taking advantage of it and are canning more fruit than they need for the family and selling it for the benefit of the Red Cross. These sales can be made through the local grocers or at socials and Red Cross gatherings. Some women are also raising a few more chickens than usual, an extra pig or two or a sheep this year, for the benefit of the Red Cross."

DAISY FLY KILLER placed anywhere, attracts and kills all flies. Neat, clean, ornamental, convenient, cheap. Lasts all season. Made of metal, can't spill or tip over; will not soil or injure anything. Guaranteed effective. Sold by dealers, or 6 sent by express prepaid for $1.

HAROLD SOMERS, 150 DeKalb Ave., Brooklyn, N. Y.

Why Lose Your Hair

The Cause is Dandruff and Itching; The Remedy Cuticura

All druggists; Soap 25, Ointment 25 & 50, Talcum 25. Sample each free of "Cuticura, Dept. F, Boston."

FRENCHGLOSS

COOK WITH PEARL OIL

Ready to Cook in a Jiffy

Just the touch of a match and your New Perfection Oil Cook Stove is ready for cooking. No waiting for the fire to burn up.

Easier to operate than a coal or wood stove: No smoke or odor; no dust or dirt. Bakes, broils, roasts, toasts,—all the year round. All the convenience of gas. And a cool kitchen in summer.

In 1, 2, 3 and 4 burner sizes, with or without ovens or cabinets. Ask your dealer today.

A New Perfection Oil Cook Stove means kitchen comfort and convenience. Ask your friend who has one. Used in 3,000,000 homes. Inexpensive, easy to operate. See them at your dealer's today.

STANDARD OIL COMPANY
(California)

NEW PERFECTION OIL COOK STOVE

Aunt Nellie has received letters from the following cousins during the last week: Gwendolyn Baldwin, Herbert E. Nye, Helen Urquhart, Isobel Katherine Urquhart, Ruth Kayser, Fern Lewis, Fay Sheppard, Fannie Sheppard, Harold Vercoe, Helene Mastich, Grace Tupper, Christa Potter, Elizabeth Woodward, Hazel Carney, Nellie Lawrence, Fleeta Lantz, Verna Christensen, Maude Yates, Ruth Weaver, Nelda Killian, Edna Reinbold, Louise Locken, Bertha Guenther, Emma Brune, Minnie Brune, Blanche Bernard, Letha Waldrop, Hazel Lackey, Augusta Lewis, Gertie Bajema, Martha Hugh, Genevieve Halverson, Esther Hergert, Ruby Berthoff, Mollie Hergert, Marie and Mary Dallas, Florence Evans, Nettie Johnson, Elizabeth Gentry, Mildred Hooper, Freda McAtee, Ethel King, Carl Short, Margaret Drew, Clarence Otis, Ethel O'Rourke, Vera Williams, Fern Meyer, Hazel Crouch, Grace Brunink and Della Brunink.

**From Our Little Indian Cousin.**

Dear Aunt Nellie: This is my first letter to the Children's Corner. I am a little Indian girl. I am 7 years old. My birthday is April 21. Have I a twin. I would like to hear from them if there is any. I am in the second grade at school. Our teacher moved away this week so we don't have any school now. I know Sallie Garry, a Corner cousin. She lives about 15 miles from here. I enjoy reading the boys' and girls' letters in the Corner very much. I have three sisters and no brothers. My sisters' names are Agnes, Margaret and Emily. I am the youngest. I will tell one riddle and see if the cousins can answer it. Guess a riddle now you must, stone is fire, fire is dust; black is red, red is white; come and view the wondrous sight. I will tell you what it is in my next letter. I have one dog and his name is Snookums. I have one cat and we call her Kitty. I also have three kittens. I wish all the cousins and Aunt Nellie good luck.—Annie Phillips, Wellpinit, Wash. (And we wish you good luck, too, dear. We are so glad to have you for a cousin.—Aunt Nellie.)

**Gerda Has Two Little Nieces.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. My father takes the Farmer. I have brown eyes and red hair. I am 11 years old and am in the sixth grade. We live on an 80-acre farm and we have three horses and their names are Nellie, Kate and Fannie. We have four cows and three calves. The cows' names are Jennie, Blackey, Blenda and Pansy. The calves' names are Jersey, Reddy and Daisy. My birthday is May 11. Have I a twin? If so I wish they would write to me. I have three sisters and two are married and have two little babies. One of my sister's names is Bettie Nordstrom and her baby's name is Gladys and she is one year and five months old and my other sister's name is Lillie Dahlgren and her baby's name is Ruby and she is one year old. My other sister's name is Julie Ekholm. I go to the Mountain Valley school. My teacher's name is Miss Hazel Marie Peckham. I like her. —Gerda Ekholm, Rockford, Wash.

**Cat Catches Many Mice.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 12 years old and am in the seventh grade. The school teacher is my father. There are 19 children in school. I have a brother that is in the seventh grade. He is 13 years old and his name is Thomas. I have a gray and white cat. Her name is Dorfie. She catches many mice. I will give the cousins a few riddles: A horn ate a horn up a high oak tree. If you guess this riddle you may hang me. In came two legs, picked up three legs, knocked down four legs. We take the Farmer and like it very much. We are especially interested in "The Trappers of the Ozarks." We also enjoy the articles on agriculture and stock raising.—Harold Stringer, Pullman, Wash.

**Brownie Is a Saddle Horse.**

Dear Aunt Nellie: I am writing to you for the first time. I live on a prairie. We have 40 acres in orchard and 640 acres pasture. We have two miles to walk to school. We have five horses, Nellie, Maggie, Queen, Bob and Brownie. Brownie is the saddle horse. We have two cows, Cherrie and Isabella. We have a calf, too, named Jessie. We take the Farmer. I like to read the letters in the Children's Corner. I have two brothers and one sister. My brother's name is Harry and my sister's name is Lois. The baby's name is Elmo. I am 11 years old. My birthday comes April 10. Have I a twin? One of my brother's is 13 years old. The other is only 2.—Aubrey Thomas, Mae, Wash.

**Flossy and Mossy Are Cats.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 10 years old and I am in the fifth grade. My teacher's name is Mrs. Steele. My birthday is August 24. I go to the East Wenatchee school. There are about 75 pupils in our school. I have two cats and their names are Flossy and Mossy. I have a dog and his name is Rags. Our school was shut down on account of scarlet fever. I have one little sister and her name is Ethel. She is 2 years old. We live on a five-acre tract. We have two horses. I can only ride one of them. His name is Bob.—Ivy Ward, Wenatchee, Wash.

**Ride in an Auto Truck to School.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner, but hope it will not be the last. I am 12 years old and am in the sixth grade. I have light hair and blue eyes. We live on a 10-acre farm about six miles from Olympia. There are about 107 children in our school, but we have three rooms. There are about 33 in our room, 15 in my class. We ride in an auto truck two miles to school and two miles back, four miles altogether. I had three teachers this year. I have a brother in the army. We have not heard from him for a long time, so we do not know where he is. I saw a letter in The Farmer from a girl who was the same age as I am and in the same grade and whose first name was the same as mine. My birthday is November 11. Have I a twin? If so, will he or she write to me?—Mabel F. Reed, R. F. D. 3, Box 72 A, Olympia, Wash.

**Lives on Grandfather's Farm.**

Dear Aunt Nellie: I thought I would write a letter to the Children's Corner. I have read some of the other letters and enjoyed reading them. A friend of mine wrote a letter to you. Her name is Elve Hillstrom. She is a nice girl. I am 14 years old. I have five brothers, one older than I. He is 16 years old. My brothers' names are Gerald, Willard, Melvin, Oscar and Ralph. I am on the farm with my granddady and grandmother. The farm has 280 acres. My two brothers are here, too. My older brother and I are going to school. We have two horses and a big colt. Their names are Tom, Prince and Bird. I have 23 little pigs and five cows and six heifers. My birthday is September 23.—Marie Jeffries, Oakville, Wash.

**Has Crocheted Two Rugs.**

Dear Aunt Nellie: This is the first time I have written to the Corner. I am 11 years old. My birthday is February 9. If I have a twin I would like to hear from him. I live on a 160-acre farm. We have four horses. Their names are Nellie, Ned, Dollie and Billie. We have one cow and a calf. The cow's name is Cherrie and the calf's name is Buttercup. We have one dog. His name is Jack. We have three cats. Their names are Pussie, Whitie and Spot. I have an uncle and a cousin in the navy. I can crochet. I have crocheted two rag rugs. I have two brothers, Perry and Charles. I have three sisters. Their names are Sadie, Mildred and Grace.—Leonard W. Olin, Baird, Wash.

**Almost Found Her Corner Twin.**

Dear Aunt Nellie: This is the second time I have written to you, and I hope to write again. We have five calves and 40 pigs and 13 cows. Our school had a contest with the Greenwood school and we beat them. I had to speak, and I won 50 cents. We have two big orchards. We have 840 little chickens and 200 big chickens, so we have over 1000 in all. Aunt Nellie, I have almost found my twin. There is a girl whose birthday is April 3, but I don't remember her name, and there is a girl whose birthday is the 6th. Her name is Catherine Rempel. She lives in Oregon. She wrote to me and I answered her letter. I hope to write again.—Virginia Ripperda, R. R. 3, Everson, Wash.

**Go to the Swamp for Moss.**

Dear Aunt Nellie: I am 10 years old. I am in the fourth grade. My brother is going to write a letter now. This is the second time I have written to you. I enjoy reading the other children's letters very much. Two girls in Fragaria wrote to Aunt Nellie and when I get the Farmer I am going to find it and read it. I was very glad to get the Farmer because I love to read letters. About every Friday afternoon we go down in the swamp and hunt moss for the Red Cross and when we don't go and hunt it we knit wash rags. We have a garden club and a girl named Martha Peterson was president and I am secretary.—Lena Jonsen, Box 3, Colby, Wash.

**Goes to Deer Lake School.**

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I am 11 years old and my birthday is October 27. Have I a twin? If so, please write to me. We have one horse. His name is Prince. We have four cows and one calf. I have two brothers. Their names are Alber and Russell. Alber is 12 years old. Russell is 8 years old. Alber, Russell and I go to the Deer Lake school. Our teacher's name is Miss Jacobsen. Russell's teacher's name is Miss Peterson. Russell is in the second grade. Alber is in the sixth grade and I am in the fifth grade.—Selma Anderson, Box 73A, Clinton, Wash.

**On the Prairie Close to a Wood.**

Dear Aunt Nellie: I will write to the Children's Corner again. This is my second letter to the Corner. I like to read the cousins' letters. They are interesting. There are lots of flowers in bloom. Our school was out May 17. I am going to take the state examinations in history and spelling. I live close to Wild Rose prairie. I go to the Edgewood school, which is on the western part of the prairie close to a wood. We have sewing and manual training in our school. I like to sew and I have made quite a few things by hand. I have found some girls to whom I write letters. I would like to hear from them again. I think they write nice letters. I will gladly answer anyone's letter who will write to me. I like to write letters and I don't get a chance very often. The girls' names that I have been writing to are Virginia Clark and Frances Lambert, both of Penawawa, Wash., and Irene Clarke of Grand Dalles, Wash.—Viola M. Tarbert, R. 1, Box 56, Deer Park, Wash.

**An Interesting Letter From Emma.**

Dear Aunt Nellie: I am 10 years old and am in the fifth grade. My birthday is January 30. Have I a twin? If I have, would they please write to me. I like to knit. Do you? I like to read, too. I have read "Little Men," "Little Women," "Under the Lilacs," "Jack and Jill," "Joe's Boys," "The Trail of the Lonesome Pine," "Sue Orcutt," "The Orcutt Girls," "Greyfriars Bobby," "Quincy Adams Sawyer," "Little Prudy's Cousin Grace," "Little Lord Fauntleroy," "Little Prudy's Dotty Dimple," "Ellen Leslie," "The Secret Garden," "Animal Heroes, "Wild Animals I Have Known," "The Real Fairy Folk," "The Biography of a Grizzly," "Polly and the Princess," "Miss Gibbie Gault," and many more. Here is a puzzle which I found in the Youth's Companion, but could not solve. If a cistern had contained twice as much water and if the water had only been used half as fast as it was used, the water would have lasted three and three-sevenths weeks. How long did the water last? I found it in the Classmate. Can any of the cousins solve it for me? Here is another, only it is a joke. A young mother and her pretty baby were passengers on a train. The infant attracted the attention of an elderly gentleman passenger who, stopping to admire it, said: "A fine youngster, that, madam. I hope you will bring him up to be an upright, conscientious man." "That," said the young mother, smiling, "will be a bit difficult." "Pshaw!" rejoined the elderly gentleman, "as the twig is bent so is the tree inclined." "I know," agreed the other, "but this twig is inclined to be a girl!" Well, I must stop now or I am afraid my letter will form an acquaintance with Mr. W. Basket.—Emma Lucile Munroe, R. F. D. 1, Hazelwood Farm, Spokane, Wash.

**Country Life Better Than City Life.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I read the Children's Corner every time the Farmer comes. I like to read the letters Sallie Garry writes. My birthday comes November 5. We made a basket of raffia at our school. There are 23 children at school. I think the Children's Corner was very long one time. There are 10 of us in the family, including father and mother, and we all joined the Red Cross but the baby, Romanice. She is only a month old. We have three horses, one mare, seven calves and about 13 chickens. We have 11 milch cows and we sell milk. My sister, Olga, and I are setting a hen. I think country life is better than city life. Last year my two sisters and I had to weed a garden and when we got through we went to town and had a good time. My favorite flower is a carnation. My sisters, Victoria and Olga, and I were the ones that went that time. Victoria had the umbrella in the buggy and the umbrella was lying by the brake of the buggy and as she tried to pull it it sounded so funny we girls laughed so hard the horse nearly ran into the fence.—Vivian Miroshe, Tono, Wash.

**Elizabeth Has a Croquet Set.**

Dear Aunt Nellie: This is the first time I have ever written to the Children's Corner, but I enjoy reading the letters. I am 14 years old. I am in the eighth grade. I have three brothers and they are younger than I am. We live on a ranch 12 miles north of Odessa. I am knitting for the Red Cross. I think it is doing a lot of good work for the soldiers. Do you knit for the Red Cross? My father has a new car. I have two playmates in school. Their names are Agnes and Anna Havlicak. My birthday is March 8. Have I a twin? A girl that goes to our school writes to the Children's Corner. Her name is Necia Hire. I saw her second letter in the paper. We have 25 pigs, 200 chickens, seven cows and two little calves. I have a croquet set.—Elizabeth Anna Green, R. F. D. No. 3, box 19, Odessa, Wash. (Yes, Aunt Nellie knits and is glad that all the cousins are working for our soldiers.—Aunt Nellie.

**Live on a Big Wheat Farm.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I hope it won't be the last. I enjoy reading the letters very much. There are 17 pupils in our room and 42 pupils in our school. My playmate is El Berta Cantwell. I think she will write. I joined the Junior Red Cross. We live on a big wheat farm three miles from town. We have about 33 horses, 12 cows and calves, three cats, one dog, about five dozen chickens and five sheep. Have I a twin? If so I wish they would write to me.—Edith Tiedo, Box 22, Hoover, Wash.

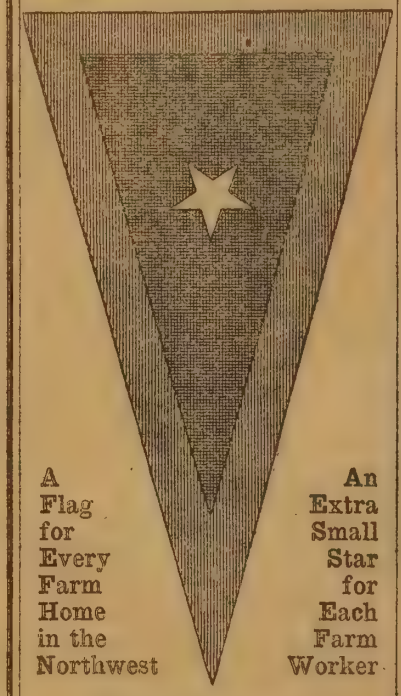
**Lyman and Roy Are Her Brothers.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I have two brothers and three sisters. My brothers' names are Lyman and Roy. My sisters' names are Lucinda, Elsie and Inez. I am 11 years old. My birthday is October 27. Have I a twin? If so I wish she would write to me. We have five horses, 16 rabbits, 14 pigs and 10 head of cattle.—Hilda L. Smelcer, General Delivery, Spokane, Wash.

**Wonders If He Has a Twin.**

Dear Aunt Nellie: This is the first letter I have written to the Children's Corner. I live in Pleasant Valley, on a homestead, 20 miles from town and the postoffice. I go two and a half miles to school. There are five scholars in our school. We have 25 head of cattle. I gather them in every evening after school off the range so papa can milk the cows. We have six horses, two pigs and one pet lamb. I am 10 years old and my birthday comes on March 5. I wonder if I have a twin in the Corner. Sometime I will send my picture on my favorite pony.—Arthur C. Bernhardt, Yakima, Wash. (We are looking for your picture, Arthur. If it is a good, clear one we will put it in the Corner so that all the cousins may see it, too.—Aunt Nellie.)

**Wishes Her Twin Would Write.**



Dear Aunt Nellie: This is the second time I have written to you. I am 8 years old. My birthday was April 9, 1918. I passed the fourth reader. I have brown eyes and brown hair. My name is Mary Sofie. I have three sisters and three brothers. My two oldest brothers are married and my two oldest sisters are married. One lives in Seattle and her husband is expecting to go to war any time. My oldest brother lives in Los Angeles and the other in Elyn. Have I a twin? If I have I wish they would write to me.—Lucile Almaden, R. F. D. 2, Sequin, Wash.

**Likes Her New Teacher Fine.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I wish to be a cousin. I am 7 years old and I am in the first grade. My teacher's name was Mrs. Dere. I like her fine. I have one brother and sister. Their names are Bernard and Margaret. My birthday is December 19. Have I a twin? If I have will they please write me? I would answer them if they would.—Dorothy Kane, La Center, Wash.

UNITED STATES
GOVERNMENT

# Financing War

## *Money Filters Back to the People*

When the war started in the summer of 1914, American financial authorities were generally of the opinion that it could not be waged, on the gigantic scale in which it had been started by Germany, for more than a year. One side or the other, it was thought, would become financially exhausted.

But a small minority even then tried to point out that financial exhaustion would not be the determining factor; that so long as the fighting countries had resources of man power and economic resources there could, in reality, be no financial exhaustion, as the government could go on indefinitely issuing bonds or raising war funds by heavy taxation. And it turns out that they were much nearer the truth than were the advocates of the other point of view, for the war is nearing its fourth finished year, the fighting has grown constantly in intensity, and neither side yet gives any visible sign of financial exhaustion.

The question naturally rises, where does all the money come from to be loaned in such enormous sums to the various governments engaged in the war, and the answer to this question puzzles many minds. A Chicago banker says the answer, however, is simple enough:

The money does not come from anywhere. It is not a money transaction. It is a credit transaction. unfortunately the terms of credit are stated and measured by terms of money. We bankers constantly speak of loaning money to our customers, whereas we really loan them the bank's credit. For example: When a customer's note for $1000 is discounted by a bank, and the proceeds placed to the customer's credit, that bank's loans and that bank's deposits are immediately increased by $1000, but there is not a dollar more or less money in the bank than before the customer offered his note. The bank, without the use of any money whatever, has created a credit of $1000, which serves the purpose of money to the borrower. What the bank's customer does on a small scale, the government is doing on an enormous scale. The bank customer's note is only a scrap of paper, but it represents the property, the character and the honor of the maker. A government bond costs only the engraver's bill to produce, but it stands for all the taxable property, the character and the honor of the American people. But there was neither more nor less money in the country after the recent government loan had been floated than there was before.

The government borrows money from the people to spend for war needs, but in spending that money it filters back into the possession of the people. It builds great cantonments, buying labor and all kinds of materials from the people. It buys rifles, munitions and food supplies—from the people. And that endless chain will go on revolving so long as the government has credit, and even then, if its credit should become exhausted, the government could go on raising war funds by taxation.

That process has now been going on for nearly four years in Germany, and could go on indefinitely if Germany had sufficient economic resources and man power. It is upon wastage of the latter that we must build our expectations of victory.

### Auto Races Scheduled. . .

July 2, 3 and 4 are again to be the dates for the annual auto race schedule at the Tacoma speedway. The affair will be more than usually interesting this year because of the proximity to Camp Lewis, the latter being an added inducement for people to attend from considerable distances. Such drivers as Earl Cooper, with a Stutz, Eddie Pullen with a Mercer, Dave Lewis and Tommy Milton with Duesenbergs, and Cliff Durant with a Chevrolet are sceduled to take part. Durant's participation is especially interesting in view of the fact that he is heavily interested in the manufacture of the make of car that he drives.

### Nonpartizan League.

At a massmeeting of farmers held at Endicott, Wash., the following resolution was passed unanimously:

Resolved, That it is the wish of farmers and citizens of Whitman county that all nonpartizan league organizers keep out of Whitman county during the war and that they devote their time to a more useful occupation to help win the war.

John T. Chenoweth of St. John, who has been working in Whitman county as a nonpartizan league organizer, says he will abide by the wishes of the 300 farmers present and no longer carry on his organizing work in that county.

### Develops New Wheat.

It is unofficially reported that Luther Burbank, the famous horticulturist who has developed so many varieties of agricultural plants, has developed a variety of wheat which contains approximately 14 per cent gluten. It is stated that the experiments resulting in the development of this wheat have covered a period of 11 years. In order to get a high grade of flour for breadmaking, it has been necessary in the past for millers to mix some of the lower grades with the higher grades in order to get the proper gluten content. If the new variety proves to be as high in the content of this element as reported it may render the manufacture of high-grade flour a simpler task.

### Coyote Hunter.

Government hunter W. B. Gunnoe has 84 coyotes and a wild cat to his credit as a result of his work this season in the Wenas, Yakima county, district. He has taken 36 old coyotes and 48 young ones. He says that practically all the coyotes taken by him show by their stomach condition that they have been eating sheep.

# GRAIN FIRES
# Burn Human Lives

LOOK at your heading wheat field, swept by the growing breezes of June; its beauty and its vastness suggest the billowing sea. Yet more—

## Human Lives Are in That Wheat Field!

If that grain gets to our starving allies children that are mere skeletons, gaunt and hungry men and women will live to see American soldiers smash the might that has trampled entire nations into the earth; if that grain gets to our own valiant fighters across the sea, it will provide the strength of muscle and will key the will of those soldiers the sooner to drive down to defeat the brutal power of a people gone mad.

You MUST save that grain from the kaiser's ally, FIRE!

To allow grain to burn this year, for lack of proper precaution, is to send more human lives to follow the ten million that the kaiser has already slaughtered.

A fire in the grain fields before this war meant only dollars burned—NOW it is HUMAN LIVES!

The Northwestern Mutual Fire Association offers its services to grain growers, whole-heartedly, in an earnest endeavor to keep grain losses at the lowest possible minimum.

This organization with the cooperation of its loyal host of policy holders has been a pioneer in the fight against fire—especially grain fire. We have sought to introduce the most up-to-date methods of eliminating all preventable causes of fires in the grain fields.

The Northwestern Mutual's corps of trained agents and inspectors is at your service, and will be glad to advise and consult with you as to the best means of protecting your crops and buildings, as well as protecting you against personal loss.

Thousands of Inland Empire farmers have availed themselves of this service. The cost is as low as sound insurance principles will permit; the service is exactly what you require.

Expenses have greatly increased and we are required to pay a war tax on every dollar of premiums collected, yet we are offering you our service on the same basis as last year.

We are only as far away as your telephone or mail box.

Main Office, Central Building, Seattle.

Inland Empire Offices, Old National Bank Bldg., Spokane.

# News for Breeders

J. B. Kays of Mabton, Wash., one of the well known sheep men of that region, has about 6000 ewes this spring and saved a little over 100 per cent of lambs. This, Mr. Kays says, is not quite up to the average, as 100 per cent of lambs is considered rather small there. Mr. Kays sold his wool in April for 58 cents a pound. He sees no chance for much decrease in the price of sheep, though he does not expect any higher prices. He thinks, prices will keep up, even after the war. The Yakima valley has had a dry winter and spring, forcing the sheep to be sent to higher ranges earlier than usual.

Clifford Riggs of Touchet, Wash., breeder of big type Poland China swine, feeds brood sows on shorts and the leaves from alfalfa hay that are scattered when the hay is baled. Sometimes Mr. Riggs mixes them and he finds that the sows keep fully as fat as they should be allowed to get on that ration. When pigs are about a month old he fixes a creep so they can feed away from the sow. He can thus get a rapid growth on them. Mr. Riggs' foundation stock came here from John B. Lawson and Peter Mouw, the latter the old pioneer breeder of the big type in Iowa. His herd sire is Mouw's Prince, while his foundation sow was Iowa Express and to her he gives much of the credit for the quality of his herd. Giantess, a sow of his own breeding, weighs 800 pounds when fat. Mr. Riggs recently sold a young boar at auction in Walla Walla for the benefit of the Red Cross, the pig bringing $280.

St. Mawes' Susie, one of the cows in Ed Cary's Jersey herd, Carlton, Ore., finished a year's official test May 1. While official figures for the last month had not been received when this was written it is known that she has produced almost exactly 860 pounds of butter fat or 1012 pounds of 85 per cent butter—the old Jersey standard. This is Susie's third official record. Her first was 813 pounds of butter and the second 937. She began this test at 10 years and 7 months old and still looks like a young cow. She is the fourth Jersey cow in Oregon to produce over 1000 pounds of butter. St. Mawes' Susie Olga, a daughter of Susie, finished a year's test in January with 815 pounds of butter and St. Mawes' Blossom, a full sister to the old cow, has a record of over 815 pounds of butter.

Poppy's Maiden and Boise Queen, the former a daughter of St. Mawes' Poppy (1120 pounds of butter), and the latter a daughter of the great bull St. Mawes, each finished in April with well over 800 pounds of butter.

On Monday, June 3, a carload of steers shipped by Edward Coles of Haines, Ore., sold on the Portland market for $15 a hundred, thereby topping all former price records for regular sales in any open market in the northwest. Mr. Soles is the man who for several years past has won grand championship on carload of fat steers at the Pacific International stock show at North Portland. He knows how to fit steers at any season of the year, and finds that the steer really fitted brings the price. Most of Mr. Cole's steers are practically purebred Herefords. These were baby beef of a Shorthorn-Hereford cross. H. A.

## Lady Mary Fayne.

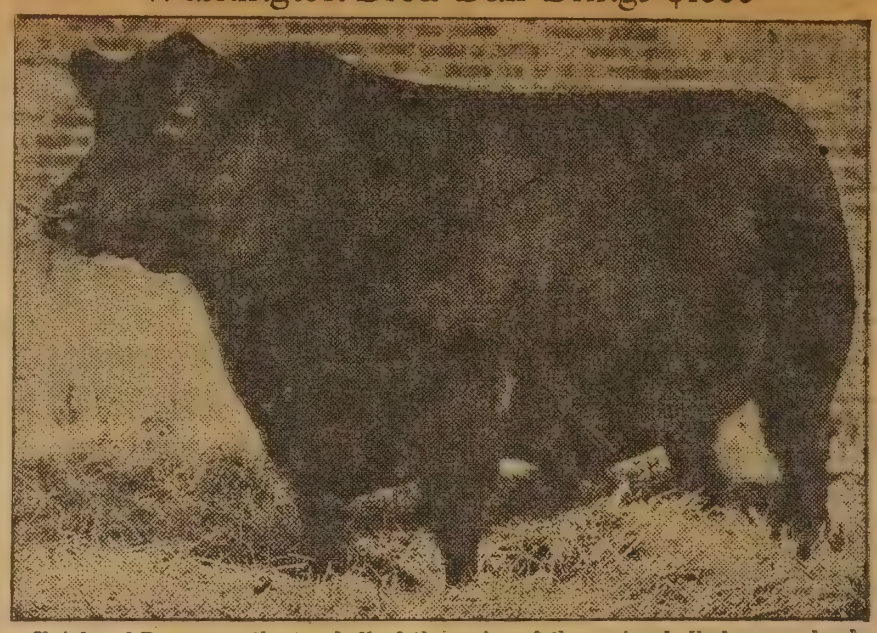
The above photograph shows Lady Mary Fayne, one of the Holstein cows owned by William Todd & Sons, Yakima, Wash. She has an A. R. O. record of 26.16 pounds of butter made as a 3-year-old. In addition she is, as her picture indicates, a great show cow. She will probably be exhibited at the Washington State fair this fall. She was just about ready to freshen when the Farmer camera snapped her in May, so will not be at her best when the fair is held. Lady Mary Fayne is a daughter of Sir Johanna Ruth Fayne, the bull that was at the head of the Todd herd for years and sired many heavy producers and good show animals. H. A.

## Staying By the Dairy.

Colonel George Gue of Yakima thinks the dairy and stock business generally is improving in tone. Feed prices are still high and labor is both high and scarce, but the men who have hung onto their cows until now are realizing that they have acted wisely. "And when things do turn," says Colonel Gue, "these men who have stayed with the business are going to cash in on their foresight. It's not going to be easy to buy good cattle when the war is over. The entire world is going to be buying or trying to buy, and prices are going up. The stickers will have all the best of it then."

## Great Guernsey Sale.

The greatest Guernsey sale in the history of the breed, so far as prices are concerned, was held in connection with the annual meeting of the American Guernsey Cattle club at Chicago, May 14. It was a consignment sale of the choicest animals from the leading herds of the country. The bull Don Diavolo of Linda Vista, sold for $10,000, the highest price ever received for a Guernsey bull. The cow Longwater Luxury topped the female prices at $5300 and the total received for the 67 head was $102,925, an average of $1536.



## Sunset Farm for $24,000.

Miss Florence N. Kent has sold to Frank H. Leonard of Chicago 240 acres of land, 12 miles west of Spokane, for a reported consideration of $24,000. Miss Kent took in exchange 15 acres of highly improved orchard land at Dishman valued at $15,000.

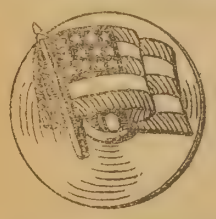
### Holstein Bull Brings $625.

The Moorehead and Hobson Holstein sale at Outlaak, Wash., May 28, resulted in good fair values, though no sensational prices were received. Top price was for a bull, Sir Chimacum Wayne Boon, that went for $625. Top price for female was $505 for Model Duchess Girl, and the average for the nearly 60 head was $278. The young stock went proportionately higher than the mature animals, as is so often the case at auction sales of purebred stock. H. A.

## Washington-Bred Bull Brings $1000

Knight of Rosemere, the top bull of the series of the spring bull shows and sales held under the auspices of the American Aberdeen-Angus Breeders' association at Chicago, Sioux City, Omaha and St. Joseph. This bull sold for $1000 to an Iowa breeder and was bred and shown by Congdon & Battles of Yakima, Wash.

## Sells the Calf; Buys Back.



J. T. Compton of Wenatchee has recently purchased a three-year-old heifer out of Suza Kleiterp Pontiac. The singular thing about the transaction is that both mother and daughter were originally the property of Mr. Compton. The older animal he kept, while the calf was sold. That the young Holstein comes back into the herd of her original owner is a pretty clear indication of the value he puts upon both mother and daughter.

## Registered Guernsey Bull.

A registered Guernsey bull has been bought by Fred Sarasien for the Clinton Breeders' association of Island county, Wash., and is now in service to about 74 cows. This bull was selected by County Agent R. M. Turner.

## Coat Lapel Button

for securing two subscription orders to the Washington Farmer

Just like illustration, only smaller. The perfect size for your coat lapel. A dandy American flag in red, white, blue.

**In writing advertisers, be sure to say that you saw their advertisement in this paper.**

## JERSEY CATTLE

### Foundation Herd of Jerseys

To reduce our herd to a size proportionate to the available labor supply we make the following offerings: First of all the great Tennessee cow.

**Moyane Monine,** 803 lbs. butter, 10,406 lbs. milk in one year. Also
**Creole Bess,** 684 lbs. butter, 12,363 lbs. milk.
**Stockwell's Dahlia,** 619 lbs. butter, 8890 lbs. milk.
**Lucy's Convent Lassie,** 484 lbs. butter, 7568 lbs. milk.
**Princess of the West,** 477 lbs. butter, 6996 lbs. milk in 341 days.
**Pearl of Riga,** 458 lbs. butter, 7489 lbs. milk in 297 days.
**Diamond of Fair Acres,** now on test, milking 59 lbs. a day, as junior 3-year-old.
**One heavy producing** untested cow and one 2-year-old heifer.
(All butter regular Jersey standard, 85 per cent.)

This includes all our American bred cows and three choice imported cows, including the many times grand champion, Stockwell's Dahlia.

Free from abortion and will furnish certificate of health from federal veterinarian.

Prices, pedigrees and photos on request.

**J. B. STUMP & SON, Monmouth, Ore.**

### Best of Breeding

Two bull calves, one by Comassie Lulu's Noble, full brother to 2 register of merit cows with good records. Dam was junior champion Pacific International stock show and has R. M. record of 365 lbs. butter, begun at 1 year, 10 months, class AA.

The other by Oxford Torono 2d, a Hood Farm bred bull. His dam has a heifer making private record, begun under two years, of almost 500 lbs. butter. Both very cheap, in proportion to quality.

WM. BEHRMANN JR., Hillsboro, Ore.

### ASHBURN FARM

REGISTER OF MERIT JERSEYS.

In nearly 13 years we have yet to get our first poor heifer or dissatisfied customer. We have the best of the Golden Glow's Chief and St. Mawes strains, with the cross of our great Kentucky bull, Valentine's Ashburn Baronet.

J. M. DICKSON & SON. Shedd, Ore.

GOLDEN GLOW HERD.

Winner of 1st and 2d prize in butter test, Oregon State Fair, 1917 (all breeds, 20 entries); breeder and owner of grand champion cow in show ring, 1916; breeder of grand champion cow, 1917. Breeder and owner of world's champion 3-year-old, with 1115 lbs. butter, 80 per cent fat. Every female a daughter, granddaughter or great-granddaughter of Golden Glow's Chief, sire of 34; 14 over 700 lbs.; 32 over 600 lbs.

PICKARD BROS., Marion, Ore.

GOLDEN GLOW'S CHIEF

has 35 Register of Merit daughters and 40 grand-daughters, 4 proven sons, and a WORLD RECORD JUNIOR 3-YEAR-OLD DAUGHTER, who is dam of ONE OF OUR HERD BULLS by the old bull himself. Our second sire is also a son of Golden Glow's Chief, out of a Gold Medal Hood Farm cow. Write us for a young bull calf.

D. Brooks Hogan, Mgr., Iron Mine Farm, Oswego, Oregon.

W. M. LADD, Owner, Portland, Oregon.

### All High Record Blood

Bull calf out of Lucy of P. V., full sister to St. Mawes Susie; 936 lbs. butter in a year; to St. Mawes Blossom 823 lbs., and to Susie's Twin Maiden, 642 lbs. Sire, Poppy's St. Mawes, son of St. Mawes Poppy, 1120 lbs.

ED CARY, Carlton, Ore.
Station, La Fayette, Ore.

### OAK RIDGE JERSEY FARM

Thirty years breeding Jersey cattle. Young bulls from Register of Merit dams. Also a few choice females.

RILEY E. HULBURT, Albany, Ore.

### GWENDOLA OLGA LAD

Sire Beauty Lala Lad, he by Rosaire Olga Lad, sire of over 30 register of merit daughters, including St. Mawes Beauty, 934.9 lbs. butter as junior 3-year-old (all butter in this ad being computed on basis of 80 per cent fat.) Beauty Lola Lad's dam, Beauty Lola, R. M. record, 724 lbs. butter, milked twice a day, ordinary herd care.

GWENDOLA OLGA LAD'S dam, Gwendola Olga Chimes, R. M. record 1035.5 lbs. butter as junior 4-year-old. She is by Silver Chimes of S. B., sire of 9 other R. M. daughters, including Silver Chimes Rue, 983.78 lbs. butter. Her dam, Coffee's Gwendola, R. M. record 770.07 lbs. butter and she is a granddaughter of the great bull King Koffee's Count.

GWENDOLA OLGA LAD was dropped March 7, 1917. He is a well grown, good individual, fit to head and improve the best pure bred herds. Other young bulls of best breeding.

DEL PERKINS, Carton, Ore.

### Jersey Home Dairy

Young bulls, winners at Washington State Fair, make good herd sires. Attractive prices for quick sale.

**Erickson Bros. Prop.**
North Yakima, Wash.

### WAIKIKI FARM

Register of Merit Jerseys. Largest Jersey herd in the northwest. Young stock for sale.

IRA P. WHITNEY, Manager.
Route 7, Spokane, Wash.

### JUST ONE CALF LEFT

on our farm, out of a daughter of Rosaire Olga Lad, with a record of 765 lbs. butter, and by Gerties Poppys St. Mawes. This calf has three crosses of Rosaire Olga Lad. He is a dandy. The last four bull calves brought us $250 each; all were from our herd bull G. P. St. Mawes. Our herd average now is 747 lbs. butter from the 11 head.

DOERFLER FARMS, Silverton, Ore.
F. A. Doerfler, Prop.

## HOLSTEIN CATTLE

### CARNATION HOLSTEINS

Carnation Stock Farms

Over 300 in herd to select from. Herd has been under federal inspection for several years. Our herd sires are Matador Segis Walker, a grandson of King Segis, out of Matador Twisk Minette 4th, with record of 33.69 lbs. His first five two-year-old heifers, to freshen, have averaged nearly 22 lbs. in 7 days; King Segis 10th; Johanna McKinley Segis, the 40-lb. bull.

Write today your needs for a Holstein bull. Get them while they are young. Save money on cost price and on express charges. Careful attention given to mail orders.

FARM—CARNATION, WASH.
Offices — 2080 Stuart Bldg., Seattle.

Visitors welcome. Correspondence solicited. Write for circular, Value of Pure Bred Sires.

### 365-DAY HOLSTEINS

24,667 lbs. milk—1026 lbs. butter—is the S. O. advance registry, yearly, record of the dam of the yearling bull we are offering for sale. Fine individual. Good breeding. Ready for service.

THE HERD WITH YEARLY RECORDS.
WESTERNWOLD RANCH, Prineville, Ore.

### LaConnor Flats Stock Farm

Pure bred registered Holstein cattle. Herd sire Segis Pontiac Acme; average of three of nearest dams; butter, 1 year, 1089.82 lbs.; milk, 24,380.3.

J. H. HULBERT. Mt. Vernon, Wash.

### Bargains in Bull Calves

Sired by Segis Riverside Pontiac, that sold in Pacific international sale, 1914, for $1025, and whose dam has A. R. O. record of 31.47 lbs. butter in 7 days; 118.89 in 30 days, and big records all through his pedigree.

ERNEST JOHNSON, Scappoose, Ore.

### Record Holsteins

Young bulls, some of them ready for service, by a sire whose five nearest dams average 26.17 pounds butter, or another with 29.67-pound dam, and out of high-record A. R. O. dams. Priced to sell.

ERNEST WERNER, AURORA, ORE.

### Registered Holsteins

Finely bred bull calves for sale at prices that are an inducement for you to finish raising them.

H. R. BOOMER. New Plymouth, Idaho.

HOLSTEINS BRED FOR PRODUCTION
and
Berkshires of Quality.
Stock of All Ages, Either Sex, for Sale.

HUGH NISBET. Chimacum, Wash.

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, June 17.—Corn prices went soaring again today impelled by record-breaking heat in the west. Advances, however, were not well maintained. The market closed nervous, ½ to 1 cent net higher, with July $1.45¾ to $1.45 7-8, and August $1.47 7-8. Oats finished ½ to 1½c up. Provisions rose 25 cents to $1.

Absence of any intimation that actual damage had resulted from the intense heat tended to unsettle sentiment in the later dealings.

Fears of crop damage in the southwest counted as a factor from the bull side of the oats market.

Provisions ascended with grain and hogs.

**Chicago Futures.**

## Seattle Market.

SEATTLE, Wash., June 15.—Potato acreage in Washington is now believed by experienced jobbers and distributors, based on searching investigations covering a period of a month, to be reduced from normal by 35 to 40 per cent. The famous Mount Vernon flats, the largest potato district of western Washington, has been given over largely to peas and grain.

It is estimated that fully 35 per cent of the potato acreage of 1916 in this district will be lost to spuds. Encouraged by the prospective high prices of oats and other grains, and disheartened by the losses of this season, Mount Vernon growers have diversified and will look for better results in other food commodities.

There is a difference of opinion as to the reduction of spud acreage in the Yakima valley Gems. Considerable acreage has gone into sugar beets, stimulated by the new sugar plant and the eagerness of its management to contract for the entire output of raw material at what farmers regard as good prices. Estimates of the reductions of spud acreage there are from 20 to 40 per cent.

New potatoes are dull, a large number of buyers seeking the old stock.

**Prices Paid Producers.**

Prices paid by wholesalers to producers:

Eggs—Select ranch, 40@41c per dozen; Oregon, eastern Washington and Idaho, 37c per dozen.

Butter—Fresh dairy, 30@32c per lb.; butterfat, 46c per lb.; baking, 30@35c per lb.; raw milk, $2.15 per cwt.

Poultry—Broilers, live, 1918, 30c per lb.; hens, 24@26c per lb.; spring roosters, live, fat, 2½ to 5 lbs., 27c per lb.; old roosters, 17@20c per lb.; ducks, live, fat, 25c per lb.; squabs, large, $3.50 per dozen; geese, fat, live, 23c per lb.; Belgian hares, 19c per lb.; guineas, $7 per dozen; turkeys, young toms and hens, dry picked, 10 lbs. and up, 30@33c per lb.; smaller birds, 24@30c per lb.

**City Prices.**

Hay and feed quotations, city prices, truckload delivery, are as follows:

Feed—Bran, $34 per ton; shorts, $35.50; scratch feed, $77; all-grain chop, $71; oats, $68; sprouting oats, $78; rolled oats, $69; whole corn, $75; cracked corn, $77; rolled barley, $67; clipped barley, $69; alfalfa meal, $36; oil meal, $70; egg mash, $62.

**Hay**—Timothy, $36 per ton, $35 ton by carload; alfalfa, $29 ton, $28 ton by carload.

**METALS.**

NEW YORK, June 15.—Bar silver, 99½c.

## Portland Market.

PORTLAND, Ore., June 15.—Official announcement from Lewis Penwell, chief of the wool division of the war industries board, that the Portland wool district has been extended to include Idaho wools as far east and including Pocatello assures to northwestern manufacturers an adequate supply of three-eighths and quarter-blood wools to fill all government contracts.

New wool is coming in fast, and as soon as the full appraisal committee of four is named the grading of 1918 wools in Portland warehouses will begin. Two members of the committee chosen are Charles H. Green of this city and Harry Wagner of The Dalles. In the meantime Mr. Green, who has charge of the distribution of wool, has allotted 150,000 pounds of the 1917 clip to mills in this territory.

Shearing is progressing in the eastern Oregon counties as rapidly as the shortage of wool shearers will permit.

Grain men are greatly encouraged over the brighter crop prospects east of the Cascades, where rain came in the nick of time to save wheat, which was suffering from the prolonged dry spell and hot winds. Valley crops were also benefited by showers. The construction of a new 1500 barrel flour mill is announced to begin in this city immediately.

There has been another half cent advance in cube butter prices as a result of the strong demand from speculators and city creameries. Print prices are unchanged.

Enlarged receipts of ranch eggs and freer offerings of poor grade easterns have weakened the Oregon market.

Poultry is firm, with a strong demand from the sound, particularly for broilers. The demand for country dressed meats, which relaxed during the hot spell, has not revived and pork and veal are both weak. Prices are further depressed by lower prices at the yards.

The early strawberry crop is finished and as the late crop is slow in coming on prices have stiffened, with $3.50 again quoted on the best shipping stock. Local cherries are more plentiful and range in price from 7 to 21 cents, according to quality.

Four grades of onions have been established by the public service commission, to be known as Nos. 1 and 2, Oregon boilers and culls. An order was issued placing the handling, weighing, inspecting and grading under control of the commission. The order is effective July 1.

Butter—Cubes, extra, 41 1-2c; prime firsts, 40 1-2c; prints, extras, 44c; cartons, 1c extra; butterfat, No. 1, 43c, delivered.

Eggs—Oregon ranch current receipts, 38c; candled, 40c; selects, 42c per dozen.

Cheese—Jobbers' buying prices, f. o. b. dock, Portland; Tillamook, triplets, 23 1-2c; Young Americas, 24 1-2c per pound; Coos and Curry, f. o. b. Myrtle Point; Triplets, 23c; longhorn, 24c per pound; 1-4c discount to Portland trade.

Poultry—Hens, 23@24c; broilers, 26@30c; ducks, nominal; geese nominal; turkeys nominal.

Veal—Fancy, 16@17c per pound.

Potatoes—Oregon Burbank, $1@1.25 per hundred; new California, 3@3 1-2c per pound.

Hay—Buying prices, f. o. b. Portland; eastern Oregon timothy, $32@33 per ton; valley timothy, $27@28; alfalfa, $24@24.50; valley, grain hay, $24@26; clover, $21; straw, $9@10.

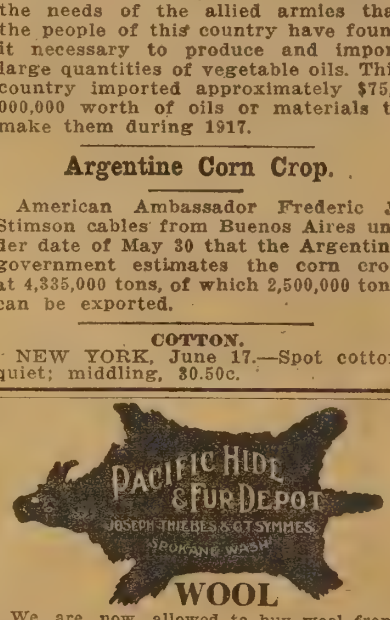
## Butter and Eggs.

PORTLAND, Ore., June 17.—Butter—Prints extras, 44@45c; cubes extras, 41 1-2c; prime firsts, 40 1-2c; dairy, 32c. Butter fat—Portland delivery, No. 1 sour cream, 43c.

CHICAGO, June 17.—Butter steady; creamery, 38@42 1-2. Eggs steady; receipts, 1389 cases; firsts, 30 1-2@32 3-4; ordinary firsts, 26 1-2@30 1-2c; at mark cases, included, 29@32c.

SAN FRANCISCO, June 17.—Butter, 44 1-2@48 1-2c. Eggs—Fresh extras, 44c; firsts, 40c; fresh extra pullets, 40c; extra pullets, 38c. Cheese—New firsts, 23c; young Americas, 25c.

## Import Vegetable Oils.



So much animal fat has been exported during the last year or two to meet the needs of the allied armies that the people of this country have found it necessary to produce and import large quantities of vegetable oils. This country imported approximately $75,000,000 worth of oils or materials to make them during 1917.

## Argentine Corn Crop.

American Ambassador Frederic J. Stimson cables from Buenos Aires under date of May 30 that the Argentine government estimates the corn crop at 4,335,000 tons, of which 2,500,000 tons can be exported.

**COTTON.**

NEW YORK, June 17.—Spot cotton quiet; middling, 30.50c.

**WOOL**

We are now allowed to buy wool from growers. Returns will be made subject to government price, less our profit of 1½ cents per pound.

Market price paid for hides, metal and rubber. Write for prices if interested. Prompt returns guaranteed.

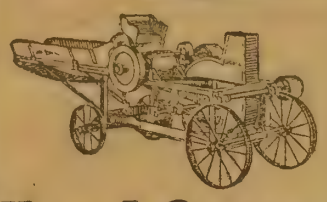
**PACIFIC HIDE & FUR DEPOT.**

Joseph Thiebes and C. T. Symmes.
1101-09 Railroad Ave., Spokane, Wash.

# ECONOMY

Long-sighted judgment, disregarding first cost, looks for quality in a tractor, for permanence, for lowest cost per working hour, through continual operation and freedom from repairs. That is economy—that is the Caterpillar.

Over thirty years' experience in tractor-building has shown us how to build into the Caterpillar the strongest and longest-lived construction—how to transmit power from the motor to drawbar with least frictional loss.



We have arranged for a limited allotment of 75s for harvest and can make quick delivery from Spokane or Stockton.

61 Beale St., San Francisco.

Warehouse stocks carried at Portland and Seattle.

90 Bushels Per Acre

Mr. A. J. Woolen writes: "I arrived in Canada with practically nothing. Nevertheless I made good, and my first crop of oats went on an average 90 bushels to the acre."

Mr. Woolen is only one of thousands of farmers who have made good in Western Canada. Government statistics show the average yield of oats per acre is 53⅓ bushels; of wheat 30 bushels.

| | |
|---|---|
| Wheat | 30 bu. |
| Oats | 53⅓ bu. |
| Potatoes | 148 bu. |
| Barley | 37 bu. |
| Rye | 27¾ bu. |
| Flax | 13⅓ bu. |

This is the 1915 average per acre from Government statistics.

128,000 FREE FARMS!

Whether you have capital to buy land or not, there is a farm for you in Canada. You can get one of the recently surveyed 160-acre fertile homesteads along the Canadian Northern Railway. Here you have the same opportunity to succeed as did Mr. Woolen. First comers get choicest locations.

Best Farm Lands $15 to $25 Per Acre

Thousands of acres of specially selected centrally located land, *close to the railway,* can be purchased on easy cash payments, or part cash and part crop payments. Here are modern free schools, good transportation, telephones and automobile roads. Crops produced can only be equaled on farms costing $150 to $200 per acre in more densely settled communities.

**Special Low Fares**—The Canadian Northern Railway, which takes you to all parts of this territory, provides special low fares to home-seekers and settlers.

Send for FREE Book

Write today for your free copies of the "Home-Seekers' and Settlers' Guide" and government literature. The Guide is full of interesting and valuable information based on government returns and it tells you exactly how to make a home in Western Canada. Here is a home and wealth for you.

# Frenzied Finance!

## German Manufacturer of Credit

Nearly four years ago the military party in Germany hurried the country into war on a promise that it would bring a quick and decisive victory and all the cost would be more than defrayed by an indemnity of $7,000,000,000 that was to be taken from the French. The deceived German people are sadder and wiser now.

Interest charges on the German debt are now 30 times greater than before the war, and the government is borrowing money to pay interest on sums already borrowed.

**GERMANY'S TOTAL ANNUAL REVENUES BEFORE THE WAR WERE $850,000,000. IF THE WAR WERE ENDED NOW THE NATION WOULD HAVE TO FACE AN ANNUAL EXPENDITURE OF $3,250,000,000, OR NEARLY $50 FOR EVERY MAN, WOMAN AND CHILD IN THE COUNTRY, AND THAT WOULD COVER ONLY NATIONAL, NOT LOCAL TAXES.**

Frenzied finance! The real meaning of the word was never known before. Germany has manufactured credits wholesale. Bond issue after bond issue has been put out until war flotations are now estimated at $25,000,000,000, or $357 for every inhabitant.

Austrian financial conditions are even worse, and as for Turkey, the kaiser's Mohammedan ally, it was bankrupt before the war began.

Undoubtedly there is dire financial and economic distress in all the countries that the kaiser drew into this wicked war, but it would be a mistake for the American people to depend on their financial collapse.

**WE LEARNED IN OUR CIVIL WAR THAT ARMIES WILL FIGHT HARD LONG AFTER THEIR COUNTRY IS BANKRUPT. OUR ONLY SAFE COURSE IS TO CARRY ON OUR WAR PREPARATIONS WITH NO THOUGHT OF GEMANY'S FINANCIAL COLLAPSE.**

If the collapse should come, so much the better, but a thoroughly beaten German army is the only dependable foundation on which to build an enduring peace.

## FOOD IN NORWAY.

### Production Must be Speeded Up.

The annual military training exercises in Norway will this summer be postponed till times when they will not interfere with the increased food production now planned throughout the country. Protests and resolutions poured into the national assembly from all over the country to the effect, that all available horse and man power this summer must be used on the farms. A large increase in the production of potatoes and grain is planned for this summer and much new land will be put under the plow. Men and horses will be drafted, misused or badly used land can be seized by the government and factories can be stopped to release men for the farms. The government has appropriated much money for the financing of this important undertaking. The country has secured enough food for this year and is now preparing to meet the demand of the next winter.

WHITE'S HOTEL AND RESTAURANT. Rooms, hot and cold water. 75c up. Breakfast 20c to 40c. Dinner, 25c to 50c. Sprague and Stevens, Spokane.

GALAX HOTEL; NEW AND MODERN; 75C and $1. Main and Bernard, Spokane.

## RUBBER STAMPS and SEALS 384

FOR RUBBER STAMPS, STENCILS, badges, numbering machines, checks, seals, etc., write Pacific Coast Stamp Works, Seattle and Spokane.

## ARTIFICIAL LIMBS 424

SCHINDLER ARTIFICIAL LIMB CO., S115 Wall st., Spokane, Wash.

## PLUMBING, STEAM FITTING 594

PLUMBING SUPPLIES AT WHOLESALE. Stark-Davis Co., 212 3d st., Portland, Ore.

# Want Ads

**Want Ad Rates 30c Per Line**

Want ads are run at this rate in The Washington Farmer and i t s associate papers, The Oregon Farmer and The Idaho Farmer, thoroughly covering the three states.

**Send for card giving lower rates for ads running one month or longer.**

**How to Figure Cost of Ads**

Figure four words for the first line, which is set in capital letters, and six words for each succeeding line. Multiply number of lines by 30 and you have cost each issue.

## INVESTMENTS 513

OWN 3840 ACRES TIMBER lands on Arrow Lakes, which I located 12 years ago. Will deed an interest to party who will pay two years' assessments. Address D 7, Washington Farmer, Spokane, Wash.

## SEEDS 620

SEEDS—THE KIND THAT GROW.
You can't keep them in the ground.
Send for catalogue.
BUTZER'S SEED STORE.
188-190 Front St.
Portland, Oregon.

WE SPECIALIZE IN TIMOTHY, ALFALfa, clovers, seed for forage crops. Write for prices. Mark Means Co., Lewiston, Ida.

GOOD SUDAN GRASS SEED, 20C PER LB. Limited quantity. Order immediately. W. P. Muncy, Doyle, Calif.

## FARM LANDS—FOR SALE 651

MR. FARMER AND INVESTOR, INVESTIGATE THIS PROPERTY.
2350-acre farm for sale; in the wheat belt of Alberta; at a sacrifice to close an estate.
Seven hundred acres wheat.
Nine hundred acres oats.
One hundred and fifty acres barley.
One hundred acres timothy.
Four hundred acres summer fallow.
Balance pasture.
Buildings valued at $8000; fifteen miles wire fence; two wells and running water; schoolhouse on property; three and half miles from two stations; twenty-four miles from Calgary, Alberta. Splendid neighborhood. Price fifty-five dollars per acre, including the crop, which is valued at fifty thousand dollars net. Terms, $35,000 cash, balance arranged 6 per cent. Arrangements might be made to use the machinery. Write or wire W. M. Gilfoy, 713 Herald building, Calgary, Alta., Canada.

ATTENTION, LANDBUYERS!
Here's an excellent proposition:
40-acre farms, selling for $15 to $25 per acre; long-time payments, 6 per cent interest; in the best agricultural part of Snohomish county, where you have all the modern conveniences—paved roads, railways, schools, churches, mills and factories. This district has proven its worth by the many successful farmers now located there.
We also have some beautiful 10-acre waterfront tracts.
OPPORTUNITY knocks at every man's door ONCE, but, believe me, it does not continue to knock forever, nor does it pound the door down. For further information address the owners, BROWNELL LAND CO., 904 Third ave., Seattle, Wash.

LAND BARGAIN.

1280 acres, 11 miles south of Wilson Creek, Grant county, Washington, near Lincoln county line; 30 per cent tillable; good, rich soil; lots of water; balance bunchgrass pasture; all fenced; no buildings. Price $7 per acre. Will take up to 50 per cent in trade, balance easy terms. Would make a fine diversified farm.
HOUSE AND LAND ASSOCIATION.
514 RIVERSIDE AVE.
PHONE MAIN 3979.
SPOKANE, WASH.

DAIRY FARM FOR SALE—NOW DOING $250 to $300 cash business a month; 14 dairy cows and all equipment for handling milk route. Price $3700 cash or terms. Young stock and horses can also be bought reasonably. A good opportunity to raise cattle. Lots of free range. For particulars write A. Enstrom, Box 330, Ephrata, Wash.

682-A. IMPROVED WHEAT FARM; SEVEN miles south of Hartline, Wash.; on Sunset highway; good land; all in cultivation except 15 acres; 300 a. in summer fallow; all fenced; large house, fine barn, good outbuildings; plenty water. Only $45 per acre. $6000 cash will handle. A. L. Tucker, Coulee City, Wash.

TWO BROTHERS, NOT FARMERS, OWN 160 acres, with good water rights; near good town; mile to station and school. Will produce big grain and alfalfa crops. $16,000; cash $8500; $1000 holds till fall. One with good security can buy with less cash. Other farms. O. E. Carman, Vale, Ore.

MY 60 ACRES FOR SALE.
Farm located 2 mi. from Sublimity; fine black loam ground; 50 a. in cultivation. Building and fences good. Here is a bargain. Price on application. F. X. Hottinger, Scio, Ore.

FOR SALE — ALFALFA, WHEAT AND stock farms. If you want good, well-improved, irrigated farms at a price that will pay for itself in two crops, write me. John Hardwick Realty Co., Vale, Ore.

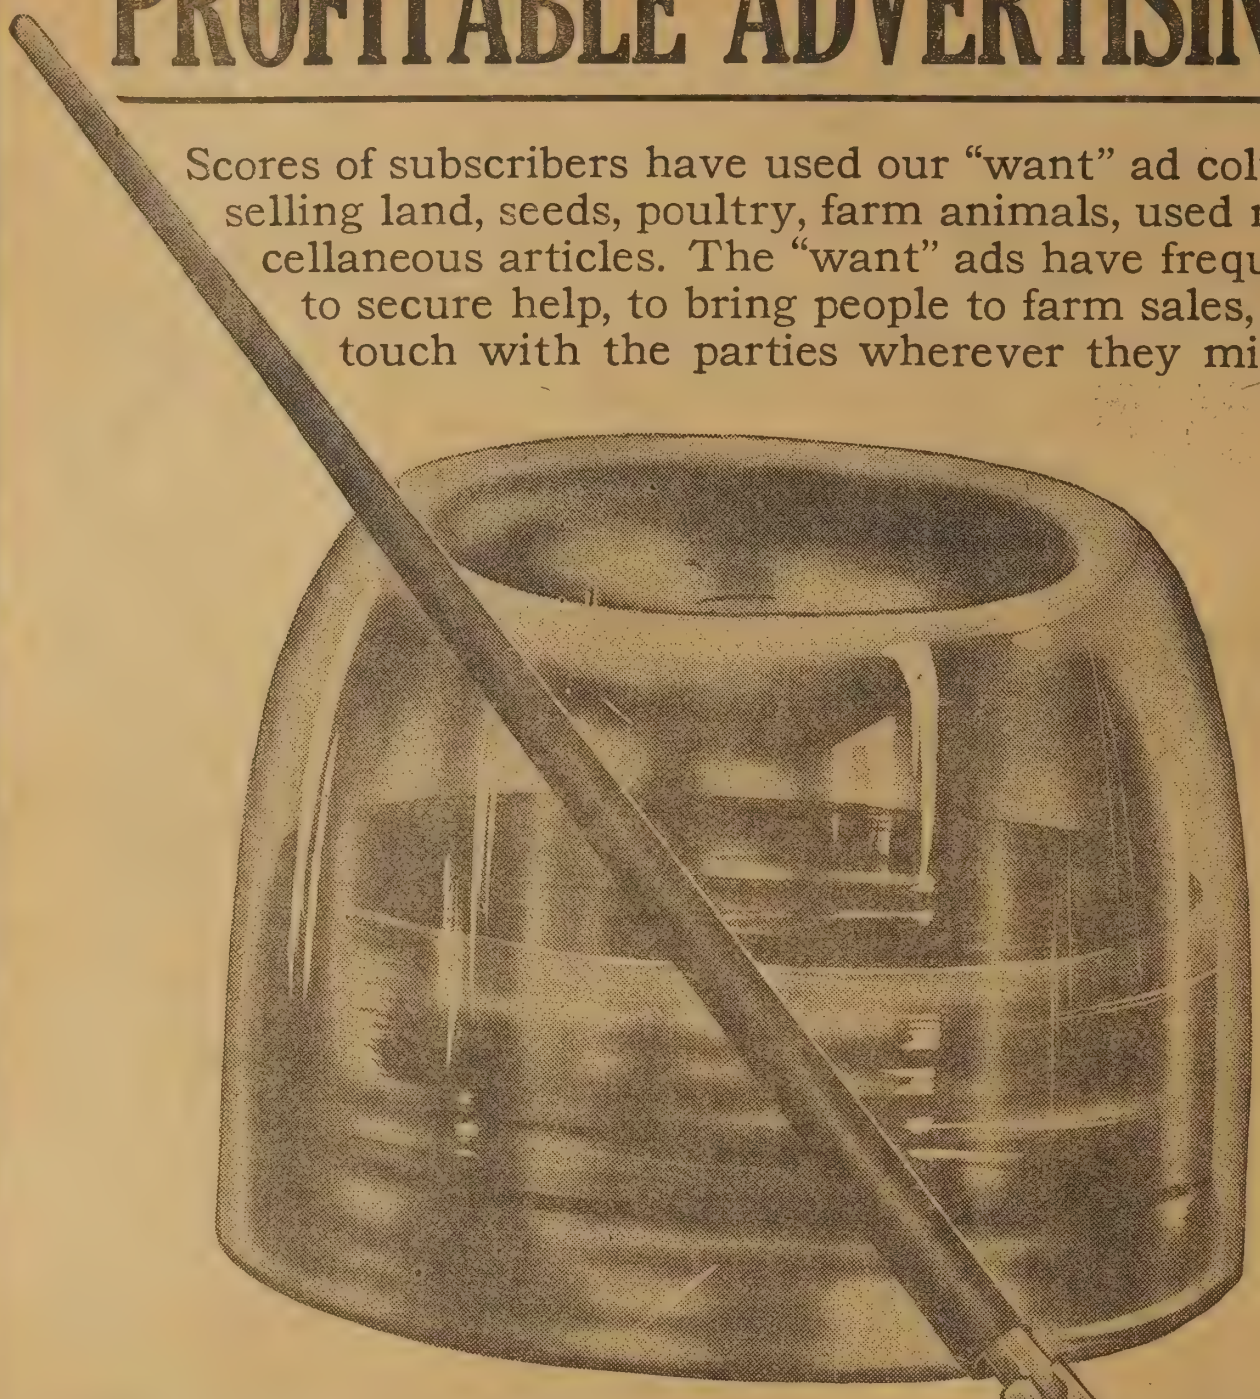
160 ACRES DESIRABLE BENCH LAND, well located; rich soil; no frosts; good range, water. $1000 will handle. Bargain. Clinton Case, Colville, Wn.

FOR HAY, GRAIN OR STOCK RANCHES in famous Rosebud county, eighty acres to twenty thousand acres. Write Rosebud Realty Co., Rosebud, Mont.

WHEAT AND STOCK FARM, ALL EQUIPped; good buildings, plenty water; $50,000, clear. Lee Richardson, Wahkiacus, Wash.

## FARM LANDS—WANTED 654

I WANT TO HEAR FROM OWNER OF farm or unimproved land for sale. Mrs. W. Booth, Pulaski, Iowa.



## FARM LANDS—Wanted to Rent 660

EXPERIENCED DAIRY MAN WANTS TO rent or work dairy ranch with stock, one to five years. Address Box 142, Deer Park, Wash.

WANT TO RENT IMPROVED FARM ON good roads. Near school. G. A. Aronsan, Otis, Ore.

# PROFITABLE ADVERTISING for YOU

Scores of subscribers have used our "want" ad colums to advantage in selling land, seeds, poultry, farm animals, used machinery, and miscellaneous articles. The "want" ads have frequently enabled them to secure help, to bring people to farm sales, and in fact to get in touch with the parties wherever they might be located with whom profitable transactions could be arranged.

Our "want" ads are printed in the three state papers, The Washington Farmer, The Idaho Farmer and The Oregon Farmer. You get a low combination rate, and through three state farm weeklies, which form the Pacific Northwest Farm Trio, you reach the farm homes in every nook and corner of three great states.

*A drop of ink may be worth many dollars to you if used to write a "Want" ad for The Pacific Northwest Farm Trio*

# What Is Condition of Northwest Grain?

## *This Paper Gathers Telegraphic Information From Reliable Sources Throughout Inland Empire*

This page is devoted to three sides of the most important single subject in the northwest today—WHEAT. The first is the general condition as influenced by the drouth and heat; the second is the probable effect of the rain and cooler weather on that condition; the third is the price situation as affected by the recent 25 per cent increase in freight rates. Desiring to compile actual facts on this threefold subject, this paper telegraphed reliable authorities in all of the big producing sections, asking their estimates; gathered also reliable reports on the scope of the rain that began falling Saturday and Sunday, and secured from J. M. Lownsdale of Portland, Ore., one of the best informed market authorities in the west, a special telegraphic statement of the price situation.

**GRAIN CONDITION PRIOR TO RAIN.**

The telegrams received by The Farmer give local conditions. In some districts the prospects prior to the rain were for not more than a quarter of a normal crop. In some they were for as high as three-quarters normal. Summarized, they indicated probably half a crop for the northwest as a whole. The following are the telegrams:

**Prospects Are Normal.**

POMEROY, Wash., June 22—(Special to The Farmer).—Garfield county crops are three weeks earlier than last year. There is a record acreage. The heat damage is slight. Fall sown wheat acreage is slightly less than normal, condition good. Spring wheat acreage 100 per cent increase, condition fair. Barley acreage 50 per cent increase, condition bad on account of late frost and green aphis. A good rain by July 1 will give this county more than a normal crop.—L. M. NETTLE.

**Prospects Are Fair.**

WATERVILLE, Wash., June 22—(Specail to The Farmer).—Winter wheat acreage is very small, with prospects of 50 per cent normal yield. Spring seeding its holding its own on heavy soil. Wheat in large section in the vicinity of Mansfield, Withrow and northern parts of Douglas county is heading out, with prospects of a very light yield; can make 15 bushels with rain by July 4. Prospects are fair in the vicinity of Waterville, La Moine, St. Andrews, Mold, Barry and Baird. There is less moisture than last year at the same date, but the grain is further advanced. Without rain the average yield will be less than 1917. There is a slightly increased acreage throughout the county. Farmers will sow 100,000 acres to wheat in the fall if conditions are favorable.—V. H. VENTNER, County Agriculturist.

**Too Late for Rain?**

PASCO, Wash., June 22—(Special to The Farmer).—The wheat crop in this section will be light; too far gone for rain to do much good. In places the wheat will never be cut; also about 1 per cent of the wheat has blown out completely. The moisture shortage is the worst ever. Cool nights and days would increase the yield several bushels. The fall wheat has been hit as hard as the spring wheat. Early Baart is standing up under the dry conditions better than the rest. All the wheat is drying around the base of the plant, and Bluestem has begun to burn in the head. Wheat is filling; will cut earliest about the Fourth of July. The yield probably will be cut from a third to a half.—T. S. BROWN, County Agricultural Agent.

**Damage Not Yet Irreparable.**

COLFAX, Wash., June 22.—(Special to The Farmer.)—Wheat in Whitman county has not yet been damaged seriously. However, the situation is critical. If good rains come between now and July 1 there will be a good crop. If it does not rain would place the average yield for Whitman county this year at 10 bushels per acre. Early Baart and Marquis wheat are standing the hot weather magnificently and do not appear to be damaged yet. Bluestem is not standing the heat so well. Early winter Turkey Red is showing signs of injury, and all wheat on clay points has been burned to a degree. This, however, is such a small portion of the total acreage as to be insignificant. Wheat in the vicinity of Hay, Hooper and La Crosse promises a fair yield under any circumstances, and in the vicinity of Tekoa is not yet suffering for want of rain. Early winter wheat crop in the southern and western portions of Whitman county is now ripening. Harvesting at Hay station will start about July 10 on winter wheat. Twenty-five per cent of the normal winter wheat acreage is in winter wheat this year. Estimate our yield for Whitman county this year if we have rain in 10 days at 12,000,000 bushels, owing to the large acreage; at 6,000,000 bushels if we have no further rain.—C. L. MACKENZIE.

**Hooray! Bumper Crop!**

GRANGEVILLE, Idaho, June 23—(Special to The Farmer).—Crop conditions on prairie very good. Rainfall last 24 hours has insured us a bumper crop of grain on Camas prairie.—JOHN D. LONG.

**Irrigated Grain Good.**

REDMOND, Ore., June 22—(Special to The Farmer).—Dry land grain is beginning to suffer for rain. The spring grain is recovering nicely from frost. Irrigated grain is good. Aphis is attacking wheat and oats in some localities. The yield prospects in irrigated sections are good; in dry land section fair.—R. A. WARD, County Agent.

**Fall Wheat Is Made.**

WALLA WALLA, Wash., June 22—(Special to The Farmer).—Weather conditions have been against a proper yield of wheat here this year. It has been very dry all this spring and lately very warm with hot winds; fall wheat is pretty well made; rain would not help it much. Wheat hay has been cut in the valley for about a week or so, and just beginning to be cut in the foothills. The probable yield of fall wheat is 80 per cent normal. Most of the spring grain has suffered with drouth and heat, and if present conditions continue will be a very short crop. A good rain very soon would increase the yield of spring grain.—B. F. BREWER.

**Summer Fallow Crop Good.**

CHENEY, Wash., June 22—(Special to The Farmer).—Grain is being damaged more by the hot weather than by the lack of moisture. All grain has been damaged by weather conditions. On fall and spring plowing there will not be over half a crop. On summer fallowed ground wheat will yield 25 to 30 bushels if rain comes soon. Early sown wheat will be heading out soon; the straw will be short and the damage probably greater than on later sown. There is practically no win-

(Continued on page twenty-eight.)

**RAIN FALLS THROUGHOUT INLAND EMPIRE.**

As indicated in some of our special telegrams of Saturday, a warm, and more or less steady, rain fell throughout the Inland Empire Saturday night and Sunday morning, with good prospects of further moisture. Overnight cheeriness takes the place of despondency, and already old-time grain growers of the Palouse country are comparing conditions this season with those of 1897, when, after a severe dry spell, copious rains resulted in a big crop. News from points as far apart as Douglas, Yakima, Stevens, Whitman, Spokane, Columbia counties in Washington, and from Boundary to Latah, Nez Perce, Idaho counties in Idaho, and down into eastern Oregon give evidence of the widespread rainfall.

# Who Will Pay the Increased Freight?

President Wilson, with the advice of Food Administrator Hoover, has issued a formal executive order that will permit the grain buying corporation to increase the price of wheat as previously fixed if deemed necessary or advisable after the series of conferences now being held. The object of the order appears to be the counteracting of the increased freight on wheat under the recent order of Director General McAdoo of the railroads.

On June 25 the new freight rates went into effect, increasing the old rates 25 per cent. What effect will this increase have on the price to be received by the wheat growers of the northwest for their product? That is a big question. Assuming that the three states produce this year 45,000,000 bushels, which would be a considerable reduction from earlier prospects, and assuming further that 15,000,000 bushels of that were kept locally for milling, seed and the like, there would be left 30,000,000 bushels to be shipped to the coast terminals. The average freight rate from Inland Empire shipping points to the coast before the advance was not less than about 15 cents a hundred, or 9 cents a bushel. The 25 per cent increase would therefore be about 2 1-4 cents a bushel, or $675,000. Will the government increase the guaranteed price of wheat to meet that increase in freight, or will the wheat producer of the three states have to bear it? That's the question. Indications appear to be that the government probably will increase the price to meet it. Here is what J. M. Lownsdale, probably the best informed market man of the northwest, says about the situation:

PORTLAND, Ore., June 22.—(Special to the Farmer.)—The wheat price situation as it affects farmers in the Pacific northwest will be complicated by the advance in freight rates that goes into effect June 25, but to what extent grain men here do not know.

The necessity for a modification of the prices as named in the presidential proclamation is apparent, as those prices were based upon freight rates then existing. The matter is being considered at the present time by the grain corporation in the series of meetings it is holding in New York in conference with the millers and representatives of the grain trade. The traffic representatives of the interested markets met in New York today to discuss the freight relations and on June 24 the commercial representatives of the leading markets, who hold membership on the advisory board of the grain corporation, will meet to determine if the freight relations can be reflected into the commercial relations of those markets. The matter will then be passed on to the executive committee of the grain corporation, which, at its final meeting on June 29 will make announcement of prices and regulations that will govern trading in the 1918 crop. These findings will be subject to the approval of the president and the presidential proclamation is expected to be made immediately thereafter, as the new grain season will begin on July 1. J. M. LOWNSDALE.

# Rain Is General Over the Northwest

The intense drouth that has visited nearly all of the wheat producing sections appears definitely broken at this writing. Rain that began in most cases Saturday relieved the situation in nearly every district. Indications are that several millions of bushels have been added to the yield of the three states by the rain and the accompanying cooler weather. The following is a summary of the reports compiled by the Farmer on the rainfall:

**Moscow, Idaho**—Half an inch of rain had fallen up to Sunday night, coming in time to save the crops in that territory.

**Grangeville, Idaho**—Nearly an inch of rain fell Sunday, seeming practically to insure a good crop.

**Lewiston, Idaho**—Good rain fell Saturday night and part of Sunday. Grain greatly benefited and fruit reported uninjured.

**Genesee, Idaho**—Steady rain fell throughout part of Saturday night and Sunday.

**Dayton, Wash.**—Good rain has fallen, saving spring grain and barley from almost total failure and seeming to insure fair crops.

**Pomeroy, Wash.**—Thunder showers brought in a soaking rain estimated by some to amount to a total fall of an inch.

**Mansfield, Wash.**—Sunday's rain is reported to have wet the ground four to six inches deep.

**Yakima, Wash.**—Light rain fell here, with more in the Horse Heaven country, where it was badly needed. Irrigation water is short in many parts of the valley.

**Pasco, Wash.**—Light rain has fallen here. Crops in many cases too badly injured to benefit much, though much acreage will make increased yield.

**Ritzville, Wash.**—Light showers Saturday night, followed by another shower Sunday.

**Spokane, Wash.**—A little less than half an inch of rain fell Saturday night and Sunday. Surrounding points similarly visited.

**Odessa, Wash.**—Rain officially quoted as nearly half an inch has fallen.

**Wilbur, Wash.**—Heavy showers fell Sunday.

**Montana**—Several points in Montana report the drouth broken by rain.

**Pendleton, Ore.**—Showers fell Sunday, insufficient, but enough to help the crops.

**Wallowa, Ore.**—The Wallowa valley is reported to have rain.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

## *Pledge to Your Utmost*

Tomorrow, June 28, ends the great war savings campaign. It will be today with most of the readers of this paper, perhaps. If it is, and you haven't made a liberal pledge to purchase war savings stamps, make a rush to do it right now. Don't let the campaign end without your having pledged to your utmost limit. Remember that when you buy these stamps, you are not giving money away. You are investing it, you are depositing it with your government, you are merely transferring its purchasing power to Uncle Sam as your representative to spend it where it will do most to help win the war. And when the war is over, or even before if you need it, it will be returned to you with interest. Be patriotic! Be thrifty and economical! And do it all at one operation by the purchase of your utmost limit of war savings stamps.

## *Not More Stock, but Better*

In the present emergency every one is crying for more live stock of all kinds, and every one realizes the imperative need for the largest possible quantities of meat, wool and other animal products. The only question at issue is that of how this end is to be attained, and it is with this in view that we have prefaced this comment with the words, "Not more stock, but better." The bulk of the live stock of the northwest is raised on hay and grass. Every possible means is being used to increase to a maximum the available amount of hay and grass, but there is a limit beyond which we can not pass. Our live stock in turn may be increased up to the point where they are consuming all our hay and grass, and beyond that point they can not pass without serious losses.

We have already reached the point where our hay and grass are being all consumed, and in fact hay was very short during the last two winters, and at the best can not be plentiful in the coming season. A few localities can increase the number of their live stock, while a few others had better cut down a little. Taken as a whole the northwest is well stocked with animals of the various kinds, and any considered increase in mere numbers could not result other than disastrously since we would not have the feed to take care of them.

Since our feed is limited it therefore behooves us to make the maximum use of that feed, and that can be done only through the medium of good stock. While the live stock of the northwest has been improving with leaps and bounds, there is yet great room for improvement. Cattle that only weigh 1000 pounds at three years old, and have thin backs and eat hams, are not giving adequate returns for the precious feed they eat. Boarder cows that produce worthless calves are pro-Germans of the insidious and damaging kind. Ewes that shear six pounds and produce peewee lambs are robbing the children of France of food and clothing. The pig that eats five and a half pounds of feed for every pound of gain he makes is not only a profiteer, but an alien enemy comparable only with the sneaks who go around burning warehouses and destroying factories.

Seriously, the problem is most important. The future of civilization and the lives of millions are depending upon our making the maximum use of every resource. In times of peace our liberal American spirit has permitted every one to do as he pleased, and if he wanted to waste good feed on poor stock it was "his feed." Now it is NOT his feed, and the scrub animal can not be permitted to go on wasting our precious resources. The scrub must go the way of the profiteer, the slacker and the enemy spy.

E. L. P.

## *Rivals Japanese Gardening*

There is at least one man in Kittitas county, Washington, who can beat the Japanese at their own game of intensive gardening. G. W. D. Glenn, whose main crop is potatoes, raises cukes, squashes, onions and cabbage between the rows, and also has several hives of bees which forage over the garden, collecting honey and pollinating the various crops. In order to keep so many crops doing well on the same ground, Mr. Glenn practices almost continuous cultivation. His potatoes are cultivated before the tops show, and from that time on the soil is stirred steadily till the crop is ready for harvest. The effect of this persistent work is not confined to releasing plant food and conserving moisture, in this gardener's opinion, for he ascribes his comparative freedom from insect pests to the fact that steady cultivation crushes many insect enemies and induces some of the others to change their camping place.

"You have no idea until you have observed closely how many insects a thorough harrowing will kill," comments Mr. Glenn. "I once got the best of a bad lot of potato bugs back east by taking a couple of brushes and giving the vines a regular switching. Some of the bugs were killed by being crushed and part of them were killed by dust, and apparently the rest moved out."

P. E. T.

THE more you try the more mistakes you will make, but the biggest mistake is not to try.

NOW is no time to haggle about details. Attend to details, to be sure, but don't let them interfere with big things.

WHEN you know you are right, don't hesitate to go ahead, but don't wait too long trying to prove that you are right.

NOTHING that would make winter feed for the chickens, the cows, the pigs or the horses should be allowed to go to waste.

HOW about a goat or two for that brush land pasture? They will pay their way in clearing the brush away, if not in meat or milk or mohair.

STANDARD virtues can not be acquired once for all; cultivate the virtues as you would cultivate your garden if you would have a good crop every year.

EVERY one should do all in his power to support every flag that is opposing Prussianism. Unstinted support to Old Glory is support to them all.

HE is a poor man who can not see the other fellow's point of view. He must before he can disagree with it. He can not take exception to what he knows nothing about.

ONE of America's greatest tragedies was a battle in the revolutionary war when the defenders of liberty ran out of supplies. God forbid that the defenders of liberty in France ever face similar disaster!

BUY every thrift stamp that you can. It is 25 cents better than put away in the bank. Buy every war savings stamp that you can. It is the makings of $5 laid away, but yet at work helping to win the war.

## *Mr. Hoover Gets Somewhere*

Mr. Hoover was appointed national food administrator a little more than a year ago. Here are some of the results of his labors:

Wheat that had sold for $1.80 a bushel in February, 1917, sold for $3.40 on May 17, and the speculators were cleaning up fortunes. At the time Mr. Hoover was appointed, May 15, 1917, the price of flour per barrel at Minneapolis was $16.75, while on May 4, 1918, it was $9.80, a decrease of 41 per cent.

On the former date the difference between what the farmer got for his wheat and the wholesale price of flour was equivalent to $5.68 a barrel, while on the latter date the difference amounted to only 64 cents.

From July 1, 1917, to March 31, 1918, we exported to our allies 80,000,000 bushels of wheat and flour, or 124 per cent of the amount available for export on July 1, while a year ago, during the same period, we exported to the allies only 51 per cent of the amount available for export on July 1.

Exports of pork products for March, 1918, were over 50 per cent larger than for any previous month in the past seven years, and almost three times as great as the highest amount exported in any month in the four years before 1915.

Exports of beef products for March, this year, were over 20 per cent larger than for any previous month in the past seven years, and more than twice as great as the highest amount exported in any month in the four years before 1915.

It is mere conjecture to guess what might have happened if a different course had been pursued. Some well-informed persons say that if the government had not acted on food control the price of flour would have gone to $20 a barrel or more and there would have been bread riots in some of the great cities of the country. But it is not guesswork to say that if control had not been exercised through Mr. Hoover, or some other equally able administrator, the American people would have eaten up all the wheat in the United States this year, we should have shipped little or no wheat or flour to our allies, and the home barrel would have been empty several months ago.

## *Country's Greatest Crop*

Some of us who have reached the middle age of life realize, when we break away from the old moorings of friends and relatives and transplant ourselves into new territory, that if we were considering ourselves alone it is not worth the trouble. But we are not choosing for ourselves; we are choosing for those who come after us, our children and children's children.

We are looking for a land of opportunity, where with youth and hope and vigor they may take hold of the forces of a new country and push their way to wealth and honor. However, many a man with this in view has, on coming to a new and growing country, turned his face to the future instead of to the past; has taken on a new lease of life as a consequence, and prolonged his period of usefulness five, ten or twenty years. Yet, the primary object was not himself, but his loved ones.

We, and not our children, are responsible for where they shall be born, educated and settled. Where shall it be? The child can not determine; the parents must determine.

After all is said about this or that occupation, the profits in this or that business, the great object is not dollars, but life. It may in some places cost more to live than in others, but it is worth more, for it leads to a fuller, better life. Some men spray for scale and codling moth to save their crops; but vote to license breeding places of vice to tempt their children.

The greatest crop any country can produce is a high grade of boys and girls. They are better than purebred horses, cattle or hogs. The farmer who raises premium stock and scrub children must confess that there is something bad in the hereditary tendencies or in his methods.

G. L.

# Does Austria Face a Famine?

## *Food Shortage May Strike a Telling Blow for the Allies*

Reports continue to come, with ever increasing apparent reliability, that Austria is suffering from a serious food shortage. While the reports from that country and her allies are strictly censored to keep the outside world from learning the truth, many reports come from neutral countries declaring that Austria can not escape a disastrous famine from this time until the harvesting of the grain crop, something like two months hence. Here is a statement issued by the state department of the United States at Washington: "We are convinced that the reports of food shortage in that harassed country are true. It is believed that the Austrians can not hope for any relief of consequence from this condition until the crops come on in August or September of this year, and from all accounts the people can not escape famine until then.

The report says that Austria, Hungary and Bulgaria are all feeling a growing lack of confidence in Germany, and are making demonstrations against that country, claiming that she should help relieve the situation. It is stated that formal appeals for help have been made to Quartermaster General Ludendorff of Germany, who replied that he was unable to lend any assistance because of the food troubles through which Germany is passing. It is charged that Germany has diverted foodstuffs from the Ukraine, a province taken from Russia, to Germany after they had been specifically promised to Austria. If any of the reports are true concerning Austria it indicates serious conditions in Germany as well, for the latter country would make any possible sacrifice rather than allow her principal ally, Austria, to fall into a state of revolution that would be sure to result from a famine.

The reports, many of which emanate from Switzerland, the only neutral country touching upon Austria, declare that food riots have already occurred in Austrian cities, and that in many places workers in government plants, including munitions plants, have gone on strike.

### Austrians Are Routed by Italians.

What appears to be a serious defeat to the Austrians is reported from Rome. The official statement says that more than 40,000 Austrians have been captured by the Italians, who are pressing a vigorous offensive as the Austrians, all but defeated, retreat almost in disorder. All of the ground captured by the Austrians in the beginning of their offensive has been retaken at this writing, and the Italians are apparently determined to follow up the retreat as strongly as possible.

### Germany Expected to Strike Again.

The allied military authorities are expecting another big strike by Germany at a point yet undetermined. Some authorities believe that it will be made in a line with Paris, probably along the Soissons-Rheims front and along the Marne river again. How capable the allies will be to resist any blow that may be struck is conjectural. The fortunes of war depend largely, even in this unprecedented type of warfare, upon the one side in keeping the other in the dark as to its driving power and its resisting, though the aircraft development has done much to make surprises impossible.

### American Army Increases Rapidly.

Official statement by General March, chief of staff at Washington, says that another 100,000 American soldiers have reached French soil, bringing the total now there to 900,000. The department continues to promise 1,000,000 there by July 1, with the movement continuing with precision and rapidity throughout the remainder of the year and thereafter as long as it is necessary to put enough men on the battle-front to win the war by sheer force of men and arms.

### May Declare War on Turkey.

As a result of a recent attack by Turkish troops on the American official headquarters in Pabriz, Persia, this country may within a short time consider it necessary to declare war on Turkey. Although the United States has been at war with both Germany and Austria, which are allies of Turkey, no official declaration of war has been made between that country and this. There has been, however, a strong pressure brought to bear by a number of prominent persons in official circles urging the formal breaking off with both Turkey and Bulgaria in order to assist the department of justice in dealing with alien enemies in this country. The attack on the American headquarters in Pabriz included, according to reports, the sacking of an American hospital at that place.

### Wilson Pardons Sentinels Who Slept.

President Wilson last week granted unconditional pardon to the two young soldiers who, under military rules, were sentenced to death for having slept while on duty as sentinels with the American forces in France. Both young men were ordered to return to their companies for further service. In granting the pardon, President Wilson said that he found no reason to suspect either soldier of disloyalty or conscious disregard of duty. In a statement that he made in connection with the pardons, the president, however, laid emphasis on the necessity of rigid regulations in the army for the safety and discipline of the men who form it, as well as for the safety of the country that they represent.

### Charge Graft On Public Work.

Investigations are being made throughout the country, principally at the national capital, designed to show whether or not there has been a widespread plot on the part of agents for government contracts to defraud the government out of hundreds of thousands and even millions of dollars. Evidence is being collected which appears to indicate that some of the charges are well founded. In several instances government officers and army men, some in comparatively high positions, are involved in the charges of graft. One alleged result of the plot was the prevention by these illegally operating agents of competitive bidding by contractors on government work. The investigation promises to develop into one of the most important in this country since the war began.

### New Taxation Scheme Broached.

Joseph N. Klein, an expert accountant who has been associated with the council of national defense at Washington, has submitted to the ways and means committee of the national house of representatives a proposal for a sweeping taxation bill that would, if adopted, raise something like a billion dollars revenue. Among the features of the proposal made by Mr. Klein are the following: A flat tax of 10 cents on every legal document not now taxed; a flat tax of either two or three cents on each bank check drawn, a one-cent tax on every streetcar fare, either city or interurban, a tax of an unspecified amount on public officials and public school teachers, a graduated tax on all salaries of $20 a week or more (the tax to increase with the amount of the salary), and numerous taxes on mercantile transactions of all kinds.

### May Extend Draft Age Limits.

While no definite action has yet been taken by congress on the matter, there appears to be growing a strong sentiment in favor of extending the army draft age to include all men between the ages of 18 and 45 years. Secretary of War Baker has formally withdrawn his objections previously stated to the plan and many other officials in Washington are known to be in favor of it. Provost Marshal General Crowder has begun the preparation of figures to show the effects of thus extending the draft age. They indicate that such extension would increase the number of men in class 1, which is the class first called into service, by at least a quarter million. United States Senator France of Maryland has prepared a bill, which, if adopted by both houses of congress, would extend the age as indicated.

### Will License All Stock Yards.

With a view to more effective regulations of the meat-producing and distributing industry, President Wilson has issued a proclamation requiring all stockyards throughout the country to secure licenses to operate. The license must be obtained from the food administration on or before July 25. The president's proclamation was based on the following statement made by a committee appointed to investigate the stockyards industry: "The stock yards should be placed under license and regulation by the department of justice, which should also establish a government system of animal grading under suitable regulations and methods of price reporting of actual transactions. Daily reports should be made on distribution in destinations of live stock, meats and other products from the principal packing points."

### May Fly Across the Ocean.

A plan is being worked out looking toward the crossing of the Atlantic by airplane, the object being to develop the possibility until the air fleet from this country can make the trip to Europe that way without necessitating the use of vessels for transportation.

### May Increase Paris Bombardment.

With the German army only 45 or 50 miles from Paris at the nearest point it is a growing possibility that a considerable number of cannon with that range will be put into action in a more effective bombardment of that city.

### Non-Partizan Candidate Is Defeated.

Charles A. Lindbergh, candidate of the Nonpartizan league for the nomination for governor of Minnesota, was defeated in the recent primary election in that state by a majority of more than 50,000 votes by his opponent, Governor Burnquist, who is running for reelection on the republican ticket.

### Get a Farm Service Flag.

The man, woman, boy or girl who stays at home and works hard to produce necessaries for the soldiers in Europe are entitled to real war service recognition. That is the idea back of the Washington Farmer's farm service war flag. It is pennant-shaped, made of the good old red, white and blue, and has a star representing the producing farm home. Small stars are added to represent each worker of that home.

.....

**Convenient Order Blank.**

THE WASHINGTON FARMER, ——————1918.

Review Building, Spokane, Wash.

Enclosed find five cents (5c), for which please send me a Farm War Service Flag (printed on enamel paper) with ..... extra small stars for farm workers.

Name .....

R. F. D. ..... Postoffice .....

Box ..... State .....

## *Washington Gleanings*

A new bridge is to be built across the Cowlitz river at Riffe. The contract price is $21,000.

Lewis county pure-stock breeders have voted to join the farmers in their annual picnic, which will be held July 27.

The Island county farm bureau was recently formed, with John Kinneth president, J. D. Capaan vice president and R. M. Turner secretary.

Big catches of Quinault salmon are being made on Grays Harbor, and although the run has been late in starting a big catch is expected for the year.

W. H. Woodhouse of Garfield has purchased 500 acres of Montana land located within two miles of Wibaux. The place is now in crop. The reported price is $45 per acre.

Walter Hooper of Hooper and Charles Bruihl of Benge have purchased 3000 acres of land located six miles northwest of La Crosse, and expect to enter the sheep business on a large scale, already having 6000 head.

Most of the men working in the car barns of the North Coast Power company of Vancouver are leaving within a short time to take up various lines of war work. Women are being trained to take their places. Among the only men to remain at the barns will be the blacksmith.

John Henley of Pomeroy is making preparations to plow up half of a 140-acre field of barley ruined by the aphis. Bert Green also has barley thus destroyed, and many others in that community report serious damage.

Skykomish lookout station, on the summit of Cleveland mountain, in the Snoqualmie national forest, is to be manned by a woman this summer, Miss Mabel McBain, a school teacher and a member of the Mountaineers' club of Everett, according to S. G. Smith, forest supervisor of the Snoqualmie forest.

Twelve high school boys are acting as testers in the Snohomish valley under the Snohomish High School Cow Testing association, which has been formed by students taking that work. The testing is done in the same manner as adopted by the government associations, and the same set of books as being used.

A large number of threshermen, in session at Colfax, Whitman county, have appointed a committee of 10 from among their number to determine the wages that shall be paid on threshing crews this season for the various kinds of labor. The committee will report just before harvest begins. It is hoped to unify the wage scale.

The four lambs donated to the Olympia Red Cross chapter by Commissioner of Agriculture Benson and placed on the state capitol lawn in two pens gained 66 pounds in 33 days. One lamb gained from 13 to 35 pounds, another from 11 to 29 pounds, and in the second pen the gains were from 9 1-2 to 22 1-2 pounds and from 10 to 25 pounds.

This year came near being another disastrous one for the pea crop, though it is reported that the recent rains have done much to rescue them from the drouth. Last year the crop was nearly a failure, and many beginners were discouraged. Had the crop failed this year it would have set the pea-production industry back several years in its development.

The reports received from various parts of the wheat producing districts of the northwest indicate clearly the benefit to be derived from good care of the soil. The reports in many cases speak of the better condition in which the grain on well-tilled land is found than that on the poorly farmed soil. It is again demonstrated that big yields rest as much with the farmer as with the soil.

G. E. Bennett of Ellensburg has 101 acres in hay and pasture, with enough cows on the place to enable him to market his product on the hoof. A live stream crossing the pasture land makes the situation ideal for stock farming. Just at present Mr. Bennett has one particularly fine Holstein bull calf—a big-boned, straight-backed youngster which should develop into something worth owning later on.

The United States department of the interior is undertaking to reclassify lands heretofore designated as mineral lands and therefore withheld from appropriation as agricultural land. Among the reclassifications planned for an early date is that of certain so-called mineral lands in the Colville reservation. It is hoped that there will result a considerable increase in the available agricultural land of the district.

E. J. Becker of Ellensburg is one of the Kittitas county farmers who report a poor stand of potatoes from home-raised seed. Some of those who bought their seed were inclined to lay the blame for poor germinating qualities on the other fellow, but Mr. Becker knows that in his case the tubers have been properly chosen and taken care of. Wheat and hay are doing well, according to the Kittitas county man, with aphis more than usually abundant but apparently doing little harm locally.

Aphis are doing unprecedented damage in the fields of the state this season, according to reports from many sections. Especially is this true in the barley fields. Reports from Walla Walla and Columbia counties indicate serious damage to barley, so serious in some cases that fields are being plowed up. The ladybug, the red and black spotted beetle, so common but not numerous enough, is the natural enemy of aphis, and is reported in some districts to be lending loyal assistance in combatting the pest.

# Accurate Live Stock Figures Needed

## *Even Unpleasant Truth Is More Desirable Than Over-Optimistic Fiction*

By E. J. IDDINGS

There is today in the minds of a great many live stock men considerable question as to the exact status of the industry. The only data that we have that seems at all reliable is that contained in the statistical reports of the United States department of agriculture. Those reports indicate a favorable standing of the industry so far as the number of live stock is concerned, and many of our more experienced live stock men have little or no confidence in the correctness of this point of view.

No phase of agriculture demands such forward-looking plans as does live stock production. Numbers of animals fluctuate from time to time, but on the whole there is stability, and in normal times approximately the same world totals are found from year to year. Should by any mishap any considerable portion of the world's live stock be destroyed, years would be required, particularly with the larger animals, to restore the desired balance between supply and demand.

Should the entire wheat of the world be destroyed, except a reasonable seed stock, a single favorable year could be made to restore the normal condition. The same is true with the other cereals, with many of the forage products, and in fact with nearly all the crops of the farm. Fruit growing is ordinarily considered a business requiring many years of preparation. Nevertheless, trees of many varieties may be planted and grow to such size that they bear fruit in no longer a period than is required to grow a brood mare from foal to maturity, and secure from her a husky young work animal. Hence the assertion of need of foresight in providing for the future live stock needs of mankind.

Unfortunately, disaster has come to the live stock of many lands. Invading armies have ruthlessly destroyed farm animals of all kinds. The abnormal war demands for meat, for motive power and for other animal products has made deep inroad into the supplies of many countries, and in some nations lack of fodder for feeding live stock has necessitated the slaughter of large numbers of animals that might otherwise have remained to form a part of the world's supply today. This destruction and abnormal usage has resulted in a loss of live stock, variously estimated at from 100,000,000 to 140,000,000 head.

During the war period we in America are interested in but one phase of live stock supply, viz., in supplying our own needs and the requirements of our allies. We naturally figure as sources of supply such great live stock producing lands as America, Canada, Australia, New Zealand, the Argentine, and South Africa. The shipping situation is such, however, that if America's man power and food supplies are to be a deciding factor in the world war, ships of all kinds and sizes must be concentrated on the Atlantic, to form a veritable bridge between America and France. Hence, ships in the greatest possible numbers will carry supplies of all kinds, including live stock, to England and France, and will ply only from North American ports. The live stock burden of the war, therefore, is unquestionably on the United States and Canada.

Many careful-thinking and experienced live stock men have for more than a year been regarding the American live stock situation with deep concern, and have urged measures both for conserving supplies and for looking forward to increased production to meet the demands of the future. Many of these men have expressed a well-defined lack of confidence in the optimistic live stock reports of the United States department of agriculture. These reports for January 1, 1918, indicated an increase in America of all kinds of live stock as compared with the year before. The writer confesses to having a lack of confidence in the federal estimates for reasons that appear later.

This is a matter of the very greatest importance. If federal reports are too optimistic, it means a false feeling of confidence in the adequacy of supplies, and tends toward encouraging a relaxation of effort, rather than an impetus for stimulation of production. This matter of live stock supply, therefore, is, in the judgment of many, the real outstanding live stock problem of the day.

The federal reports mentioned above indicated an increase during 1917 of 1,857,000 head of beef cattle. At the same time, the accurate tabulations of 52 of the leading markets of America show an increased slaughter, as compared with the previous year, of 3,700,000 head. These figures lead one to believe, therefore, that there has been an increase in beef cattle alone of more than 5,000,000 head in a single year, a condition that on the face of it does not seem probable. Furthermore, it must be remembered that this supposed increase took place in a year not regarded as a favorable one for beef cattle production. Twelve western states, having over 7,000,000 head of cattle, experienced one of the severest winters in the memory of the western people. This meant that female stock came out on to spring pastures in low condition, and the calf crop was unquestionably quite a bit below normal. In addition, four states of the southwest, having over 8,000,000 head of cattle, suffered an extremely severe drouth, resulting in unfavorable conditions for production. The 16 states mentioned contained ap-

(Continued on page nine.)

## BEANS FOR CANNERY.

### Interests Wenatchee Farmers.

W. H. Paulhamus of the Puyallup and Sumner Cannery company, has been in the Wenatchee district. He offers for green beans $50 per ton, f. o. b. shipping point, and is meeting with good responses. One man is preparing to put in 25 acres, another five acres. H. B. Ellison, chairman of the County School Garden club, is anxious that as many school children in the county as possible may take advantage of this opportunity to help themselves by raising green beans for the cannery as well as to help out the food program.

## Fair Programs Are Out.

The 10th annual premium list of the Southwest Washington fair is now being distributed. The fair will be held at the grounds half way between Chehalis and Centralia, in Lewis county, August 26 to 30, inclusive.

F. B. Hubbard, of Centralia, who was the first president of the fair commission, still occupies that position; George R. Walker, of Chehalis, is secretary, and J. T. Bivin, of Randle, by virtue of his position as county commissioner, is treasurer. Other members of the fair commission are R. R. Somerville, of Centralia, county commissioner from the first district, and Ed S. Orr, of Chehalis, commissioner from the second district.

### Clarke County Wants Prune Price.

The federal food commissioner for California has announced 8 1-2 cents as the price for prunes for the 1918 crop. This is taken to mean average price on average product. Clarke county, Washington, growers have decided to ask for this base price for their prunes also.

# State Grange at Walla Walla

By GEORGE J. CANNON, Buckeye, Wash.

To the Editor of The Washington Farmer: I have been reluctant about making a statement relative to the grange affair at Walla Walla because I felt that the less said the better, but there has been so much said by Mr. Bouck and his followers that I feel bound to give the farmers of Washington the other side of the story, as I saw it.

The Washington state grange called delegates from all parts of the state to meet in the city of Walla Walla for a four days' annual session. Some weeks prior to the date set for the meeting reports were current to the effect that the national nonpartizan league was preparing to monopolize the grange convention and to put on foot a campaign similar to the one waged two years ago in North Dakota. Many of the farmers of the state of Washington, myself being one of them, felt that, regardless of the merits of the nonpartizan league, it would be a terrible mistake to allow this to happen. First, because the grange during all its 52 years of existence and faithful service to the farmers of the country has been strictly and absolutely a nonpartizan and nonsectarian organization, political discussion being absolutely prohibited in grange meetings by its constitution and bylaws and because we realized that if such political agitation were allowed the membership of the grange would be divided and a continuation of its harmonious workings would be prevented, and, secondly, because we believe that this particular time, when our nation is at war and the best efforts of every man, woman and child in the United States should be devoted to the winning of the war and the saving of free government from destruction, that no agitation, of whatsoever nature, should be permitted amongst our people and no time spent by us in wrangling over petty grievances between ourselves on questions of mere profit and loss in dollars. We felt that the first duty resting upon each one of us was, and is, to do all in his or her power to aid in carrying on the war and to leave our personal troubles for adjustment at a later date. We therefore looked with suspicion and fear upon any move which seemed to threaten the disruption of the grange or the harmonious working of the people of Washington in support of the war.

When the convention opened on Tuesday I was extremely busy with potato planting and had given up my intention of attending the convention, but word came to me that the situation in Walla Walla was critical and I left my work to go down and see if I could aid in preventing so disastrous an alliance as the farmers' grange and the nonpartizan league. I reached Walla Walla on Wednesday morning and was dismayed to find that the nonpartizan league and a federation of labor organizations were holding a sort of camp meeting in the city of Walla Walla, camouflaged as a state grange convention. Everything seemed to be in the hands of 10 or 12 leaders, who spent most of their time behind closed doors, where, I believe, they were also taking orders from other leaders who did not even appear on the streets. Everywhere about the hotels, on the streets and in the public school buildings, where the session was being held, one could see a group of disheveled, uncouth, suspicious-looking chaps who would flutter around from one group to another and take in tow any delegate who might seem to be lost or in want of information as to why he was there. None of these individuals showed any disposition to discuss matters with me, but some of them were busy canvassing the crowd and telling others that I was there to make trouble and that my actions should be closely watched. Many of the delegates had never attended a state meeting before and evidently had not learned the tricks of political bosses, or perhaps they were too confident of the good intentions of their leaders; at all events they seemed not to suspect what was going on and seemed unwilling to make any statements more than that they were told to vote for Mr. Bouck and everything else would be O. K.

The forenoon on Wednesday was given to rambling discussion of everything but the war and real grange work. Promptly after the noon recess the worthy master introduced Ray McKaig of North Dakota as the hero of the emancipation of the North Dakota farmers and Mr. McKaig engaged the audience from that time until three minutes after 6 o'clock, although his address seemed to have been completed shortly after 5, at which time I attempted to get the floor for the purpose of pointing out to the grangers that this campaigning for the nonpartizan league was illegal and improper in a grange meeting and entirely inopportune in any meeting during the present war. When Mr. McKaig finaly abandoned the floor after 6 o'clock I was denied the privilege of the same, was then denied the privilege of a hearing at the evening session and again at the opening of the next morning session. This morning session was supposed to be given to the election of officers and it was therefore considered important from the standpoint of the element which I represented that we be granted a hearing before said election, but that did not seem to fall in with the plans of the nonpartizan advocators and was therefore denied. Now it is a law of the grange that no political campaigning for office be allowed and that no nominations be permitted, but in spite of this fact the floor was granted to Mr. Chamberlain who delivered what I consider one of the best campaign speeches ever made at any convention for the reelection of Mr. Bouck. During the delivery of this speech I will confess that I and many others of the old-time grangers blushed with shame and buried much of old-time reverence for grange elections.

The votes were counted and Mr. Bouck received an easy majority. It is my opinion that at least 50 of the votes were bagged by the Chamberlain speech. After the election the privilege of the floor was accorded me for 10 minutes during which time I was supposed to answer an argument that lasted the entire afternoon of the day before and which, of course, it was useless to answer at all after the election had been held. Following this we were treated to more labor speeches together with several eulogies of the late State Master C. B. Kegley and an assurance from many mouths that President Wilson is really a pretty good fellow and that our state grange leaders propose to guarantee his future success by giving him their support.

I want to say here that few, if any, of the grangers present there esteemed Brother Kegley more in his lifetime, or hold his memory more dear than I do. But why shout about the virtues of a departed brother while in the act of heaping disgrace upon the organization he so creditably built up and led? Why sing the praises of President Wilson while trying to rob him of the united support he so badly needs from the people of this state?

Up to this time there had not been any work done or any consideration of legitimate grange questions or war work, and yet the session was supposed to close on the following day. It was even given out boldly that the morning session of Friday, the last day of the convention, was to be given to an address by Mrs. Ina Williams of Yakima, who stated in my presence that it was her intention to plead for the nonpartizan league. Now, during all this time the people of Walla Walla were lending the unlimited use of their high school buildings to the state grange for grange work. Is it any wonder then that they became disgusted and decided to expel from said school buildings a bunch of agitators who, under the cloak of the state grange, were following the same tactics at Walla Walla that were followed by the bolsheviki in Russia?

The Walla Walla people, in my judgment at least, acted cooly, fairly and wisely, and I believe I am voicing the sentiments of most Washington grangers when I say that they owe us no apology. It is true that there was at Walla Walla and has since been a great deal of extravagant, blustering talk about a national investigation and a just punishment to the people of Walla Walla. I shall be anxious to watch the outcome of such an investigation and to see whether some of the leaders there are so important in the national administration as their remarks would lead us to believe. I do not believe it necessary for said leaders to devote their time canvassing the country, declaring that they are 100 per cent American and absolutely loyal to the administration. I consider it the duty of the Washington farmer now to do all in his power to produce food for our armies and our allies regardless of whether he profit thereby; to allow his actions to speak for his patriotism and to build for himself such a record of patriotic duty well performed that when the proper time for readjustment comes the great tribunal of the American people will decide in his favor and see that justice is granted to him.

## THIS WAR GARDEN.

### Stirs Whole Family's Patriotism.

The war garden on the Louis Noble place, near Ellensburg, Wash., is the center around which the activities of the entire family revolve. An extra acreage has been put in, particularly of beans and potatoes. The latter will be used to take the place of wheat, as far as possible, while most of the surplus products of the garden will be canned. Last year's canning, which included even such unusual vegetables as summer squash, was absolutely satisfactory. The cold pack method was used, government directions being followed to the letter. Particular care is taken to provide new rubbers, and to keep jars and tops clean, when not in use. Missouri Wonder Pole Beans proved the most satisfactory of all those tried out, being big yielders and particularly good for dry shelled beans to use during the winter.

## SMITHSON'S RANCH.

### Hay, Cattle, Horses and Sheep.

The J. H. Smithson place, near Ellensburg, Wash., is one which comes near to fulfilling the eastern idea of a real "ranch." Mr. Smithson has 500 acres in hay, while the live stock end of the place consists of 500 head of black polled cattle, 100 head of horses and 5000 sheep. In addition to the horses, Mr. Smithson uses a tractor for much of his heavy farm work.

# National War Savings Day

## June 28

The day we all sign up.

The day we tell Uncle Sam just how hard we want to win this war. That's the day our government has officially set for us to purchase War Savings Stamps.

On June 28th every man, woman and child in the United States will be called upon to pledge his or her full quota of War Savings Stamp purchases for 1918.

You will be expected to pledge the full amount that you can afford —no more—but by the same token, no less.

In every County, City, Town and Village in this State the War Savings Committees are preparing for this big patriotic rally of June 28th. Unless you have already bought War Savings Stamps to the $1000 limit, get busy with paper and pencil and figure out the utmost you can do.

Remember this. You take no chances when you go the limit on War Savings Stamps. They are the best and safest investment in the world. They pay you 4 per cent interest compounded quarterly. **They can't go below par.** You can get back every dollar you put into War Savings Stamps any time you need it. You can turn them in at the Postoffice any time for their full value plus interest.

Uncle Sam is asking hundreds of thousands of men to give their lives to their country. He is asking you only to lend your money.

What are you lending?

# Top Price of $10,000 For Jersey Cow

William Ross Procter of Barryville, N. Y., pushed the price of Jersey cows up another notch when, after a few moments of spirited bidding, he offered $10,000 for the Jersey cow Oxford's Briar Flower at Edmond Butler's sale of imported Jerseys at Mount Kisco, N. Y., some time ago.

Oxford's Briar Flower was bid up to $8000 in the space of a few moments and Mr. Proctor, who also owns Golden Fern's Noble, the $25,000 Jersey bull, clinched his hold on the bid by making it an even $10,000.

The greatest price ever paid for a Jersey cow previous to the Butler sale was paid at the time that Lady Viola sold at public auction for $7000 in 1911.

The 60 head averaged over $1000. The best previous average at a Jersey sale was $952, made at the T. S. Cooper sale in 1883.

The price leader is a daughter of the bull Oxford Majesty, made famous by achievements of his progeny in the show ring and at the milk pail. This cow, Oxford's Briar Flower, has many notable Island of Jersey records as a butter producer and show winner.

Discussing "Speculative Prices for Purebred Cattle," The Farmer of St. Paul hits the nail on the head when it says:

The breeders of purebred stock should always remember that the ultimate market for all purebred stock is the farm trade. The bulk of the purebred stock raised must be sold to farmers. There are, of course, always a few fancy strains that are worth more than the prices which the farm trade can afford to pay, but these animals should be used for breeding stock in the hands of breeders. When a purebred stock business gets on the basis where farmers can not afford to buy a well-bred sire at a reasonable figure, the purebred stock business is on the downhill grade. There has never been a time when purebred stock was in such great demand as at the present time. Every breeder should remember that it is good business and a wise policy to keep prices on a strictly legitimate basis.

The campaign must be continued "to keep prices on a strictly legitimate basis." The stock industry of the Pacific northwest depends upon it. However necesary it may be and however commendable it may be for those having means to invest the same in purebred stock enterprises yet the stock industry of this part of the country depends upon the introduction of better animals generally among the farmers of these four states and the purebred stock farmers themselves can not be supported upon peak prices only. There must be a stabilized industry built up on good profit paying prices for good stock.

## CHARLES M. WINSLOW.

### Death of Noted Ayrshire Breeder.

The name of Charles M. Winslow has passed into history. Full of years and accomplishments, his presence will no longer be felt at the Ayrshire Breeders' association, of which he was the secretary for many years.

His death occurred at Brandon, Vt., June 8. He was born February 10, 1841, and is survived by his wife and an only son, Charles G. Winslow, who is electrical engineer for the National Central railroad.

He was a charter member of the National Ayrshire Breeders' association, organized in 1875, only one of whom survives today, namely, H. R. C. Watson of Brandon, Vt. Mr. Winslow was responsible for the incorporation of the association in 1886. He was elected secretary-treasurer of the National Ayrshire Breeders' association in 1882, and has been annually reelected since. For 35 years he has steered this association through stormy times until today it is out in the clear and headed forward. Mr. Winslow was a keen breeder and his exhibits at St. Louis and other national expositions were always to be reckoned with.

Mr. Winslow for many years was president of the New England Agricultural society. He was a member of the Vermont legislature in 1894-5 and secretary of the state board of agriculture. He was for many years president of the New England Ayrshire club and the Vermont Ayrshire club, and prominent in town affairs.

## Walla Walla Cows' Records.

According to the last monthly report of the Walla Walla Valley Cow Testing association, there are at this time 465 cows in the association, 70 of which are dry. During the month of May the average pounds of milk per cow, including dry cows, was 634; the average test in the association, 4.1; average pounds of butter at per cow, including dry cows, 26.2, and the average cost of feed per cow, $5.57. The average profit above feed cost was $5.96.

Ninety-three cows in the association averaged more than 900 pounds of milk per cow; 65 cows produced 40 pounds or more of butterfat.

J. S. Bixby is the official tester.

### Cane for President Wilson.

Lieutenant Colonel W. G. MacKendrick of the British army recently presented to President Wilson a cane made from the door of the celebrated Cloth hall of Ypres, Belgium. Similar canes have been given King George of England, King Albert of Belgium, President Poincare of France, Premier Lloyd George of England, General Haig and General Petain.

Clean and Clear as Water

Awarded Gold Medal Pan.-Pac. Expo.
For Calf Scours
B-K treatment is saving many calves. Scouring calves indicate a germ infection that is likely to run through your entire herd with serious losses.
The loss of one calf is bad enough, but nothing compared to your loss when the infection spreads—as it will unless checked. Then your year's work in building up your herd is wasted—your profits lost.
Leading breeders testify that B-K stops scours. It is powerful in killing germs. When used internally B-K kills the germs in the mouth, throat and digestive tract, heals inflamed membranes, relieves irritation. B-K may be given freely in drinking water.
If your dealer does not have B-K, send us his name.

## MILK QUESTIONS.

### Food Administration Answers.

**Does the food administration ask us to decrease our consumption of milk?**

No; nor attempt to substitute other foods for it. Use all the milk. Children need plenty of whole milk. Use sour and skim milk in cooking and making cottage cheese.

**If I can not afford whole milk, shall I get skim milk?**

Yes, skim milk is an excellent food. Try to make up for the lack of fat in some other way. But remember that children should have whole milk.

**Is milk a cheap food compared to its food value?**

Yes. Even at 12 cents a quart one gets protein as cheaply as in meat at 25 cents a pound, eggs at 35 cents a dozen, or fresh cod at 20 cents a pound.

**How can we avoid wasting any milk?**

By using all remnants of sour milk, cream and buttermilk in cooking and for homemade cottage cheese.

**How much milk does a child need each day?**

At least a quart up to the age of 6 years; after that at least a pint up to the age of 12.

**Does an adult need milk?**

Under normal conditions it is not absolutely necessary as it is for children, but it is nevertheless a desirable food for adults.

**What is the nourishment in skim milk?**

It contains all the protein of whole milk, contains lime, phosphorus, milk sugar.

**What is the food value of milk?**

One pint of skim milk furnishes 170 calories; 1 pint of whole milk furnishes 310 calories.

**Why is milk so important a food?**

Because it is the most complete and well balanced of any single food and is a vital food need for babies and children.

**How much milk does the United States produce annually?**

About 33,000,000,000 quarts annually.

**How is this milk usually distributed?**

4.3 per cent goes to feed calves.

6.6 per cent goes into production of ice cream and condensed milk.

89.1 per cent is used in butter and cheese making and for fluid use.

## Need Accurate Figures

(Continued from page six.)

proximately 36 per cent of all the beef cattle in America. With conditions highly unfavorable in more than one-third of the beef producing area, a decided increase is hardly probable or possible. The homesteading of large areas of land during the last five years, and the increased development of lands through the dry farming system, has resulted in a great shift in the western flocks of sheep, and in many sections the tendency has been distinctly toward reduction. Furthermore, there does not seem to be any marked evidence of increased popularity of sheep, at least prior to this year, in the corn belt and far eastern states. In spite of these facts, however, and in spite of the same severe winter conditions and dry summer, which affected both beef cattle and sheep, the federal figures show an increase during 1917 of 1,284,000 head of sheep.

The cost of feeds and of other supplies for the dairyman made milk production unprofitable in many sections of America, and resulted in the reduction of herds. The federal figures, however, indicate an actual increase in dairy cattle in America of 390,000 head.

There is also found in the same statistical reports as quoted above an increased showing for both horses and mules. This is possible, but not highly probable, in view of the great drain that the European demand has made on the supplies of horse stock of America.

It is in relation to swine where one is most disposed to doubt the accuracy of the Washington statisticians. Feed prices have been extremely high, and unquestionably there has been an American-wide tendency among certain classes of farmers to sell wheat and other grains for cash and to dispose of swine. The federal reports show, however, a gain in swine during 1917, of 3,871,000 head, and indicate since 1914 a gain in American supplies of swine of 11,441,000 head, or approximately 20 per cent.

One can analyze these figures in a more satisfactory way by reverting to certain districts where we feel reasonably sure of conditions. In the state of Washington there is credited in 1915 a total of 327,000 head of swine, and in 1918 283,000 head. In other words, a reduction in the three years of only 14 per cent. One can feel reasonably safe in saying, if he has had any experience in meeting with the live stock men in Washington, and in traveling over that state, that a 14 per cent loss of swine in three years does not adequately represent the situation. In the state of Idaho we are credited with 219,000 head of swine in January, 1918, as compared with 528,000 in 1915, or a decrease of 34 per cent. In some sections of Idaho we have accurate figures. In one well-known irrigated district there was only one hog in January as compared with three on the same date in 1917. In another district there were on the same respective dates 42, as compared with 100, and only 23 as compared with 100 in January, 1916. In another section of Idaho professional buyers of swine and other experienced and conservative men estimated during the winter that there was no more than one single hog as compared with 10 only three or four years ago. There can be little question that either the figures for swine are entirely too optimistic for the state of Idaho or the census of three to five years ago did not represent anything like the real number of swine in the state.

We do not need, however, to rely entirely on western figures. The same federal sources of information credit Iowa in January of this year with 10,307,000 head of swine, as compared with 9,370,000 in 1917, and 8,720,000 in 1915. Wallace's Farmer is authority for a compilation of assessors' reports. In this compilation, one-third of the counties had already reported, and on the basis of these reports Iowa had in January of this year only a little more than 6,000,000 head of swine, or approximately three-fifths of the number estimated by the United States department of agriculture.

On account of the lack of sources of information, it is impossible to present the live stock situation in a comprehensive way, using figures that we feel certain are reasonably accurate. The above general discussion of the situation and figures from such sources as seem reliable seem to indicate that one of the crying needs of today is a really accurate and reliable means of securing live stock statistics. Few will agree that the present system is adequate. Items pointed out seem to indicate that the latest reports are entirely too hopeful. If the live stock industry is to be organized to meet the real needs of both the war and after the war period, we want first of all to know the truth, and then to act promptly in the light of this knowledge.

CASE

THRESHING MACHINES

A Small Size Thresher For Use With a Tractor

THE Case 20 x 28 Thresher, pictured above, is the smallest of our lightweight machines. It is just the thing for use with any small tractor of the power of the Case 9-18 oil tractor.

With such a combination you can do your own threshing, when you want it done. No need to wait your turn. Thresh exactly when you want to, thereby taking no risk of crop losses on account of bad weather. You can handle a few jobs for neighbors too, if you wish.

Perhaps you use a stationary or portable engine? If so, a team of horses can haul this light weight machine easily. It weighs about 2400 pounds with blower, ready for work.

This small model is just as efficient as the other Case Threshers, famous for 76 years. It, too, is built of steel. It is simple in design, sturdily built and lacks all complicated parts.

You will note that it is freed from a multiplicity of gears, pulleys, belts and other moving parts that eat up power.

This, like all Case Threshers, is a great grain saver. No one can now afford a waster.

There is a size Case Thresher for every need—we make them in 7 sizes, 20x28, 20x36, 26x46, 28x50, 32x54, 36x58 and 40x62. Ask the Case Dealer about them, or write to us direct.

**J. I. Case Threshing Machine Company, Inc.**

Founded 1842 1220 Erie Street, Racine, Wis.

## Prof. Evvard's Self-Feeder Suggestions

In his official capacity with the Iowa State Agricultural experiment station Professor John M. Evvard has made numerous experiments which have enabled him to obtain far-reaching and positive conclusions as to the merit of the various methods of feeding hogs. His experiments have been both practical and scientific and probably there is no man in this country or abroad better able to speak authoritatively on the subject of feeding hogs. Professor Evvard's conclusions have been set forth in a booklet called "Feeding Hogs for Profit," published by Morris & Co., Union stock yards, Chicago, Ill. Here is a most excellent summary of self-feeding suggestions by Professor Evvard taken from this book:

1. An efficient method for full feeding of hogs is to self-feed.
2. If you wish to "grow your pigs along slowly" do not self-feed.
3. The hog does not like hash any better than you do.
4. The self-feeder will not save all of the work, only part of it.
5. Better have a little too much self-feeder trough space than too little.
6. The self-feeder works excellently with swine; but that is not saying that the same is true of horses, cattle, sheep, poultry and goats.
7. To self-feed pregnant sows mix bulky feeds with the grain, such as alfalfa. Regulate the gains by increasing or decreasing the hay meal.
8. The hog is a physiologist not an economist; he eats to suit himself, and corn at 3 cents and corn at $3 looks all the same to him. In other words, "the hog looks out for himself, not you."
9. Human ingenuity must be exercised in learning what and which feed to place before swine in separate self-feeders to secure optimum results. In case of doubt use corn meal and meat meal tankage.
10. The hog can not always economically balance his ration; much depends upon the opportunities that you afford him. Choose the right feeds.
11. The self-feeder in the summer had best be in the shade, and in the winter away from the cold winds, preferably under warm shelter—well floored.
12. —Rats, chickens, birds and other animals enjoy the self-feeder as do the hogs; govern your operations accordingly.
13. The careless, unreliable human feeder can be displaced with the self-feeder to great advantage ofttimes in the full feeding of swine.
14. Self-watering is a part of the Iowa self-feeding system, therefore keep plenty of drinking water before the hogs always. Self-icing is not self-watering.
15. —Self-fed pigs are liable to eat most any hour of the day or night, hence it is well to have the self-feeders easily accessible all of the time.
16. It is well not to "rush" the hog when he is eating; the self-feeder allows him plenty of time to eat without creating that impulse to hurry for fear that the other hogs get all of the feed (as in the hand-feeding scheme).
17. Do not neglect those fall pigs; give them a few self-feeders in which are corn, meat tankage products, middlings and salt. Try the scheme; enjoy the results, and tell your neighbors.
18. —There are scarcely any runts to cause down-heartedness in the Free-Choice system fed bunches because they get all they want to eat and of whatever feed; and it is the lack of scuitable feed (and shelter) mostly that produces the "winter runts."
19. Lest we forget: The suckling pig that follows his "mammy" is self-fed all of the time; why not continue the practice after he is weaned.
20. Do not mix slop if you can do better. Save the time and the labor; use the self-feeder when full feeding.
21. Self-feeding according to the Free-Choice scheme or system is the natural way of full feeding.
22. The self-feeder is not a panacea for all feeding troubles.

## Hog House With 22 Pens

The accompanying photo shows the very convenient hog house of William A. Steen, near Milton, Ore. It has 22 pens six feet square. Each pen has an outside runway 26 feet long. A small wooden watering trough goes the entire length of the house at the outer end of the runways, and has an enlarged place in each pen for the pigs to drink from. A slide is opened to let the little pigs out and in, and Mr. Steen finds that while the little fellows will run outside considerable they nearly always return to their own pen, and there is very little trouble about robbing one another. An alley runs through the hog house for feeding, the feed being mixed in a vat that can be heated if desired and has a float for supplying water. On each farrowing pen is a card showing the date of breeding and farrowing and condition of the sow and pigs. A card shows also the feed each day to fattening pigs, the weight in and out and the number of hogs.

Feed is put into the bins at the end of the house, with hoppers. The ground outside is as high as the top of the bins, and each bin holds a wagon load.

Mr. Steen's conveniences do not stop at his hog house. A turbine water wheel in his blacksmith shop furnishes power for his electric motor, for lights in his house, barns and elevator and for power for the elevator, the latter being transmitted by cable 150 feet long across the creek. A road above the elevator (which is on a side hill) allows a spout to receive grain from a wagon. It is ground and carried by gravity to any one of five bins and from them drawn off, still by gravity, as it is desired to be fed.

In the winter hogs are kept in fattening pens right under the elevator. Two self-feeders are supplied by flexible spouts so that once grain is delivered to the elevator a minimum of labor is used in grinding and feeding.

## Draft Horse

### Is Preferred for Shorter Hauls

To the Editor: Does the draft horse still occupy an important place in the world's commerce? Will he ever cease to be an important factor in the city traffic?

These questions are continually being raised, especially by farmers who are in doubt as to whether they can dispose of their horses in the future.

They can well be answered by a little survey of the commercial traffic in the larger cities. According to statistics, we find that heavy drafters have not been displaced by trucks to any great extent in the traffic of large cities, especially for short hauls.

In the city of Chicago all vehicles are licensed. The records there show the following number licensed on April 30, 1916, and on the same date in 1917:

In 1916, 35,690 one-horse vehicles were licensed, and in 1917, 32,759, or a reduction of approximately 3000. There were 13,774 two-horse vehicles in use on April 30, 1916, and 13,488 on the same date the following year, or a decrease of 326. Most of this reduction, however, has been in carriages, which shows that no noticeable decrease took place with heavy draft teams on two-horse wagons.

In 1916 there were 207 three-horse wagons in use, while in 1917 there were 212, or an increase of five. Both years showed 11 four-horse wagons. The records show that the number of automobile delivery wagons and automobile trucks have increased; but, on the other hand, persons well familiar with that city's traffic conditions testify that the automobiles and trucks are used almost exclusively for the long-distance hauls —that is, for five miles or more—and that the horses are still used on the shorter hauls.

It is of interest also to note that some of the department stores in Chicago have gone back to draft horses, and are using them on their short-haul work, having found that the trucks were too costly for this traffic.

What applies to one of the most important of our cities is safe to say should be significant of the commerce of the other cities as well. This gives reason to believe that the horse will always be an important factor in the city traffic. And as long as horses perform an essential part of the commercial traffic we must infer from the law of supply and demand that this demand will always afford an important market for good draft horses.

D. E. RICHARDS,
Secretary Oregon Stallion Registration Board.

## San Francisco Livestock Show.

San Francisco is to have a live stock show this fall, the intention being to make it a great and permanent live stock exposition. The San Francisco Chamber of Commerce will finance the show this year; the grounds are already secured and are located in the heart of the city with ample loading and unloading facilities for stock across the street. The dates have been set for November 2-10, one week preceding the Portland show. The premium list, when issued, will carry prizes of $25,000 or more. A night horse show will be a feature of special attractiveness. The situation of San Francisco, in the heart of a great state, where live stock breeding is steadily on the increase, seems to assure the success of the show.

H. A.

## Livestock in Queensland.

Published statistics indicate that the total number of horses in Queensland, Australia, are 659,162, being a decrease of 38,353 as compared with 1916; cattle, 4,653,455, a decrease of 112,202; sheep, 15,812,425, an increase of 228,132; and pigs, 160,196, an increase of 30,463.

Cutter's
Refined
Germ-Free
Anti-Hog Cholera Serum

*Produced in the Most Up-to-date and Best Equipped Anti-Hog Cholera Serum Plant in the World.*

**Does away with the risks** that necessarily attend the use of a serum that is not germ-free.

**It is 20% more efficient,** measure for measure, than the old type, "bloody" serum, is much more quickly absorbed, does not discolor the flesh at point of injection, and carries no liability of producing abscesses.

**80 c.c. of Cutter's Refined Germ Free Serum is just as efficient as 100 c.c.** of the best old type "bloody" serum.

**But we make the old type serum,** and do the job so well that though **we have sold several million c.c.** since we started production in 1917, there has been **not even one complaint of failure** to protect, or of bad effects following its use.

**So, whether you use the old or the new kind,** insist on "Cutter's," for in either case you will be getting the best that can possibly be produced.

**Remember, a serum may be "clarified," or "clear," and still not be germ free.** Such a serum is almost as dangerous as a "bloody" serum. **Cutter's Refined Serum is not only clear but it is Germ Free.**

**Write for our two new booklets,** "Hog Cholera Prevention," and "Special and Detailed Information Concerning Hog Cholera Immunization." **From the latter you will learn** what constitutes good work and why a competent veterinarian should be employed.

**Prices.**

**Cutter's Refined, Germ-Free, Anti-Hog Cholera Serum** is 2½ cents per c.c.

**Cutter's Regular,** or "old type" Serum, is 1½ cents per c.c.

**Cutter's Hog Cholera Virus,** for use with either type of serum, is supplied at 1½ cents per c.c. **It is dependable.**

**We prepay shipping charges.**

**Let your veterinarian order** for you and **encourage him to be liberal in estimating the amount of serum to use;** safety lies in giving more than may be needed rather than trying to figure too fine.

**Should he be prejudiced** in favor of some other serum, there is a reason that concerns him but not you, except insofar as it should make you more insistent that Cutter's Serum be used. **In such case do your own ordering direct from us.** You will get "Cutter's" promptly, prepaid.

# Veterinary

Dr. S. B. Nelson

**Horse Has Heaves**—Can you tell me what will cure the heaves? One of my horses has them and I would like to know what to do for her.

C. H. W., Lava Hot Springs, Idaho.

There is no positive cure for heaves in horses. Lessen the coarse feed, such as hay, one half. Dampen the hay when fed. Then give, on the grain, one-half ounce of Fowler's solution of arsenic, morning and evening. This may help. If the animal is quite bad, in addition to the above treatment, you may give one dram of potassium iodide at noon on the feed.

**Cow Has Indigestion** — Will you please prescribe some remedy for a cow I have? I think she has indigestion. She does not seem to be sick very much, but does not eat very much, has a bad breath and the milk is so strong that it can not be used. She breathes rather hard. She does not seem to need a physic. Has been this way about a week. She has been on good pasture, and think she has been eating too much. Have not been feeding anything aside from the grass. She was bloated once a few days before she got this way.

H. I. M., Tuscar, Mont.

I am of the opinion that your cow is suffering from a digestive disturbance, probably of the fourth stomach. It may be farther forward than that. I am going to suggest to you that you give her one pound of epsom salts, one-fourth pound of common salt and one pint of coarse molasses, in three quarts of water. A day or two later begin giving her a half ounce of compound tincture of gential in a half pint of water, morning and evening.

**Chronic Mammitis.**—My cow came fresh April 14. She seems well and in good condition. The left front teat was spoiled when I bought her a little over two and a half years ago. They said that they trusted to the calf getting the milk from that teat, but it didn't, and the teat went bad. I have not been able to get milk from that quarter since I got her. Since the calf came we have noticed quite frequently clots of blood coming from the left hind teat. Sometimes there is a clot half as large as a pea, other times there is just a little string, fine as a hair. Sometimes a week passes when we don't notice anything. Then sometimes there are small bits of mushy, white substance. I can tell when they come, while milking, by the feel of the teat. Can you tell me what is the matter with the cow and what to do for her? Is the milk from the other teats fit to use?

A. L. E., Murtaugh, Ida ho.

Your cow is affected with a chronic mammitis or garget. I do not believe that she would yield to treatment. She might raise you two or three calves this year, but I think it would be advisable if she is the type of cow that can be used as such, to fatten her for the block and dispose of her.

**Cow Has Cough.**—I have a cow that has had a cough all winter and does not seem to be getting any better. She is 6 years old and will freshen in September and has been in extra good condition all winter. I do not like the cough and would be glad if you would prescribe something for it. She has been kept warm and fed clean oat hay, with shorts and bran (dry). Have been careful to put cows in in wet or cold weather.—W. H. G. W., Port Blakely, Wash.

The cough is only a symptom of disease. I could not tell what causes it. I would suggest that you have the nearest local veterinarian make an examination of her and he can find out what causes the cough and prescribe.

**Would Spay Pups**—Our collie has pups, mostly female, and I would spay a couple if I knew how. Is it possible for you to tell me how and at the right age, etc.? Am located in rather an isolated place where I can get no one to come and spay them without quite an expense.—J. J. D., Nordland, Wash.

It is hardly possible for me to describe the operation of spaying in these columns, as it would take too much space. But I would suggest to you that if you are anywhere near the railway that you might send a couple of the puppies when they are from three to seven months old to the Veterinary Department of the State College of Washington, billing them to Professor E. E. Wegner, and then writing him a letter, and he will be very glad to spay them for you and send them back. The cost during the school year, which is between October 1 and June 1 is 25 cents a day for their feed. No charge is made for their operation.

**Sheep Have Sore Eyes**—We have some sheep that are afflicted with sore eyes, the eyes becoming inflamed and in about 10 days the eye bursts and they are permanently blind. Would like to know name of disease and a preventive.—J. H. W., White Bluffs, Wash.

The disease is possibly an infectious keratitis. Would advise separating the diseased from the well sheep and placing the diseased sheep in darkened quarters. Drop into the eyes morning and evening a few drops of a two per cent solution of Argyrol.

**Potatoes for Dairy Cows.**—What feeding value is there is cooked potatoes for dairy cows? I have been feeding my two cows a few each day and they have increased in their milk. If I stop for a day or two the cows will decrease. P. K., Mabton, Wash.

Potatoes furnish carbohydrate, one of the three important food subdivisions. Carbohydrates are composed of either starch or sugar and in the case of potatoes, of starch. This starch is converted into some form of sugar and furnishes to the cow an important energy producer. Part of the sugar is also converted into fat, so by feeding potatoes you are balancing up the nitrogenous ration that you may be feeding.

**Lamb Loses Control of Legs**—I have a lamb that started to lose control of its legs a few days ago. Will you kindly let me know what to do for a case of this kind? It eats plenty and seems to be O. K. in every other way. —L. K., Walla Walla, Wash.

Without knowing what is the cause of the loss of control of the lamb's legs, it is difficult to give a remedy. There are a number of things which might cause this, either injury to the nervous system or possibly digestive trouble, and for that reason I can not give you specific advice on the care of the lamb. I am going to suggest to you, however, that you add to its milk once daily a teaspoonful of castor oil. Warm oil a little and shake it up with the milk so that the lamb will drink it.

**Horse Jerks His Head.**—I have a horse that has occasional spells of jerking his head in short, backward jerks, and he also rubs his nose. These spells come after drinking and while working. He seems to be in good health otherwise and eats well. Can you give me any information as to treatment? R. A. B., Spokane, Wash.

From the very limited description that you give it is most difficult to make a diagnosis. I am hardly able to determine whether this might be due to a nervous trouble or to an indigestion or to the fact that she might be infested with parasites. You really need the services of a veterinarian to make a personal examination and to give you advice. I regret I can not be of service to you through the paper.

**Help Fight the War in the Cornfield**

**Save 100 Per Cent of the Corn Crop**

You can do it with a concrete silo, and keep green fields on tap through the winter.

A concrete silo prevents the 40 per cent waste of the corn crop that happens when corn is harvested in the old way.

You should have a ***concrete silo*** because it is rotproof, ratproof, windproof, fireproof, permanent.

## Earthworms Put "Pep" Into Chicks

By J. L. Ashlock.

If one has a small flock of young chicks in a coop in the backyard and finds that they are getting droopy and lack the "pep" which it takes to make a broiler in eight weeks, he can spade out a few earthworms every morning, feed them to the chicks and enjoy the sprints, tugs of war and tandem sprints, four chicks to the worm, that follow. Right away his chicks will begin to take an interest in life and grow.

If the hens are falling off in egg production, and losing their appetite on beef scrap and so on, let the city-lot poultryman spade up a 10 or 20 foot square of rich earth, doing a little of it each night or morning, with his hens at his feet. About the third night after he does this the egg production will go up anywhere from 25 to 50 per cent.

The cry of nations for more food and the resulting activity on the part of many patriotic citizens who the last spring and summer have been busy in the backyard and adjacent town lots with spade and hoe, has brought to the acquaintanceship of humans in greater number than ever before the lowly earthworm.

It is the notion of the average city farmer—and many other farmers as well—that the earthworm is not good for very much. Indeed, the earthworm is often suspected of eating garden produce and of being of no particular use. Some think that it is rained out of the sky. All three suppositions are wrong. The earthworm does not eat garden produce, it is never rained from the sky in a thunder storm, and it is of so much importance in the soil that it is one of the great facts of biological creation.

The man who spades earthworms as large around as his little finger and six inches long from the rich soil of his backyard garden should let a few hens follow his spade. A hen will devour an earthworm in preference to almost any other food. There are few foods that accelerate egg production more than earthworms. If you watch the hen that races excitedly about your feet while you dig and see how many big, fat earthworms she takes in, you will presently notice that before her crop sticks out hard as a baseball and she wanders away at peace with the world she will have engulfed from two to three yards of earthworms laid end to end. With this length of nutritious worm-cable coiled up in her capacious maw she is ready for egg production, and by her song will tell you so as she ambles nestward.

Professor A. L. Melander, zoologist at the state college, discusses the earthworm in cold blood. He says there is no "biological" reason why we human beings should not eat earthworms. It is largely a matter of habit what we eat. Not long ago we were in the habit of eating oysters fattened in beds at the mouths of sewers; and even when we found that such oysters started epidemics of typhoid we persisted in consuming sewer-fattened oysters until by stringent laws in almost every state we were prohibited from doing so.

We relish clams and the shellfish tribe generally, including lobsters, crabs, and shrimps—scavengers all! Vastly less cleanly are they in habits and dietary preferences than are the earthworm which we spurn underfoot. In the western part of the state there are tons of shelless snails—slugs, they are called—as long as lead pencils and of fat proportions. They eat nothing but weeds and leaves. Most cleanly and fastidious creatures they are, even though looks are against them! Of course we back up at the thought of them as food; though in France they have become sufficiently modern to consider one variety of the slug as quite a delicacy.

In this respect we are much less modern than the Piute Indians of California and Nevada, who relish a stew of caterpillars. Blackened, dried and stewed, these worms resemble nothing so much as stewed prunes. They possess toughness, insipidity in the absence of salt—and the Piutes eat them unsalted—and over the worm stew floats a yellowish grease which possesses the tang of linseed oil. The Indians smudge these worms in great quantities from the pine trees, kill them, dry them, and call such food "papaia."

(Continued on page thirty-one.)

## General Purpose Types

To the Editor: Could you please tell me what kind of chicken is best for all-round farm use? For setting, marketing and laying, is a mixed bunch best, or one certain breed?—E. J. J.

Monse, Wash.

The best all around farm fowl should be found among the following breeds: Plymouth Rocks, Rhode Island Reds, Wyandottes. These are American breeds and are more nearly of general purpose type than other breeds. They are of fair size, good setters, and fair layers. Some others might be classed as general purpose breeds, such as the Orpingtons. The Orpingtons, however, are larger and are more of a meat type. They have white skin and legs, while the American demand is for yellow color of legs and skin. The black Orpingtons have dark legs and that is more objectionable.

Which of the above is selected is not very material. It is more important to select a strain that have good laying qualities as well as good meat qualities. While heavy egg laying is not characteristic of fowls of fine meat qualities, yet they may be fair layers, and should be fair layers to make a good general purpose fowl. There are good and poor layers in every breed, and one should be very careful of the strain he buys, more so than of the breed. Strain of breeding counts for more than breed. That is the foundation rock on which to build a profitable flock. The way to select them is not from their looks as from their egg records. If you know some one who keeps egg records and who has been breeding up his flock each year by selecting the best layers, you should go to him for stock.

It is better to keep one distinct breed than two breeds or a mixed flock.

J. D.

**Palm Sugar.**

Sugar is extracted from 16 varieties of palms that grow in Ceylon.

## BRIGHTER OUTLOOK.

### With Oats and Corn Prices Down.

During the last few weeks the prices of oats and corn have shown a little patriotism and come down to near the level of wheat. Every little helps, and the poultryman would be glad to see the prices recede some more. With prospects of a fair crop the prospects are that prices will in the fall be lower than last year by natural causes, or failing that, by legislation along the lines of the McNary bill.

Then with higher prices of eggs also in prospect, there should be better times ahead for the poultry-keeper. Egg prices are higher now by some 7 cents a dozen than a year ago at this season. The present prices are probably higher than they have ever been at this season of the year. At the same time there is no profiteering in egg production nor is there likely to be till after the war is over. The chances are the profits will be satisfactory then.

Meantime there should be no complaint from consumers as to prices. The actual facts are that the eggs are being sold below the cost of production, taking the total production of the United States. The average hen of the United States is not paying for her feed if the feed were all paid for at market prices, the average hen laying less than 100 eggs a year. Only the heavy laying flocks are able to show a profit for the owners. Were all the average and poor layers killed off there would be an egg famine, and anything that will precipitate an egg famine is pro-German, because with a reduction in the egg output there will be more meat eaten in this country and less to send to the soldiers.

Rather than complain at the prices, let us eat more eggs at home and send more meat to the allies, and by eating more eggs we help the poultry-keeper to continue in the business. Happily there is no indication of any egg boycott this year.

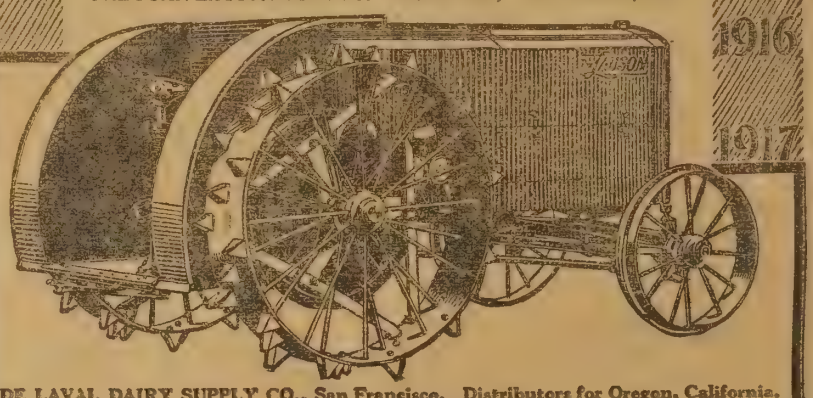
**Backed By Twenty Years of Experience**

Every test made in the twenty years we have been building LAUSON farm engines helped to make the LAUSON Kerosene Tractor better. We looked to the future—five, ten years ahead, and worked slowly. The LAUSON reputation demanded a tractor of unquestioned reliability.



To those who know LAUSON engines, we say, "Here's a tractor that merits your confidence because it comes from the same plant as the engines you have found doubly serviceable." To others, we say, "Try it."

The LAUSON 15-25 FULL JEWEL TRACTOR

has a powerful *Heavy Duty Four-Cylinder Valve-in-Head Engine.* It is of medium weight, well distributed and built to meet the requirements of the average farm. Ample power for 3 to 4 plows, large ensilage cutter or 24 to 28-inch thresher. Burns kerosene, distillate or gasoline and operates economically. Note that all parts are enclosed from rain and dirt—a great advantage. It is a simple, thoroughly tested and practical machine for all farm tractor or belt work. Hyatt Roller Bearings throughout. Automatic type Steering Knuckles enables short turns and easy control. Driving gears enclosed, running in oil.

*Built up to a standard—not down to a price.*
*Write us or our distributor for name of Lauson dealer in your locality.* 51D

## Remove the Cause

### Health, Not Disease, Is Natural

By GRANVILLE LOWTHER.

It is easy to cure diseases anywhere in any form of life if we know the causes and can remove them. This grows out of the fact that the normal condition of life is health. This proposition needs no proof for it is common observation that the tendency of all forms of life is in the direction of repair and growth. For instance a crop of alfalfa has reached its normal stage of growth and is cut down. Immediately the process of repair begins and in the course of time a new crop almost as large as the other stands upon the same ground, grown by the same roots. If the bark of a tree is broken, new bark is formed to cover the wound, provided there is no obstruction to the healing process Cut your flesh and the wound will heal provided the obstructions to the healing process are removed. These illustrations may be multiplied indefinitely. Disease is abnormal and grows out of one of two general causes.

First: The conditions of the organism.

Second: The nature of the environment as related to the needs of the organism.

To illustrate the conditions in the organism we will refer to a fact with which most people are familiar, and that fact is that a flesh wound will heal much more readily if there are few poisonous toxins in the blood, such as alcohol, nicotine, uric acid, etc. So there may be enzymatic conditions in the sap of a tree that either tend to affect or hinder a return from normal conditions of health.

Conditions of environment may be illustrated by removing a plant having large porous leaves capable of evaporating a large amount of water and therefore adapted to a humid climate, into an arid region, or by transplanting a cactus or sagebrush into the muck and mire of the valleys where lilys and flags naturally grow. It would be folly to attempt to grow apples in the cranberry bogs or to grow cranberries under the conditions where apples are best grown. The trees would very soon show signs of disease and would soon die.

**Question of Causes.**

While it is easy to see that the general propositions already named are true, there are specific causes that are not easily determined and that often cause much controversy.

Perhaps no disease in the northwest has been a subject of more discussion than that among apple trees called apple rosette. It has been assigned to at least 20 different causes by many intelligent and observing persons. My belief is that all of these observations are right in part, and that the men who have claimed all these different causes for apple rosette are right in what they affirm, but when they deny what others with equal intelligence claim they are probably wrong. It is generally true that when two or more intelligent persons differ on a question about which they both claim to be familiar that there is a larger truth which includes them both, that it can not be said that both are wholly right or wholly wrong These men have formed opinions growing out of their observations and experience, and now the question is in apple rosette is there a larger cause which includes the causes these men have observed? One man found rosette where the trees had been damaged by gophers. He killed the gophers and the trees recovered. He concluded, therefore, that gophers are the cause of rosette. Another found rosette where there was lack of water. He put on more water and the trees recovered. He concludes that lack of water is the cause of rosette. Another found that his trees were rosetted where there was too much water. He put in drains that carried away the seepage and the trees recovered. Another found a few of his trees rosetting near an old hen house where there was an extra supply of hen manure. He removed it, scattered it over other parts of the orchard, hauled in fresh dirt and the trees recovered. Rosette has been frequently observed where land is strong in alkali, and where the alkali could be removed, there was a tendency to recover although this seemed much more difficult than any other form. Another found that where there was woolly aphis on the roots, the trees were rosetted. He dug away the soil, applied a solution of black leaf tobacco in about the proportions of one to 800, and where he could reach the insects on the roots, claims that the trees recovered. Perhaps the most general cure is alfalfa. More orchards have been cured of rosette by the sowing of alfalfa among the trees than by any other or perhaps than all other methods combined. This doubtless grows out of the fact that in this northwest country the soil tends to puddle under the process of irrigation The roots of the alfalfa penetrate the puddled section, letting the water down to a greater depth than the roots of the trees had penetrated, thus areating the soil, giving it water to a greater depth, allowing the roots to open up a new stratum from which to extract food and at the same time furnishing nitrogen, a constituent which our volcanic ash soil in the arid regions very much needs.

**Primary and Contributory Causes.**

All of the causes named are contributory, while back of them all is a primary cause, to which the others point. A primary cause is one which includes all the others. I think I am right. therefore, when I say that there is a larger cause which includes all the others, and I think so for the reason that I have examined more than 600 trees, the roots of which were all diseased or injured, and the tops of which were rosetted. I think so furthermore, because of the nature of the organism. The nature of the tree is such that the root system has millions of little stomata too small to be seen with the naked eye, and that suck the food from the soil, and supply the top system. They are similar to the stomata of the human stomach that suck the chemical substances from the food we eat, and enable the organism to appropriate it in building a body, repairing waste, and manufacturing energy. Now suppose something destroys these organs, what is the result? The result must be lack of food; that means lack of growth and energy, that is just what has occurred in case of a tree that has apple rosette. The tree is starving because its organs for extracting food from the soil are injured or destroyed. This may happen from any one of a number of causes, from lack of water, from too much water, from any other injury to the root system. Now the only reason that I have written at length on this subject is that a great many people are still inquiring what to do to cure their orchards of apple rosette. My answer is that the best general cure is alfalfa, but there are causes that alfalfa will not reach, and we have to study local conditions, contributory causes, and remove them if we can.

## Which?

### Orcharding or Wheat Growing?

By Granville Lowther.

I was subjected to a little friendly criticism recently because of an article I had written entitled "Stay With the Apple Business." My critic said, "Do you not know that wheat growing pays better profits than apple growing?" My answer is "Yes, I know it." But I would ask my critic further: "Do you not know that on account of the war, which we hope will not last long, the wheat business is overstimulated?" Before the war wheat sold for less than half the present price fixed by the government. When the war is ended there will be a reaction from the overstimulation, and some persons will be hurt as a result.

Furthermore, the critic in question has an orchard, paid for, with machinery adapted to the orchard business, packing house and everything necessary for a successful care of the crop. If he should go into the wheat business his spraying outfit, his fruit grading machine and a few other things would be of no value as aids to wheat production. His packing house might be of value, but its greatest value is in being used for the purposes to which it was first adapted.

Another consideration is that it takes time to make a change from a business already learned to one with which we are not so familiar. Whoever makes this change from fruit to wheat during the war will probably buy all his new machinery at very high prices, and by the time he becomes familiar with the work the war will be over and prices will have changed.

However, I want every one to do what seems to him best, and it may be that his judgment will prove to be better than mine.

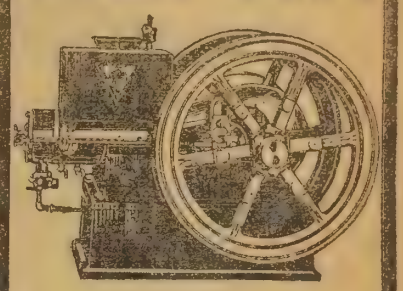
## The Spray Gun

The spray gun is not a German machine for projecting poisonous gases or liquid fire, but a simple device for use in spraying the orchards.

We bought one recently, and it saves one man in the spraying process. Whereas, we used two men formerly, one man with the gun will do the same work with the same effort that required two by the old process. There are several types of manufacture, so I am told, all with the same essential parts and qualities.

There is another feature that commends it, and that is that it is not expensive.

It is never safe to judge the value of a machine nor of a man's work by the number of trees he can spray in a given time, but I timed our man in spraying 23 year-old apple trees, and he sprayed 10 trees in 15 minutes. I think he would average in a day one tree for every two minutes, not counting the time it would take to fill the tank. It took him 40 minutes to empty a 200-gallon tank, and he did his work well. This is one of the cheap, simple, efficient labor-saving devices that releases man power for other work, and makes the expense of production less than it would otherwise be.



As there are several types gotten out by different companies this is not an advertisement for any particular firm, but for something to save labor.

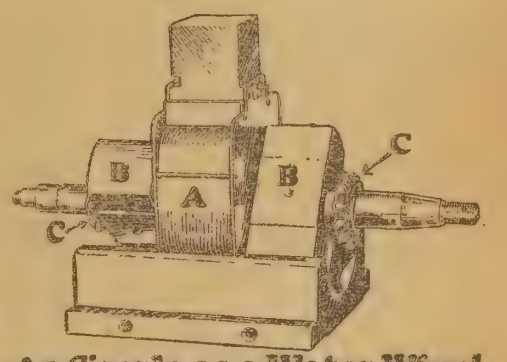
G. L.

**Taken by Enemy.**

Five Y. M. C. A. foyer du soldat buildings recently turned over to the British Y. M. C. A. are now in the hands of the Germans.

ALPHA

Gasoline Engines



1½ to 28 H. P.

For operating grain elevators, cutting feed, filling the silo, pumping water, sawing wood, or wherever DEPENDABLE power is wanted. Put a reliable, smooth-runing ALPHA at work for you. It will run right along day after day and not get out of order. It's an engine you never have to "fuss" with. It's always ready. Operates economically on gasoline or distillate. Full details on request.

De Laval Dairy Supply Co.

61 Bebie St., San Francisco. Warehouse Stocks Seattle and Portland.

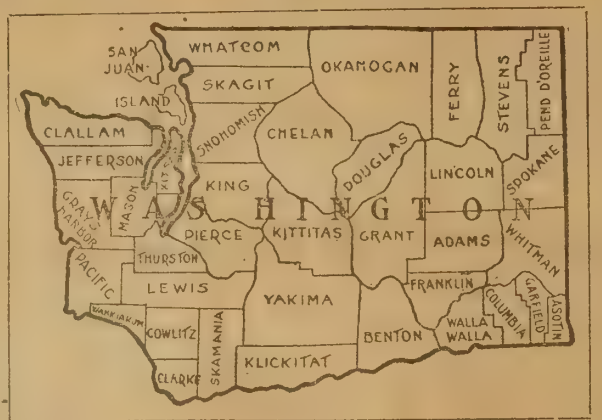
As Simple as a Water Wheel

The simplest form of power generation is the water wheel which consists of a series of paddles mounted on a shaft, running in simple bearings and requiring only an occasional oiling.

Like the water wheel, the K-W Magneto owes its reliability to this same, simple construction. The windings (A) are stationary, while the paddle-like rotor (BB) revolves in ball bearings (CC) and generates the current. Like the water wheel the internal parts of K-W Magnetos need absolutely no attention except for an occasional oiling.

There are *no* moving wires, revolving windings, troublesome commutators and brushes, current collector rings, etc., in this patented K-W construction. We thereby eliminate all internal sparking and trouble due to sliding contacts and poor connections. In K-W construction all internal connections are *permanent*.

Don't put up with inefficient, troublesome ignition. Insist upon a



K-W High Tension MAGNETO

which requires no more attention than a water wheel—a magneto that is as efficient as it is reliable. There is a type for *your* tractor. Tell us the make of your tractor and we can show you how a K-W will allow you to get full power out of the cheaper grades of fuel. Write for a list of K-W equipped tractors—there are 83 models made by 40 manufacturers.

THE K-W IGNITION Co.
2491 CHESTER AVE. CLEVELAND, OHIO. U.S.A.

# Yakima Hay Crop Light

## Small Grains Look Well—Acreage Is Largest in History of Valley. Peach Crop Light. Apples Are Better than Usual.

TOPPENISH, Yakima County, Wash., June 15.—The hay crop of the Yakima valley is but little over half the usual tonnage, owing to a light crop and a large acreage being plowed up for other crops. The beet crop is not up to the usual standard owing to poor stands caused by the unusual dry windy weather. Corn is a much better stand than usual and is looking very well. Small grain is looking extremely well, and the acreage is the largest in the history of the valley. Melons are not looking well owing to the extremely cool spring. Onions are exceptionally good, but the acreage is small. Potatoes have not the usual acreage, and the early planted potatoes are not looking well while the later planting is doing fine. The peach crop is very light and has not done well owing to aphis. Sweet cherries are a pretty good crop and of fine quality. Apricots very light; pears up to the usual, both in quantity and quality, while apples are rather above the usual in yield, and are at the beginning of the thinning season looking well. The strawberry and other berry crops are looking better than usual, but the acreage is very light. It has been the windiest spring for many years and extremely cold and frosty. The snow supply in the hills is the lightest for five years, but the reclamation service report all storage filled to capacity. The ditches and flumes were badly damaged by the floods of last winter, which caused a delay in the delivery of water this spring. Crops of all kinds have shown a great improvement since the warm weather began. The crops on land that grow sugar beets last year is producing as well as any other land except newly plowed alfalfa. The work on the sugar factory is well under way. The company expects to begin making sugar about September 20. Bees wintered well, and the honey producing plants are plentiful, but it is too early to predict as to the honey flow, as that is dependent on the moisture and warmth. Pastures are rather poorer than usual, and feed is scarce at the present time. The first cutting of alfalfa is in full swing. Labor is a little scarce, but not serious as the harvest will be shorter than usual.

C. A. WYCKOFF.

### Getting Ready for Harvest.

COLFAX, Whitman County, Wash., June 15.—Wheat is the principal crop in this county. Winter wheat generally does not look very good. I should say about 60 per cent of normal. Spring wheat seeded in season is very good; late seeded is spotted. Farmers in general are preparing now for harvest. They do not anticipate any great labor shortage. F. L. KENNARD.

### Potatoes Look Good.

DARRINGTON, Snohomish County, Wash., June 14.—Crop and weather conditions have been favorable all this month, still crops are not as far advanced as they should be owing to the cold and wet during May. Potatoes are looking well, but timothy and clover don't seem to do as well as they should. Oats is looking fairly good in most places. Every farmer in this section is certainly doing his bit. They are in the harness from sunup till sundown and helping the Red Cross and everything else that comes up pertaining to the winning of the war to the very best of their ability and means. By all appearances the hay crop will be about normal on most places in this section. The war has promoted the community spirit to a great extent, and at frequent meetings held people will talk over their obligations, and feeling that everybody has a part in the winning of the task set before us. Cows are doing quite well, pasture is good, considering. Cream is shipped from this section, most of it going to our cooperative creamery at Arlington. At present we receive 47 cents per pound for butter fat. A couple of our biggest dairy farms sell their milk to the logging camps—say they are doing better than shipping the cream.

C. D. NEDIERPRUM.

## Team Work Needed

To the Editor: Please talk for an honest price on potatoes this fall. Many farmers paid $100 a ton for seed potatoes last year and planted heavy. West of the Cascades potatoes have sold at less than they were worth to feed to hogs. Try to get people to consume more. Thousands of acres of ground are idle here on the harbor, and that is the finest potato and vegetable ground in the country, while it is in too small tracts to be suitable for grain ranches. So you see potatoes have been cheap and farmers are working out at days' wages. If there was a little team work the man with a good grain ranch could raise grain and not potatoes, and the man with a vegetable ranch could raise vegetables, and in that way there wouldn't be millions of bushels of surplus potatoes and the grain rancher could get a good, reasonable price for his grain, and the potato rancher could get a reasonable price for his stuff, and all the tillable ground in the country would be tilled. That would mean a great deal at this critical time. I would like to see every square 20x20 of ground in the United States in some good, useful crop, and I believe if the man with a big grain ranch would not plant heavy to vegetables—just plant what he needs, say for his own use, and let the man with a small ranch raise vegetables for the market, all the ground in the country could be tilled at a living profit and the farmer here west of the Cascades wouldn't be working out and his farm growing in a forest of weeds.

If the ground west of the Cascades lies idle a while it has to be almost cleared again, and this is lost energy. Let us see the whole of America a producer till the war is over at least, and all hungry stomachs filled in the civilized world. O. R. MARRS.

Cosmopolis, Wash.

### Spring Has Been Backward.

H. Vosberg of Newport, Washington, reports a cold, slow spring in his part of the state.

"There are some things we don't attempt to raise even the best of years," he adds. "Corn and alfalfa need more warm weather than we can give them, so that our dairymen and stockmen, of whom there are a few, must depend upon clover, oats, timothy, etc. Lately some of these live stock farmers have been building silos, and that makes it possible for them to get by where otherwise they must go under.

"I don't think there are any tractors used for agricultural purposes near us, but they are used very successfully in getting out logs. Lumbering is one of the big industries just at present."

### Klickitat Wheat Good.

A. J. Dingmon, of Goldendale, who attended the state grange meeting at Walla Walla, reports a large acreage of wheat sown in his part of Klickitat county. Contrary to conditions in some other sections, where spring sown grain has been held back by unseasonably cold weather, spring wheat in Mr. Dingmon's neighborhood is looking better than that sown last fall.

### Dry-Land Apple Superior?

G. A. Freeman of Lyle, Washington, is convinced that dry land apples can not be beaten for quality by those raised under any other type of orchard culture. Lyle is the dividing point, approximately, between the part of Klickitat county which raises fruit and that which raises wheat. In the fruit districts, the Spitzenburg and the Newtown Pippin are the favorite commercial varieties, although in some of the older orchards more of a mixture is found. Mr. Freeman's 25-acre farm contains some of this old orchard land, set to several varieties, but he explains that successful marketing depends upon having enough of one or two varieties to handle to advantage.

# Special Patriotic Number of Twice-a-Week Spokesman-Review

**$1 Buys a 3-Year Subscription to TheWashingtonFarmer and a One-Year Subscription to The Twice-a-Week Spokesman-Review.**

THE JULY 2d ISSUE of The Twice-a-Week Spokesman-Review will be of special interest to every patriotic family in the Pacific Northwest.

A special spread of two pages will be devoted to pictures of the young men of this section who are now in their country's war service, at home or abroad, together with letters from camp and trench, giving intimate sidelights on the war's events.

This same issue will contain The Twice-a-Week's regular Red Cross department, filled with interesting news of Red Cross activities.

In addition to these special patriotic features, this number of The Twice-a-Week Spokesman-Review will contain the class of matter which has won its deserved popularity in all parts of the Pacific Northwest.

Its reports of the war and other current events are always complete, accurate and up to date; its home news from all parts of Washington, Idaho, Oregon and Montana brings you the information you want about folks you know; while its magazine and household pages are brimful of helpful and entertaining articles.

Why not accept our special clubbing offer today and have your subscription to The Twice-a-Week Spokesman-Review start with the special patriotic number of July 2nd?

**ORDER BLANK** June 27

**THE WASHINGTON FARMER, Spokane, Washington.**

Gentlemen:

I desire to take advantage of your special clubbing offer. Enclosed is $1 in full payment for one year's subscription to The Twice-a-Week Spokesman-Review and three years' subscription to THE WASHINGTON FARMER.

**In Canada add 1 cent per copy for extra postage.**

# You Can Live Without Wheat

You can live without wheat, according to the judgment of 10 noted scientists who have rendered the following opinion for the United States food administration:

"It is the scientific opinion of the committee that in a mixed diet wheat may be entirely replaced, without harm, by other available cereals, namely, rice, barley, oats, and corn. However, we should not recommend this except as an emergency measure."

The 10 scientists were:

Dr. R. H. Chittendon, professor of physiological chemistry and dean of Sheffield Scientific school, Yale.

Dr. Graham Lusk, professor of physiology, Cornell university.

Dr. E. V. McCollum, professor of biochemistry, Johns Hopkins university.

Dr. L. B. Mendel, professor of physiological chemistry, Yale university.

C. L. Alsberg, chief of the bureau of chemistry, United States department of agriculture.

Dr. F. C. Langworthy, chief home economics division, state extension service, United States department of agriculture.

Dr. Alonzo E. Taylor, professor of physiological chemistry, University of Pennsylvania.

Professor Vernon Kellogg, Stanford university.

Dr. Raymond Pearl, school of hygiene, Johns Hopkins university.

Dr. Ray Lyman Wilbur, formerly dean of the Stanford university medical school, now president of Stanford university.

"The emergency is here. If you can do without wheat, do it now for your country," says the federal food bureau.

The fact that Mr. Hoover has found it necessary to secure the foregoing statement indicates that the notion that wheat is an indispensable article of diet is widespread among the American people. In point of fact many of the most virile nations in world history have developed to a high degree of physical vigor without wheat.

An Englishman once tried to taunt a Scotchman with the fact that the Scotch had little or no wheat and subsisted largely on oats. "In my country," said the Englishman, "we feed oats to horses." "Aye," retorted the Scot, "but whaur will ye find finer horses than in England or finer men than in Scotland?"

Until comparatively recent times the races of northern Europe had no wheat and the greater part of the Japanese people are without it.

When Europeans discovered America they found the Indians along the Atlantic and gulf coasts subsisting largely upon maize, or Indian corn, and before the Indians were contaminated by contact with the vices of civilization they were splendid specimens physically.

The Ohio and Mississippi valleys, as well as a great part of the south, were settled by hardy pioneers who lived chiefly on corn bread or hominy.

Wheat is undoubtedly a superior cereal, and wheat bread more palatable than breads made from other grains, but the notion that it is essential to health and physical perfection is not borne out by present-day facts or recorded history.

## Until Next Harvest

The wheat situation is the most serious in the food supply of the world.

Our harvest was less than estimated.

Needs of the allies are greater than we calculated.

Losses by sea and battle have been heavier than were anticipated.

Tenser demands on shipping space restrict ships more than ever to the shortest haul and the tightest bulk.

We have fallen behind in our program. We have eaten further into our stock of wheat than we should.

There is no margin anywhere.

The allies' stocks of wheat are down to the danger point. We dare not stop the flow of wheat over seas. That would be greater disaster than the defeat of an army.

We must send wheat and more wheat. To redeem our obligations to those who fight for us, and whom we have sent, we must go on a wheatless basis.

Going without wheat is an inconvenience—nothing worse. It is no hardship, no danger.

Food will win the war! Food today means first of all wheat.

Perhaps this is the largest contribution we can make.

Against Germany's lust for domination, America's aim is healing, her ideal service.

Going without wheat adds directly to our forces in France.

Germany's war of starvation is a challenge most of all to America.

We can hope to contribute most to the common cause by supplying needed food.

Now is the hour of our testing. Wheat is the test.

Will you who "tarry by the stuff" do your best? Your all?

UNITED STATES FOOD ADMINISTRATION.

# Provide Farmers Short Time Credit

A subject of deep importance to the farmers of the United States is under consideration by Secretary McAdoo and David Lubin, delegate of the United States to the International Institute of Agriculture at Rome, Italy.

Mr. Lubin is urging the government to extend the federal farm loan system so as to provide farmers with short time credit at commercial banks. In a letter to the secretary of the treasury he outlined the proposed more of procedure as follows:

"The farmer, on obtaining from the federal land bank his 'certificate' entitling him to a fixed limit of credit, would deposit the same with a commercial bank willing to accept his account. He would then draw against the account by check and pay interest annually on the amounts drawn.

"This would be the transaction in its simplest form, but in course of time it could be amended so as to convert the static farmer's certificate into what may be designated as the 'check note' form. That is, checks for certain fixed denominations, drawn against the farmer's certificate, would become notes, and these 'check notes' would become a mobile, gilt-edged security, passing freely from hand to hand. This would secure to the farmer not only the credit facilities enjoyed by the merchant, but it would do more; it would open up to him the primary money market at its lowest ruling rates of interest."

Regarding the feasibility of Mr. Lubin's plan for farm credits on open accounts, it was shown that the federal land bank's guarantee would apply both to the validity of the "farmer's certificate" and to payment.

With relation to the "farmer's certificate" it was shown that the guarantee would be evidence that the certificate had been made out in accordance with fact and in duce process of law. Regarding payment, it was maintained by Mr. Lubin that the guarantee would be evidence of indorsement by the federal land bank guaranteeing payment.

In answer to Mr. McAdoo's assertion that this system would be likely to affect the credit standing to the federal land banks because "no corporation can incur contingent liabilities on any large scale without correspondingly affecting its credit," Mr. Lubin pointed out that the proposed system of farm credits on open account would afford an exception to the rule; the risk of guaranteeing payment could be safely assumed, for the character of the security would render any contingent liability so remote as to make the risk a negligible quantity.

In the event that this proposed government contingency fund is objected to, Mr. Lubin suggested that the "farmers' certificates" with the guarantee of validity from the federal land banks be indorsed by certain responsible trust companies insuring payment. This indorsement, in view of the remoteness of the risk, could no doubt be had for reasonable fees.

In answer to the question as to whether the loan should be limited in all cases to approximately one-seventh of the value of the security, Mr. Lubin stated that in his opinion it should "at least until the proposal has been well tried out, and until experience has demonstrated that the amount of the loans could be increased without detracting from the gilt-edged character of the security. The best means toward the desired end is gilt-edged security. Such security in the financial world finds its way to gilt-edged quarters and on gilt-edged terms and conditions. Any deflection must throw such security out of the gilt-edged market."

"We see," said Mr. Lubin, "that but one-third of the farms are mortgaged, so there are 2,538,596 farms out of 3,948,722 to which the proposed system could be applied. Long-time mortgage loans are made either for enlarging the farm or for making farm improvements, or for paying off old debts; whereas the proposed system of farm credits on open account would be for the purpose of placing the farmer on a cash paying basis. The first places the farmer on a credit basis; the second places him on a cash basis."

Mr. Lubin says in the matter of credit and payment of high interest charges the American farmer stands today where the American merchant stood 40 years ago. Under old-time conditions the retailer had to go to the jobber who had access to the bank. It thus came to pass that the jobber was the toll gatherer, gathering toll from the manufacturer on the one hand and from the retailer on the other, and to the limit of 'all that the traffic could bear.' As a result, our goods were then the poorest and, at the same time, the highest priced in all the world.

This has since been done away with. The jobber is now practically out of business. Improved methods of reporting on the merchant's standing by the mercantile agencies have done much to enable the retailer to obtain banking facilities, and he now buys direct of the manufacturer. As a result, our goods now hold their own for quality and price on the markets of the world.

All this was not accomplished without a struggle, but the victory was worth the struggle, for this change from a credit to a cash basis has effected beneficial economic changes in every direction, increasing profits on the one hand, and reducing prices to the consumer on the other. This is what has been accomplished in the field of commerce; but the farmer is still living under the stupid and costly policy of the merchant of 40 years ago.

## Sidelights

**Women's Rights.**

The suffragettes of the barnyard held a great meeting. Mme. White Wyandotte presided, and there was great expectation when she rose to make her speech.

"The purpose of this meeting," cackled Mme. W. W., "is to protest against the practice of roosters who crow every time we lay an egg!"

Whereupon the discussion became general.—Exchange.

**Considerate Treatment.**

"Bobby, if you don't quit making so much noise I shall have to deal severely with you."

"What'll you do, ma?" asked the youngster, who had been reading newspapers.

"Why—er—I'll intern you."

"All right, ma. Let's play I'm a German spy and you feed me on cake and jam."—Birmingham Age-Herald.

**The Office Boy's Query.**

The office boy watched with keen interest the proprietor, who was hastily buttoning up his coat one afternoon a while ago.

"If any one asks for me I shall be back in one hour," the great man said, as he was leaving the office.

"Yes, sir; and how long will you be gone if no one asks for you?" rejoined the boy, quickly.—Exchange.

**Got a Line on Them.**

Two English laborers who were on the road to Birmingham to get work happened to meet an old Irishman breaking stones on the roadside. They inquired of Pat how long it would take to get there. Pat simply looked at them and made no reply. Thinking he was deaf they walked on. When they had gone about 300 yards he called after them, so they came back.

"Ye asked me how long it would take to go to Birmingham?"

"Yes," they said.

"Well," said Pat, "it will take ye four hours."

"Why didn't you tell us that before?" they asked.

"Well, now," said Pat; "how could I tell ye until I saw how fast ye could walk first?"—Pittsburg Chronicle-Telegraph.

## SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

## Calm Forethought the Key to a "Good Night's Sleep"

IF you ever stop to define sleep theoretically you would probably stumble. There have been many definitions of sleep in years gone by, all the way from suspended consciousness to another kind of living. Whatever sleep is, however, does not concern you aside from the fact that it is a blessing.

It is not what goes on in the remote parts of the universe that tests the soundness of the individual's sleep, but the little noises of creaky floors, squeaky doors, rattling windows, whistling winds and roaring thunders. If, in the morning, you can say you heard nothing at all last night, and are surprised to hear the tales told you, you can be sure you slept soundly. The sound sleep is the real sleep and only that can marvelously change you from a hard-worked, worn-out human being to a transformed, vigorous, hearty, jolly fellow. Sleep, however, is not always genuine. It happens at times that you actually experience a strong muscle tension in your dreams. Sometimes you feel as though you were in a fight, and the muscles of your arms and legs are just as strongly at work as if you were engaged in some very hard manual labor. When in this state, you are not asleep, nor are you awake. You are thus in a queer state of "in between."

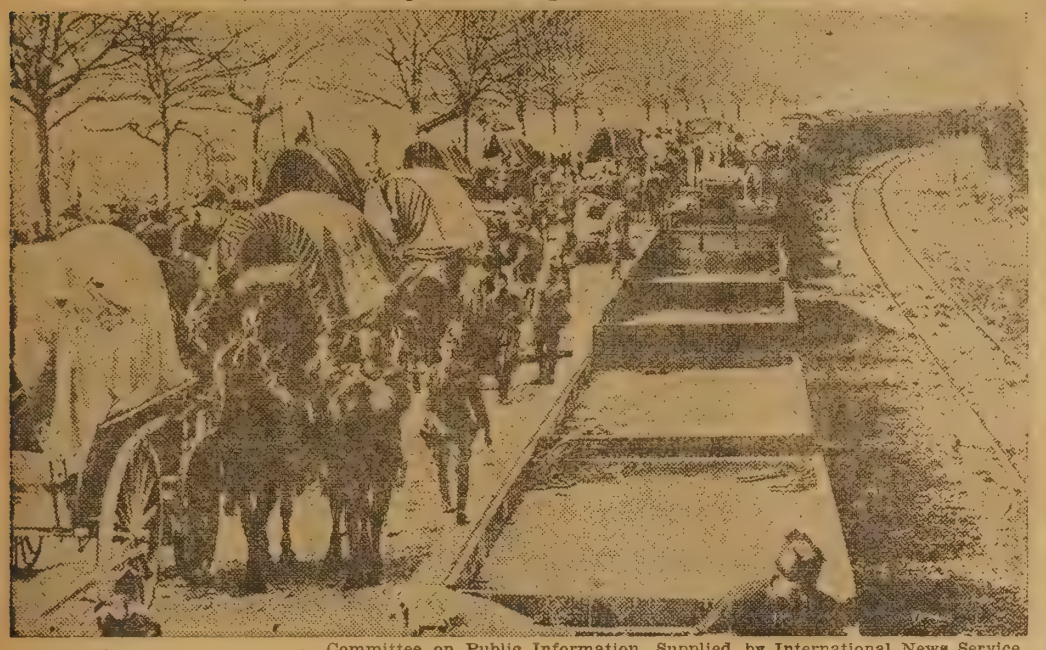
Dr. Hirshberg.

One reason for your disturbed rest is probably due to your uncomfortable bed. Your mattress or pillows may be too hard, and maybe your covers are too heavy and rest pressingly upon you so as to interfere with your respiratory apparatus. A light and downy comfort is much better than a heavy one, because it keeps the warmth under cover more effectively and does not hamper the work of your respiratory machine.

**Getting Fresh Air.**

Another reason for a disturbed sleep may be due to poor ventilation. Always have your windows open and see that the transom also is open so as to allow the air to move quickly and freely across the room. Try to see to it, furthermore, that your sleeping room is in an upper story of the house, for the air near the ground is, as a rule, filled with poisonous gases and soot which are too heavy to rise and so hover just above the ground. The air above, on the contrary, is rarer and clearer, and hence purer and more fit to take into your vitals.

A badly made bed and poor air have indeed an infinite amount of danger for the maintenance of a calm, quiet night's rest. It may be also that the reason you do not get your proper rest lies within your own bodily mechanism. Perhaps you have been worried all day about some vital question or your nerve fibers have been poisoned by errors in your diet. When you are at fault in this way you need not even hope for rest at night, for your nerve fibers are sufficiently fortified against the sleep which you intend to impose upon them.



**Preparing for Sleep.**

You should indulge in a light diet before bedtime, such as cereals. Never use meat, bread or hard-boiled eggs at night, for these contain excessive protein and tend to produce poison in the mechanism and disturb your rest. Just before you retire drink a cup of hot milk, if you fear you won't be able to sleep through the night. This helps to draw the blood from the brain to the stomach and so helps bring mental rest.

Just as important as is the regulation of your diet for securing sound sleep is the acquiring of good mental habits. Never read exciting stories just before bedtime. These leave the nerves tense and makes it hard for them as well as for the muscles to relax. Read poetry or prose of the reflective kind, the kind that will make you reflect upon the mystery, beauty and wonder of life. These, in addition to some regular evening exercise, will help put you in a reflective state of mind, and it will not be long before you will have happy thoughts to blend with the mystic silence of the night and you are soon off to the realm of sleep to gain renewed strength with which to cope with the perplexities of the morrow.

## Infantry Aided by Dismounted Cavalry

Copyright International News Service.

A remarkable action photograph, showing a party of British cavalrymen dismounting and rushing to the aid of a hard-pressed infantry regiment. The German offensive in Picardy afforded the first real opportunity the British cavalry had of getting into action in force.

## Red Cross Shoes for Italian Feet

One of the first things the American Red Cross workers did in Italy was to establish a shoe factory. It was the most pressing need of the vast refugee population. A call was issued among the homeless ones for cobblers and shoemakers and there was a quick responses. All kinds of footwear are being made—the low shoes and slippers with wooden soles and heels and a boot originally intended for mountain wear that has a sole of coiled rope to afford a sure foothold on rocky mountain paths. All these are manufactured from the leather, cloth and ropes supplied by the American Red Cross. The picture shows a distribution of shoes among Venetian refugees at Rimini. The women with their black shawls, which show them to be women of Venice, are keenly enjoying the new fashions in footwear. No shopper on Fifth avenue could show a more fastidious and yet appreciative attitude on questions of fit and style than these wanderers who have been swept out of their homes by war. The American Red Cross has done its share in restoring a normal living condition among them as far as possible.

Indiana Times.

## Farmerettes Answer Call of Uncle Sam

In the opinion of Uncle Sam the raising of pigs is an important war task, so important in fact that he has called upon 200,000 girls and boys to raise porkers for the market. The appeal has been heeded by the farmerettes, who are joyfully tackling the job of providing more than their share of the pork products, that we must ship to our fighters and the allies in Europe.

This farmerette is having a jolly good time taking care of this litter of eight cute little black pigs. Caring for the pigs is but one part of the work these girls do down at their Huntington, Long Island, farm. They are showing that girls can be capable farm hands at all sorts of chores. Besides raising pigs they care for the cattle and till the farm better than many men.

Copyright Underwood & Underwood.

# Large Profits

## Milling the Flour at 25 Cents

When the food administration allowed the mills of this country a profit of 25 cents per barrel, it seemed a moderate allowance, and for small mills was moderate, but, as the recent report of the federal trade commission showed, 25 cents a barrel meant very large profits for the big milling concerns.

The Canadian government has the same problem and has been looking into flour milling profiteering. Mrs. George Hambleton, till recently chief of staff to the Canadian cost of living commissioner, has filed an interesting and revealing report. It has a direct bearing on the milling question in the United States, because the profit allowance is the same in both countries—25 cents a barrel.

Increased profits, the report indicates, are due to increased production and increase in turn-over, which, in 1917, was two or three times that of the pre-war year, although in most cases there was some increase in the profit per barrel of flour.

"The increased profits," the report continues, "have been disposed in various ways. In come cases, as with the Maple Leaf Milling company, dividends have been paid on common stock for the first time. In other cases already substantial dividends have been increased, as in the case of the Ogilvie Flour Mills company. The regular dividends on common stock of this company up to 1916 were 8 per cent. In 1916 they were increased to 12 per cent and in 1917 to 25 per cent.

"The surplus profits account has been greatly increased. In 1913 the surplus profits account of the Maple Leaf Milling company was about $250,000. In 1917 it was over $1,760,000. The surplus profits account of the Western Canada Flour Mills company was approximately $445,000 in 1913. In 1917 it was $845,000. The latter is in addition to a sinking fund."

The surplus profits account of the St. Lawrence Flour Mills company, the report proceeds, increased from a debit of $62,000 in 1913 to a credit of $138,000 in 1917, in addition to a sinking fund. The surplus profits account of the Robin Hood Mills in 1913 was $257,000. In 1917 it was $317,000, in addition to an accumulated reserve for war tax of $163,000, and very substantial dividends during the period.

The surplus profits account of the Ogilvie Flour Mills company in 1913 was approximately $473,000, in 1917 it had increased to $2,690,000, in addition to the immense reserves of $280,000 for war in 1916 and of $750,000 for war tax in 1917.

The surplus profits account of the Lake of the Woods Milling company in 1913 was $853,000, in 1917 it was $831,000 plus $392,000 at the credit of the surplus profits account of the Keewatin Flour Mills company, which the Lake of the Woods entirely owns. This is in addition to the redemption of Keewatin bonds to the extent of $350,000 in 1916 and the redemption of bonds of the Lake of the Woods company to the extent of $200,000 in 1917, and redemption of good will account, $250,000. Eight per cent dividends on common stock were paid throughout, as well as the regular 7 per cent on preferred shares.

"It is clear," the report concludes, "that the only way to reach the profits of the milling companies is to increase the tax on the net profits on total investment for the year."

FARM SERVICE
WAR FLAG

A Flag for Every Farm Home in the Northwest

An Extra Small Star for Each Farm Worker

# Big Changes Wrought

To the Editor: One of the greatest benefits that the present war has brought to the American farmer and his family is the conservation and utilization of their resources. We are now beginning to realize, as never before, that we have been a wasteful people; that what we have been considering as feed, fit only for live stock, is in reality even more wholesome and nutritious than was the exceedingly white "high patent" flour from which we made practically all our bread.

Before the present war, carload after carload of kiln-dried corn meal, put up in nine-pound bags, was shipped here from Nebraska and Iowa, which retailed at from five to six cents per pound when we were raising excellent milling corn which we were selling for hog feed at from one to two cents per pound.

It is very difficult to get the millmen to grind our home-grown corn into meal. They said, "We are not equipped for it"; "We would have to readjust our whole mill machinery," or "There isn't enough to bother with." Now one who travels over the country will frequently find on the farms, small hand-power corn grinders; grinders whose power is obtained from gasoline engines; and even the engines of automobiles are frequently utilized in converting corn into nutritious meal—a product that is far better than the kiln-dried stuff that is shipped from the Mississippi and Missouri river valleys.

In the Clearwater river valley and in the bench lands surrounding it there will be an increase of corn acreage of more than 100 per cent this season—and much of this will be converted into breadstuff.

Not only are more beans being grown in this country than ever before, but more beans are being consumed by the American people here and by our soldiers and allies abroad than ever before—and with much benefit, too. Now, when a football or baseball team is referred to as the "bean-eaters," their antagonists beware of them.

More eggs are being preserved by the water glass solution than ever before by farmers' wives. Thus eggs that are worth but 30 cents per dozen in the spring and early summer are kept till fresh eggs would cost 60 cents per dozen—thus making a saving of practically 100 per cent.

Many housewives are canning large quantities of rhubarb or pieplant by the cold water process without using sugar in putting it up.

Some years ago the writer read a story concerning an Englishman and Scotchman who were breakfasting together in a cafe. The Scot called for a bowl of rolled oats. The Englishman sneeringly remarked, "Hengland feeds hoats to 'er 'orses only, while Scotland feeds them to her men!" "Just so," replied the canny Scot, "and just see what horses you have and what men we have, will ye?"

Since the war we have learned to eat barley flour, rice flour, corn flour, and even potato flour.

We used to think that hog fat or lard was the only substance that could be used for shortening except butter. Now we find that cottolene, crisco, mazola and many other vegetable oils are found to be not only a splendid substitute, but in many instances decidedly preferable to hog lard.

Much land that was formerly unused is now being broken up and growing crops.

People who are not in position to raise poultry are now raising rabbits and feeding them horseradish leaves that were formerly thrown away.

Knitting had well-nigh become a lost art among our American women. Now not only nearly all the women and girls, but thousands of men and boys have learned this useful handiwork.

The conservation of our resources will become habits so fixed in the minds of our people that they will not go with the ending of the war, but will continue for years thereafter.

T. O. GREENE.

Juliaetta, Idaho.

### German Women Fight, Too.

Women war workers as substitutes for men in Berlin have given satisfaction in most lines of work, but have made an unsatisfactory showing as street car conductors, according to a Berlin judge who presided at the trial of a woman who had given a female conductor a box on the ear.

### To Remove Wagon Tar.

To the Editor: These are some of the things I have been learning about housekeeping:

Wagon tar may be removed from anything washable by rubbing the spots before drying with lard and rolling up for a short time, then washing between the hands in hot soap suds. This has made sightly many suits of little boys' clothes otherwise ruined.

To make hot water molasses cake with no eggs cream together one-half cup lard and one-half cup brown sugar. Add one cup molasses, two and one-half cups flour sifted with two scant teaspoonfuls of soda and one-fourth teaspoon salt, two teaspoons vanilla, one-half teaspoonful of each nutmeg, cinnamon, cloves and allspice, one pound of seeded raisins plumped in hot water and floured. Add last one cup of boiling water or strong coffee. For ginger cake two teaspoons of ginger may be used in stead of the other spices.

MRS. E. KNIFFEN.

Walla Walla, Wash.

### Four Principal Angels.

According to the Koran, the four principal angels are: Gabriel, the angel of revelation; Michael, the friend and protector of the Jews; Azrael, the angel of death; Israfel, whose office it will be to sound the trumpet on the last day.

# Trappers of the Ozarks

**The Adventures of Two Young Pioneers in the Wilds of Upper Louisiana. Now the State of Missouri.**

**By LOUIS B. MILLER**

Copyright, 1914, 1915, by Lewis B. Miller.

## CHAPTER XXII.

### Back on the Big Niangua.

The water was cold, but at the deepest place it came scarcely up to their knees. When they emerged from the cave into the starlight, they were under a high cliff. Their torches had been left inside. Still wading, they followed the shallow stream for about 50 yards, when they came to a small river.

From the melting of the snow the river was bankful. They could hear its dull roar even before they had got out of the cave.

Just where the little stream entered the river, the hunters had two canoes concealed under an overhanging bank. The canoes were brought to shallow water and tied, and the party put down their loads in them. Then they made two more wading trips into the cave for their other things. Most of the snow was now gone, but they took pains not to step out of the water, lest they should leave a visible foot-print somewhere.

When the last of their things had been deposited in the canoes, Jacks and the two young men stepped into one, and Wolf and Murphy into the other.

First they all dried their feet and put on their socks and boots. Then Jacks took up one paddle and Ben another, and together they urged the canoe out into the river. The other canoe followed.

Once out in mid-current, the canoes rushed along so fast and bobbed up and down so violently that Jodo thought they were rushing to destruction. But Jacks steered with skill, and the canoe rode safely on.

Seeing that they were not in danger, Jodo gazed around. Soon he tapped Ben on the shoulder and pointed to a bright place in the sky to the north. "I'm glad we're not in that," he said.

"So am I," Ben answered. "And I'm glad, too, that the Osages think we are. May they keep on thinking so!"

When the canoe had been running for a good while, Ben said to the hunter who was steering it:

"How did you happen to discover that underground way out of your house? Did you dig into it when you were digging your well?"

"No. We put our house thar just because the cave was thar. Our first house was built on the river-bank, a good many miles above here. After the Osages burn't that'n down, we intended to build close to the river down here. But while we's camped thar close to the mouth of the cave, the place whar we uns come out, I's out huntin' one day and found a hole in the ground. It wasn't much of a hole, but I could see water down thar. A piece of the cave's roof had drapped in. I guessed that the cave had its outlet close to our camp; and right away it popped into my noggin that if we had a house with a secret outlet, comin' to light a mile or two away, it would prove most almighty handy if we run up ag'in' more redskins than we could wrastle with. So, after we'd explored the cave, and found things just as I'd 'lowed they'd be, we built our house up thar in the woods, like you seed. Happened to be a little spring running' acrosst the cave under the hole, and that made the water question easy."

"Are you expecting to come back to this country?" questioned Jodo.

"That I don't know. It's mighty doubtful now. But if we do come, it's dollars to dimes that we'll build right on that same, identical spot. But we'll build a two-story house, with one story hangin' over t'other. Then if any redskin tries to fire it, we can shoot down on 'im, and pour water down on the fire."

Now Ben said: "If that cave outlet hadn't opened to us, we should have been finished by this time—shot to death or burnt to death. It was a lucky chance, or providence, that you built over that hole in the ground."

"Luckiest that ever was!" declared Jodo.

"Luckier than we guessed when we pegged down thar," admitted the shaggy man.

On the two canoes hurried, hour after hour, down the narrow river, swept along by the swift current and propelled by the paddles. At length Jacks spoke out, breaking a lengthy silence:

"Well, we've come a-kitin'. Didn't take us long to gallop them 20 miles or so. Now we'll purty soon be whar the river bends south. If you boys feel like travelin' on with us, we'll be the gladdest kind of your company. But if you're still bent on strikin' back to your trappin'-camp, right ahead yander will be the best place for you to take to dry land.

"We're many times obliged for the invitation, Mr. Jacks," Ben answered, "and also for all you've done to help us out of our troubles. But we still think we'd better travel north from here."

"So be it; so mought it be! You two are the jedges," answered the hunter, as he headed the canoe toward the north bank. The other canoe followed. Day was still not visible in the east.

Soon Ben and Jodo were standing on the bank with their rifles and packs, saying good-bye to the three hunters, thanking them again and again, and shaking hands with them.

"If any of you men ever get up the river as high as St. Louis, be sure to come about 15 miles west and see us," invited Ben.

Jacks answered: "We might git up thar some day—who knows? And if we do we'll come out and pull your latch-string. We shorely will!"

After a little more talk, the hunters paddled out into the river again. The two on shore watched till the canoes were lost to sight. The last seen of them, Jacks was waving his "coon-skin." Then they fastened on their packs, shouldered their rifles, and with their eyes on the north star set off at a brisk gait.

The snow was nearly all gone by this time, and the few inches left were still thawing. There was much mud in places, which interfered somewhat with their progress. But they tramped vigorously on.

Just before daylight they stopped, kindled a little fire and broiled some meat from their provision-bag and ate it. Before the smoke could be seen they threw water on the fire, then marched ahead. And they kept going, with only a noontime halt to rest, till night made it safe to kindle another fire. By that time they were tired enough to rest and sleep.

And so they pushed on, day after day. They kept a ceaseless watch for Indians and signs of Indians, but saw none. There was plenty of game, but they fired not a shot. They had all the meat they wanted, and it was wiser to save their small stock of ammunition for urgent needs.

After some days of traveling north, without finding any country that Ben could recognize, they shifted their course to northwest. At length, late one afternoon, they arrived at a good-sized river and camped for night on its bank.

"Do you think this is the Big Niangua, Ben?"

"I can't be sure of that. We'd better travel down it a day or so, and see if we come to any familiar ground. We may be farther east than we think, and this may turn out to be the upper Gasconade."

"If it's the Gasconade, we've got to cross it. But how?"

"Just what I've been wondering. Not easy to make a raft of any size without an ax. Of course we've got our lariat still. We could make a little raft that would carry our few things, and swim behind it. But that wafer is colder than is pleasant to swim in. And with a little raft I'm mortally afraid of getting our precious powder wet."

"That would certainly be a calamity for us. If the river were lower, we could pull off our clothes and wade it."

"Maybe we can think of some safe way. Of course if this proves to be the Niangua, we shall not have to cross."

Next morning they continued their journey, but followed down the east bank of the river. The scenery was striking, but the country so rough that they made sorry progress. Not long before sunset, while traveling along the top of a limestone cliff, two or three hundred feet above the river, they caught sight of a canoe that was being paddled down stream.

At first, thinking that the travelers must be Indians, Ben and his companion hastily concealed themselves among some bushes, but where they could look down upon the river. As the canoe came along near the base of the cliff, the men in it were seen to be white men. Ben now sprang up and stood on the edge of the cliff.

"Hello down there!" he called.

The canoemen raised their heads and gazed upward. "Hello up there!" one of them called back.

"Where do you hail from?"

"From Loutre island!"

That, as Ben and Jodo knew, was the name of a settlement on the Missouri river, opposite the mouth of the Gasconade.

"What stream is this?"

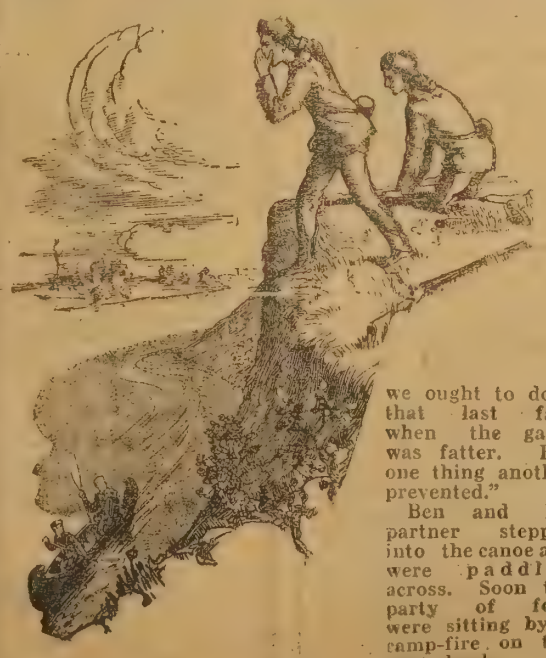
"The Gasconade!"

"Are you going to camp soon?"

"As soon as we can pick out a campin'-place! Come and camp with us!"

"That's just what we want to do! Can you find a camping-place on this side?"

"I don't see any. If you men can git down to the water, we'll ferry you across. That is, if you hain't got any canoe of your own."



"All right! We're traveling by land just now. I think we can soon find a sloping place. We want to cross the river anyhow. Lucky for us you happened along."

Hurrying on a few hundred yards, Ben and Jodo came to where the cliff changed to a steep, gravelly hill-side. There, by clinging to bushes, they had soon slid down, down, down, till they were at the water's edge. The canoemen were already there, waiting.

The two land-travelers shook hands with the two water-travelers. One of the strangers, it soon appeared, was a Frenchman named Cartier, who know but a few words of English—not enough to converse. The other was an American, Robinson by name, who spoke French as well as English, and had married the Frenchman's daughter.

"Been up the river on a hunting-trip, I suppose," Ben remarked, noticing some skins and some dried meat in the canoe.

Robinson nodded. "Yes. We wanted to lay in a little supply of meat before cold weather is past. Of course we ought to done that last fall, when the game was fatter. But one thing another prevented."

Other white friends are found by the trapper boys.

Ben and his partner stepped into the canoe and were paddled across. Soon the party of four were sitting by a camp-fire on the west bank.

"Seems to me like I've seen you before, some'r's or some'r's else," Robinson soon remarked to Ben. "But for the life of me I can't quite recollect where it was."

Ben looked at the American. "And I've had the same impression as to you. "Yes, and now I know where it was that we met. Last spring my partner, a Frenchman, and I, after wintering on the Piney Fork of the Gasconade—a good distance east of here—had floated down into the Missouri. Twenty-odd miles below the Loutre island settlement we camped on an island in the river. And you, with a lot of others from Loutre island and Coate sans Dessein—"

"Oh yes, I know! I recollect well enough now. Sever'l of us from up the river had been down to St. Louis. And we was on our way back when we stopped and camped with you two trappers on that island. And so we meet ag'in, on another river!"

Having been for nearly half a year in the wilds, Ben and his partner were hungry for news. And they soon learned that Robinson, before starting on this hunting-trip, had just returned from a canoe-trip to St. Louis.

"Did they have an earthquake there some time in December?" Jodo inquired, eagerly.

"Yes. But it didn't do any damage to speak of there—not much more than it did up where I live. Shook things up right peert, though, they say. But where it busted things to pieces was down below St. Louis, in the New Madrid country. There it sunk great trac's of land, till they're turnin' to out-and-out lakes. In fact, the whole New Madrid settlement is mighty nigh clean wiped out. That' where the shake-up was worst."

After the party had talked long of the earthquake, till the subject was exhausted, Robinson said:

"I commonly paddle up and do my huntin' along the Osage river. But there's a big layout of Sacs and Foxes camped up there, not a great ways from the river. And we 'lowed we'd just a leetle ruther do our huntin' in some other neck of the woods this year."

"But why? The Sacs and Foxes are still friendly to the whites, aren't they?"

"Well, not any too friendly—not friendly to hurt. I wouldn't like for the red boogers to ketch me out where nobody would ever know what happened. Stand a downright pore chance to see that black-eyed French girl and the baby ag'in, I would."

"Why, what's the matter?" inquired Jodo.

"Matter enough! These here United States of Amerikey is on the verge of war with Great Britain. Looks mighty like we's goin' to have to shed our coats and role up our sleeves and spit on our hands, and whale the mother country ag'in. Everybody seems about dead-certain that congress will declare war ag'in the British, and that before so very long. In fact, hostilities has purty nigh begun in places, and preparations for hostilities has worse than begun."

"How—what?" asked Ben.

"Why, it's well known that British agents are bein' sent to all the tribes along our frontier to stir up the redskins ag'in the whiteskins. In fact they've already armed sever'l of the tribes with guns and powder and ball, and little bands of warriors is raidin' the settlements from time to time. They hadn't broke out bad, any of 'em, when we left home; but no tellin'—no tellin' what has come to pass before now. Everybody believes this country is on the eve of another long and bloody war with England. And if that's what, all our frontier settlements, and especially them west of the Mississippi, is dog-gone shore to have a long and bloody war with the Indian tribes. They don't love us Americans any too well anyhow, the redskins don't. It kind of gits their dander up to see us settlers crowdin' fu'ther and fu'ther into their happy huntin'-grounds. And the Britishers, with their arms and ammunition and double tongues, knows just how to sick the bloody boogers onto us."

"Well, now, that's interesting news," Ben remarked. "How soon is war likely to break out, do people think?"

"Hard to say just when. But from the way things looked when I paddled out of St. Louis, you boys needn't be su'prised to come back to the settlements and find the redskins trottin' the war-path."

"That may be what makes the Osages so mean just now," Jodo said to Ben.

"Yes; though I didn't see any evidence that British agents had visited the village we were in."

"Safe to say the British are eggin' the Osages on to meanness, as well as the Sacs and Foxes and Pottawatomies and other tribes," Robinson answered. "Was you boys in the Osage village?"

"You bet we were!" Jodo assured him. "And we came in half an inch of being there again, in spite of all we could do to keep out."

"How came that?"

Ben and Jodo now related their recent experiences, which proved so interesting to Robinson that he stopped them from time to time and interpreted to his French-speaking father-in-law. Till a late hour the party sat around their camp-fire, talking of their experience in the wilds.

When morning came, and the two parties were about to separate, both Ben and Jodo got some leaves of a pocket note-book from Robinson, and wrote brief notes to their friends at home. Robinson expected to make another canoe-trip to St. Louis soon after his return to Loutre island; and he promised to deliver the notes to friends of the Hendersons and Armstrong families there.

The canoemen then paddled away down stream, while Ben and Jodo tramped off toward the Big Niangua; but not before the latter two had been given some additional powder and a few more bullets for their rifles.

In time Ben and his companion came to the same Indian trail they had traveled the fall before. After that they had no trouble finding their way. They kept a careful watch, from every high point, for smoke, but could discover none, nor any other evidence that Indians were in this part of the country.

It was late one afternoon when the two entered a familiar, rock-walled valley, or cove, and looked for their cabin under the cliff. Somewhat to their surprise, it was still standing, apparently just as they had left it. And scarcely had they entered the valley when an animal grazing there fled, braying lustily, toward the cliff. Nor did he stop till he had disappeared into the Cave of the Bats.

"Why, it's little old Spunky!" exclaimed Jodo.

(Continued on the following page.)

# Trappers of the Ozarks

(Continued from the preceding page.)

"Spunky it is! And he's gone wild! Reminds we of the wild asses that we read about in the Bible. I supposed that when he ran away from the Osage villags he would make a bee-line for St. Louis. But it seems he's lingered by the way."

"My guess is that, with so much snow on the ground, he had to stop here to keep from starving. Pretty safe to say he broke down the fence and got in to his hay-pile."

That, as they soon found out, was true. The mule had broken in to the hay and had already eaten most of it. They went to the mouth of the cave, and by much calling and coaxing got him to come to them. Soon he was out in the valley, grazing again.

After making sure that their cabin was just as they had left it, the returned wanderers looked about for Bose and Tinker. Pieces of rabbit-skins and tufts of hair, together with the bones of small animals, were found in the cabin and near it. This indicated that the dogs were here, or had been recently, and showed how they had lived. But when called they failed to come.

"Maybe they're off hunting," suggested Jodo.

"That's possible. If they are, they'll be coming back about dusk, I suppose."

The first thing the trappers did was to find a rope they had hid away in the big cave, tie it to their hair-lariat, knot sticks in part of it to make a sort of rope-ladder, and, after hanging the ladder from the top of the cliff, to climb it. Everything in the little cave was found just as they had left it. They brought down their flour and meal and their two big pots; likewise their cooking-vessels and some honey. And that night they ate a heartier meal than they had for many days—since leaving here.

They half expected that the dogs would return some time during the night. But when morning came without bringing them, there was but one conclusion. Ben utter that:

"They've either got tired of living here by themselves and set off for home, or they've been killed by wild animals—wolves most likely."

"Yes, that could easily have happened," Jodo agreed. "During that coldest weather, while we were having such a hard time to keep that wolf-pack from picking our bones, the wolves here may have got so hungry that they devoured poor Bose and Tinker."

"Let's hope that they didn't—till we learn better. But they're gone, the dogs, and not till we get home can we find out for certain whether they're gone down wolves' throats."

(To be continued.)

## Life What You Make It

By C. C. Gott.

Life in the cuntry is what the individual makes it, the grandest or the most miserable. A city man finds time for amusements and the farmer can, too, if he only will. Too many get the habit of wasting minutes. My grandfather used to say, "It is not the getting up early, but the way you manage after you get up." So many work hard all day and accomplish nothing, and then they say they have no time for pleasure. Keep your work in your mind while at it, and forget it when done with it. Don't walk half a mile down in the pasture to fix the fence, just to find you have forgotten to take the hammer; just as well have stayed at the house and help your wife wash the dishes.

**Keep Foods Cold and Screened.**

Food should be kept as cold as possible and carefully screened against flies, mice and other marauders is a warning being sent out by the children's bureau at Washington. When there is danger that foods will not keep until the meal for which they are needed they should be cooked, scalded or sterilized, and then cooked as quickly as possible, even if they must be warmed before being eaten.

**Mourning Substitute.**

President Woodrow Wilson indorses the idea of those in mourning for deaths of relatives in the service of their country of wearing a black band on the arm with a gilt star for each member of the family lost.

LOCAL HOME PAPER
AND
THE WASHINGTON FARMER

For the Price of Your Home Paper Alone

Through a special clubbing arrangement with a large number of newspapers in Washington, we can now send you **The Washington Farmer** and your Local Home Paper at the regular subscription price of your home paper.

THE HOME PAPER

You alone know the great value of your local town paper. The part it plays in local affairs, the news of the happenings of your community, the gossip, social and commercial life that you wish to keep posted on. It brings the story of the home boys at the front who are fighting for you and our country.

THE STATE FARM PAPER

The Washington Farmer is your family paper. It keeps you posted on the agricultural developments of your state. It is a complete family farm paper—all the farm news, latest and best serial stories, department for every member of the family—feature sections of every branch of farming, dairying, stock raising, fruit growing, etc. Also colored comic pages and a children's and family page. It is the biggest and best farm paper published in The Pacific Northwest.

**The Washington Farmer Is Issued Every Week**

We are pleased to state that by subscribing now to any of the following papers and paying the regular annual subscription price of that paper your payment will also include a subscription to The Washington Farmer.

# Coating Method of Preserving Eggs

The well-known method of coating eggs with lard has been modified in many ways, says Prof. George A. Olson, head of the chemistry department of the Washington state experiment station, in a bulletin recently issued. Generally, it may be said that the nature of the components used for coating eggs is some combination of fats, oils or closely related chemical substances. Occasionally rubber, paraffin, gelatin, or juices of plants in combination with fats, etc., is used. A number of the preparations sold on the market contain some form of preservative, usually not more than one per cent of the entire mixture. These preparations have either been patented or patents have been applied for, and are extensively sold as specified brands of egg preserver. These preservatives may properly be called greases or smears and are used as coverings or coatings on the eggs.

The principle involved in the coating of the eggs with the various forms of greases is to check air movement and lower the evaporation of water contained in the egg. The bacterial or chemical decomposition that would take place under normal conditions is also reduced, if not entirely eliminated, by this principle. The inclusion of a preservative in the greases serves the two-fold purpose of checking the bacterial activities and preventing the decomposition of the grease.

Precautions in using only clean, sterile eggs are important where the smearing method is employed.

While we have not attempted to test out the various brands of egg preservatives, we have, nevertheless, tried out a number, some of which were prepared in the experiment station laboratory. Based upon the results obtained, we are satisfied that there are reliable preparations on the market. The use of lard or a compound lard with beeswax, or spermaceti, or paraffin mixed with one-half per cent of salicylic acid, or benzoic acid, or thymol, when melted, together, will make a good grease for preserving eggs. The important thing is to have a combination which may readily be applied and yet not be too soft.

Each egg must be treated separately. The preservative is applied by hand and all parts of the shell must be covered, otherwise unsatisfactory results are sure to follow. Where a few eggs are put up the time element is negligible. However, where there are a large number of eggs to be treated, the method which will work out expeditiously is the one worth considering.

After the eggs have been covered thoroughly with the grease preparation, they are next wrapped in paper, as a precautionary means. The eggs are then packed in cases or cartons with the small end pointed vertically downward. An occasional shifting of the eggs in the cases is employed and apparently with good results.

The directions contained in this part of the bulletin are very important and should be carefully noted. A cool, dry place is best for storing eggs coated with the grease preparations. It is preferable to use a warm, dry place than one which is cool and damp. Generally speaking, the use of filthy or cracked or fertile eggs or storage in damp places have been the chief contributing causes for the spoiling of eggs preserved by this method.

The stored greased eggs can be used in place of fresh ones for all purposes for which the fresh eggs are used. The greased eggs appear to be of a decidedly better quality and with less of the undesirable foreign properties which are usually found in the average cold storage product.

In our experiments with eggs of known sterility and taken from clean nests, we have been very successful with the grease method of preserving eggs. We know that some chemical changes in the eggs have occurred. The extent of such changes, however, has been small when compared with those noted in the eggs kept in water-glass liquid for a similar length of time. The period of our investigations has been ten months. Perhaps when the eggs are kept for a longer period of time more notable changes may occur.

The average daily loss in weight of eggs ranged from 0.002 to 0.017 grams. The maximum daily loss in weight of egg ranged from 0.011 to 0.045 grams. The minimum daily loss of egg ranged fro 0.001 to 0.0035 grams. These results were obtained with four different preparations. Two of the preparations were made in the station laboratory and the other two were commercial products.

We would suggest to those who have not tried the grease method for preserving eggs that they prepare only a few eggs in this manner. We would further advise that the method which has been satisfactorily used in the past be continued until satisfied that the grease method will prove equally successful.

Eggs which have been preserved by means of greases or smears should not be sold without the word "Preserved" stamped on each egg. The chemist can detect eggs preserved with the various kinds of greases.

## Oatmeal Soap.

One cupful of cold cooked porridge, one cupful of milk, two cupfuls of rice stock, one treaspoonful grated onion, seasoning. Add the oatmeal to the milk and rice stock. The rice stock is made by boiling one ounce of rice in a pint and a half of water till the rice is cooked to a pulp. Then add the grated onion and seasoning. Boil up, well mixing it all smoothly and serve very hot.

# Jams and Jellies

## That's What the Soldiers Want

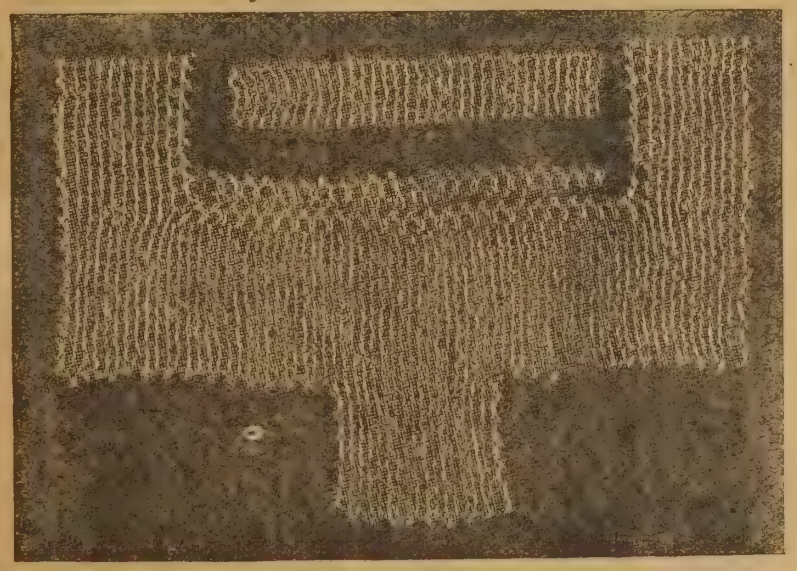
By ANNA BUCHANAN.

There's an average of 4000 men in the hospital at Camp Lewis all the time, and how these men long for home-made jams and jellies is told by Mrs. B. H. Kizer, a member of the Spokane chapter of the American Red Cross. Mrs. Kizer has just returned to Spokane from a visit to the camp and tells of some of the things women, especially those living on the farms, can do without very much extra effort, to help make the boys happy.

"Jams and jellies are better than canned fruits because they carry better," says Mrs. Kizer. Paraffine containers, of the pint size, are easier and cheaper to ship, however this is a matter which the women sending goods can decide for themselves. If fruit jars or jelly glasses are sent, they are (after being emptied) taken to Seattle and sold, the money going to the Red Cross. Of course jars and jelly glasses are expensive now and many women who would like to send fruit do not feel that they can buy jars to send it in, so Mrs. Kizer suggests the use of old bottles.

Just take a piece of twine, dip it into kerosene, tie it tightly around the bottle, where you want it to break, set a match to the string and after the bottle gets hot, plunge it, neck first, into a vessel of cold water, up to where the string is tied. The bottle will break where the string is tied, and you will have a jar good enough for jams and jellies.

Another thing greatly needed at Camp Lewis is dish towels. These may be made of flour sacks, cotton cloth or linen, and would be greatly appreciated by the boys in the camp.



These things should be sent to W. R. Van Valen, assistant field director, military relief, northwestern division, American Red Cross, Camp Lewis, Wash. Sign your name clearly and that of the Red Cross chapter through which you are sending it, if you are sending it through the Red Cross, but the things can be sent individually if preferred. It might be a good plan for a number of neighbors to get together and make up a box between them, packing the same carefully, especially if the fruit is done up in glass.

Mrs. Kizer was much interested in the bakery at the camp, where 35,000 loaves of bread are made daily, the baking going on from 7 in the morning till midnight. There are hundreds of ovens, each one of which will hold 600 loaves of bread, and it keeps three men busy at an oven all the time, putting in the loaves, taking them out and placing the finished produce where it belongs. They have learned to do the work so rapidly that they can handle this hot bread with their bare hands without getting burned. Mrs. Kizer described the kneading troughs as being of metal and looking something like bath tubs, only that they are much longer. She says they are kept spotless.

"The men are splendidly fed," said Mrs. Kizer, "as is shown by their improved health after being at camp a while. Men who go there underweight invariably gain from 5 to 20 pounds in three months' time, and those who are overweight lose in the same proportion. This, of course, is due to the perfect rations and to the exercise the men get at the camp."

# Child's Filet Yoke

By WINIFRED WORTH

You who are mothers will enjoy crocheting this novel pattern. It's very easy to do.

Use No. 50 Cordonet.

This yoke and band for sleeves makes a very pretty yoke for a child's dress. The band also can be used for an insertion in the waist line or above the hem for a trimming. Follow illustration for yoke. The following is full detail how to make filet crochet: Make chain desired length, turn, thread over hook and put hook in 6th st. of chain from hook, thread over and draw through 2 st. and then 2, chain 2, skip 2 on ch. 1 t. in 3 st. of chain from last treble, repeat for desired number of meshes. A block (or solid mesh) is made by making 4 t. in 1 open m. If there are two blocks (or solid meshes) there must be 7 t. 10 for 3, etc. To estimate the length of chain in any pattern, count mesh and multiply by 3, plus 6. For instance, a pattern of 61 m. would be 3 times 61, plus 6, or 189 ch.

"—use foods that require less sugar"

THIS is one of the most important recommendations of the Food Administrator: "In cooking and baking use foods that require *less sugar.*"

In other words—use Ghirardelli's. Use it freely and wisely—in place of other less nutritious and more expensive foods. Not only will you save money but you will help in food conservation.

Cooking and baking require less sugar when you use Ghirardelli's. Because—it contains in itself the sweetening flavor you need. More than this—it adds a new touch of richness to your icings, your puddings and other desserts.

*In ½ lb., 1 lb. and 3 lb. cans; a tablespoonful—one cent's worth—makes a cup.*

D. GHIRARDELLI CO.

Since 1852 San Francisco

Ghirardelli's Ground Chocolate

# Patterns

2488—Dress for misses and small women. Cut in 3 sizes: 16, 18 and 20 years. Size 18 requires 5 yards of 36-inch material. The skirt measures about 1 7-8 yard at the foot. Price, 10 cents.

## Patriotic and Tasty

The following recipes, by Mrs. Grace Coulter Scott, district home demonstrator for Pullman, will be found as appetizing as they are patriotic:

**Chocolate Cake.**

3 eggs, ¾ c milk, 1 t salt, 6 t baking powder, 1 t cinnamon, 2 sqs chocolate, 1 t vanila, 2-3 c sugar, ½ c fat, 1 c syrup.

For flour use any of the following combinations:

1 2-3 c buckwheat and ½ c ground oats, or 1 c rice flour and 2 c barley, or 1 c corn flour and 2 c barley.

**Pie Crust.**

5 t fat, ½ t salt, cold water (¾ to 1 c).

For flour use any of the following:

2 c barley flour, 2 c ground rolled oats, 1 c corn and 1 c barley.

Combine fat, salt, and flour. Blend thoroughly. Mix with cold water to a rather soft dough. Pat and roll out. Handle the dough as little as possible or it will become sticky. The crust may have to be patted into shape on the pie pan.

**Wheatless Loaf Bread.**

1 c liquid, 4 t fat, 4 t syrup, 2 eggs, 6 t baking powder, 1 t salt.

For flour use any of the following:

1 c rice and 2 c barley.

1 1-3 c corn and 1 c buckwheat.

2 c barley and 1 c ground rolled oats.

1 1-3 c corn and 1 c ground rolled oats.

Combine liquid ingredients, sift dry ingredients and combine mixtures. Bake as a loaf in a moderately hot oven 1 hour.

## England's Potato Acreage.

The British food controller announces that preliminary returns have now been obtained and tabulated from all persons farming one acre of land and upwards in Great Britain, which indicate that the potato acreage of 1918 will exceed that of 1917 by about 25 per cent. When allotments and cottage gardens, which are not included in the return, are taken into account, it appears that the total acreage of 1918 will approximate 900,000 acres.

**NEW PERFECTION OIL COOK STOVE**

**Honor the Boys Who Have Gone.**

Dear Aunt Nellie: This is the fourth time I have written but it won't be the last. I am a little girl 12 years old. My birthday is February 22. I have found a twin. Her name is Libbie Latimer. She lives at Plaza, Wash. We write letters to each other. Another girl is my twin, too. Her name is Violet Vivian Vase, but she did not give her address when she wrote. Elva Green, the answers to your riddles are: A potato has eyes and can't see; corn has ears and can't hear; a wagon has a tongue and can't talk; water in a brook never stops running. Lucile Turnley, the answers to your riddles are: Sun, broom, Andrew. Now I'll ask some riddles: Why is a man who has no children invisible? What letter would have made Noah's ark noisy? Why is a pig in the parlor like a fire in the house? Why is the letter A like 12 o'clock? We have two cats, both black and white. Their names are Millie and Etta Would-Be. Etta is a kitten and is very playful. I like to tease her with a straw. We have a dog named Ponto that can do all sorts of tricks. I am in the seventh grade at school and have three teachers—Mrs. Olson, Miss Strecker and Mr. Fager. I go on a truck to school. We live about two miles from school. There are about 175 pupils. The seventh and eighth grades are in my room. The desks face north. The teacher's desk is in front of our room. On the north wall are two big pictures of Washington and Lincoln. We have six or seven pictures in all. The 11th and 12th grades have a big service flag. There are 26 red stars in a field of white. They stand for the boys who have gone to our school and who went when their country called. One star is going to be changed to a gold star to represent one of our boys who was killed when the Tuscania went down. We have an American flag, too, and salute it every Monday morning.—Evis Erickson, R. F. D. 2, Box 108, Lynden, Wash.

**Plants Garden in the Spring.**

Dear Aunt Nellie: This is the second time I have written to the Childrens' Corner and I hope it will not be the last. Have I a twin? If I have I hope she will write to me. I am in the seventh grade. I will be 14 June 30. I have a sister and a brother dead. Their names are Ora Thelma and William Lyman Walker. I have two sisters alive; their names are Hazel and Mildred. Hazel is 15 and Mildred is 15 months old. Mildred is awful cute. She talks a little, but she does not walk yet. We have two cows, one calf, six horses, two sheep, one cat, and I have a buggy. We have lots of fun in the summer. I help my mama plant garden in the spring. I help her can fruit and vegetables in the summer. My teacher's name is C. M. Ryman. We have nine pupils in our school. We all joined the Red Cross. I am going to learn to knit. I think I would like it. I have two cousins and two uncles in the war. I don't know but what one of my cousins is killed already. I can crochet and I am going to learn to tat. I have two rabbits. One is white and brown spotted and the other is brown. They run out of doors all the time. We have a Sunday school at Cliffs. I go every Sunday I can. We live within a half mile from Sunday school. I like spelling, geography and arithmetic best of all my studies. I wonder how many of the cousins like them best.—Beulah Maud Walker, Cliffs, Wash.

**Brother Serves Uncle Sam.**

Dear Aunt Nellie: I am writing to you for the first time. I like to read the letters very well. I am 13 years old and will be 14 October 19. Have I a twin? If so I would like for her to write to me. I live on a 160-acre farm and we rent 360 acres. I have three sisters and four brothers; my oldest brother is serving Uncle Sam. His name is Stephen E. Kendall. I go to school. There are 12 children in our school. My teacher's name is Miss Della Barclay. I like her fine. She is going to teach again next year. I have a brother and sister going to school. The rest of my brothers and sisters are working. We have two cars. I am going to learn how to run one of them. I am the oldest one at home now and I have to do most all of the work. I have got five hens sitting.—Fay Kendall, Oakesdale, Wash.

**Harry Will Raise Potatoes.**

Dear Aunt Nellie: It has been a long time since I have written to you last. This is my third letter to you. I wish a lot of boys would write. My little sister Margret and I bought a war savings stamp together. Our school is closed. We have one little colt. Its name is Joe. My sister and I planted some potatoes so we can get money and buy another war savings stamp. Last year I planted some potatoes, but they did not grow. We have fives calves—Bessie, Reuben, Tony, Rosey and Flossy.—Harry Wegele, Wilson Creek, Wash. (Aunt Nellie also wishes that more boys would write. Every time you write you will encourage some other boy to become a cousin. We like your letters.—Aunt Nellie.)

**Guesses the Cousins' Riddles.**

Dear Aunt Nellie: I am a Corner cousin and have written to the Corner twice. I am 11 years old and my birthday is April 17. Have I a twin? I have three sisters and one brother. We live on a 440-acre fruit farm. I think all of the cousins write real nice letters to the Corner. Now I will answer some riddles: Elva Green's (1) a potato, (2) corn, (3) a wagon, (4) a river. Sally Garry's (6) a chimney. Mildred Tormey's (3) a newspaper that has been read, (4) a sponge. Lucile Turnley's (1) the wind. I couldn't answer the rest of them. Now I will give some: What is the difference between an old penny and a new dime? What is it which you break if you even name it? What is it that we value more than life, fear more than death, the rich man wants it, the poor man has it, the miser spends it, the spendthrift keeps it and when we die we take it with us? What is it that a man, no matter how smart he is, overlooks? How many soft boiled eggs can a man eat on an empty stomach? I will give the answers to these riddles the next time I write. It was my sister Harriet that wrote to you and didn't sign her name. She is going to write again soon. We go to the Bishop school, district No. 149. Our teacher's name is Hazel Howell. We like her real well. There are nine children go to our school. I am in the sixth grade. We have 14 little baby pigs and 12 little chicks.—Elvira Blyton, Bishop, Wash.

**Hazel Cooks for Brother.**

Dear Aunt Nellie: I have been reading the letters in the Children's Corner and thought I would write. I am 12 years old. My birthday is August 22. I go to school at the Sacred Heart convent, Ward, Wash. My school closed because of a smallpox scare. I am in the sixth grade and I also take music lessons. My father owns a wheat farm in the Big Bend near Wilbur. My mother owns 120 acres near Fruitland. I also own 155 acres near Lincoln. My father is in the hospital having his eyes treated. I have one brother and two sisters. Their names are Henry, Josephine and Bertha. Bertha is married and has two children. My sister Josephine and I are going to cook for my brother while he is seeding. He has my father's place leased. I have one colt and one dog and two cats. The colt's name is Chance. My grandmother and grandfather live near us. Grandfather was born in 1833 at Fort Okanogan. He is very spry for his age, rides a horse as well as a young man. He does all of his own work yet. Grandma isn't so strong, for she has rheumatism, but does her own work and makes a great many quilts and rag rugs. There are a great many flowers here in the spring. I can crochet and tat. I can do a little embroidering. I got a gold watch for Christmas, and also many other nice presents. Papa has a touring car.—Hazel Defreece, Fruitland, Wash., age 12.

**Brother's Name Is Leonard.**

Dear Aunt Nellie: I am 12 years old and in the fifth grade. My teacher's name is Miss Walker. I enjoy reading the Children's Corner's and so I thought I would write. I go to the Dixie school. We have been living in Dixie, but we moved to Walla Walla. I have a twin. Her name is Esther Olstrich. We are the same age only she is in the sixth grade. I have one brother and no sisters. Brother's name is Leonard. I will write again.—Helen Cochran, Dixie, Wash.

**Orris Has Two Uncles.**

Dear Aunt Nellie: This is my second letter to the Children's Corner and I enjoy reading the letters. I am 8 year old. I go to school. Helen Cochran stays at grandmother's and I stay there, too. I have two uncles. Their names are Ed and Charley. I have one brother named Lee. Have I a twin? I like to stay with grandmother.—Orris May, Dixie, Wash.

**Beautiful Scenery of Alaska.**

Dear Aunt Nellie: This is my first letter to the Children's Corner. I was 8 years old February 1, and I enjoy the letters in the Children's Corner very much and wish there were more; especially would I like to hear from my school friends of the Olympic View school, Satsop, Wash., where I went to school. I now live in Alaska. This place is called the Matanuska valley. It is famous for mining and farming. The coldest here this winter where I live was 30 below zero, but only for a few days. At times it is 10 below in the morning and 30 above by noon. There is about 20 inches of snow on the level, the most we have had at any time this winter. I like it here fine. I have lots of fun skating on the ice and I enjoy watching the teams bringing their sleigh loads of coal from the mine down Moose creek to the railroad here. I have a nice dog and cat. I have a nice Yukon sled and my dog can haul the sled. There are no boys or girls to play with. I am in the third grade and I hope I will pass. I am going to have a garden of my own and help raise food for our soldiers. I wish I could tell the cousins how beautiful the scenery is here. The very high hills across the Matanuska river, all covered with snow and the timber in the ridges between is like a great picture. I will write again.—David LeRoy, Moose Creek, Alaska.

**Will Learn to Knit.**

Dear Aunt Nellie:: I am 11 years old and am in the fifth grade at school. My teacher's name is Miss Skeffington. I like her fine. My birthday is September 26. Have I a twin If so I would like for them to write to me. There is one girl that just lacks a day of being a year older than I am. I will write to her anyway. I live on a 16-acre farm way out of town. We have three horses and nine cows and seven calves. We did have eight, but one died. We have two cats, two dogs and about 1000 chickens. Mother has got the incubators set. There are about seven incubators, two big ones and five little ones. We have an automobile and it is a truck. At school we are working on Red Cross work. I don't know how to knit, but I am going to learn. Mama knows how to knit. I am going to learn from her.—El Berta Cantwell, Hover, Wash.

**Reads the Children's Letters.**

Dear Aunt Nellie: This is the first time I have written to the Corner. I have been reading the letters of the children. I am 11 years old and will be 12 September 15. I have dark hair and brown eyes. I am in the fifth grade at school. There are five pupils in my class. There are 28 children in the school. I have two sisters and four brothers. Their names are Viola and Julia. Julia is 5 years old and Viola is 13. My brothers' names are Oliver, Roger, Bruce and Walter. Oliver is 9 years old, Roger is 7, Bruce is 4 and Walter is 7 months old. We have one dog named Ring. We call her Ring because she has a white ring around her neck. We live on an 80-acre farm. We have two horses, two colts, two cows and three calves. I would like to correspond with some boy or girl of my age.—Minnie Wynona Tarbet, R. F. D. 1, Deer Park, Wash.

**Help Our Boys Over There.**

Dear Aunt Nellie: I am going to write a letter to the Children's Corner. My father takes the Farmer and I enjoy reading the Children's Corner very much. I live on a 45-acre farm and we have 18 cows in all and two horses. I have two sisters and two brothers. My sisters and one brother are older than I am. There are two big rooms in our school and I am in the fourth grade. My teacher's name is Miss Martson. I like her very much. The boys and girls at school joined the Junior Red Cross. We are going to do all we can to help our boys "over there." I am 10 years old. Have I a twin? If so I wish he or she would correspond with me.—Irene Lindquist, Route 1, Box 62, Arlington, Wash.

**Elvira Is Staying With Grandma.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I enjoy reading the letters. I am 11 years old. I will be 12 September 4. I am in the fifth grade. My teacher's name is Elsie Bond. I have two sisters and one brother. Their names are Evelyn, Esther and Freddie. I am staying with my grandma. My mother died two years ago. Have I a twin? If I have I wish they would write to me. My brother is 9 years old. He will be 10 August 4. He is in the fourth grade. We have three old bantams and 10 little ones. We have 63 little chicks and three little ducks. May I be a cousin?—Elvira Triebroasser, R. F. D. 2, Box 19, Odessa, Wash. (The cousins and Aunt Nellie welcome you to the Corner, Elvira, and will watch for your next letter. Aunt Nellie.)

**Brother Is in Alaska.**

Dear Aunt Nellie: I enjoy reading the letters very much. I am 10 years old and am in the fourth grade. Have I a twin? My teacher's name is Miss St. John. I like her very much. I live on a 10-acre ranch. We have two cows. We have two cats and one puppy. It's name is Jack. We also have five rabbits. There are nine children in our family, six boys and three girls. The boys' names are Claude, Clare, Clifford, Freddie, Francis and Harold. The oldest is 23 years of age. The youngest is three years old. Claude is up in Alaska. The last time we heard from him he had just received his questionnaire and thinks he will be in Class 1. My oldest sister is 19 years old and is married. My youngest sister is 8 years old. Her name is Bernice.—Clara Harrison, R. F. D. 2, Snohomish, Wash.

**Have One Lamb.**

Dear Aunt Nellie: I like to read the letters in the Children's Corner. I am 9 years old. I am in the fourth grade. We have two cows and three horses. I have five brothers. Their names are Forrest, James, Francis, Charles and Jack. I live on a 10-acre ranch. We have one lamb. Our school all joined the Red Cross. Our teachers' names were Miss Young and Miss Cone.—Paul Hess, Two Rivers, Wash.

**Teacher Plays Games With Them.**

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I would like to correspond with any cousin my age and in the fourth grade. When we get the Farmer I always read the letters and enjoy them very much. I can not knit, but would like very much to learn. I can crochet a little. I can not tat,

(Continued on the following page.)

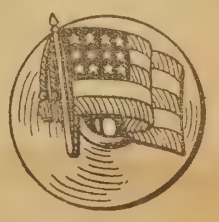
# James Does Business With Uncle Sam

James was 10 years old, and like most boys, and girls as well, he liked to do things worth while. So he undertook to save all the pennies and nickels that he could get hold of and buy thrift stamps with them. He ran all manner of errands and sold vegetables from his garden and hoed for his mother and did lots and lots of things to earn money, and every few days he counted up and found he had 25 or more cents, enough to buy a thrift stamp. It was a proud day when he bought his first one, and a still prouder day when he bought the last one that he needed to fill up his first thrift stamp card. Pretty soon he had enough extra pennies to add to the stamps in the card to trade for a real five-dollar war savings stamp.

All the time his father and mother were helping him, telling him just what he must do and helping him to do it, just as every other boy's father and mother would be glad to do if their boy wanted to help his country that way.

"Now do you understand what you've done?" asked James' mother when he proudly showed her the five-dollar war savings stamp he had bought. "You have loaned your money to the government to help win this war from the wicked nation that has destroyed so many boys' and girls' homes 'way across the ocean, and that threatened to come over here and destroy homes in this country. And the government of your own country has promised to pay you five dollars for this stamp, which cost you only $4.17. You see, it pays you 83 cents for the use of the money. That is about a cent a month."

"I understand," answered James. "I've saved my pennies and nickels and let my country have them to use to buy things that the soldiers will need. And some day I'll get it back, won't I?"



"Some day, when the war is over, you will get it back, and you will know that you helped win the war," said his mother. "If every boy and girl in the whole United States would earn and save and lend their money to the government, it would help a lot.

"And, Mother, it is just like daddy does, isn't it? Just like he does when he earns money and puts it in the bank or lends it to somebody that needs it."

"Yes, James, it is just like daddy does. You are a business man when you buy thrift stamps. You are doing business with your country, the best country on earth. And when you do this kind of business you are helping make it a still better country, and helping to make the whole world a better world for boys and girls to live in."

## Coat Lapel Button

for securing two subscription orders to the **Washington Farmer**

Just like illustration, only smaller. The perfect size for your coat lapel. A dandy American flag in red, white, blue.

One of these flags will be given free to any one sending two one-year subscription orders to The Washington Farmer.

# Children's Corner

Aunt Nellie

(Continued from the preceding page.)

but would like to learn. In our school there are only 13 pupils. They have only four classes, first, second, third and fourth. I like my teacher very much. She eats with us at noon and plays games, too. I haven't found my twin yet, but I hope I will. I shall write to her or him.—Clara Vivian Harrison, R. F. D. 2, Snohomish, Wash. I am 10 years old.

**Get a Red Cross Pennant.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner, but hope it will not be the last time. I am in the sixth grade and am 11 years old. I will be 12 October 9. I wonder if I have a twin. If I have, will she please write to me, for I would like to correspond with her. I live on a 40-acre farm. We have 13 head of cattle, 30 chickens, one hog and three horses. The horses' names are Jerry, Tom and Nell. The land here is quite hilly, and there are quite a few trees. There are 24 children in our room and our teacher's name is Hattie Vander Linden. All of the children like her and hope she will teach here next year. We organized a junior Red Cross, and I joined. I can knit real well. We have our pin, too, and get a pennant for almost all of the school joining. We had a program and made $27.30 for the new piano that we bought last year. I guess I had better close, with love to you and all the cousins. May I be a cousin, as I might write again?—Agnes Irwin, Blaine, Wash. (You surely may be a cousin and write again, Agnes. We hope this won't be your last letter.—Aunt Nellie.)

**Spring Brings Pleasant Weather.**

Dear Aunt Nellie: This is my first Corner letter. I would have written to you before but I have not known your address. I read the many interesting letters every time the Farmer comes. I am a girl of 11 and my name is Signe Westman. My birthday is September 17. Have I a twin? I hope so. I have four brothers and two sisters. Their names are Harold, Ragnar, Teddy, Verner, Nancy and Edith. Harold is 15 years old, Ragnar is 13, Teddy is 9, Verner is 4, Nancy is 7 and Edith is 2. We live on a 40-acre farm. We have six cows, two horses and 50 chickens. The horses' names are Dixie and Queen. We also have a dog named Felix. I can tat and I am going to learn how to crochet and knit. I am in the fifth grade. My teacher's name is W. W. Pettit. We have had three different teachers this school term. We have not had much snow here this winter but much rain. But spring is here now and will bring nicer weather. My playmates at school are Laila Haquist and Ellen Nybeck. If I have a twin please write to me for I will gladly answer your letters.—Signe Westman, Independence, Wash.

**Buys Thrift Stamps With His Money.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 13 years old and my birthday is August 27. I am in the seventh grade at school. I go to the Aldergrove school, and my teacher's name is Mr. Leber, and I like him very much. There are 14 pupils in my school. We organized a war savings society last Saturday. I have been trapping this winter and I bought thrift stamps with the money that I got for my furs. I caught one mink and two racoon, one civet cat and a brown weasel, and I caught a coyote, to. I live on an 80-acre farm, and we have seven cows, five calves and one pig, and about 25 chickens. I milk two cows, both morning and night. Last Saturday I helped some people get a cow out of the swamp. She was in the mud by the river and we got some help and pulled her out, and when we got her out she got stuck in another hole and we had to pull her out of there, too.—Oscar W. Nelson, Tumwater, Wash.

**Helps to Lick the Kaiser.**

Dear Aunt Nellie: I am learning to knit. I hope I can help lick the kaiser. I have 26 goats, 17 sheep, two cows and one colt. The nine little goats are as white as snow. The two little sheep are not quite so white. The little goats all line up behind a stump, then one jumps up and another bunts him off and they keep it up for quite a while. I had a very nice dog called Carlo, he was poisoned and now I have a dog called Collie. I am as well pleased with Collie as I was with Carlo. I am 11 years old my next birthday, the 2d of October. Have I a twin?—Ina M. Stewart, Chewelah, Wash.

**Takes Piano and Violin Lessons.**

Dear Aunt Nellie: I was looking through the Farmer this evening and I saw the numerous lettters written by girls from all over the Union, so I thought I would write. I wrote a letter to the Children's club in the Minneapolis Tribune. If there is a letter absolutely correct it is put in the paper on the children's page. Only one of them was put in the paper. I have seven war savings stamps, $35 worth. I have four sisters. The oldest one is 13 years old and her name is Eileen. She has eight war saving stamps. I come next. I was 11 November 24. My sister Mary is 7 years old. Her birthday is September 21. She has $30, six war saving stamps. The twins, age 4 September 29, each have a $50 third Liberty bond. Their names are Agnes and Anna. There are about 1750 people in the town of Republic, where I live. My father's profession is banking. He owns the Ferry County State bank. I am in the sixth grade at school. My teacher's name is Miss Farquhar. I take piano lessons from June Ritter and violin lessons from Mrs. Ritter's mother. Our Liberty bond quota was $2300. We exceeded it on the first few days. I have three cousins in the service of Uncle Sam. Clarence Trumo is an aviator and is in France. The other cousins are in the army. I will close, hoping I have a twin who will write.—Inez Walsh, box 279, Republic, Wash.

**Raymond Will Come Again.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I hope it will not be the last time. I like to read the letters in the Children's Corner. I am 11 years old and my birthday is March 27. I am in the fourth grade. My teacher is Miss Sullivan. There are 16 pupils in our room. There are 12 grades in the school. I live two miles from school. I walk all the way to school. I have five rabbits. I have three white rabbits and two gray rabbits. Altogether, we have 20 rabbits. My brothers are Rollie and Warren. Rollie has 14 rabbits. Warren has none.—Raymond Lyons, Spangle, Wash.

**Wild Ducks Nest in the Lake.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 8 years old and in the second grade. My birthday is October 2. We have five horses, seven cows, four calves, 40 chickens, six turkeys and 20 rabbits. I have two brothers, Rollie and Raymond. We have a lake across the road from our house. The wild ducks nest there every year. If I have a twin I wish they would write to me. We put up three bird houses and the bluebirds are making nests in them. My brother and I knitted enough squares for an afghan.—Warren Lyons, Spangle, Wash.

**Knits for the Red Cross.**

Dear Aunt Nellie: This is the first time I have written to the Corner. I hope it will not be the last time. I have three sisters and two brothers. Their names are Elna, Elvira, Nina, Edwin and Sigfrid. We live on a 20-acre farm. We have two horses, one colt, five cows, four calves, one pig, two cats and one dog. I am 11 years old. There were 19 pupils in my room and five grades. I am a Red Cross member. I have knitted a wash rag for the Red Cross. My birthday is February 21. Have I a twin? If so I wish they would write.—Signa Nordquist, Winlock, Wash.

**A Red Cross Member.**

Dear Aunt Nellie: I like to read the children's letters, for they are very interesting. My sister is going to write a letter, too. She is 12 years old. I have two sisters. My biggest sister is Hazel and my little sister is Mary. She is 2 years old. I have red hair and brown eyes. I am four feet and three inches tall. I joined the Red Cross. I would send you my picture, but I haven't it just now, only in a big frame. I will send it to you after a while.—Myrtle Webster, R. F. D. 1, Box 62, Olalla, Wash. (Aunt Nellie will be watching for the picture, Myrtle. Write to me again.—Aunt Nellie.)

**Knitting Blocks for Afghans.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 10 years old and will be 11 September 11. I read the Farmer and like it, too. The best of all is the Children's Corner. I have three brothers and one sister. My brothers' names are Albert, Raymond and Howard and my sister's name is Ruth. I am knitting blocks for afghans. We have three afghans over at our schoolhouse every two weeks. We work on the afghans. I have two miles and one-half to walk.—Mildred Heidegger, Box 72, Rice, Wash.

**Snowbird Is May's Little Pony.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I like to read the other children's letters in the Corner so I thought I would write. Have I a twin? If so I wish she would write to me. My birthday is the second of December. I am 10 years old and in the fifth and sixth grades. I have two brothers and one sister. My brothers' names are Dale and Robert. My sister's name is Pearl. We have some horses and cattle. I have a little pony named Snowbird.—May Wiley, Boyd, Wash.

**In the Seventh Grade at School.**

Dear Aunt Nellie: I have never written to the Farmer before. My papa takes the Farmer and I like to read the letters of the cousins. I have been going to school in Pasco, but I came home now. I have started to school here now, with my sister and brother. I like my teacher fine. Her name is Mrs. Shaw. I am in the seventh grade at school. I will be 12 years old July 27, 1918. I will close now. With best wishes for Aunt Nellie and all the cousins.—Neah Peck, Age 11, Box 457, Lind, Wash.

**With the Marines in France.**

Dear Aunt Nellie: I have written two letters to you and have seen them both in print so I will try my third one. I have never found a twin yet and I have read every letter in the Corner. My birthday is July 4. I will be 12 years old my next birthday. I see quite a few birthdays in the Corner but none on the date of mine. I would like to correspond with Alice Case, Tokeland, Wash. Our school was closed three weeks ago on account of our teacher being sick and when she got well measles began to spread and we haven't any school since then. We had the measles, too. My brother took down first, then my little brother and I, then my big brother and my mother. We got over them all right, but we are still under quarantine. My oldest brother is in the war. He enlisted in the marines and is now in France. The next brother tried to get in three times, but they wouldn't take him. I go to a country school by the name of Happy Home. There are 13 children going to my school. I would like very much for some of the cousins to write to me as I am always looking for a letter. I will try and write often and I wish our Corner would grow to be the most important part of the paper. —Edythe Strahl, R. R. 1, Centerville, Wash.

**Papa Planted a Big Garden.**

Dear Aunt Nellie: I read your letters in the Farmer and I like them very much. I want to be a cousin. My papa has 30 acres of land. We have three cows, three calves, one horse and 21 chickens. I will be 10 years old next October 9. I am in the second grade at school. I have one mile to go to school. I have three brothers and three sisters. Two of my sisters go to school. Their names are Antonia, Annie, Evis, Joe, Christina and the baby we haven't named yet. Antonia is in the second grade and Annie is in the first. My teacher's name is Mrs. Threlcold. Our school will be out in three weeks. I will be glad when school is out. I can wash dishes and sweep the floors. I can milk cows already. There are lots of flowers in the woods now and I like to go and pick them almost every night. This is the first time I have written to the Children's Corner. I am the oldest in our family. I go to Hobart school. I have two cousins to go to school. They are in the same grade. There are 30 in our room. My cousins' names are Julia and Rudolph. My papa planted a big garden. He planted potatoes, beans, lettuce and cucumbers, onions, carrots, beets and radishes. —Mary Kochever, Hobart, Wash.

**Trouble Is Vivian's Dog.**

Dear Aunt Nellie: I have been reading the Children's Corner letters and I like them very much. This is the first time I have written to the Children's Corner. I am 13 years old. I have brown hair and brown eyes. My weight is 57 pounds. I have a dog and his name is Trouble. We have 15 chickens and a pig. I have one brother and one sister. May I be a cousin?—Vivian Davis, Box 24, Edwall, Wash.

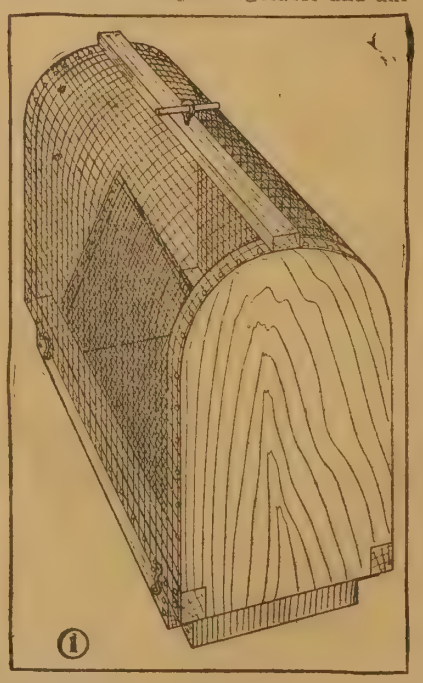
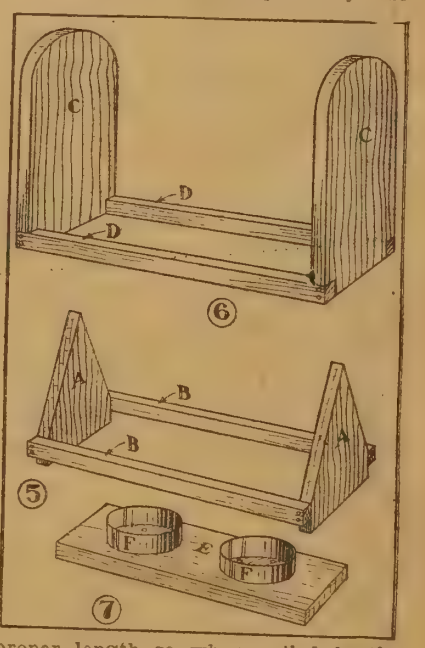
# Handicraft For Boys



By A. Neely Hall

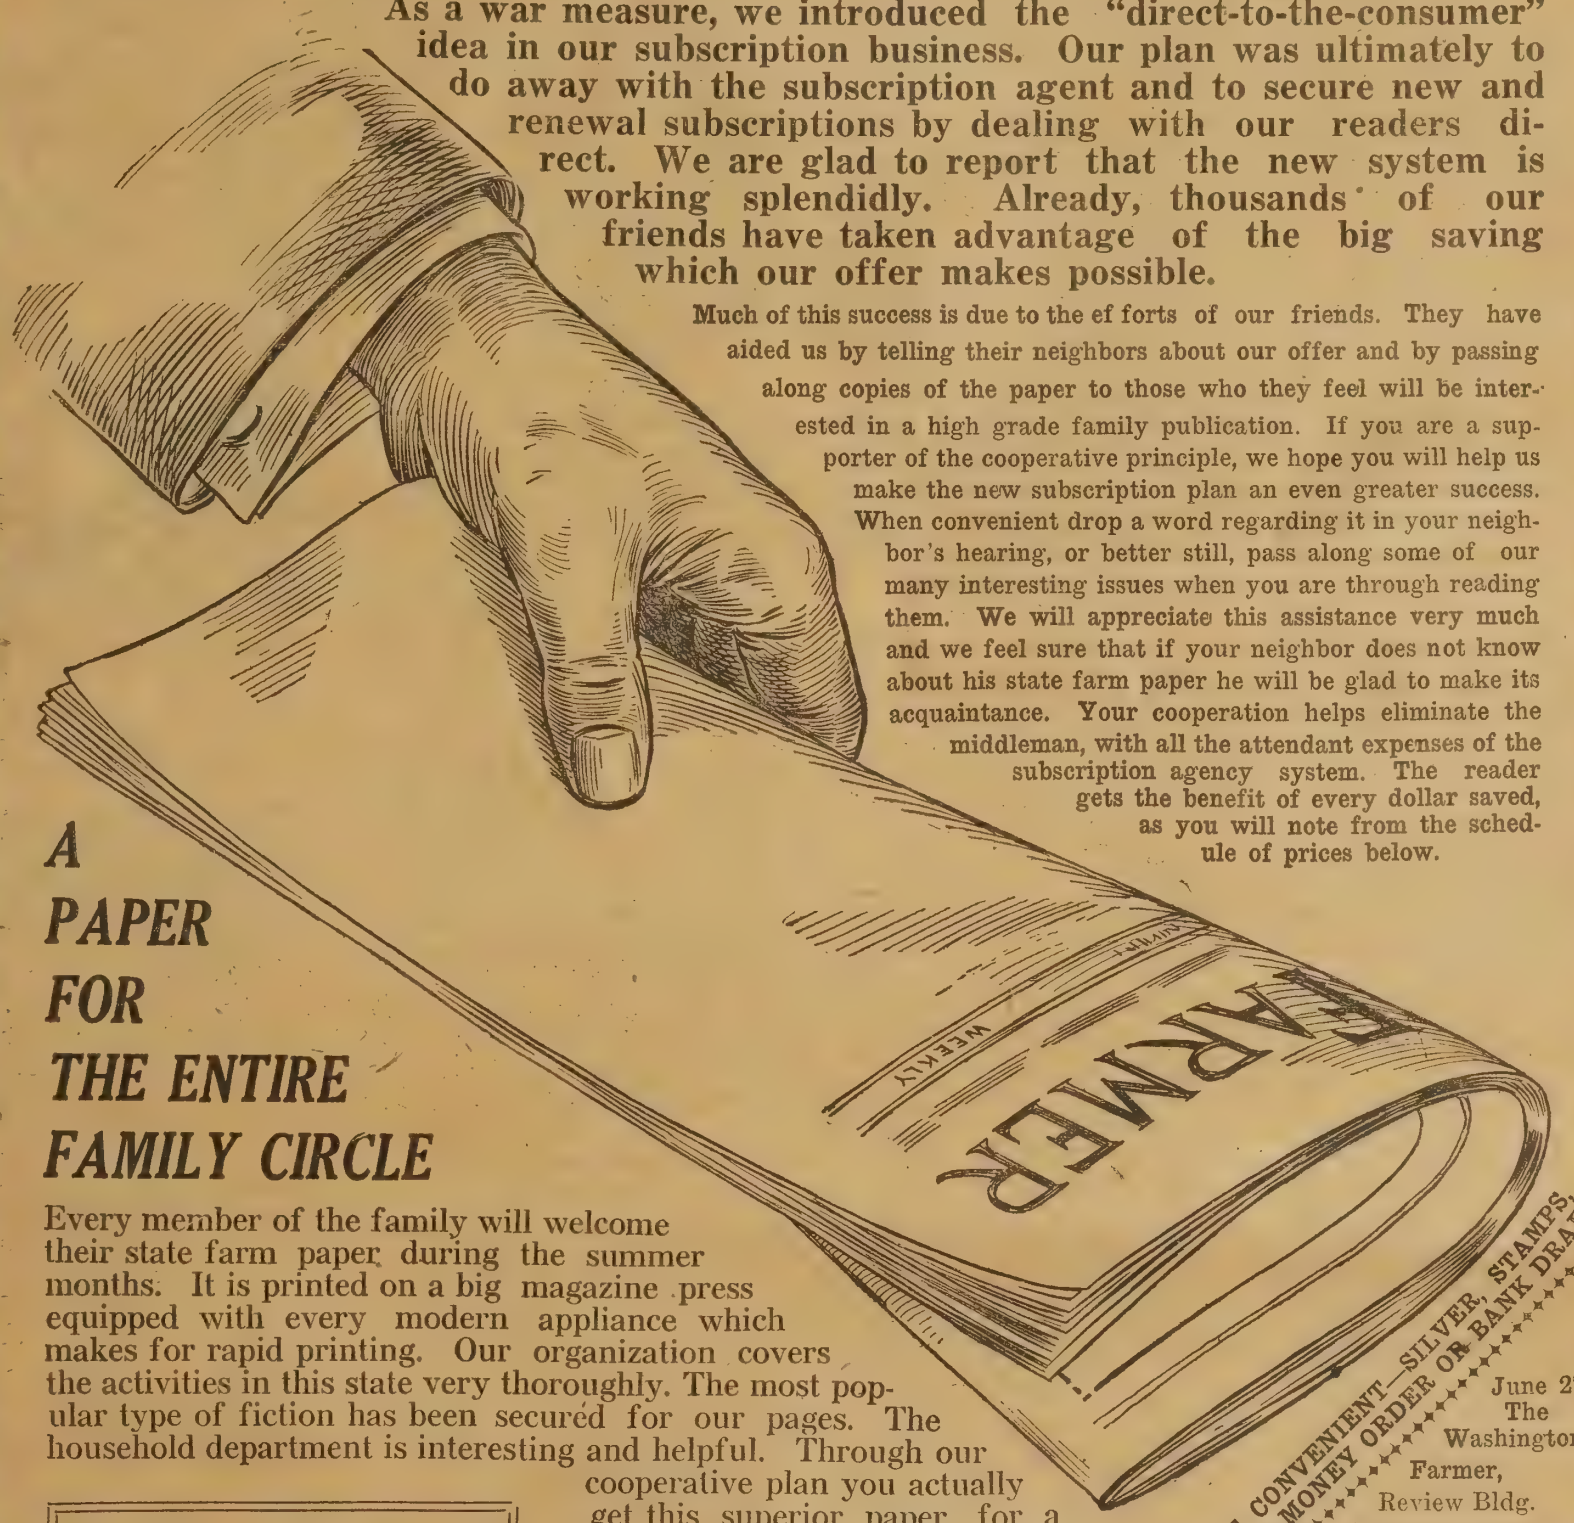
(Copyright by A. Neely Hall.)

## A Homemade Fly Trap.



Have you ever realized that flies are really a safety guard, in so far as they warn us of unsanitary conditions? I don't mean to infer that we are lucky to have them around, but, because flies breed in filth—garbage, stable refuse and decayed vegetable and animal matter, strewn about alleys and lots, or left exposed in uncovered receptacles, their very existence points to neglected cleanup work which should be given our immediate attention to prevent the spread of disease germs. Remove these possibilities for breeding, and then, by swatting and trapping, the flies in a neighborhood can be reduced to a minimum. You boys can help in a big way. See to the removal or covering of breeding material, and then swat! swat! swat! indoors and out, and make and set several fly traps like that shown in figure 1—a most excellent form of trap easily made. Figure 2 shows by arrows how the fly, attracted by the bait, enters one of the side bottom openings, and reaches the bait pan F; then how after leaving the bait pan it rises in the wedge-shaped inner wire enclosure, and passes through a quarter-inch opening into the larger enclosure, where it becomes trapped. Once in, there is little likelihood of its finding the way out. The flies are killed by immersing the trap in hot water; then the inner part is separated from the outer enclosure, for cleaning.

First prepare the two end pieces of the inner enclosure (A, figures 3 and 5); then cut the side strips B one inch square by 16 inches long, and nail to ends A at the point where the edges start to slant. Tack a piece of screen wire to each side of the frame, with the edges at the peak exactly one-quarter inch apart.



The outer enclosure requires two end pieces (C, figures 4 and 6), two side strips (D) one inch square by the proper length so when nailed in the notches in end pieces C there will be just enough space between ends C for the inner part of the trap to slip between. Cover the sides and top with screen wire. The baitpan base (E, figures 2 and 7) should be five inches wide and just long enough to fit between ends A. Tack two can covers to the center for bait pans. Figure 2 shows how the baitpan base should be placed so there will not be more than a half-inch opening between its side edges and the edges of side strips B, for the flies to enter through. The base need not be fastened to the upper part, but the two enclosures should hook together so they will not separate when removed for killing the flies. Figure 1 shows how to attach small hooks.

Nail a crosspiece (G, figure 2) across the tops of ends C to brace them and keep the screen wire taut, and make a handle of a screweye (H) with a peg (I) run through it.

# LET SOMEONE ELSE ENJOY IT

*SCORES OF OUR FRIENDS ACTED ON OUR SUGGESTION TO PASS THEIR PAPER ON TO A NEIGHBOR WHEN THROUGH READING IT. WE TRUST THAT MANY MORE WILL DO THE SAME WITH THIS ISSUE; AND CALL ATTENTION TO OUR MONEY-SAVING OFFER*

**As a war measure, we introduced the "direct-to-the-consumer" idea in our subscription business. Our plan was ultimately to do away with the subscription agent and to secure new and renewal subscriptions by dealing with our readers direct. We are glad to report that the new system is working splendidly. Already, thousands of our friends have taken advantage of the big saving which our offer makes possible.**

Much of this success is due to the ef forts of our friends. They have aided us by telling their neighbors about our offer and by passing along copies of the paper to those who they feel will be interested in a high grade family publication. If you are a supporter of the cooperative principle, we hope you will help us make the new subscription plan an even greater success. When convenient drop a word regarding it in your neighbor's hearing, or better still, pass along some of our many interesting issues when you are through reading them. We will appreciate this assistance very much and we feel sure that if your neighbor does not know about his state farm paper he will be glad to make its acquaintance. Your cooperation helps eliminate the middleman, with all the attendant expenses of the subscription agency system. The reader gets the benefit of every dollar saved, as you will note from the schedule of prices below.

## *A PAPER FOR THE ENTIRE FAMILY CIRCLE*

Every member of the family will welcome their state farm paper during the summer months. It is printed on a big magazine press equipped with every modern appliance which makes for rapid printing. Our organization covers the activities in this state very thoroughly. The most popular type of fiction has been secured for our pages. The household department is interesting and helpful. Through our cooperative plan you actually get this superior paper for a mere fraction of what it has cost in the past.

## A Real Saving

*Following Rates Now in Effect for Subscription to The Washington Farmer*

**25c** *FOR ONE YEAR*

**50c** *FOR THREE YEARS*

**$1** *FOR FIVE YEARS*

## *Act Now!*

YOUR REMITTANCE MAY BE IN ANY FORM MOST CONVENIENT—SILVER, STAMPS, PERSONAL CHECK, POSTAL MONEY ORDER, EXPRESS MONEY ORDER OR BANK DRAFT

June 27.

The Washington Farmer,
Review Bldg.
Spokane, Wash.

I desire to take advantage of your plan to deal direct with your readers in securing and renewing subscription, thus saving the middleman's cost and releasing men for productive labor.

Enclosed is $..... for ..... years' subscription.

**In Canada add 1 cent per copy for extra postage.**

If you are already paid in advance your subscription will be set forward from the date to which you are paid.

# What Is Northwest Grain Condition?

(Continued from page three.)

ter wheat in this section; it is heading out; the stand is poor, and 15 to 20 bushels yield is the most that could be expected.—W. J. SUTTON.

**Frosts Have Done Damage.**

ENTERPRISE, Ore., June 23.—(Special to The Farmer.)—Fall grain is burning badly in sections in all our county. On deep soil on northern slopes prospects are good for 18 bushels without rain; grain on shallow soil will be a failure unless rain falls immediately. Prospects now indicate that over half of normal crops will be produced over the county with no rain. Fall grain is three weeks earlier than last year, and is now heading. Spring grain is somewhat backward and is not badly hurt by drouth yet, but has been delayed and injured by frost and cold weather, the stand being poor. Rain is falling over sections of the county this morning. Aphis is doing damage in few sections. —MAC HOKE, County Agent.

**Will Need Federal Aid.**

WATERVILLE, Wash. June 22.—(Special to The Farmer.)—Douglas county has about 190,000 acres in spring wheat and about 5000 acres of winter wheat and 20,000 acres of oats and barley. In central parts and on east side of the county spring wheat will make from two to 10 bushels. Along the breaks of the Columbia river and inland 10 miles the prospect is for 12 to 20 bushels. Barley and oats are light crops. All the straw is very short. Rain within five days may help these figures. Without rain they will be reduced. Many dry farming districts will need federal or state aid for seed and feed.—A. L. ROGERS.

**Two-thirds of a Crop.**

PENDLETON, Ore., June 23.—(Special to The Farmer.)—Crop yield difficult to estimate. Local showers Saturday did some good. Early spring prospects were excellent. Then followed extremely long dry spell through April, May and two-thirds of June. Crops have suffered greatly. Some fields too far gone to be benefited by yesterday's shower. I would estimate county as a whole about two-thirds of a normal crop. Harvest will be a little earlier than normal on account of the drouth.—M. S. SCHROCK, County Agent.

**Spring Wheat Almost Fails.**

WALLA WALLA, Wash., June 22.—(Special to The Farmer.)—The wheat harvest will start next week around Lowden, Touchet, Prescott and some parts of Eureka flat; the bulk of the harvest will start the following week. Present indications point to a 50 per cent wheat crop and a 10 per cent oats and barley crop. The damage in barley and oats is due to aphis and drouth. Fall wheat in general looks good. Spring wheat without a rain will be a practical failure in some localities.—H. H. BOONE, County Agriculturist.

**Grain Well Advanced.**

LA CROSSE, Wash., June 22.—(Special to The Farmer.)—The weather up to noon today has been severe, and the damage to grain considerable. Tonight prospects are for rain and considerably cooler. If rain comes and favorable weather follows about 65 per cent of a normal crop should be harvested. If severe weather continues only about 30 per cent to 35 per cent of a normal crop can be expected. The acreage is large, and most of the fields are well advanced.—IRA M. CAMP.

**Aphis Does Damage.**

DAYTON, Wash., June 22.—(Special to The Farmer.)—Barley on summer fallow land will be half a crop; on stubble an absolute failure. Fall wheat is very good on light lands. On heavy lands nearer the mountains the green aphis has hurt the grain badly, especially spring sowing. Rain will greatly improve conditions of the wheat crop, but can not help the barley or oats. Conservative estimates put the barley crop at 30 per cent of last year and wheat as good as last year. All signs indicate rain tonight.—J. L. DUMAS.

**Late Wheat Badly Hurt.**

COLFAX, Wash., June 22.—(Special to The Farmer.)—Winter wheat today stands at about 60 per cent normal. Early seeded spring wheat is not injured materially, and with rain occurring within the week will yield 80 per cent of normal. The late seeded wheat, oats and barley have been injured approximately 50 per cent. Aphis has done some damage in these latter, but the ladybug is gaining control. Peas are fair, and indications are that the yield will be good.—F. L. KENNARD.

**Poorer Than Last Year.**

DAVENPORT, Wash., June 22—(Special to The Farmer).—Drouth continues. Winter wheat heads little shown. Spring wheat in boot. Hundreds of acres will not be cut without rain. With rain in 10 days spring grain should make from 10 to 15 bushels. Poorer prospects than this time last year.—ALMER McCURTAIN.

**Yields Are Doubtful.**

EPHRATA, Wash., June 22—(Special to The Farmer).—Very poor crop. Will be very light unless rain soon. In southern part of county large percentage will not pay to harvest under present conditions. Rain would cause grain to fill, but would not increase height. In northern part rain would double yield. Probable yields are from nothing to 15 bushels—H. R. VERCLER.

**Depends on Future Weather.**

RITZVILLE, Wash., June 22—(Special to The Farmer).—Early Baart wheat is headed out and very short, less than knee high. Heads are short, but setting three kernels to the mesh. With reasonable weather will make a possible half crop. Bluestem 10 days later and not as good as Early Baart. All spring wheat in this section, and better than 75 per cent of acreage of Early Baart, straw being short, will make a light hay crop. Grain is well rooted, but suffering from lack of rain and hot weather. Quality of grain depends on future weather. Light shower of rain this evening.—D. A. SCOTT.

**Three-Fourths Normal.**

PENDLETON, Ore., June 22.—(Special to The Farmer).—Have just returned from a meeting of the stockholders of the Tri-State Terminal company in Seattle, and am convinced that the crop outlook indicates three-fourths of normal. Reports show that the damage is from drouth and frost. The outlook is worse than at this time last year. New acreage is nil because crop on this land is failure from drouth. There were 100 out of 2800 stockholders from the three states present at the terminal company meeting. Dividends were paid in war savings stamps. Consumers and producers should both oppose resumption of speculation in wheat during the war, a tentative promise being given for resumption if sufficient wheat for allies and home consumption is produced. The consumer is the chief sufferer as the producer is guaranteed a fixed price.—W. W. HARRAH.

**Small Acreage in Winter Wheat.**

BELMONT, Wash., June 22.—(Special to The Farmer.)—There is the smallest acreage of winter wheat in this vicinity in years. Twelve hundred acres will yield about 20 bushels per acre. Conditions of spring wheat is 60 per cent normal; oats 50 per cent; barley complete failure. Rain in 10 days may increase spring wheat somewhat. With no rain spring grain will be almost a total failure, as it is beginning to head three to five inches in height. Peas are standing the hot weather in good shape.—ROBERT THOM.

**Frosts Have Done Damage.**

ENTERPRISE, Ore., June 23—(Special to The Farmer).—Fall grain is burning badly in sections in all our county. On deep soil on northern slope prospects are good for 18 bushels without rain; grain on shallow soil will be a failure unless rain falls immediately. Prospects now indicate that over half of normal crops will be produced over the county with no rain. Fall grain is three weeks earlier than last year and is now heading. Spring grain is somewhat backward and is not badly hurt by drouth yet, but has been delayed and injured by frost and cold weather, the stand being poor. Rain is falling over sections of the county this morning. Aphis is doing damage in few sections.—MAC HOKE, County Agent.

**Cool Weather Has Helped.**

LEWISTOWN, Mont., June 22—(Special to The Farmer).—There was rain early in the week practically over the entire county, and the cooler weather has improved crop conditions materially. With more rain during the next 10 days spring crops will be normal and better in southern half of the county. With copious rains the north side should show up well. Winter wheat on fallow or well prepared land is showing up well. Stubble grain needs rain. The rye crop is excellent. Condition of corn is about normal. In general the season is advanced three weeks. Alfalfa is on in the eastern districts. Farmers are well up with their work, and the labor supply is ample for the present.—CARL H. PETERSON, County Agent.

## Save! Invest!

### War Stamps Afford Opportunity

One of two things must come about: American thrift or German victory.

Thrift and saving is a big thing for the American people to learn in a day. Germany has been learning it always. If Germany had been a wasteful, luxury loving nation like America, she would have been defeated months ago. Her thrift and saving and frugality alone have enabled her to all but conquer the world. Practice of the same virtues, though hastily acquired, alone can, even now, save the world from her domination.

Tomorrow, June 28, ends the great, nation-wide savings campaign in which the people of the country have been asked to pledge to buy $2,000,000,000 worth of war savings stamps during the present year. Reports from many districts representative of the nation indicate that the campaign has been successful.

Buying savings stamps is not like contributing money to a purpose. It is not giving something away, though the cause is one worthy of the utmost giving. It is, rather, the investing of money in the best security of the best nation in the world. One stamp bought in June costs $4.17. On January 1, 1923, it will return to the owner an even $5. That means interest at the rate of 4 per cent compounded quarterly. The cost and the value of a war savings stamp increases one cent a month.

While it is desirable that those who can hold their stamps for the full five-year period, there is the other commendable feature that if the time comes when the money is needed it may be withdrawn, with interest at 3 per cent from the date of investment.

In the words of President Wilson, let no one be unenlisted in the country's service through war stamp saving when the sun sets June 28. But if there are those so unenlisted, let not another sun descend until the regular purchase of war savings stamps is pledged.

## Stock Brings Half Price

The Shorthorn sale held at Spokane last week by Day & Rothrock of Sprague, Wash., Joe Turner of Meyers Falls, Wash., and A. D. Dunn of Wapato, Wash., was not a success from all points of view. The consignors stated after the sale that the animals brought in a general way about half what animals of like breeding and quality have been selling for at the ranches this season at private sale. R. A. Balch, assistant sales manager of Day & Rothrock, said that there was at least one good feature of the sale in addition to the distribution of a number of good breeding stock among the farmers and smaller breeders, and that was that the sale proved that the Shorthorn breeders meant it when they said their sales would be open and above board and that the stock would sell exactly as advertised.

Of the 34 animals sold the top price of the sale was received for Tressa 38905, a cow consigned by Joe Turner. She brought $345 with a six-months old calf at foot. She was purchased by F. M. Rothrock for George Harding of Springdale, Wash. A few head sold for $100, but this was the lowest figure of the sale. Other prices ranged from $100 to a little over $200.

Johnson-Lemmon of Garfield, Wash., purchased 10 young bulls and E. W. Haag of Sandpoint, Idaho, purchased five head.

### Coming Events.

June 28-29—Convention Lincoln County Farmers' union, Odessa, Wash.
June 28-29—Dairy institute, Wenatchee, Wash.
August 19-25—Convention National G. A. R., Portland, Ore.

**Fairs, Shows, Exhibits.**

September 2-7—Spokane Interstate fair, Spokane, Wash.
September 16-21—Washington State fair, Yakima, Wash.
September 19-21—Roundup, Pendleton, Ore.
October 1-6—Western Washington fair, Puyallup, Wash.
November 7-13—Northwest live stock show, Lewiston, Idaho.

## FARM SERVICE WAR FLAG

A Flag for Every Farm Home in the Northwest

An Extra Small Star for Each Farm Worker

(Patent applied for.)

**Designed by The Washington Farmer in connection with The Oregon Farmer and The Idaho Farmer for the farm and farm home that is increasing food production in helping to win the war.**

**OFFER NO. 1.**

A farm service war flag, 9x22, printed on heavy enamel paper, in full colors, will be postpaid to any one securing and sending in ONE NEW subscription to this paper. (One year 25c, three years 50c, five years $1.00.)

# NEWS FOR BREEDERS

## Makes Friends With the Live Stock

The young lady shown in the accompanying photograph is the little daughter of Charles Bull of Mabton, Wash. The Herefords show are registered yearling bulls bred and raised by Mr. Bull, who has an excellent herd of his favorite breed. They are perfectly gentle and the little girls find it much sport to ride them in the lot.

Mr. Bull's herd sire, Menlo 465841, is a grandsire of Disturber on the sire's side, through Distinction, with Bean Brummel on the dam's side. Anxiety 4th, Don Carlos and other great bulls appear in the pedigree also. Mr. Bull now has a herd of about 70 registered Herefords. Among recent sales are one to Thomas E. Jones of Ellensburg, Wash., two to J. B. Hosfelt of Bickleton, Wash., and one to Charles Tallman of Slipps. Mr. Bull also has a few good Berkshires. His herd boar, Kintyre's Fashion, goes back to old Premier Longfellow.

H. A.

### Duroc-Jersey Association.

Volume 55 of the National Duroc-Jersey Swine Record association contains the pedigrees of males from No. 227501 to No. 235999, inclusive, and of females from No. 572000 to No. 591998. It also contains minutes of the meetings of the board of directors during the year 1917, as well as the meetings of the stockholders. In 1916 the association erected a building of its own in Peoria, Ill., which, with the lot, cost $55,000, not taking into account office furniture and fixtures and the equipment of the assembly room on the third floor. At the beginning of the year 1917, the board of directors decided to extend their breed promotion work by employing a field secretary, who has devoted his time to acquainting farmers and hog growers with the facts concerning the Duroc-Jerseys. The secretary reports that the calls made upon this field secretary for information have been enormous. This association is now declared to be the largest swine record association in the world, having over 6600 members.

### Horses May Be Drafted.

Here is a suggestion by Wayne Dinsmore, secretary of the Percheron Society of America:

It must also be remembered that the government has power to draft horses into service, as they have already drafted men, and there is no question but that, if the need arises, all horses of suitable ages and types will be commandeered as they were in Great Britain and France, leaving for farm work only the young, the old and the unfit. When that time comes, and it may be nearer than many imagine, the man with mares and young stock coming on will suffer but little, while the man who says, "I can buy them cheaper than I can raise them," and who has only geldings and mules of full working age on hand will find himself stripped of work animals and forced to buy such makeshifts as he can.

Among the notable Jersey sales this year is that of T. S. Cooper & Sons' "Linden Grove sale" May 30. The Cooper Decoration day sale is an annual event and more high priced, imported Jerseys have passed through the sale ring there than anywhere else in this country. This year, while prices were not quite up to the sensational values received at the Butler & Hood farm sales, the average was $632, with top price of $2700 paid for Pretty Jersey Belle by White Horse farms, so it will be seen that values ran consistently high. Five Texas breeders bought cattle, but there were none from the Pacific northwest.

F. M. Svinth, proprietor of Shady Grove farm, Chehalis, Wash., reports that his Holstein heifer, Lorinda Palmyra of Shady Grove, was recently put on a seven days' official test and produced 14,313 pounds of fat or 17.76 pounds of butter from 406.4 pounds of milk. There was some delay in securing a tester or an even better record would have been made. This is the second heifer by Mr. Svinth's herd bull, Hollywood Receba Palmyra, that has freshened and he is much pleased with the showing made. She was two years, six months and 19 days old when the test was started. Her dam, Queen Lorinda, at five years and six months, produced 19.97 pounds of butter from 507.1 pounds of milk, and in 365 days 639.15 pounds of butter and 15,539 pounds of milk. Mr. Svinth has other cows with good seven-day and full year records and will in time have the entire herd officially tested.

D. C. Bunn, proprietor of Riverly Farm Berkshires, Prosser, Wash., recently sold the young boar, Beauty's Prince 9th to Z. L. Williams of Columbia, S. C., so that Mr. Bunn is now in the ranks of western breeders who have supplied breeding stock to the east. Mr. Bunn will not show this season, both on account of shortage of help and because the older classifications are eliminated. But he reports the finest lot of pigs he has ever had.

## DUROC-JERSEY SWINE

**DUROC SOWS FOR SALE.**
A few choice Durec gilts, bred to farrow early next May, daughters of grand champion Richards Defender and bred to Junior Champion Richards Pathfinder. No better breeding east or west. Also a few good boars ready for service. Price very reasonable. We furnish pedigree and guarantee satisfaction, or will refund your money and pay express both ways.
**RICHARDS LIVE STOCK CO., Virginia, Ida.**
Home of the Champion Durocs.

**REGISTERED DUROC-JERSEY HOGS.**
Some good spring litters Richards Defender and Pathfinder breeding; big type. Send out nothing but high class stock. Guaranteed to please. Write me for prices on these pigs.
**ERIK W. OLSON, Virginia, Idaho.**

**OTTO'S DUROC JERSEYS.**
Get in line for a real boar pig for Sept. delivery. Also gilts and sows bred and open. The kind that is up to date.
**L. S. OTTO, Filer, Idaho.**

**AVONDALE STOCK FARM.**
Registered Duroc-Jersey hogs. Inspection invited. Correspondence solicited.
**H. C. POLLY. Route 2, Burley, Idaho.**

**DUROCS.**
Boars and open or bred gilts of excellent breeding.
E. E. PRICE, CABINET, IDAHO, OR
**JAMES N. PRICE. Yakima, Wash.**

## POLAND CHINA SWINE

### Big Type Poland Chinas

Peter Mouw and John B. Lawsen strains. Young boars and bred or open gilts. Good individuals.

**CLIFFORD RIGGS. Touchet, Wash.**

**GREENLEAF STOCK RANCH.**
Big type Poland China, either sex, for sale at all times.
**Wilson Bros., A. L. Wilson, Mgr.**
Greenleaf, Idaho.

**BIG TYPE POLAND CHINAS.**
Herd headed by Sammy (79833).
Correspondence Solicited.
**Fruitland Stock Farm, C. Royston, Mgr.**
Payette or Fruitland, Idaho.

## TAMWORTH SWINE

**ROUND KNOLL RANCH NO. 3.**
Herd headed by Knoll Slope Colonel, assisted by Jolly Lad IV. Correspondence solicited.
**Bliss, Idaho.**

## SHROPSHIRE SHEEP

### Shropshire and Hampshire Rams

Registered stock. Spring lambs and yearlings. No ewes for sale.
**GRANT B. DIMMICK, Oregon City, Ore.**

# Breeders' Department

## JERSEY CATTLE

### Foundation Herd of Jerseys

To reduce our herd to a size proportionate to the available labor supply we make the following offerings: First of all the great Tennessee cow,

**Moyane Monine,** 803 lbs. butter, 10,406 lbs. milk in one year. Also
**Creole Bess,** 684 lbs. butter, 12,363 lbs. milk.
**Stockwell's Dahlia,** 619 lbs. butter, 8890 lbs. milk.
**Lucy's Convent Lassie,** 484 lbs. butter, 7568 lbs. milk.
**Princess of the West,** 477 lbs. butter, 6996 lbs. milk in 341 days.
**Pearl of Riga,** 458 lbs. butter, 7489 lbs. milk in 297 days.
**Diamond of Fair Acres,** now on test, milking 59 lbs. a day, as junior 3-year-old.
**One heavy producing** untested cow and one 2-year-old heifer.
(All butter regular Jersey standard, 85 per cent.)

This includes all our American bred cows and three choice imported cows, including the many times grand champion, Stockwell's Dahlia.

Free from abortion and will furnish certificate of health from federal veterinarian.

Prices, pedigrees and photos on request.

**J. B. STUMP & SON, Monmouth, Ore.**

### High Producing Jersey Stock

**Golden Maid's Prince,** sire of three Register of Merit daughters. One, beginning at 1 year 10 months, produced 341.27 pounds 85 per cent butter in one year; two junior yearlings, 480.40 and 450.08 pounds. Five more, over six months on test, will average over 600 pounds. He was grand champion Oregon State fair, 1913.

**Monmouth Noble**—4 Register of Merit daughters. Three 2-year-olds produced 482.10, 401.30 and 377.07 pounds butter, and one, beginning at 1 year 10 months, 427 pounds.

**ABOUT 25 HEIFERS**

From 8 months to 2 years old. Several to freshen this fall. All daughters of above bulls and nearly all out of Register of Merit cows. Heifers are well grown, typy, best of udders and some are extra fine show animals. Write for full particulars or call and see them. Will be sold very reasonably.

**WM. SCHULMERICK, Hillsboro, Ore.**

## SHORTHORN CATTLE

### Herds Bulls

**Imported Doune Radiance No. 609412**
and
**Gainford Perfection No. 442173.**

### Hercules Shorthorns

We can supply you with choice, well grown bulls and females of breeding age. Your inspection of our herd is invited. Visitors always welcome.

**Day & Rothrock Company**
**205 Exchange Bank Bldg. Spokane, Wash.**

### LELAND BROTHERS

Breeders of top registered Shorthorn cattle. Correspondence solicited.
**WENDELL, Idaho.**

**REGISTERED SHORTHORN COWS.**
Young bulls and heifers, sired by Scotch bulls; liberal terms.
**CALDWELL CATTLE CO., Caldwell, Idaho.**

### Firlawn Shorthorn Farm

UNION, ORE.
We offer a young herd bull (registered), ready for service in four months, and 7 yearling heifers, all of imported Scotch blood. Bull and heifers unrelated. Prices reasonable. Write us and come to the Union Stock Show.
**SHERMAN & HUTCHINSON,**
Union, Ore.

## GUERNSEY CATTLE

### ROSE CITY HERD

Yeksa, Gov. of the Chene, Sequel and May Rose strains. More prizes at Oregon state fair, 1916 and 1917, than any other exhibitor for number of cattle shown. A few choice animals of both sexes now offered.

**W. A. GOODIN, Cornelius, Oregon.**

## HOLSTEIN CATTLE

### 365-DAY HOLSTEINS

24,667 lbs. milk—1026 lbs. butter—is the S. O. advance registry, yearly, record of the dam of the yearling bull we are offering for sale. Fine individual. Good breeding. Ready for service.

THE HERD WITH YEARLY RECORDS.
**WESTERNWOLD RANCH, Prineville, Ore.**

### Registered Holsteins

Finely bred bull calves for sale at prices that are an inducement for you to finish raising them.
**H. R. BOOMER. New Plymouth, Idaho.**

### HOLSTEINS

Well-bred young bulls for sale.
**THOS. CARMICHAEL. Gaston, Ore.**

**REGISTERED HOLSTEINS.**
Bull calves for sale, with good A. R. O. backing.
**BEEBE BROS., R. F. D. 2, Rupert, Idaho.**

## ABERDEEN ANGUS

### Aberdeen Angus Cattle

**A. H. EAGLESON & SONS.**
Boise, Idaho.

## BERKSHIRE SWINE

### Riverby Orchard Berkshires

Riverby Orchard Berkshires won 12 out of 15 first prizes at the Washington state fair, 1916, also many prizes, including grand champion sow at the Panama-Pacific world's fair. We offer for sale a few good boars and young sows.

**D. C. BUNN, Prosser, Wash.**

## HAMPSHIRE SWINE

**REGISTERED HAMPSHIRE HOGS.**
Growthy and vigorous; great rustlers. Pigs from January and February litters, also other ages. Correspondence invited.
**TUTTLE BROS., Asotin, Wash.**

## HEREFORD CATTLE

### Highland Stock Farm

offers for sale Hereford bulls, 1 or 2 years old. One or a carload.
**PLATT BROS. Genesee, Idaho.**

## AYRSHIRE CATTLE

### Edgewater Farm

Government accredited herd, headed by Peter Pan 63d. Bull calves available.
**ELBERT M. CHANDLER, Burbank, Wash.**

**In writing advertisers, be sure to say that you saw their advertisement in this paper.**

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, June 22.—Corn prices averaged lower today, influenced by excellent crop conditions and the effectual breaking of the hot wave. The market, however, closed unsettled, $1.44 to $1.44 1-8 July and $1.46 1-2 August—1-4c off to 3-8c up compared with 24 hours before. Oats finished 1-8c to 1c down, and provisions varying from 2c decline to 7c advance.

Week-end adjustment of trades rallied the corn market sharply in the last hour, but otherwise the bears seemed to possess almost entire control. The market was eased by news that rain had fallen where most desired. Would-be purchasers were rendered still more cautious by anxiety to avoid any infraction of the latest government rulings against unlicensed holdings.

Short sales weakened oats. Besides crop and weather conditions were favorable and exporters were out of the market.

Provisions declined with grain and hogs, but later rallied, owing to covering by shorts. Trade was light, and in pork had next to no volume.

**Cash Quotations.**

CHICAGO, June 22.—Corn, No. 2 yellow, nominal; No. 3 yellow, nominal; No. 4 yellow, $1.45@1.52. Oats, No. 3 white, 78¼@79c; standard, 78¼@79½c. Rye, nominal. Barley, $1@1.25. Timothy, $5@7.50. Clover, nominal. Pork, nominal; lard, $24.97; ribs, $22.25@23.

Sheep—50c to $1 lower—Receipts, 142. East of mountain lambs, $14@14.50; valley lambs, $12.50@13; yearlings, $7.50@8; wethers, $7@7.50; ewes, $5@7.

**Spokane Stock Yards Saturday.**

HOGS—Receipts none, market steady. Prime light, $16.35@16.50; prime heavy, $16.20@16.35; Rough heavy, $15.20@15.50; pigs, $15.25@15.60; stockers and feeders, $14.25@15.50.

CATTLE—Receipts 38, market steady. Prime steers, $12.50@13.25; good to choice steers, $11@12; medium to good steers, $9.50@10.25; fair to medium steers, $8.50@9.50; common to fair steers, $6.25@8.25; choice cows and heifers, $9.25@10.25; good cows and heifers, $7.50@8.50; medium to good cows and heifers, $6.25@7.25; fair to medium cows and heifers, $5.50@6.25; canners, $3@5; bulls, $6@9; calves, $7.50@10.50; stockers and feeders, $6.50@9.

SHEEP—Receipts none, market unsettled. Prime lambs, $14@14.50; good lambs, $12.50@13; prime yearlings, $7.75@8.25; prime wethers, $7.25@7.75; best mutton ewes, $5@8.

## Portland Market.

PORTLAND, Ore., June 22.—A stronger demand for cube butter for storing, a decrease in production owing to the drying up of pastures and higher markets in the south, lead to an all around advance in the local market. Cube extras sold at 44 1-2 cents and prime firsts at 43 1-2 cents. Print prices were advanced 4 cents to 48@49 cents. The buying price of butter fat was also raised 4 cents.

Half a dozen cars of eastern eggs arrived in the last week and that unsettled the market for Oregon ranch.

Poultry has been in small supply for a week and prices are on a stronger basis. Trade in dressed meats is of light volume.

The strawberry season is nearly ended locally. The demand is still good and prices range from $3 to $3.25. Cherries are very plentiful and cheaper at 4@15 cents, according to variety.

New clip wool is coming in in large volume. The valuation and distribution of the clip will begin about July 1.

Butter—Cubes, extra, 44 1-2c; prime firsts, 43 1-2c; prints, extras, 48c; cartons, 1c extra; butterfat, No. 1, 47c delivered.

Eggs—Oregon ranch current receipts, 38c; candled, 50c; selects, 42c per dozen.

Cheese—Jobbers' buying prices, f. o. b. dock, Portland; Tillamook, triplets, 23 1-2c; Young Americas, 24 1-2c per pound; Coos and Curry, f. o. b. Myrtle Point; Triplets, 23c; longhorn, 24c per pound; 1-4c discount to Portland trade.

Poultry—Hens, 24@25c; broilers, 30@32c; ducks nominal; geese nominal; turkeys nominal.

Veal—Fancy, 15 1-2c per pound.

Potatoes—Oregon, Burbank, $1.25@1.50 per hundred; new California, 3@3 1-2c per pound.

Hay—Buying prices, f. o. b. Portland; eastern Oregon timothy, $32@33 per ton; valley timothy, $27@28; alfalfa, $21@24.50; valley, grain hay, $24@26; clover, $21; straw, $9@10.

## Seattle Market.

SEATTLE, June 22.—Surprised by the increase in production of cherries over their former estimates, Western avenue jobbers began cutting prices on cherries today to 15@20c for Wenatchee Bings and 12 1-2c for pie stock. Damage from frost and cold at Wenatchee is not as heavy as reported, and wholesalers asserted that to base a strong market on that report any longer would interfere with the movement and the daily cleanup requisite for so perishable a commodity. Royal Anns are moving close to the Bing market. A small shipment of early Lamberts from eastern Washington was cleaned up at 22 1-2c.

With a stronger market for strawberries and gradual decrease in production, consignments have fallen off and activity of canners in the field has compelled jobbers to get into the patches and bid $2.75 cash for the fruit. A brisk demand from consumers for domestic canning has sprung up, but all who buy now will pay 50@75c higher than prevailed a week ago. Clark Seedlings are very scarce and are moving at $3@3.25. Marshalls easily bring $3, so that buyers are not so particular as formerly as to the durability of the berry they take over.

There has been a slight increase in the demand for old potatoes. Yakima Gems in storage sell "as is" at $20@26, but reconditioning, with shrinkage off and costs of new bags runs up the sack basis wholesale to $30@32. First Kennewick new spuds will be due about July 1, according to crop reports received here. If opening prices exceed 2@3c per pound here, jobbers declare, the business will go to Californias. More brokers are handling spuds this year than ever before, their number exceeding the commission houses on the street.

Eastern Washington and Idaho eggs are arriving with heavy shrinkage and rot spots and jobbers are bidding the market down to 37c, against 40@42c for locals, in order to check the flow. Buyers will not look at them at 39c despite the high levels of fresh hennery stock of 47c.

The advance for the midweek of 4c in butter did not, as hoped, produce any increase in the offerings from country creameries or outside markets and there was no visible evidence further than a sharp lift in the demand, that ordinary pressure which make for increased arrivals had been exerted.

Prices paid by wholesalers to producers:

Eggs—Select ranch, 40@42c per dozen; Oregon, eastern Washington and Idaho, 30c per dozen.

Butter—Fresh dairy, 30c per lb; butterfat, 50c per lb; raw milk, $2.15 per cwt.

Poultry—Broilers, live, 1918, 30c per lb; hens, 24@26c per lb; spring roosters, live, fat, 2½ to 5 lbs., 27c per lb; old roosters, 17@20c per lb; ducks, live, fat, 25c per lb; squabs, large, $3.50 per dozen; geese, fat, live, 23c per lb; Belgian hares, 19c per lb; guineas, $7 per dozen; turkeys, young toms and hens, dry picked, 10 lbs; and up, 30@33c per lb; smaller birds, 24@30c per lb.

**City Prices.**

Hay and feed quotations, city prices, truckload delivery, are as follows:

Feed—Bran, $34 per ton; shorts, $35.50; scratch feed, $77; all-grain chop, $71; oats, $68; sprouting oats, $78; rolled oats, $69; whole corn, $75; cracked corn, $77; rolled barley, $67; clipped barley, $69; alfalfa meal, $36; oil meal, $70; egg mash, $62.

Hay—Eastern Washington timothy, $34 per ton; do double compressed, $37@38; alfalfa, $26; Puget sound, $26@27; straw, $15.

## Portland Wheat.

PORTLAND, Ore., June 22.—The coarse grain markets closed generally steady and very quiet. A little business was reported in barley in the open market, but there was no interest in oats or corn. At the exchange $52 was bid for brewing and $50 for feed barley. Sacked oats held at $59.50 and eastern bulk oats at $54@54.50. Bulk corn bids were $61 on mixed and $63.50 on yellow.

## Butter and Eggs.

PORTLAND, Ore., June 22.—Butter—Prints, extras, 48@49c; cubes, extras, 44 1-2c; prime firsts, 48 1-2c; dairy, 33 1-2c. Butterfat, Portland delivery—No. 1 sour cream, 47c.

SAN FRANCISCO, June 22.—Eggs—Fresh extras, 44 1-2c; friers, 40@45c. Egg plant, 6@7c; lima beans, 10@12c.

## Spokane Market.

**MEAT.**

**Beef**—Beef steers, 16@21½c lb; cow beef, 14@17c lb; heifers, 18c lb; best loin, 33c lb; steer chucks, 16½@17½c lb; prime ribs, 25c lb; rump and round, 23c lb.

**Mutton**—Breakers, 30c lb; wethers, 23c lb.

**Lambs**—Diamond T. C. lambs, 30c lb; lambs, 28c.

**Pork**—Packer dressed hogs, 26@27c lb; pork loins, 30@31c lb; legs, 30c lb; shoulders, 25c lb; leaf lard, 28c lb; tenderloins, frozen, 40c lb; spareribs, 19c lb; country dressed hogs, with head on, 20c lb to producer; country dressed veal, 14c lb to producer.

**Smoked Meats**—Washington hams, 33¾c lb; T. C. hams, 35c lb; T. C. bacon, 46½@48½c lb; Washington bacon, 39½@43½c lb; picnics, 23½c lb; English bacon, 35c lb.

**Star Brand**—Hams, 35c lb; Shield hams, 33@34c lb; picnics, 23½c lb; bacon backs, 33c lb; Star bacon, 46½@48½c lb; Shield bacon, 41@45½c lb; Simon Pure lard, $17.50 case; Shield lard, tierces, 27½c lb; White Cloud compound, tierces, 22¾c lb.

**Dry Salt Meats**—Clear bellies, 27c; lean backs, clear, 26½c lb; sides, 26c per lb.

**Lard**—Tierces, 26½c lb, $13.99@14.74 case; Diamond T. C. pure leaf lard, $15.50 case; $8 half case; Snowcap compound, tierces, 22¼c lb.

**POULTRY.**

**Live Poultry**—Live hens, 20c lb; roosters, 12½c lb to producers, f. o. b. Spokane.

**GASOLINE, LINSEED OIL, ETC.**

**Gasoline**—Red Crown, bulk, 24½c gal, cases, 34½c gal; Shell, 24½c; refined oil (Pearl), bulk, 13c gal, cases, 23c gal; Eocene, 15½c gal in bulk, cases 25½c gal; engine distillate, 16½c gal, bulk.

**Linseed Oil**—Raw, bbl, $1.68 gal, case $1.85 gal; boiled, bbl, $1.70 gal, cases $1.88 gal.

**Turpentine**—Bulk, 79c gal; cases, 99c gal.

**White Lead**—Strictly pure white lead in oil, ton lots, 12¾c lb; 50-lb lots, 13½c.

**GRAIN AND FEED.**

# Fix Own Prices

## Farmer Must Look Out for Self

A. W. Davis, master of the Stevens county Pomona grange for more than 20 years, has been interested in many of the activities for which the grange stands most prominently. Something more than two decades ago Mr. Davis was a cattle feeder back in Iowa. He went through the days of adversity when dozens of small banks failed because they held too much "cattle paper," and afterward he had the experience of having his feed bills at the stock yards almost eat up his returns. These things taught him that there was something wrong with the producer's end of the live stock business and with this idea in mind he began to study ways and means. His solution lies in the direction of farmers' commission companies and warehouses. Not until the farmer puts himself in a position to make his own prices, declared Mr. Davis, will he be able to break even financially.

"Farmers are the best meaning people in the world," continues the Stevens county man. "Look at what they are doing now to try to produce more food—the farmer has always worked long hours, and now he is trying to do twice as much as he has been doing. In the north half of my county where wheat has not been grown to amount to much until now, small patches—enough at least to supply the producer and so to free that much more for export—are being put in everywhere. We have no threshing machines in our community, but by harvest time that will be attended to. No, the farmer is no shirker, and in spite of his reputation as a kicker, he doesn't do much of that. For instance, have you ever heard him kick about the high price of seed wheat, or of the hay and grain he must feed his horses and cattle? He has said so little about it that many people do not realize that the farmer is one of the principal consumers of his own products, and that they cost him as much as they cost anybody."

### Some Stump Blasting Costs.

Owners of cut-over timber land are somewhat at sea when it comes to figuring land clearing costs. Old figures are not at all reliable under existing conditions because both dynamite and labor are much higher now than was the case a few years, or even a few months, ago.

As I do considerable clearing for land owners I wanted to know whether it is cheaper to blast stumps or to pull them with a stump puller, writes a man from Michigan.

I used in my test 500 pounds of 40 per cent dynamite, 1000 blasting caps, 3000 feet of fuse and a standard make of stump puller.

My explosives and the labor necessary in handling it cost me $213.19. This expenditure enabled me to remove 1017 stumps. Average cost per stump, 21 cents.

To operate the stump puller I was obliged to employ a team and crew of two men. Figuring a team and man at $4.50 per day and two assistants at $1.50 per day made my cost per stump 25 cents. This crew was able to average about 30 stumps per day. I found it necessary to use dynamite on a number of stumps that were pulled out with the puller in order to split them up to sizes that would enable us to dispose of them and in order to get the clay off the roots. In cases where this was necessary the cost of pulling the stumps was practically double the cost of blasting them.

It is my conclusion that, in spite of the abnormally high cost of explosives temporarily, due to war conditions, blasting is still the cheaper method of stump disposal.

# Big War Map for Two Subscription Orders

A splendid four-page war map of the battle front in France, originally published in the Spokane (Wash.) Spokesman-Review, will be sent to any one who secures and mails us two new subscriptions to The Washington Farmer.

This map is printed in four sections and when pasted together, according to directions furnished, will give you a map 64 inches long and 21 inches wide; presenting the details of the great fighting territory in such a way that you will be able to follow every detail of the big battles which are now brewing.

Send orders for new subscriptions and war map to

# Earthworms Put "Pep" Into Chicks

(Continued from page twelve.)

The earthworm is an eater of soil. It eats soil in such quantities that as you look upon a fertile countryside you will not see an inch of soil anywhere which has not in all probability many times passed through the bodies of earthworms. Passing the soil through their bodies, the earthworms extract therefrom the bacteria, protozoans and humus on which they feed; and, at night usually, they come to the surface and void the residue soil in small accumulations which an observant eye readily sees. This excreted soil is brought up in such quantities that 10 tons per acre, annually, is in many localities a low estimate.

All the while the earthworms are doing this an interesting thing is happening: They are bringing to the surface finely pulverized soil, and by this action causing a subsidence of stones into the soil. They have even buried several feet below the ground the ruins of Roman villas in England, some of the most interesting of which have been discovered in English fields after generations of plowmen have passed over the ruins without suspecting that they were there. They are perpetually active. They have come to us from the prehistoric past, when the horse was three-toed and rabbit-like, and man had not yet appeared upon the earth; and by their humble work in the soil throughout all ages they have done much toward making the earth inhabitable by man.

### Promising Prospects for Fair.

Those interested in the Grays Harbor county fair at Elma, Wash., say that at this early date prospects look very promising for a successful fair this fall if they can only have fair weather. Farmers and stock breeders are evincing more interest than before. Granges also promise to take more interest and good exhibits all along the line are looked for. The racing prizes have been doubled and a high-class racing program is also promised.

# Want Ads

### EDUCATIONAL 45

EARN MORE. ENROLL ANY TIME, AT Behnke-Walker, Portland, northwest's biggest business college, because best. Graduates assured positions. Write for catalogue.

### TEACHERS' AGENCIES 46

TEACHERS REGISTER WITH B. F. WESTmore, Mgr. Hazard Teachers' Agcy. $1 registers you at three offices, 911 Old Nat'l Bank bldg., Spokane, Washington.

WE SPECIALIZE IN TIMOTHY, ALFALfa, clovers, seed for forage crops. Write for prices. Mark Means Co., Lewiston, Ida.

GOOD SUDAN GRASS SEED, 20C PER LB. Limited quantity. Order immediately. W. P. Muncy, Doyle, Calif.

### FARM LANDS—FOR SALE 651

MR. FARMER AND INVESTOR, INVESTIGATE THIS PROPERTY.
2350-acre farm for sale; in the wheat belt of Alberta; at a sacrifice to close an estate.
Seven hundred acres wheat.
Nine hundred acres oats.
One hundred and fifty acres barley.
One hundred acres timothy.
Four hundred acres summer fallow.
Balance pasture.
Buildings valued at $3000; fifteen miles wire fence; two wells and running water; schoolhouse on property; three and half miles from two stations; twenty-four miles from Calgary, Alberta. Splendid neighborhood. Price fifty-five dollars per acre, including the crop, which is valued at fifty thousand dollars net. Terms, $35,000 cash, balance arranged 6 per cent. Arrangements might be made to use the machinery. Write or wire W. M. Gilfoy, 713 Herald building, Calgary, Alta., Canada.

ATTENTION, LANDBUYERS!
Here's an excellent proposition:
40-acre farms, selling for $15 to $25 per acre; long-time payments, 6 per cent interest; in the best agricultural part of Snohomish county, where you have all the modern conveniences—paved roads, railways, schools, churches, mills and factories. This district has proven its worth by the many successful farmers now located there.
We also have some beautiful 10-acre waterfront tracts.
OPPORTUNITY knocks at every man's door ONCE. but, believe me, it does not continue to knock forever, nor does it pound the door down. For further information address the owners, BROWNELL LAND CO., 904 Third ave., Seattle, Wash.

LAND BARGAIN.

1280 acres, 11 miles south of Wilson Creek, Grant county, Washington, near Lincoln county line; 30 per cent tillable; good, rich soil; lots of water; balance bunchgrass pasture; all fenced; no buildings. Price $7 per acre. Will take up to 50 per cent in trade, balance easy terms. Would make a fine diversified farm.
HOUSE AND LAND ASSOCIATION.
514 RIVERSIDE AVE.
PHONE MAIN 3079.
SPOKANE, WASH.

DESIRABLE DAIRY RANCH, 200 ACRES; 80 a. best river bottom; well improved; 28 well-graded dairy cows (has honor cow and honor herd in all cow-testing associations in Oregon in March); 13 yearlings and calves, good Jersey sire, 3 good horses, 20 shoats, 2 good brood sows, 60 hens, etc.; 12-room house, in good repair; outbuildings; good fences; income tax reports show $4000 gross income, 1917; $20,000; $8000 down, balance 10 years, 6 per cent. C. E. Ricker, Reedsport, Ore.

MY 60-ACRE FARM FOR SALE, LOCAted 2 miles from Sublimity; fine black loam ground; 50 acres in cultivation; buildings and fences good. Here's a bargain. Price on application to F. X. Hottinger, Scio, Oregon.

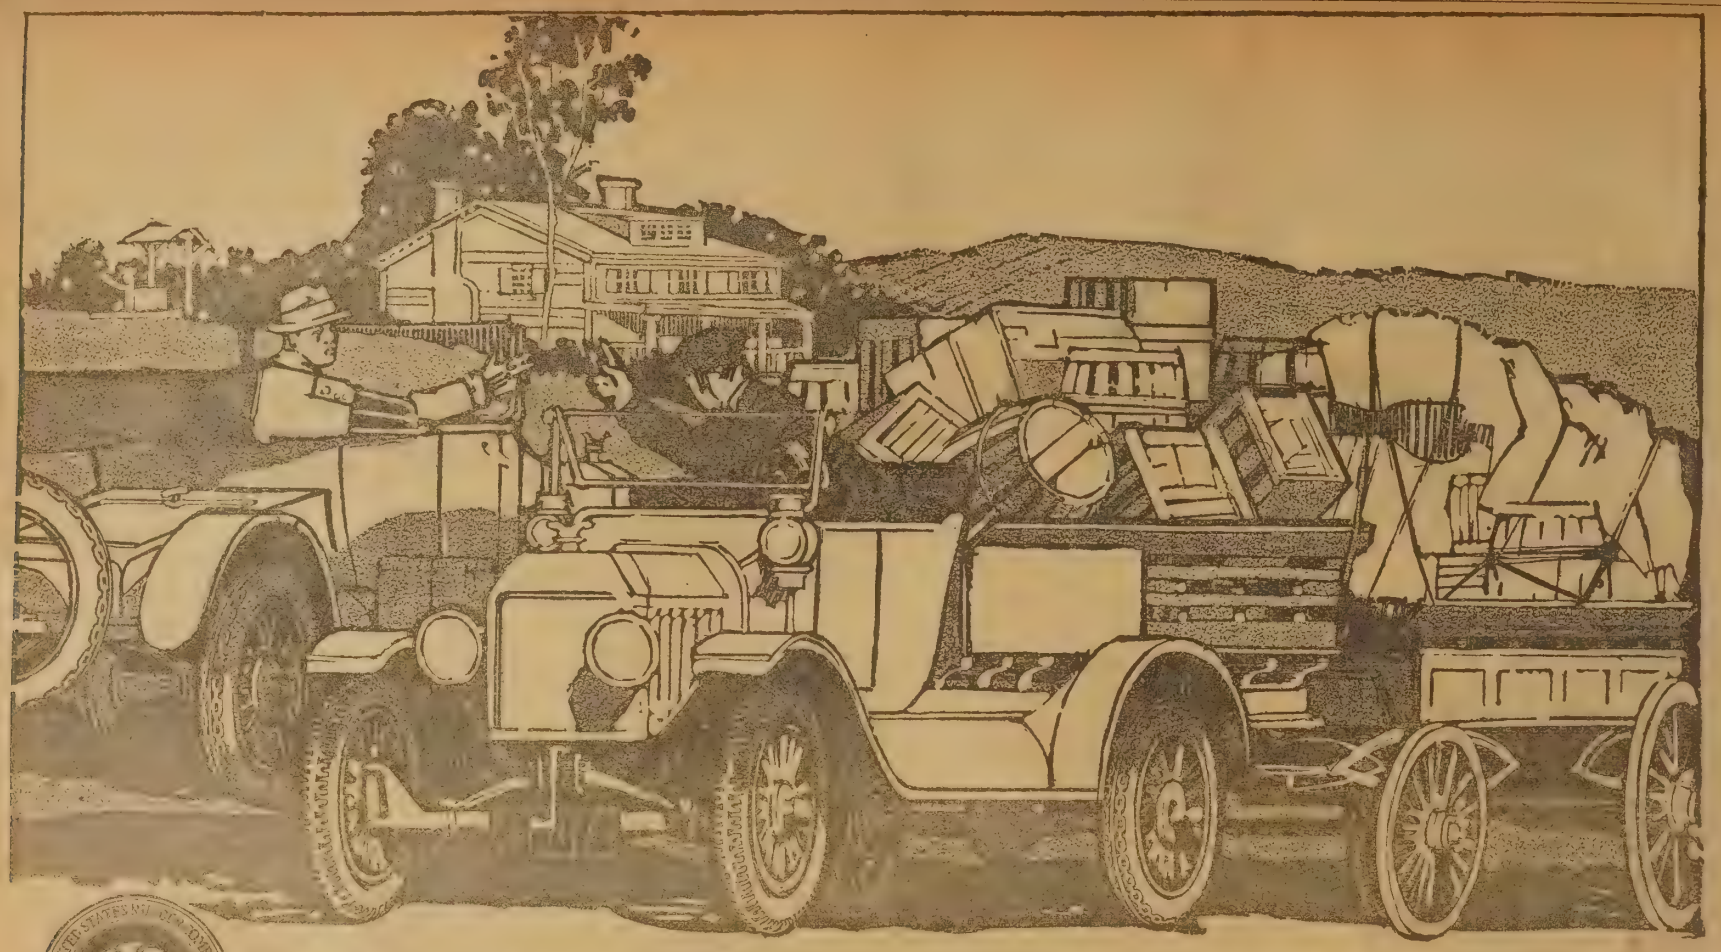
MY 60 ACRES FOR SALE.
Farm located 2 mi. from Sublimity; fine black loam ground; 50 a. in cultivation. Building and fences good. Here is a bargain. Price on application. F. X. Hottinger, Scio, Ore.

FOR SALE — ALFALFA, WHEAT AND stock farms. If you want good, well-improved, irrigated farms at a price that will pay for itself in two crops, write me. John Hardwick Realty Co., Vale, Ore.

160 ACRES DESIRABLE BENCH LAND, well located; rich soil; no frosts; good range, water. $1000 will handle. Bargain. Clinton Case, Colville, Wn.

FOR HAY, GRAIN OR STOCK RANCHES in famous Rosebud county, eighty acres to twenty thousand acres. Write Rosebud Realty Co., Rosebud, Mont.

### FARM LANDS—WANTED 654



I WANT TO HEAR FROM OWNER OF farm or unimproved land for sale. Mrs. W. Booth, Pulaski, Iowa.

### FARM LANDS—Wanted to Rent 660

EXPERIENCED DAIRY MAN WANTS TO rent or work dairy ranch with stock, one to five years. Address Box 142, Deer Park, Wash.

### TO EXCHANGE—REAL EST. 705

RHEUMATICS, HERE'S YOUR CHANCE. Change to dry climate, get well. 160 acres, diversified; part irrigated; Douglas county, Washington; valuation $2500; trade for land west of mountains. For particulars write Mrs. F. Brandt, Leahy, Wash.

# Linking Farm and Market

**Transportation is an increasingly vital factor in the farming industry.**

As farm crops become more diversified, the markets must be studied more carefully and reached more quickly.

Profitable farming has found a wonderful aid in motor transportation.

Power-driven vehicles on rubber tires have greatly widened the possible market that can be reached from any given point.

They have made timely marketing possible, enabling the grower to take advantage of price changes.

They have cut to a minimum the time used. What was formerly an all-day trip now requires but a couple of hours and leaves the horses at their work on the farm.

Using motor vehicles for business reasons, it is important that you treat their equipment in business fashion.

Buy tires on the principle that long and continuous service is the first requirement.

In this year of war, your time and efforts are more important than ever before. You need your car more. Your tires must be dependable.

Equip with United States Tires.

Use them for the same reason they are chosen by big commercial companies having large fleets of cars—because they give greater mileage per dollar of cost and permit maximum service from the car.

There is a United States Tire scientifically built to meet every condition of service.

One of the thousands of United States Sales and Service Depots will cheerfully aid you in selecting the right type and tread.

'Chain'

'Usco'

## United States Tires are Good Tires

*For commercial cars the Solid Truck Tire and the 'Nobby Cord.' Also Tires for Motorcycles, Bicycles and Aëroplanes.*

# Heavy Crop of Alfalfa

## Yield About Five to Eight Tons Per Acre in the Moses Lake District—Saving Factor to Dry Land Farmer

NEPPEL, Grant County, Wash., June 25.—Our principal crop here this year is alfalfa, and while a backward spring delayed [illegible] now being ha[illegible]e. This is a sa[illegible] farmer wh[illegible] wheat and is a [illegible] stock. [illegible] wheat farmers must depend on the alfalfa producers as never before to help carry them through this year, and is proving a great boon to them. While alfalfa is selling at $18, loose, it is costing $9 per acre or better to water it, and taxes and labor, $6 per acre. The yield will be about five to eight tons per acre. To this must be added the cost of handling crop, at whatever wages are paid, usually $3.50 and board is paid help in haying this season. With a scarcity of help at present, the short wheat crop may turn more help to the hay fields a little later. Practically all alfalfa produced will be consumed by Big Bend wheat farmers this season and none will be shipped to Coast points as formerly. It is hard to get machinery and supplies, but quite a number of combines have been set up ready for harvest recently, and this will save labor that is scarce, for that purpose. The fruit situation is not worrying the local producer as there is a very light crop and but few fruit boxes will be needed, as local people throughout the Big Bend are sure to consume the entire crop. The condition of the immediate community is showing the result of increased alfalfa planting and is a sure source of revenue, in a variety of ways.

MARTIN PENHALLICK.

### Crop Yield Light.

SPOKANE, Spokane County, Wash., June 19.—It looks as if the crops would be as short or shorter than last year. However, the chances are that rain may save all the later-planted crops of peas and make a better crop than some of those harvested last year. Because of the prospects of a small crop, farmers are not much aroused over the harvesting problem. Plans are under way whereby a sufficient number of men may be found to handle the crop even though it turn out far better than is at present indicated, by bringing in men from the timber who ordinarily take part in the harvest and by securing men from the various public works wherever it is possible, and by using high school boys wherever they are fitted to work in the harvest fields. There is an adequate supply of machinery and plenty of equipment to handle the crop during threshing and harvesting time. Several of the dairy producers who experienced a short crop last season were influenced to erect a silo and where these were erected and filled much praise has been received from the men as a result of their first experience with this kind of feed. Plans have been worked out now for the building of an all-wood silo, including the continuous wooden hoops instead of those of iron. Such silos would cost at retail prices: 8x24 feet, $98.25; 10x30 feet, $137.71; 12x30 feet, $161.01.

Men in the deferred classes have signified their intention to do their share on the farms in helping to raise more pork by agreeing to get additional brood sows during the late summer and fall. As a result of the campaign put on for this purpose there are already calls for 75 brood sows and there is an equal demand for help in conserving the feed for the greatest production from young men who are handling from five to 20 head of cattle. The method that will be used in helping the latter class will be that of encouraging them to build silos.

J. R. SHINN.

### Crops Will Be Lighter.

OMAK, Okanogan County, Wash., June 22.—The principal crop of this section is apples. Compared with last year the yield will be much lighter. It is estimated that the market value will be above that of last year. The cost of production will be nearly the same as last year. There will not be much wheat harvested in this section on account of drouth. Most all crops on the uplands will be a failure. The hay crop will be very short, not enough to winter the stock. There is not much shortage in help so far. There is no shortage in machinery or supplies for handling the coming crop. Our greatest handicap this season is shortage of water and the project managers are doing everything possible in the way of pumping to make up for lack of natural gravity water.

J. O. WOODS.

### Count on Apples and Alfalfa.

PROSSER, Benton County, Wash., June 23.—The weather is dry and hot. The wheat is burning badly. The principal crops in this community are fruit and alfalfa in the valley and wheat on the hills. Apples are all we can count on in the fruit line, as most all of the other fruit froze last spring. The first crop of alfalfa was light and most all in the stack. The second crop is coming along in good shape, and this hot weather makes it jump. The farmers are offered $16 loose and $20 baled. It costs $3 per ton to bale it and from $1 to $2 to get it to town. Wages for haying is $4 and board included, and $8 per day for man and team. Rye harvest begins the 24th of June and wheat harvest will begin about two weeks later. I think there will be enough men and machinery in this community to handle all crops in good shape. I would recommend as a general measure to improve conditions in this community to have all idle lands farmed either in wheat or corn.

G. W. WILGUS.

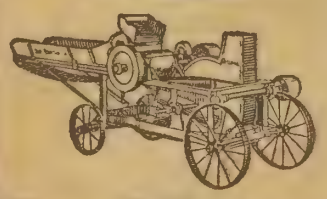
### Cutting in Progress.

CENTERVILLE, Klickitat County, Wash., June 24.—Our principal crop here is winter wheat and now this year it is spring wheat on account of the loss of so much of the winter wheat. Present indications point to not more than half the usual crop. In some places the hay cutting is in progress, some fields being very good and some very poor, with the average condition a good deal better in the last week. The spring grain is looking

(Continued on page twelve.)

Uncle Sam Wants an Army of Calves

To make into beef, fats, hides.



Raise calves on Calf Meal. It takes the place of milk because it has all the necessary elements for calf nutrition.

It is not only a scientific, but it is common-sense food, endorsed by Pacific Northwest dairymen everywhere. Dealers sell it.

Correct Lubrication for the Ford Engine

The Ford automobile engine, illustrated here, like all *internal combustion engines*, requires an oil that holds its full lubricating qualities at cylinder heat, burns clean in the combustion chambers and goes out with exhaust. ZEROLENE LIGHT fills these requirements perfectly, *because it is correctly refined from selected California asphalt-base crude.*

"Zerolene is the Best"

—Say leading motor car distributors, because the records of their service departments show that ZEROLENE, correctly refined from selected California asphalt-base crude, gives perfect lubrication with less wear and less carbon deposit.

Most cars are now lubricated with ZEROLENE because their owners have learned through experience that there is no better oil.

ZEROLENE is the correct oil for all types of automobile engines. It is the correct oil for your automobile. Get our lubrication chart showing the correct consistency for your car.

# Profiteering on Tremendous Scale

## *Meat Packers and Flour Millers Stand Foremost in Big Profit Grab*

**According to an Associated Press dispatch from Washington profiteering on a tremendous scale in virtually all the commodities of life was reported to the senate Saturday, June 29, by the Federal Trade Commission as the result of an exhaustive investigation. "Inordinate greed and barefaced fraud," as well as "war pressure for heavy production," the commission reported as the causes.**

**FEDERAL TRADE COMMISSION**

**The federal trade commission is composed of five commissioners appointed by the president. Not more than three of the commissioners can be members of the same political party. The principal office of the commission is in Washington, D. C., but it may meet and exercise all its powers at any other place. The commission may, by one or more of its members, or by such examiners as it may designate, prosecute any inquiry necessary to its duties in any part of the United States. Section 5 provides: "That unfair methods of competition in commerce are declared unlawful. The commission is empowered and directed to prevent persons, partnerships or corporations, except banks and common carriers subject to the acts to regulate commerce, from using unfair methods of competition in commerce." The federal trade commission is composed of William J. Harris, chairman; Joseph E. Davis, William B. Colver, John Franklin Fort and Victor Murdock. Leonidas L. Bracken is secretary.**

The federal trade commission further reports that the reappraisements of properties were made by great concerns when it became evident that the government was about to fix prices on a basis of return on investment, and salaries, allowances and expenses were in many instances padded to show increased costs of conducting business.

The outstanding feature of its investigation, the commission reported, was the evidence of a tendency to increase and maintain prices against the forces of competition.

Of all the big profits disclosed by the investigation the report said the profits of the meat packers and those allied with them and by the flour millers, stand foremost, despite the fixing of prices by the government.

**Allege Packers Disregard Law.**

Manipulations of the market by the five great packers—Armour, Swift, Morris, Wilson and Cudahy—the commission asserts, "embrace every device that is useful to them without regard to law."

The report charges that the five concerns have monopolistic control of the meat industry and "are reaching for like domination in other products."

During 1915, 1916 and 1917, the report said, these companies "pocketed" $140,000,000.

"The experience with steel, flour and coal," says the report, referring to price fixing, shows that a high stimulating fixed price, while stabilizing an ascending market, produces an economic situation which is fraught with hardship to the consuming public and with ultimate peril to the high cost companies through increasing power of their low cost competitors."

Where the government has fixed prices on the basis of fair return on net investment, the report hints at padded depreciations, increased salaries of officials, new construction charged off as repairs, fictitious values on raw materials and manipulated inventories.

Illustrating high remunerations charged off to expense accounts the report cites the following payments shown to officials of the American Metal company of New York, which deals chiefly in zinc:

B. Hochschild, chairman of the board, $179,663.

C. M. Loeb, president, $364,326.

Otto Sussman, vice president, $221,596.

J. Loeb, vice president, $147,930.

Sol Roos, manager, St. Louis, $148,530.

M. Schott, manager, Denver, $136,533.

In the steel industry, the report says, profits increased from 4.7 per cent in 1912, to more than 24 per cent in 1917. One of the smaller mills showed a profit of more than 300 per cent.

In the meat industry, the report says, Morris & Co. realized more than 263 per cent on $3,000,000 of capital stock outstanding and during 1916 Armour & Co., raised their capital stock from $20,000,000 to $100,000,000, "without receiving a dollar more in cash."

Independent packers meanwhile, in 1914, 1915 and 1916, earned a higher rate of profit than the large concerns.

In the leather industry the profits of one concern jumped from $655,000 in 1914 to $3,576,000 in 1917. The shoe business, meanwhile, showed large profits and the report says "it appears the retailer has profited more in proportion than the wholesaler."

To show the manner in which it is charged big concerns reappraised their assets when the government price-fixing appeared imminent, the commission included in its report a copy of a letter in which it was proposed by Swift & Co. to reappraise six tanning companies in which it owns 50 per cent.

"I approve if done quietly and promptly," was the memorandum Edward T. Swift placed upon the recommendation.

In the flour industry, the report says, the millers of 1917 will show a profit of 52 cents a barrel, or nearly 38 per cent, on the investment. One mill shows a profit of $2 a barrel. Despite the fact that the food administration succeeded in reducing profits, they still were twice as high in 1917 as in previous years.

The report covers many principal basic industries and makes much the same charges as to each.

The senate directed the commission to make the investigation and report so it could consider legislation to reach the practices disclosed.

The commission also found that large margins of profit had been made in the mining industries despite government price fixing. In the oil country large profits are now being made in the fuel oil and gasoline, the industry being one where the law of supply and demand still operates. Trade practices contributing, in addition to profits, to higher prices to consumers are noted, as failure to ship goods on a rising market or refusal to accept goods on a falling market, commercial bribery and the tendency of manufacturers to maintain a resale price.

**Retort by Packers.**

Sharp retorts were made at Chicago by representatives of Armour & Co., Morris & Co., and Swift & Co., denying charges of profiteering made in the report of the federal trade commission.

Flour millers who made excess profits during the last fiscal year, as charged by the federal trade commission, must return the amount of such profits to the government in the form of milled flour, under regulations issued by Food Administrator Herbert Hoover.

The federal trade commission charged that the millers had made a profit of 45 cents a barrel on flour, despite the food administration's regulations limiting the differential to 25 cents. It develops that the commission's report was anticipated, as the administration's regulations were sent out last June 17. Millers whose profits at the close of the fiscal year, June 30, are in excess of the maximum permitted are required to credit the amount of the excess to the food administration to be liquidated by flour to be sold to the army, navy, marine corps and the food administration's grain corporation in New York $1 a barrel.

# Northwest Wheat Stays at $2.20

M. H. Houser, representing the grain buying corporation of the national food administration in the northwest, announces the receipt of information from New York that the price of $2.20 a bushel for wheat at such northwest terminals as Portland, Tacoma and Seattle will remain in effect. This price was agreed upon some time ago, before the recent increase in freight rates. This rate increase amounts to 25 per cent above the former rate where the total increase will not exceed 6 cents per 100 pounds. On wheat from inland points to northwest coast terminals the increase averages something like 2 1-2 cents a bushel.

In commenting upon the information from New York Mr. Houser said:

"With the establishment of the $2.20 basis for the Pacific coast the farmers are given all and a little more than they had asked for and been promised.

"Figuring the last spring basic price at $2.30 at New York and $3.50 per ton freight and the loading charges here and the unoading on the Atlantic coast would leave a net price of $2.17 per bushel.

"On account of the submarine activity and other unforeseen obstacles that have arisen it is more than likely the shipping board will be compelled to readjust their wheat rate of $3.50 per ton. Under these war conditions, it goes without saying that it is difficult to anticipate changed conditions. With our speeded-up shipbuilding program here in the northwest the larger part of our surplus should be afloat the first of the year."

While Mr. Houser's statements are accurate there remains the question, as suggested in last week's issue of this paper, whether or not, if middle western and eastern prices are increased to meet the increased freight rate, a corresponding increase should not be made in the northwest. Whether the $3.50 a ton rate by ship to the Atlantic coast is readjusted or not, it is evident that the rate of something like 9 1-2 cents a bushel on an average by rail from inland northwestern shipping points to the northwest terminals has been readjusted to the extent of about 2 1-2 cents upward per bushel.

It is hardly believed by producers and dealers in the northwest that the matter is finally settled. It does appear certain, however, that the farmers will receive at least $2.20 a bushel for their first grade wheat at Coast terminals.

The Associated Press, in a dispatch from New York, makes the following statement concerning the wheat price decision:

New wheat prices, necessitated by advanced freight rates, were announced in New York Sunday night by the food administration grain corporation. It was stated that a minimum

(Continued on page twenty-eight.)

# Need a Standard

## Potato Marketing Requires It

When a farmer calls on a potato dealer, either by phone or in person, and enquires concerning the sale of potatoes, the first question the dealer asks is "What kind of potatoes have you?" Under the present lack of potato standards the farmer will necessarily be compelled to answer, "Good potatoes" or "medium potatoes" or some other more or less indefinite class of potatoes.

George J. Cannon, widely known potato grower of the Spokane, district, though he himself grows potatoes only for seed, is an earnest advocate of a national potato standardization law which would enable the grower of potatoes to reply to the dealer by telling him, "I have so many sacks of No. 1, so many sacks of No. 2," and so on. Mr. Cannon argues that under the present system it is not only a difficult matter for local dealers to purchase from local producers, but that it is almost impossible to deal satisfactorily between more widely separated points. A potato grower who wishes to ship to any point somewhat distant must ship in a majority of cases subject to inspection upon arrival and he, therefore, does not know what his potatoes are going to bring him until they are practically beyond his control.

If, however, there were a recognized legal potato standard, prices could be quoted upon potatoes the same as upon wheat and the dealer could make a specific offer without having seen the potatoes. The farmer, knowing the exact grade of his product, could accept or reject the offer before shipment.

Mr. Cannon says that marked progress in the standards of potato grades has been made as a result of the efforts of the American Potato association. The United States department of agriculture's bureau of markets has recommended a system of potato grading for use throughout the entire country and while a number of states have informally approved the system there is yet a lack of legality and national coordination. Mr. Cannon believes that the standardization law should be a national one, built up in a general way as is the national grain standards act now being put into effect throughout the United States.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on acconut of disease in stock sold through these columns.

## Germany's Hopes Go Glimmering

Thanks to the American farmer's response to his country's call and the increasing throttling of the U-boat campaign, Germany's hopes of starving England have gone glimmering.

At least one hog out of four raised in America this summer is being sent to the allies.

Shipments of meat are going to the allies and to our soldiers in France at the rate of 15,000 pounds a minute during the 10-hour day at eastern ports. That means 9,000,000 pounds a day.

Last month the British government ordered 250,000,000 pounds of meat to be delivered in three weeks. The final shipments have just been made—well within the time limit.

As a result of this activity in America, the British food ministry has increased the ham and bacon ration, and the London Times, commenting on the increased allowance, declares that the increase was made possible by large shipments of bacon and hams from the United States.

"It may be added," says the Times, "that the present excellent position of our frozen meat supplies is due almost entirely to the self-sacrifice shown by the people of the United States in responding to the appeals for voluntary meatless days and releasing meat for export to this country."

As the conflict progresses we see increasing proofs of the soundness of Mr. Hoover's early-day assertion that "food will win the war." The consumers are deserving of full credit for their patriotic denials, but don't overlook the fact that it is the American farmer who is delivering the product, and working early and late, with his patriotic wife and children, to do it.

## Optimism Is Dangerous

The allies, including those of us who are at home in America, have a right to feel thrills of joy and confidence when the enemy assaults are checked or victories over them won. But there is a grave danger that confidence may take the form of overoptimism.

It would be a serious blow to the allied cause for the people at home to relax for one day their efforts to support the armies on the front. It is as essential that the allied power both at home and on the battlefield maintain its maximum power every day and hour that the enemy is weakening as when the enemy is at his strongest. To be able to strike with force when the opponent is least prepared to defend himself is a great art of battle.

Let no one of us relax. Let us work and save and think for victory every hour until the unspeakable Huns are driven back onto their own soil and are stripped of all their power for further plundering of the world.

## The Spirit of 1776

When, in the course of human events, it becomes necessary for a peaceful and liberty-loving people to turn aside from their usual pursuits and take up arms against a foreign foe it is fitting that a statement be made of the causes that impelled them to this action.

The history of the present Emperor of Germany is a history of despotic usurpations of the minds of his people, all having in direct object the establishment of an absolute tyranny over the nations of the world. The enemy of America is the enemy of mankind.

He has ruled his own people with a rod of iron and through years of educational misdirection has robbed them of their sense of honor and right.

He has plotted the destruction of peoples and all things that stand in the way of his own unparalleled ambition.

He has forced an unspeakably terrible war upon peaceful and unwilling peoples to gratify his own lust for power.

He has ravaged inoffensive Belgium and Serbia, and dragged their people into slavery.

He has violated northern France and pillaged Russia.

He has ravished women, maimed helpless children and crucified husbands and fathers.

He has starved and tortured his prisoners of war and wantonly spread hideous diseases among the peoples of his enemies.

He has plundered the seas.

He has sent to their deaths without warning and without trace thousands of non-combatants and neutrals engaged in their rightful occupations and travel at sea.

He has disregarded as a scrap of paper all law, both of man and God, and has blasphemously linked himself with the Maker of men and the Ruler of their destinies as His chosen representative on earth.

He has, with no purpose other than the satiating of his own fiendish passions, brought to the world more sorrow and agony and set at work more machinery of evil to run through centuries to come than all the despots and tyrants of previous ages.

Therefore, remembering the holy purposes that actuated our forebears when, one hundred and forty-four years ago, they pledged their all to the maintenance of justice and liberty in America, do we, their children, one hundred million strong, setting aside all selfish purpose and appealing to the Supreme Judge of the world for the rectitude of our intentions and acts, pledge our lives, our fortunes and our sacred honor to the task of conquering this arch-enemy of humanity and establishing justice and liberty and peace throughout the stricken world.

## Beneficial Use of Land and Water

England is being forced to say to its owners of large estates, "You can not hold the land out of use for hunting grounds, parks and pastures for fancy herds of stock when we need it to grow food for our soldiers and to keep millions of our citizens from starving."

Thus the law of necessity takes precedence over the law of private ownership, and profitable use over a man's right to hold a thing of value to the public, out of use.

We have the same questions in the irrigable sections of the northwest on the question of water rights. Whether under the old "riparian rights law" a man can hold water out of use, when thousands of people would be benefited by its use, has been a perplexing question in the courts, and a subject of excitement for the legislatures of Washington, Oregon and Idaho and other states. Oregon and Idaho have decided the question in favor of the people, and against the riparian owners. The case was appealed from Oregon, and the supreme court confirmed the decision against the monopolizers of water, and in favor of the law of the "beneficial use of water."

The last legislature of the state of Washington modified its former laws, but they are not yet satisfactory to the irrigators, at the same time they cause considerable irritation to the "riparian rights owners."

The time is coming when the demands of those who claim "special privileges" will give place to the "greatest good to the greatest number" of toiling food producers. G. L.

## Mercy and Discipline

Two boys, sons of American mothers, serving their country and the civilized world behind the battle lines in France, fell asleep while on sentry duty. Military regulations required that they be sentenced to death. Their case was taken to the president. He pardoned them. But with his pardon he issued a statement emphasizing the necessity of rigorous discipline in the army, pointing out that the safety of the army and of the country that they represent rests in the hands of its sentinels and guards when on duty. Discipline did not suffer with the pardoning of the two boys. They are now back in their companies serving their country loyally. Their comrades will be no less loyal, because discipline in the American army is elastic enough to permit of the doing of justice.

## The Master Man

A master man is not one who drives other men with whip and lash, or with guns and bayonets, or any other physical force.

He is a man who is master of his own powers, a master builder of character. He looks out upon the earth with its plants, animals and human beings, and sees the places they were designed to fill, and probably relates himself to them. He studies the laws that control, and so orders his life to harmonize with them. He sees the relations of things to one another, and the relations they all sustain to the universal. He sees life, intelligence and matter in their true relations, interdependent, interactive, coeternal. Nothing that has bounds satisfies him, and he believes he has all eternity to pursue the work necessary to his development and completed manhood.

## We Killed a Pig

The pig squealed.

The sow and twelve other hogs came to the scene, boo-hooing with wide-open mouths as if they would devour us.

The pig quit squealing, died, and we gave the hogs some slop as a peace offering.

As soon as their attention was diverted from the dead pig toward the slop, they seemed to have forgotten their dead comrade. They ate the slop, and by this time we had the carcass of the dead animal carted away into a shed where we had prepared to scald him. The other hogs sucked the blood of the dead pig, and went away as quietly as if nothing had occurred.

All fines, license fees, or taxes, paid by destructive industries, for the privilege of conducting a business that demoralizes, impoverishes or kills human beings, is like slop given to hogs to get them to keep quiet, while others of the social group are being murdered.

WHILE there are undoubtedly many curiosity seekers who haunt the bulletin boards in public employment offices, the fact should be kept in mind that not every man in overalls who inspects the board and who refuses repeated offers of work is really a slacker. Some of these people are farmers, who are themselves looking for help.

WITH our modern discoveries in utilizing ocean products, and our modern methods of navigation, we will be able to add marvelously from these sources to the world's food supply.

IN normal times it may be a good idea sometimes to agree to disagree, but in war times there is only one thing for everybody to do, and that is to agree TO AGREE.

CASH superiority has its limitations; the more you ignore those limitations the bigger the hold they have upon you.

FOR the land's sake, don't think that you can keep on forever taking wheat and corn and one thing and another out of it without putting anything back.

JOB himself had nothing on the setting hen for patience. The only time she becomes impatient is when some one becomes impatient with her patience.

"CAN that stuff" may be slang, but it is mighty good advice just the same when applied to peas and beans and corn and fruit and the like.

FAILURE to conserve wheat in America is equivalent to adding regiments of soldiers to the ranks of Germany.

THERE never was a time when simple efficiency in every act was more vital than it is now.

# Big German Offensive Coming?

## *Uncertainty of Operations Marks Situation on Front*

At this writing uncertainty seems to be the outstanding feature of the war news. What is coming next is the uppermost question. It appears from the reports from Europe that a resumption of the offensive by the Germans is the most probable event for the near future, but this is largely conjectural. It has now been nearly a month since the last big drive was checked. It is not safe to believe that the defensive power of the allied armies was the only or perhaps the principal factor in checking it. It is safer to figure that, though strongly opposed by the French, British and American forces, the German war lords have delayed with a view to putting their forces in the best possible shape for a resumption of the offensive at the most appropriate time.

In the meantime, the allies have not been idle. They have been making local attacks and defending themselves against local attacks by the Germans. In many instances the reports indicate that the allies have greatly improved their positions and strengthened themselves for whatever offensive the enemy may launch. It is doubtful if any British, French or American troops have been sent to Italy since the cessation of the last German drive. It is certain, as officially announced, that the American forces on the French front have been increased. Allied leaders, while not deprecating the power of the German arms, express growing optimism. General March, American chief of staff in Washington, D. C., says that the position of the allies is the most satisfactory it has been in recent months.

### Every Day of Delay Aids the Allies.

Every day that passes without a gain by the enemy increases the certainty of allied victory. It is but a question of time, unless defeat comes before sufficient time passes, until the allied armies will be sufficiently reenforced by U. S. soldiers to make an overwhelming force against Germany. Germany can maintain her present strength possibly for a long time, barring internal troubles such as might arise out of food shortage or breakdown of morale. But she can not build up a much greater, if any greater, fighting force than she has now. She has no place to go to get it. On the other hand, the allies have America, with 100,000,000 people. America is in to win. America will send every man that is needed, even though that number be 10,000,000 or, if the war lasts several years, twice that many. Give America time to mobilize her men and resources and she alone could defeat Germany. To give her time is just what the French and British and Italians and Belgians are striving to do. They are standing up before the most tremendous odds, giving ground where necessary to conserve man power, sacrificing their lives and their homes and everything but the barest necessities of civil life—doing all this while over here we prepare. It has been a death struggle. Germany almost won. If America had been a few months later Germany would have won! She can do awful damage yet. She still menaces Paris and the English channel ports. She still has it in her power to wreak horrible devastation in France, and we may be sure she will wreak every iota of it. It is reasonable to expect the greatest offensive of which Germany is capable. Nobody realizes better than the world-hated kaiser and his war counselors that it is this summer or never for their boasted world conquest. But if she loses her 1918 offensives she will stil retain defensive powers which, if used to the utmost before peace terms are agreed upon, will enable her to withstand the allies, America included, for a long time, possibly a few years. This country must convert all her energy into war activities. Every delay is a delay in the ending of the war. Every delay in this country costs a thousand lives in Europe, or even tens of thousands of lives, and many of them will be American boys.

### American Force in France Increases.

At the rate of speed in which U. S. soldiers are being sent to France, it is calculated by the war department that there will be 1,450,000 trained men from this country on European soil some time in August. Official statements indicate that there are approximately a million men there at the present time, and that they are being transported at the rate of something like 100,000 a week. Legislation in the national capitol continues to take form looking toward the building up of the greatest national army possible to be placed in Europe at the earliest date possible, supported by the maximum supplies and military equipment that it is possible for the industry of America to produce and transport.

### American Soldiers Are in Italy.

General March, chief of staff of the war department, has announced that American troops have been landed in Italy. They are not troops sent from France by General Pershing, as has been rumored, but are soldiers transported directly from the United States to Italy to begin training there for cooperation with the Italian forces against the Austrians. General March has made no announcement as to the number of the troops sent to Italy, nor has he specifically stated what lines of activities they will follow. It is understood, however, that they come under the head of special organizations.

### Wilson Favors Universal Training.

Reports from Washington indicate that President Wilson is working on a plan for the universal military training of the able-bodied men of the country following the conclusion of the present war. The reports say that he is convinced that military training is necessary to have the nation ready for the disturbed conditions that are expected to follow the end of the war. This development is interesting in view of the opinion that the president has heretofore held, an opinion which enabled him to stand out against the military preparedness element in the nation for the first three years of the war before becoming convinced that this country must prepare to take an active part in the conflict. Some of the commentators in Washington express the opinion that it is the working out of the broader plan of universal military service that is causing the president to withhold his indorsement of the proposed extension of the ages under the present military draft law.

### Austria May Be Out Indefinitely.

The continuance in Austria of revolutionary actions on the part of the working men and even on the part of the soldiers themselves has led some commentators to express the opinion that Austria is out of the war so far as field activity is concerned for several months at the least. One of the latest reports tell of a mutiny among one division of the army resulting in the sentencing to death of 2000 Austrian soldiers. Food riots are aso reported from many sections, and it is reported that German troops have been imported for the purpose of enforcing order. So far as the outside world is able to know the facts the actual food situation in Austria remains conjectural, though it is certain that the condition is grave.

It is not reasonable, however, to suppose that Austria is out of the fight for even a few months. The Italians are expecting a resumption of the offensive by the Austrians, probably this time in the mountainous region rather than along the river Piave.

### France Will Celebrate July 4.

With approximately a million American men on the soil of Europe the observation of this country's birthday is an international affair this year. In fact, French officials have virtually declared July 4 a national holiday in order that the people of that country may cooperate with the Americans in its observation. The French chamber of deputies, which corresponds in a way to the house of representatives in congress in this country, has gone informally on record in favor of the observation of the day. One of the leaders of that body expressed the sentiments of the French people in the following words in an address before the house of deputies:

"It is the duty of France to tell her American friends: 'You celebrate your independence day on July the Fourth. Henceforth we shall likewise celebrate that date as a token of our fraternal and indissoluble friendship.'"

### Ten Thousand American Casualties.

Casualties in the American expeditionary forces thus far reported total 10,383. Of this number 9131 were in the army and 1252 in the marine corps.

Army casualties are summarized as follows:

| | |
|---|---|
| Killed in action (including 291 lost at sea) | 1491 |
| Died of wounds | 479 |
| Died of disease | 1287 |
| Died of accident and other causes | 465 |
| Wounded in action | 5024 |
| Missing in action (including prisoners) | 385 |

The summary of casualties among the marines follows:

Deaths, 407; wounded, 842; in hands of the enemy, 1; missing, 2.

### Younger Draft Men Are Numbered.

Nearly 800,000 men who have reached the age of 21 years since June 5, 1917, were formally added to the national draft army last Thursday when they registered in their home precincts throughout the entire nation. The numbering was done and the numbers drawn in the same manner as was done a year ago, when the men from the age of 21 to 31 were registered and numbered. No definite information is available as to the actual number of men in this drawing who will be acceptable for service in the army, but it is assumed that there will be between a quarter of a million and half a million men called and accepted.

### Compulsory Production in Switzerland.

A recent Swiss decree provides for compulsory crop production by all land owners up to the 1914 acreage as a minimum. All grain growers who fail to deliver the required amount into the hands of the authorities must pay fourfold the maximum price as indemnity for their deficiency. The fact that Switzerland is a republic makes this decree of unusual interest.

### Get a Farm Service Flag.

The man, woman, boy or girl who stays at home and works hard to produce necessaries for the soldiers in Europe are entitled to real war service recognition. That is the idea back of the Washington Farmers farm service war flag. It is pennant-shaped, made of the good old red, white and blue, and has a star representing the producing farm home. Small stars are added to represent each worker of that home.

.....

**Convenient Order Blank.**

THE WASHINGTON FARMER, ————1918.

Review Building, Spokane, Wash.

Enclosed find five cents (5c), for which please send me a Farm War Service Flag (printed on enamel paper) with ..... extra small stars for farm workers.

Name .....

R. F. D. ..... Postoffice .....

Box ..... State .....

## *Washington Gleanings*

The Farmers' Mutual Creamery at Tonasket recently suffered $1000 damage from fire.

A. Alexander & Co. of Wilbur have bought the flour mill at Hartline for a consideration of $87,000.

The Whatcom county Old Settlers' association has set August 8-10 as the days for their annual picnic at Ferndale.

W. J. Olwell, for 27 years manager of the Big Bend Milling company, at Davenport, will be succeeded August 1 by Scott V. Davis.

The Chehalis city commissioners have passed an ordinance forbidding the dogs from running at large at any time or place in the city.

The Fisher grange, east of Vancouver, Wash., has gone on record as opposed to affiliating with any political league or party, whatsoever.

The Sprague council has passed a resolution forbidding the sale or explosion of fireworks in the city limits during the duration of the war.

Kit Ward of Centralia has purchased the Rush farm, located six miles south of Chehalis, for $11,000. Mr. Ward will conduct a modern dairy ranch.

A sheep-killing cougar measuring six and one-half feet in length was killed recently near Montesano, by A. B. Currie, who hunted the cougar down with dogs.

Clarence Davis has sold 200 acres from his Spring Valley stock farm at Goldendale to W. R. and J. T. Lamb for $8000. The Lamb brothers expect to raise registered brown Swiss cattle and Duroc-Jersey swine.

Effective June 15, the banks of the Spokane clearing house association voluntarily cut the charge of handling out-of-town checks from a flat charge of five cents per item to a minimum charge of three cents.

The great value of the dikes which protect 5000 acres of land in the vicinity of Kelso from overflow, has been proved during the recent freshet. Without the dikes the farmers would have lost thousands of dollars in crops.

Twenty employees men and women, of the First National bank of Yakima headed by W. L. Steinweg, president, went into the hayfield of E. Stott in the Moxee recently and shocked 27 acres of alfalfa in two and a half hours.

George E. Day, proprietor of the Spring Brook farm, at Toledo, is using green ferns to supplement the regular ration for his hogs. He discovered that hogs he kept in pens eat ravenously of green ferns and appear to thrive well on it.

Five valuable milch cows belonging to John Anderson, a pioneer farmer of the Kennedy Ford district, six miles east of Palouse City, were run over and killed by the eastbound passenger train on the Washington, Idaho & Montana railway.

The new $51,000-packing plant of the Peshastin Fruit Growers' association is rapidly nearing completion. The plant is modern in every way, and will be capable of packing 4000 boxes of apples per days, employing a force of 80 men during the busy season.

Lincoln county Chairman James S. Freece, assisted by J. R. Ward, has been organizing Boy Scout organizations at Almira, Wilbur, Sprague, Edwall, Davenport and Creston. A drive for funds will begin July 8 for the purpose of financing the county organization sufficiently to employ a scout commissioner.

Fire recently destroyed a large portion of the business district of Brewster. By strenuous work on the part of citizens the flames were checked with a loss of 10 buildings, aggregating nearly $100,000, with insurance amounting to about $20,000. This makes the fourth disastrous fire that has swept Brewster.

The dairy situation throughout the country is a vital one, and demands the consideration of the best minds in this industry. The price of milk and cream, the cost of feed and labor and other conditions threaten to reduce the milking herds of the country. Every effort should be made to prevent any decrease in first-class dairy stock. The war has reduced the herds of Europe, and this country will undoubtedly be called upon after the war to furnish much of the foundation stock for their rebuilding.

Threshermen throughout the entire grain-producing sections of the country are this season being organized as never before to eliminate waste of grain. It has been estimated that hundreds of thousands of bushels of grain have been wasted annually by various bits of negligence on the part of threshermen and the growers themselves. The cracking of grain is not only a loss to the farmer through reduction in price, but is an actual food loss to the world.

The milling division of the United States food administration has announced what it terms a fair price schedule governing flour and mixed feeds. The prices scheduled go into effect immediately at the mills throughout the entire country. The new rates, it is understood, are to be in effect until a permanent plan now being considered is formulated to regulate the milling of wheat of the 1918 crop. The schedule includes six districts, three on the eastern and three on the western coast. The following is the schedule as announced:

| | Flour Per Barrel. | Mixed Feed Per Ton. |
|---|---|---|
| Boston | $10.83 | $26.88 |
| New York | 10.77 | 26.59 |
| Philadelphia | 10.73 | 26.59 |
| San Francisco | 9.95 | 24.44 |
| Portland, Ore. | 9.95 | 24.44 |
| Seattle | 9.95 | 24.44 |

# For Our Returned Soldiers

## *To Provide Refuse Land Is Not the Thing*

By PAUL E. TRIEM.

"With the disappearance of free lands, which offered the only free road to financial independence in the country, the United States entered a new era," declared Dr. Elwood Mead, international authority on land settlement, speaking before the Washington state land settlement conference. The conference was held in Seattle, June 20 and 21, and was fortunate in securing for itself the leadership of men directly connected with various phases of community development and land settlement.

Among these leaders of thought and action Dr. Mead probably stood first, as his command of data on land settlement problems is derived from experience and study in many parts of the world. Not long ago many of the ideas he advanced would have been looked upon as radical, if not revolutionary. "The national menace of tenantry," as he phrased the present system of farm renting, and the evils of absentee ownership of large tracts of agricultural land were elements in the present unsatisfactory system directly attacked by the California expert. Speaking of one of the purposes of the conference, the providing of ways and means of putting returned soldiers on the land, he said:

"Refuse land is not what we want for our returned soldiers. We must buy land now in use, and in some way must strike at the national menace of tenantry. More than that, we must devise plans national in scope if we are to hope to secure federal assistance."

Credit beyond ordinary commercial credit, credit on character rather than on tangible securities, is one of the needs in solving this national problem, in Dr. Mead's opinion. In Australia, in New Zealand and in California some advance has been made toward a solution. In both of the two former governments the commonwealth as a whole stands back of a national policy, while in California the state has entered upon the role of country community builder. In every instance an effort has been made to secure the right sort of men for the farms, and the right sort of farms for the men. When to this selective activity is added the stabilizing of finance for the individual by the state, the main features of Dr. Mead's program have been covered.

Gordon C. Corbaley of the Seattle Chamber of Commerce and Commercial club brought vividly before the conference some of the less familiar conditions of the present industrial situation, and on the basis of these data made some startling predictions in regard to after-the-war business.

"After the war the governments of the world will have to continue to be in control of the industries of the world," declared Mr. Corbaley. "This great war machine can not be knocked to pieces overnight. I do not believe we are going back to pre-war conditions in your lifetime or in mine, and remember that when I speak of these vast problems which lie before the government I do not refer to any one in Washington—you and I are part of the government. A time has come when we will have to deal with our problems collectively."

The informal address delivered by Captain E. Jackson of Wenatchee was one of the unadvertised but impressive features of the program. Captain Jackson is connected with the Imperial Association for Disabled Officers, and, speaking from the standpoint of a direct knowledge of his subject, he told the delegates of the difficulties they would have to master in working out a practical plan for putting returned and disabled soldiers on the land. Declaring that "Germany has thought her problems out and knows just how she is going to face the terrific burdens which will come after the war," Captain Jackson paid his respects to the modern pension system.

"The world has got beyond the stage of pensions," the speaker declared. "It is all right to put them on paper, but when it comes to paying, the resources of the world will not suffice to do it."

Captain Jackson's substitute for pensions has already been tried out to a certain extent by England. Intensive training in more than 40 trades is available for returned British soldiers. Others are being put upon farms, this latter branch of the work up to this time being conducted largely by private enterprise. Two years' pensions will suffice to accomplish this practical purpose in the case of the average returned soldier, according to the speaker, and the supreme economic and personal wrong of pensioning a man for the remainder of his day is avoided.

Under the efficient direction of Commissioner E. F. Benson, the conference was divided into three groups, making it possible for the distinctive problems involved in the settlement of arid, swamp and logged-over lands to be considered without waste of time. The recommendations of these three sub-councils were taken in hand by a general resolutions committee, whose final report was adopted practically as presented. The resolutions placed the conference on record as favoring federal aid and direction in the matter of land settlement; a campaign of education, to be carried out through the publicity committee, designed to awaken the public to the need of a state and national land policy; and the preparation by the legislative committee of a legislative program for state and nation, these recommendations to be reported to the executive committee not later than December 1, 1918.

The personnel of the committees is as follows:

Resolutions: George W. Dilling, Seattle, chairman; Dr. O. L. Waller, Pullman; S. V. Mortland, Yakima; T. L. Greer, Sandpoint; Dr. Elwood Mead.

Publicity: Charles P. Norton, Seattle, chairman; T. B. Hill, Yakima; William H. Crawford, Poraland; C. A. Short, Bellingham; A. F. Marsh, Chehalis.

Legislation: Colonel Howard A. Hanson, Seattle, chairman; Clark V. Savidge, Olympia; R. Ensinger, Spokane; R. B. Williamson, Yakima; John A. Rea, Tacoma; John T. Condon, Seattle.

E. F. Benson was elected president; R. K. Tiffany, first vice president, in charge of the arid land section; W. A. Linklater, second vice president, in charge of the logged-off land section; F. W. Rader, third vice president, in charge of the swamp land section. Colonel Howard A. Hanson was chosen for secretary and treasurer.

The time and location of the next meeting will be announced later.

## May Float Irrigation Bonds.

A movement is under way in Lewis county looking toward the irrigation of what is known as Ford's Prairie and Waunch's Prairie with a system of ditches leading from the Skookumchuck river. A petition asking for a vote on the issuance of bonds for this purpose was circulated last year and the county commissioners are now being asked to call an election on the issuance of the bonds. It is estimated that the project would cost about $33 an acre and under present proposals the annual payment during the first 10 years would be fixed at about $1.80 per acre.

**Increase Wheat Acreage.**

In spite of scarcity of implements and shortage of farm labor, England, Scotland and Wales have all increased their acreage of wheat.

## To Sign Up 4000 Cows

Lewis county is rapidly forging to the head as one of the foremost dairy counties in the state. The newly organized county association is working, under the plan outlined by Asher Hobson, to sign up 4000 cows, at which time the organization will be completed so as to handle all the sales of its members. J. A. Scollard is chairman of the association and C. A. Giblin secretary.

The Chehalis District Cow Testing association must also be reckoned an important factor in the dairy development of the county. The officers are: J. C. Bush, president; H. Bouchard, vice president; F. M. Svinth, secretary-treasurer, and A. Adolphson and N. Hamilton, additional directors.

An additional indication of the increased interest in live stock matters taken by Lewis county farmers is seen in the number of fine cattle recently purchased. J. A. Scollard has a $2500 Aberdeen Angus bull and 10 purebred cows brought in from North Yakima. Bert Furrer and J. T. Alexander are going in for dual purpose Shorthorns, and have bought Foothills Archer, No. 609878, from the Ayers farm of Carleton, Ore., to head their herd. This bull is sired by Imperial Lad, who weighs over 4300 pounds, and has an unsurpassed producing record behind him on both sides.

M. P. Frame joined the better live stock movement in Lewis county by purchasing three Carnation Stock farms Holsteins—Segis Ormsby Fancy, No. 266384; Milk and Butter Belle, No. 282299, and Ollie Alexander Clothilde 2nd, No. 273882. These are all fine cows, Segis Ormsby in particular, a grand daughter of King Segis, being one of the finest heifers ever brought into the county.

P. E. T.

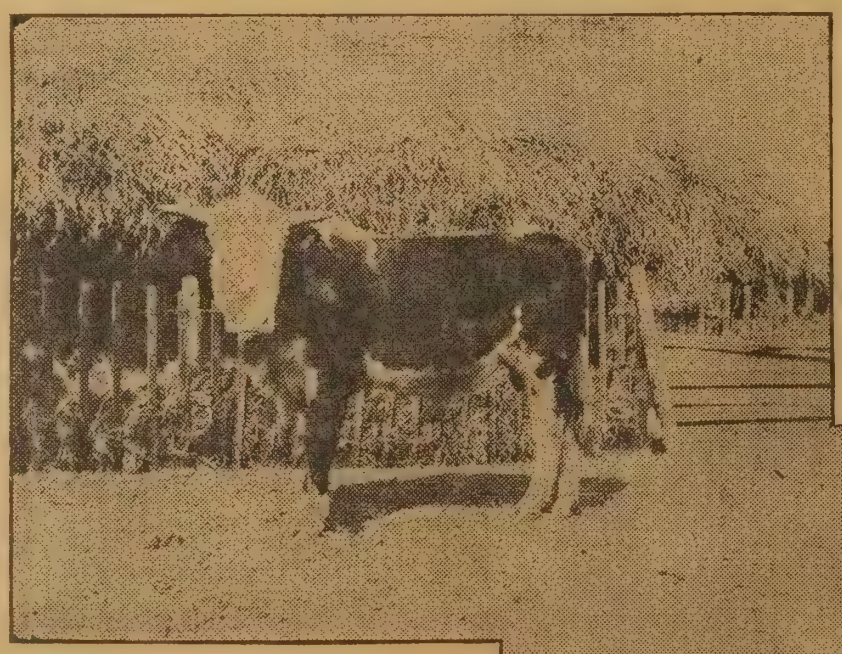
## Grain Saving

### Certificates for Threshermen

In recognition of pledges by patriotic threshermen to assist in preventing waste of grain during harvest and threshing operations, the U. S. food administration is now issuing membership certificates to those enrolled in this important conservation measure. Under this plan every thresherman will have an opportunity to take his place alongside other patriotic men who have put their business on an efficient war basis and are thus supporting the efforts of the government and the boys at the front to speedily win the war.

To secure one of these certificates, which is attractively printed in two colors and is suitable for posting on a threshing machine or for framing, a thresherman signs this pledge:

**"In order to be of service to my country in this time of need, particularly in its effort to avoid unnecessary waste of grain during harvest operations, I hereby accept membership in the United States food administration, pledging myself and such of my help as can be influenced in so far as my circumstances permit, to operate my threshing machine, so as to reduce the wastage of grain, and will go to my county grain threshing committee for assistance in the difficulties I may experience before permitting unnecessary wastage to occur."**



Any threshing machine operator who has not received a blank grain thresherman's pledge card is expected to apply for one immediately to the federal food administrator of his state either direct or through his county food administrator.

With the certificate goes the friendly desire of the food administration to aid in every possible way this work of conservation at its source. Such assistance has already taken the form of information on international food conditions, offers of mechanical aid by experts and arranging through other branches of the government for fuel, labor and other essentials.

**Wheat and Flour From Australia.**

Moderate shipments of wheat and flour are being made from Australia to the Pacific coast of the United States.

# Woman Turns Homestead Into Improved Stock Ranch

THESE two pictures were taken on the improved stock ranch of Mrs. R. E. Davie, near Bailey, in the Quincy Valley of Washington. The calf is a yearling Hereford and the two-year-old horses in the lower picture took the blue ribbon for the best matched team at a recent community fair.

Mrs. Davie took this land as a homestead in 1913 and now has made final proof. The land is nearly all in pasture. Mrs. Davie, with the help of her son, has been raising grade Herefords, but is gradually working into purebreds. She makes butter and sells some milk and cream.

The world war presents a most serious personal problem to Mrs. Davie. Her son is her hight-hand man in conducting the ranch. He is of draft age, and should he enter the military service of his country Mrs. Davie does not see how she could continue the operation of her farm, and says she sees no way but that of selling the place.

# Regulating the Flour Mills

## *Entirely Different Method Adopted for Coming Year*

The food administration's grain corporation has adopted an entirely different method of regulating the flour mills of the United States for the coming year.

Mills are now allowed to take a profit of 25 cents a barrel on flour sales, and also 50 cents a ton on feed sales, equivalent to about one and seven tenths cents per barrel of flour additional, or a total profit per barrel of 26.7 cents.

But some mills can grind flour much more economically than others, so under the present system there can be no close standardization of prices to consumers. A recent report of the federal trade commission pointed out that the present regulation of milers' profits at a fixed margin above cost has the inherent weakness of not encouraging efficiency in production and of affording unpatriotic millers temptation to dishonesty in cost accounting, difficult to detect or prevent.

The report added that consideration was then being given by the food administration to the improvement of the preesnt regulation of millers' profits in the light of experience already gained, and said it was the opinion of the federal trade commission that maximum prices of flour might be established which would cover the cost of wheat and all manufacturing, selling and general expenses, and in addition would give the miller a reasonable profit.

The food administration has adopted that recommendation and now announces that the 1918 wheat crop will be handled on a differential basis, effective July 1. One dolla rand 10 cents maximum differential a barrel between the price of wheat and the finished product will be allowed millers. No speculation in wheat or flour will be permitted.

This $1.10 differential will therefore cover all costs of manufacturing and selling and the miller's profit also. This is a considerable reduction as indicated by the federal trade commission's findings as to the average cost of flour milling in the United States in the season of 1916-17. According to that report cost items were as follows:

| | |
|---|---|
| Packages | 30 cents |
| Operating and repairs | 24 cents |
| General expenses | 13 cents |
| Selling expenses | 27 cents |
| Depreciation | 3 cents |
| Total cost | 97 cents |

Add to that the present profit allowance of 26.7 cents per barrel and a differential of $1.23.7 would be indicated, as against the $1.10 that the food administration now allows.

## WINS THRIFT STAMPS.

### Effie Lewis Wins in Contest.

Miss Effie Lewis of Colville has been awarded the one-dollar prize in thrift stamps for her letter entered in the recent historical contest of the Washington Farmer. She is a pupil of Miss Verle Hanna of school district No. 99.

The contest was for the best description in 200 words of any one of the historic incidents pictured in the frieze around the dome of the capitol in Washington. All the letters entered were so good it was hard to make a first choice, the following deserving special mention: Winnie Irene Thurman, Othello; Clifford Zimmerman, Leland, and Eugene Pollastrin, Pasco.

The prize letter was on "The Discovery of Gold in California." and follows:

**Discovery of Gold in California.**

In 1848 a mechanic was digging a mill race, in digging it he came upon some yellow particles in the sand, which he took to the owner of the mill, Mr. Sutter, who decided it was gold. This mill race was 100 miles northeast of San Francisco.

As the news spread, the "gold fever" raged, the men giving up their slow ways of making money, such as farming, clerking, herding, lumbering and milling, and went to digging gold. Even the soldiers deserted their posts of duty, vessels lost their crew before they had their cargo unloaded.

Within four months, 4000 people had gathered along the Sacramento river, digging gold with all sorts of implements, from a knife to a pick.

As the news of the discovery of gold spread, the rush to the gold fields was such as America had never seen before. Some of the people came around Cape Horn. Others crossed the mountains, while others crossed Panama. By the fall of 1849, California had a hardy population of 100,000 people who needed an orderly government as badly as they wanted gold. The slave states, which were so deeply interested in California's fate, had not sent many emigrants, and a constitution prohibiting slavery was adopted by an overwhelming majority. EFFIE LEWIS.

ENCLOSED please find three subscriptions for The Washington Farmer, for which please send me a Farm Service War Flag, 9x22, made of cotton felt, with six extra small stars, as we all work on the farm.

R. H. BARTLINE.
Kirkland, Wash.

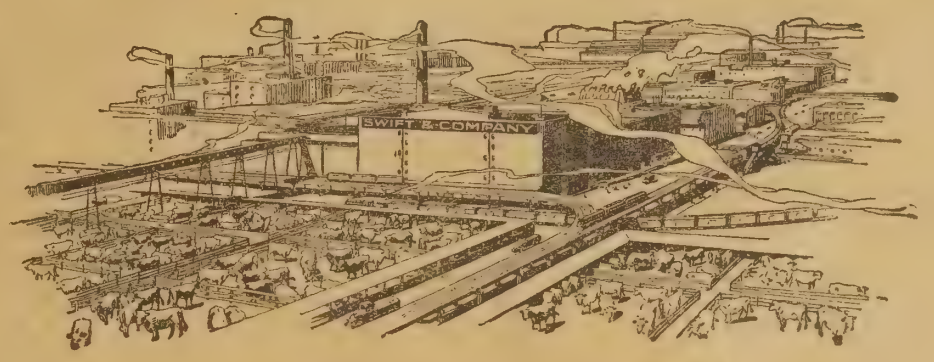
## Farm Papers Are Praised.

G. A. Grist and Mrs. Grist of Yakima, who attended the state grange meeting at Walla Walla, are both believers in all the educational mediums which effect the farmer.

"The agricultural colleges are doing a big work, in discovering principles and working out methods along agricultural lines," declares Mr. Grist. "Much of this information would be locked up, however, were it not for the farm papers and the grange lecturers."

"And the grange women," added Mrs. Grist with a smile. "The men are the greatest hangers-back in the world—they think they can never take part in anything. If it weren't for the women, many of these social institutions wouldn't accomplish much. Yes, indeed, I believe in the farm papers. They are accomplishing a big work now, and I think they are getting better right along."

### Birmingham Gets Slot Machines



Nearly 90,000 penny-in-the-slot gas meters are used in the English city of Birmingham

## Children in Hop Fields.

S. N. Hill of Yakima, Wash., reports his 27 acres of sugar beets doing very well, the principle difficulty he has experienced being to get a good stand. Mr. Hill is also sticking with the hop crop. He has about 21 acres planted this year and states that aside from some difficulty in securing competent help, the prospects are good. Much of the work in the hop fields can be done by children, however, and this will make it possible, in all probability, to market the crop in good shape.

## Yakima Fruit Tree Census.

A Yakima county fruit tree census, recently completed by the county horticultural department, shows that the county now has 2,050,181 apple trees, 494,118 pear trees, 304,315 peach trees, 72,291 plum and prune trees, 38,103 cherry trees, 9026 apricots and 7378 miscellaneous trees, the grand total being 2,975,411. Winesaps are the favorite apple, there being 750,311 of those trees to 490,317 Jonahathans, the nearest competitor.

# A business that is as big as its job

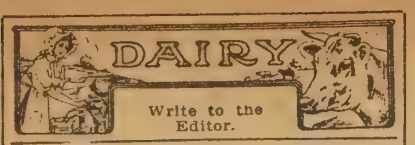
KEEPING a nation of over 100 million people regularly supplied with meat and meat products is a big and complex job.

And a still bigger job when to it is added the needs of the American soldier here and in Europe and of the Allies as well.

It is a job of converting the live stock of the West into meat and meat products and distributing them in perfect condition over long distances to the consuming centers—the North, South, East, West and abroad.

A job of supplying with *unfailing regularity* products that in the main are perishable, in the exact qualities and quantities needed, to the smallest out-of-the-way village as well as to complex and congested metropolitan centers.

Only organizations like that of Swift & Company, with its highly-specialized methods of meat-dressing, its hundreds of branch-distributing houses, and its thousands of refrigerator cars, could have handled such a job efficiently and at a minimum of expense in the present war emergency.



Today American meat and meat products are the recognized standard of the world.

And the economy with which these products are produced is indicated by the fact that today the meat of a steer, dressed, is sold for less than the cost of the steer on the hoof! The proceeds of by-products, made out of what once was waste, have made this possible.

The size of the job has dictated the size of America's packing industry. And America's packing industry has proved itself to be equal to its job.

## Question of Type.

In his address as president of the Holstein-Friesian Association of America at the 33d annual meeting, just held recently at Milwaukee, Wis., D. D. Aitken said:

There has been more or less discussion on the question of type during the last few years, some breeders taking the position that it was the record that the cow made rather than the type of individual that fixed the selling price, and that all the breeders could consider was the price and not the characteristics of the animal as to type. I do not agree with that position, nor do I believe that the Holstein-Freisian association can afford to. I am thoroughly convinced that type is one of the most important principles that must be adhered to. I am satisfied that 80 per cent of all the high-record cows are reasonably true to type, proving beyond all preadventure that type and high production can be attained. No breeder should presume to use a sire whose offspring has sloping rumps and bad udders, no matter what the record of his dam may have been.

The fact that animals do not breed true to type is evidence itself that we have neglected type to a greater or less extent in the past.

I believe, in awarding premiums, that large production should stand for a certain number of points. On the other hand I do not believe that premiums should be awarded at all to an animal that is not a credit to the breed, regardless of whether or not there was any competition in the ring. I have visited fairs and seen shows of live stock, not only those of the Holstein-Friesian breed, but of others, where there was absolutely no excuse for giving them a premium; where they were not a credit to the breed, but rather a discredit, but because of no competition they were awarded prizes. This, it seems to me, is absolutely wrong, and I believe that in awarding premiums at fairs we should have some rule laid down clearly defining the requisites necessary to entitle animals to prize money.

# Feed for Winter

## Conservation by Means of Silo

By A. B. NYSTROM.

There will be thousands of silos erected in Washington this season. This comes as a result of the desire on the part of the dairymen and stockmen to conserve the greatest possible amount of feed for next winter's use. Dry hay can no longer be counted on as the sole roughage for the dairy cow. We can not do without the hay entirely, but we must supplement it with the proper succulent feed to get the best results at the pail.

Scientists estimate that from 25 per cent to 40 per cent of the feeding value of a growing crop is lost when it is made into hay or dry fodder, whereas, in making silage only about 5 to 10 per cent is lost. Since this is the case and in view of our present feed shortage, isn't it absolutely necessary that we save the extra 20 to 30 per cent? It is our patriotic duty to save it.

Dairymen who have put up silos tell us that their silos paid for themselves the first year they used them. It is easy to see how this can be done. If a field of mixed grain and legume would have a feeding value worth $1200 as it stood in the field, and there was a loss of 30 per cent or $360 when made into hay, and only a loss of 8 per cent or $100 when made into silage, there would be a clear saving of $260 if the crop is used for silage instead of for hay. This would be sufficient to build a fairly good silo. On the farm the returns are not calculated in this way, to be sure, but rather by a comparison in the milk flow, yet we do not doubt that many dairymen have increased the production sufficiently the first year to pay for the silo.

Silage not only increases the milk flow at the time it is eaten, but it also keeps the cow in the best of physical condition. It helps her to maintain a heavy production throughout the year. It also saves on the grain bill. While silage and grain are two distinct parts of a ration, and both should be found in every ration, still we know that from one-third to one-half less grain needs to be fed when the cows get a normal amount of silage. This is another direct saving.

In most parts of the northwest the hay crop will be short, due to the dry weather and the aphis. In view of this it is imperative that we get as much feeding value as possible out of every crop that is raised. Putting the corn into the silo will do this. Put one up this year and let the cows pay for it.

# Wooden Hoop Silo

## Cost of Material Figured Out

By A. B. NYSTROM,

The following is a bill of material of a wooden hoop silo erected by E. M. Moses of Chehalis, Wash. Size 8x24.

| | |
|---|---|
| 1116 ft. 1x6-24 @ $26 M (staves) | $29.01 |
| 1200 lin. ft. ⅝x2½ hoop material @ 60c per 100 | 7.20 |
| 96 ft. 2x4x24 (uprights at door) | 1.20 |
| 140 ft. flooring and shiplap. for doors | 3.08 |
| 4 anchor irons | 1.00 |
| 4 anchor bolts with washers | .30 |
| 25 3x7-in. gal. iron strips for hoop joints | .50 |
| 10 lbs. 5d cement nails | 1.00 |
| 15 lbs. 8d cement nails | 1.50 |
| 18 ⅝x7-in. bolts for door locks | .90 |
| 2 days' labor making doors and painting | 6.00 |
| 1 coat of paint | 2.50 |
| Total paid for silo | $54.19 |
| Allowing for donated labor—making the hoops and erecting: 3 men, 14 hours, each, or 42 hours @ 60c | 25.20 |
| Total cost | $79.39 |

These figures do not include the foundation nor the roof. The silo is standing beside a patent stave silo built three years ago. It will be interesting to note the comparison in the silage produced in these two silos and also the length of time they will preserve good silage.

## Six Pounds of Butter a Day.

More than 43 pounds of butter in seven days, or over six pounds of butter a day, is the remarkable record of the Holstein cow Tietje Queen De Kol 2d, No. 228996, bred by W. L. Keyes, of Deerfield, New York, and is now owned by A. C. Howe of New Hartford, New York. Tietje finished a seven day official test with a production of 639.3 pounds of milk, yielding 43.29 pounds of butter to her credit. She freshened at the age of 4 years 10 months 26 days. She is the 32d purebred Holstein cow to enter the charmed circle of cows that have produced more than 40 pounds of butter in a week.

This is a 750-pound latest style

# DE LAVAL

## CREAM SEPARATOR

**Acknowledged by cow owners the world over to be the closest skimming, the easiest running and the longest wearing separator.**

360 pounds of butter would have been needed to buy this machine in 1914.

255 pounds of butter will buy it now.

96 bushels of wheat would have been needed to buy this machine in 1914.

55 bushels of wheat will buy it now.

139 bushels of corn would have been needed to buy this machine in 1914.

87 bushels of corn will buy it now.

There never has been a time when you needed a De Laval so much. There never was a time when you could so well afford to buy it. Don't waste food and money and time trying to get along without a cream separator, or with a half-worn-out or inferior machine. Order your De Laval NOW when you need it most.

**Why not see the nearest De Laval agent at once? If you do not know him, write to the nearest office for new catalog or any desired information.**

## HEALTH CERTIFICATE

### Required for Auction Animals.

At the joint meeting of the Washington and Oregon Veterinary Medical society, recently held in Portland, the following resolution was adopted:

Whereas, The state of Oregon has a law requiring a tuberculin test and certificate of health when dairy or breeding cattle are sold at public auction, and

Whereas, said law is working to the entire satisfaction of the live stock industry of the state,

Therefore, be it resolved, That we favor the enactment of similar laws in the states of Washington, Montana and Idaho and in adition require the inspection and tuberculin testing of all dairy and breeding cattle and other cattle coming in contact with any dairy or breeding cattle, and that we believe that this can best be done under the supervision of a live stock sanitary board, or similar organization, and through a county or district dairy herd inspector, who is a graduate veterinarian, and this inspection conducted in a similar manner to that now being carried on in Tillamook county, Oregon.

Another resolutions favors, for the time being, as a war measure, the handling and treatment of live stock diseases and their prevention by county agents, but that in the future we favor that the secretary of agriculture direct that the control and educational work in veterinary science be conducted by the United States bureau of animal industry and the state live stock sanitary boards and similar organizations, and that the states relation service and extension departments direct their educational work to lines embodying purely agricultural and horticultural subjects, and the live stock sanitary activities of county agents be confined to live stock disease survey work and the reporting of diseases.

## Live Stock Rations in England.

Extreme scarcity of concentrated animal feed in England has resulted in the establishment of live stock rations, which are now in effect on the following basis:

Horses for farm work and transportation may have 10 pounds per head daily.

Milch cows not on grass may have a daily ration of four pounds of feed per head, which is to be reduced to two pounds after August 1.

No concentrated feed may be used for feeding sheep, pigs or cattle other than milch cows. This class of stock is expected to live on roots, grass, hay and similar products.

## Veterinary

Dr. S. B. Nelson

**Stringy Milk.**—Can you tell me what to do for a cow that gives stringy or lumpy milk, especially from one teat? The cow seems to be in good health otherwise. Mrs. T. N., Kalama, Wash.

Try applying the following to the affected quarter after each milking: Soap liniment, six ounces; tincture of iodine, two ounces. Also give the cow one pound of Epsom salts in three quarts of water. The following day begin giving one tablespoonful of fluid extract of pokeroot in one pint of water morning and evening for a few days.

**Give Bloody Milk.**—We have all young cows, two with first calf and one with second, and the other about the fourth. They seem healthy and look fat and nice, but for some reason we get bloody milk (they are all Jersey stock). I noticed it in washing the separator, the substance that collects in the bowl is pinkish in color and some times even red. The man who milks says there is no soreness in any, save one, the oldest, whose teats are at times with a lump near the udder, then we kept her milk out separate and the three young cows' milk still shows some pinkish color. We feed clover hay and potatoes, but cut the latter out, thinking it might cause the trouble. They have good pasture (grass) and look fine. Have stock salt at their use all the time. A. C., Vida, Ore.

I am going to suggest to you that you give your cows each from one to one and a half pounds of epsom salts in three quarts of water. The next day giving to each animal affected, one teaspoonful of hypo-sulphite of soda daily, this for 10 to 14 days if necessary.

**Sow Is Lame.**—I have a Poland China sow that seemed lame in one of her front feet most of the latter part of the winter. She had five little pigs, one dead, the others did well until about five weeks old, when one little one became lame and could not get around at all. I put it in the barn and fed it well. It eats and is no worse but does not get much better. Another little one got lame the same way, lived one day only. One hog raiser pronounced it rheumatism, but I would not think that would be contagious, and this seems to be. They have plenty of room to exercise and are not overfed. Can you tell me what to do for them? C. W. P., Fairfield, Wash.

I would suggest that you give the little pigs from one to two ounces of castor oil. The following day begin giving them 10 grains of potassium iodine in their feed. The feed should be nearly liquid for a few days. Be sure that they have sleeping quarters where there is no draft over them. I would also suggest that you place at a convenient place for them the sulphur, salt, charcoal and wood ash combination given above.

**Hard to Get With Calf.**—I have a cow that for the last three or four years has been very hard to get with calf. She comes in heat regularly but don't catch and the last time she did she lost it at about six months. I examined her and found around the mouth of the womb a tumorous growth like a bunch of small mushrooms from the size of a pea to as large as the end of your thumb, and hard, and the mouth is turned slightly down. She is getting old. What would be your advice for me to do with her? She is still milking for the last 15 months without stopping. The tuberculosis test had no effect on her. I. S. T., Centralia, Wash.

I would suggest that you consult your local veterinarian and have him make a very careful examination of your cow. It is possible that a slight surgical operation may be of value.

**Cut Doesn't Draw Together.**—I have a colt that was cut a foot long across the point of shoulder and it gaped open six inches. It is healing nicely, but doesn't seem to draw together very much and there is a lump on the point of the shoulder where the flesh dropped down. Would you kindly advise me what to do? Also, I have a 3-year-old that I worked through spring work. I noticed that he had lumps the size of your fist on both shoulders. I put costic balsam on them and they seem to be going down now and on the wire cut I use Security Healer. A. C. M., Canfield, Idaho.

Regarding the colt, the wound will gradually draw together. In the size wound you describe this will take a long time. The lump you mention is probably the end of the severed muscle. You can not do anything more for that than you are doing. For the 3-year-old, the lumps contain small pockets of pus, probably the size of a hazelnut, the body is trying to separate them from the other tissue, hence the lumps. These swellings should be opened and the hard, fibrous tissue taken out. Frequently the dressing with tincture of iodine daily is of value. Of course, the incisions must be made away from any point upon which the collar will bear.

**Calves Are Blind.**—I have two calves six months old that have been blind about two months. When in the pasture they bump into fences or anything in their way. Their eyes look wild and have a sort of purple color. Otherwise they are in good condition. What is the trouble and can it be cured?—G. H., Oak Harbor, Wash.

I am of the opinion that the blindness is due to a trouble with the optic nerve. I do not believe that there is any rmedy that would be of valus in this case. I am, of course, taking it for granted from your letter that there is no scum covering the eyes, but that the eyes are perfectly clear and have a purplish cast to them.

**SHIP** your cattle where they will bring you the most money.

DUNHAM
CULTI-PACKER
TRADE MARK REG.

# More Wheat-- Less Labor

Plow your field, follow at once with the harrow and then the Culti-Packer. You can pull the two together if you have a tractor.

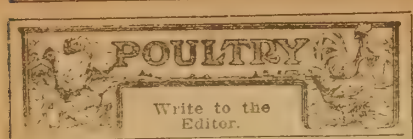
In nine soils out of ten, you will then be ready for seeding without further work. The Culti-Packer crushes all lumps, firms out the air spaces, and stirs the surface soil, leaving a mellow mulched bed for the drill.

Put the Culti-Packer right back of the drill and you will firm the soil around the seed, hasten sprouting and get the most even, sturdy stand of wheat you ever had.

The Culti-Packer has paid for itself on wheat alone for thousands of farmers, and it is just as good on every other crop you raise—corn, oats, alfalfa, beets, potatoes, rice, cotton, sugar cane.

Fifteen minutes work in the field will prove these claims and show you how to get more wheat with less labor.

*Phone Your John Deere Dealer Today--*
*Make Sure of Your Culti-Packer*



## The Culti-Packer

A sturdy simple farm tool. Just two rows of semi-steel wheels, mounted on 1 3-4-inch axle and fitted with dust-proof roller bearings. Wheels quick detachable for straddling corn.

## Soil Sense

A 48-page book on soils with over 100 field photos. Ask your John Deere dealer or write direct.

**The Dunham Co., Cleveland, Ohio** Factories at Berea, Ohio

JAMES DRYDEN,
Editorial Contributor.

A reminder—As green food gets scarce the eggs will get scarce. Clover or alfalfa leaves, lawn clippings, vetch, cabbage leaves, kale, rape, boiled potatoes, sprouted oats, will fill the bill, either one. Don't forget the green food.
J. D.

## Late-Hatched Chickens

Late-hatched chicks are not as profitable as early hatched chicks. There are several reasons for this. It is the experience of practical poultry-keepers that eggs incubated in March and April hatch better on the average than eggs incubated in June and July. The early chicks are also thriftier than the late chicks; they make a thriftier growth and show lower mortality. This may not be inevitable, but it is the fact that the early chicks as we find them do better than the late hatched ones.

Another reason against late hatching is that the late hatched chicks will not be ready to lay in the fall when prices are high. The early pullet will begin to lay before the first of November and continue to lay during the season of high prices. An early hatched pullet of a good laying strain will come near paying for her feed for a year before the first of February, or say in the first four months of laying, which a late hatched poor laying pullet will not pay for her feed in a year.

There may be conditions under which late hatching may give satisfactory results. On the general farm where the conditions are favorable for the production of good hatchable eggs, and where the range is good and feed reasonably cheap, a few late hatched chicks may bring a profit and at the same time help in the food supply with chicken meat if not with eggs. But the chicks that have been hatched early should not be neglected for the late ones. Better have a few good chicks than a lot of poor ones. J. D.

## Flaxseed for Poultry

To the Editor: Can you please advise me if flax seed is a proper feed for laying hens during summer. It is impossible to obtain wheat, and I had a large amount of flax seed on hand. If it is not suitable what would you advise me to obtain in the place of wheat. I have about 200 hens and would like to get some good results this summer. Thanking you in advance for the favor. J. B.

Salmon, Idaho.

Like many other good things, flax seed is good only in moderation for poultry. A glance at its composition plainly indicates the necessity for light feeding. Here it is: Water, 9.2; ash, 4.3; protein, 22.6; fiber, 7.1; nitrogen-free extract, 23.2; fat, 33.7. When it is remembered that wheat has only 2 per cent fat and 11.9 protein, it is seen that flaxseed is a very rich, concentrated feed.

It may be fed to advantage in small amount, at the rate of about 10 pounds in 100 of the grain fed. It is especially valuable during the molting period.

Prices of flaxseed are usually too high to permit of its general use as a poultry food. It will pay to sell the seed and buy the oil cake meal, which is a reasonably cheap feed. The fat or oil is extracted for other purposes, but the protein and other ingredients are left, and this makes it a rich protein feed, so rich that it can not be heavily fed. It is fed in mashes at the rate of 10 to 20 per cent.

Corn, oats and barley will take the place of wheat. If corn can be purchased for less than $80 a ton and oats for less than $70, or in that proportion, the ration may be made of half of each. If the price of one of the two is out of reach in any locality and barley is cheaper, use barley in its place. Feed also liberally on bran and shorts, and if linseed oil meal is available use it as indicated above. Cocoanut oil meal is also a good feed, and it may be fed in place of linseed oil meal. It is not, however, as rich in protein as linseed oil meal and may be fed in larger amount.

Then don't forget the green food, meat scrap or buttermilk, grit, shell and charcoal. J. D.

### Bugs Put to Use.

Uruguay has appointed a commission to investigate the feasibility of a scheme to turn the locust pest into a blessing by using these insects in the manufacture of fertilizer, soap and lubricants and stock food.

## Vent Gleet

To the Editor: My white Leghorn hens have a white discharge from the vent which has a bad odor. The vent seems to turn inside out and protrudes in some cases a half inch. The feathers drop off around the vent. The droppings seem to be all right until the ailment has advanced quite well and the vent gets closed from swelling. The hens have a good appetite and are lively until they get thin and run down from the discharge. Have fed scratch food and shorts and milk made into a crumbly mash. Hens have free range. Do you think it is contagious, and what can I do for them?
C. D. B.

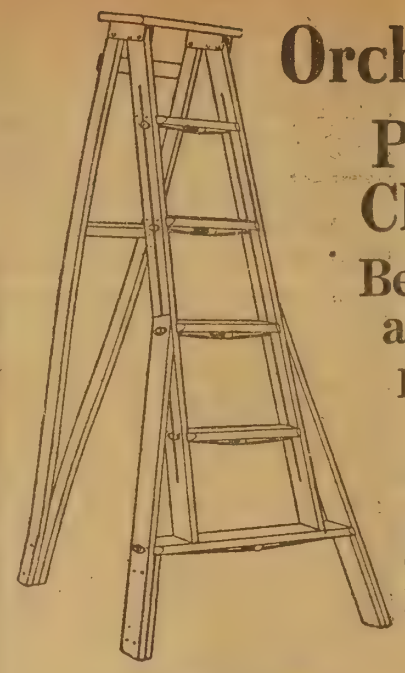
Alder, Wash.

The symptoms you give indicate a case of vent gleet. This disease is infectious and may be spread from one hen to another by the male. It would be well therefore, to examine the male and separate him from the hens if he shows any signs of the disease. The infected hens should also be isolated and given treatment, or killed. Give epsom salts to the flock, half a teaspoonful per fowl, dissolved in water and mixed in a mash and feed when the fowls are hungry. Feed light for a few days with plenty of green food, charcoal and grit. If the sick fowls do not recover in two weeks they had better be killed. One authority, Wright, prescribes as follows for this disease: "Give 30 grains epsom salts and twice a day inject first a 4 per cent solution of cocaine and immediately afterwards a solution of nitrate of silver, four grains to the ounce. The fifth day commence giving a small copaiba capsule daily and inject acetate of lead one dram to the pint." J. D.

## FEEDING PEPPER

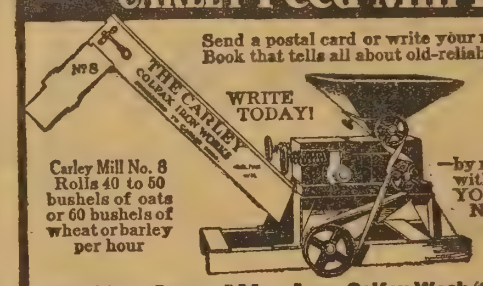
### Bad for Hens in the Long Run.

To the Editor: I am a reader of the Farmer and could you give me a little advice on hens? I bought some last year for a good laying strain, Barred Rocks, and raised pullets but they have not yet been laying well this year, but I feed them red pepper in mash all cold days in winter. Do you think this a good plan? They have had a good run on grass and wild ferns, good water with grit and shell and mixed grain as good as can be got and meal mixed. They all look in good condition and from their noise you would think they were all laying. S. B.



Clear Lake, Wash.

It is not necessary to feed pepper to make hens lay well. Some poultrymen practice feeding pepper in order to stimulate the egg organs. It may affect the yield for a time, but in the long run it is bad. If the fowls are kept in good condition by good feed and care, they will lay just as well without such stimulation. For breeding fowls especially it is bad, but we advise letting it alone all the time.



From the way this correspondent describes his method of feeding, there is one lack in the ration. Nothing is said about animal food. A good egg yield cannot be expected without some kind of animal food, meat scrap, fish scrap, or milk. With meat scrap or milk and plenty of the other foods mentioned and plenty of exercise, the fowls should lay well, if they are of a good laying kind. J. D.

### Clever Physician.

# Chewing Insects

## Eat Holes in Vegetable Leaves

I have a letter from Mrs. G. O. Cleveland, Gooding, Idaho, reading in substance as follows: "I want to ask a few questions concerning my garden. The radishes, turnips and cabbage leaves are eaten full of holes. I would like to know of something that would kill the insects that do the damage. Will the radishes grow and be as thrifty any way?"

Without having seen the insect that is doing the damage I am presuming that it is "thrips" which in spring run in great numbers about the petals of plants and attack the tender shoots of many varieties.

I think the best method is to spray for them.

There are three kinds of sprays, viz: Contact sprays, poison sprays and repellent sprays.

The repellent sprays do not kill, but applied to plants or soils, drive the insects away.

The contact sprays are for piercing and sucking insects that can not be controlled by poison sprays. Among that class are scale, aphids and any others whose bills penetrate the bark or leaf and suck the juices of the plant. The poison sprays are generally used for insects that bite or chew and are capable of taking the poison internally.

I am guessing that arsenate of lead, used about as orchardists use it, or perhaps a little stronger, will kill your garden pests. If you have no spray outfit you can use a hand sprinkler. The orchard formula is arsenate of lead poison, one pound, water 50 gallans. Twice as strong will not hurt the plants and some use it one pound to 25 gallons of water.

You could kill them with contact spray, like lime sulphur, but would be in danger of burning the foliage of your plants.

You could also kill them with a tobacco preparation called Black Leaf 40, and this will not hurt the plants, but it is more expensive than arsenate of lead.

Your radishes will not grow as well with the leaves injured as if they were uninjured. Leaves are stomachs and lungs to a plant and you know what a diseased stomach and diseased lungs will do for an animal. G. L.

# Sprays for Cabbage

To the Editor: I should like to know if coal oil is a satisfactory spray material for young cabbage plants at this time of the year E. L. K.
Grangeville, Idaho.

**The Answer.**

A. L. Melander, head of the division of entomology and zoology at the Washington State college, answers the above as follows:

Coal oil is not very frequently used in spraying cabbage plants because it is apt to leave a bad taste on the plant. Kerosene emulsion is sometimes used when the plants are young, but it is almost entirely replaced by the use of tobacco spray. You can purchase through any seed store a very concentrated extract of tobacco, known as nicotine sulphate. This is so strong that one part of it will make up about 1000 parts of the spray. To this nicotine spray, especially when used on cabbage plants, a large amount of soap is advisable, say in the proportion of four or five pounds of soap to every 100 gallons of the diluted spray. Ordinary laundry soap or the fish-oil soap used for spraying may be used for this purpose. The soap should first be sliced into hot water until it is dissolved. For this use one gallon of water to every two pounds of soap. When cool this will make a soft soap which will readily work up with nicotine spray.

For the green cabbage worms the nicotine is not particularly useful. It is better to spray the cabbages with arsenate of lead, using one pound of powdered arsenate to about 40 gallons of water and adding the soap as before. Some growers prefer to dust the arsenate dry, in which case it should be mixed at the rate of one pound of the powder with about 40 pounds of shorts. This may be lightly dusted on the growing plants. If either of the arsenicals is applied early it will be particularly valuable in checking the green worms, but the cabbage can be treated lightly with the arsenical, even up to the time of harvesting. If they are treated with the poison very late in the season it is advisable to pull off the outer leaves and not use them for stock food.

# ALFALFA IN ORCHARDS.

## Paves the Way for Tree Roots.

I have received a letter from D. E. Sweeny, S219 Browne street, Spokane, Wash., which reads as follows:

Dear Sir—In an article of yours, in the Farmer dated March 25, you recommend alfalfa in orchards provided the soil has not a gravelly subsoil. Do you mean the alfalfa is of particular value in helping the tree roots penetrate deeply, but is not necessary on gravelly subsoil, or do you mean that alfalfa should not be grown in any event on a soil with gravelly subsoil, as is ours in the Spokane valley? Take a specific case where an orchard is eight years old, has made a good growth and is in fine fruiting condition; would you recommend clean cultivation or a corn crop? If the latter and if not alfalfa, what legume would you recommend?

In reply would say that what I had in mind was, that alfalfa, on account of its large and strong root system is of special benefit in opening up a close, compact, hard or puddled soil, which the apple tree roots are not strong enough to penetrate, but which they can penetrate after the alfalfa has prepared the way for them. It is equivalent to opening up a new area of food supply. This is not necessary on that account in a gravelly soil, because the tree roots easily penetrate sand and gravel.

I do not think alfalfa injurious in a gravelly soil. On the contrary, I think if the roots are allowed to develop for three or four years, then the alfalfa plowed up, the decaying root system would fertilize the soil. This would not be necessary in a soil rich in humus, but would be helpful in most sand and gravel. I would think alfalfa might be injurious, where there is not enough water to develop both the orchard and the alfalfa. Alfalfa might also be injurious where the soil is so rich in plant food as to have enough nitrogen without it, but such a condition is rare, except where there has been years of deposit by the wash from the hillsides, or very heavy manureing. As a fertilizer in sand and gravel, I think alfalfa beneficial, but not necessary as a soil aerator nor to allow the water to penetrate to a depth sufficient to feed the roots of trees.

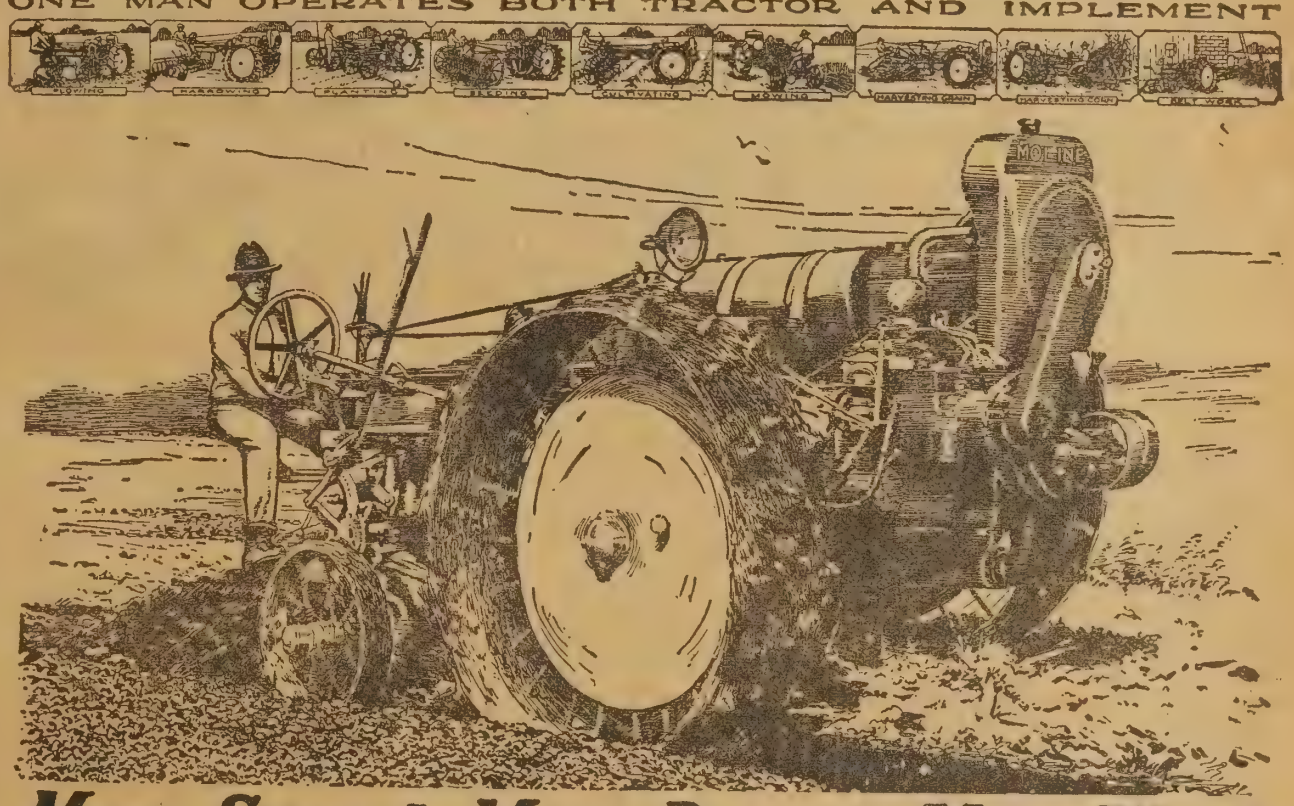
G. L.

# HARD FOR YOU?

## What About the Boy Over There?

Do you feel at times that this war has made your life pretty hard? Read what an American correspondent writes about one of our boys who had been doing his duty:

"In a little field hospital west of Montdidied I stopped at the bedside of an American boy, one of those victims of the German mustard gas, with which the Huns are making all their present gains. His eyes were matted with yellow pus and he coulld not see. His face was terribly burned. His lips were swollen and purple. His whole body had been turned the color of an Indian, and portions of it looked like melted flesh, as though it had been liquefied.



"The fighting had been renewed all along the American lines, and German wounded had begun coming into our hospital. I said to this soldier:

"'The boys are getting their revenge for you fellows tonight.' He smiled through his seared lips, and in a voice so faint that I had to bend down to listen, he gasped, 'God! I wish I was back there with 'em!'"

Do you think your life a hard one?

Help support that boy and the hundreds of thousands of others doing their duty. Buy war savings stamps to the limit of your capacity.

ONE MAN OPERATES BOTH TRACTOR AND IMPLEMENT

# More Speed-More Power-More Work

EVERY farmer who sees the new Moline-Universal Model D plowing is astonished at its speed, the splendid quality of work and the ease at which it operates. After seeing the Moline-Universal work, you will realize that the number of plows pulled is less important than the amount of work accomplished.

**Great Capacity for Work**

Speed, power and light weight are combined in the new Moline-Universal tractor to a remarkable degree.. As a result, under any ordinary plowing conditions, the Moline-Universal pulling 2 plows at 3½ m.p.h. will plow 9 acres in a 10-hour day—equal to a 3-plow tractor traveling 2¼ m.p.h., the usual tractor speed. Thus the Moline-Universal gives you large capacity for heavy work, ample power for all belt work on the average farm, with these distinct advantages over other tractors—light weight; greater economy and ease of operation; ability to do all farm work, including cultivating, and ONE-MAN control of both tractor and implement from the seat of the implement, where he must sit in order to do good work.

**Does Better Plowing**

An advantage of speed plowing is the better quality of the work. With properly shaped moldboards and the Moline-Universal tractor plowing at 3½ m.p.h. the soil is more thoroughly pulverized and compacted than at slower speeds. It is left in such a level and fine condition that furrow marks are hard to distinguish.

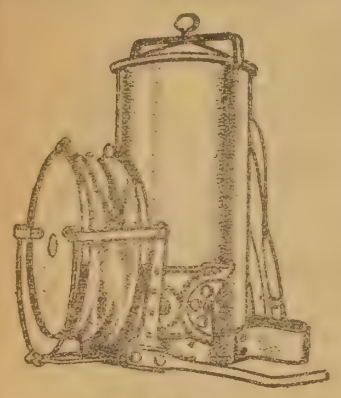
**Positive Reliability**

And keep this in mind always—the Moline-Universal is built for positive reliability. The powerful 4-cylinder, overhead-valve, vibrationless engine delivers full 9 h.p. at drawbar and 18 h.p. on belt; unusually large bearings lubricated under 35 lbs. pressure; Remy electric starting, lighting and ignition system with governor generator; all moving parts completely enclosed; 15 Hyatt roller bearings; 5 adjustable ball thrust bearings; 7 splined shafts; differential lock; heat treated and steel cut gears—these give "positive reliability," and make the new Moline-Universal the best tractor money can buy.

**Self Starter and Electric Lights**

Self starter relieves the back breaking strain of cranking, makes tractor operation easy for non-robust help. In fact, many women and boys are successfully running Moline-Universal tractors. The self starter is a feature every overator will appreciate. Electric lights increase the working capacity of the Moline-Universal so that you can use the tractor night and day in the busy season. It gives you an emergency power always available to make up for any unavoidable delays.

**Free Tractor Catalog**



Your copy of our new tractor catalog which completely describes the Moline-Universal Model D is now ready. A postal will bring it to you, also the name of your nearest dealer. Address Dept. 50.

# World Record Calf Is Brought to Coast

The highest price ever paid for a Holstein of either sex or any age and of any dairy animal of any breed ever sold anywhere in the world was paid by E. A. Stuart of Carnation Stock Farms, Seattle, for the richly bred 6-months-old bull calf, Champion Sylvia Johanna, at the sale in connection with the annual meeting of the Holstein-Freisian association, at Milwaukee, Wis., June 6-8. The price paid was $106,000, and Mr. Stuart secured him only after most spirited bidding by Joy Morton, a wealthy salt manufacturer of Chicago, who was the only other contender after $27,000 was reached.

The calf is a son of the great cow, May Echo Sylvia, and his sire is King Echo Sylvia Johanna.

The top price for cow of $13,000 was paid for the 42-pound 4-year-old, Idealize Pontiac Lass, by W. A. Green of Middlefield, Ohio, while Het Loo Pietertje, the world's record 2-year-old for seven, 30 and 60 days, and by the same sire as the $106,000 calf, went to Lisle Farms company, Lisle, Ill., for $12,500. The 176 head brought the unheard-of total of $427,680, an average of $2430 each. While Wisconsin took the largest number, buyers came from 12 states and Canada, ranging from Massachusetts to Washington. H. A.

Here is a picture of the calf bought by Mr. Stuart of Carnation farm. Mr. Stuart is standing at the animal's head.

---

Champion Sylvia Johanna has been rechristened "Carnation King Sylvia," it is announced, insured for $100,000, and shipped in a private express car on a fast passenger train to Seattle, "attended by a corps of valets" in the words of the Chicago Herald Examiner.

Referring to the sale of the Holstein bull calf for $106,000 at Milwaukee, the Pacific Dairy Review says:

It is needless to say why this calf brought this fabulous price. In fact, the breeding fraternity has for several years been prepared for the $100,000-dairy animal, and when May Echo Sylvia turned out 152 pounds of milk in one day and 12,899 pounds in 100 days, with a matchless pedigree and records behind her, students of Holstein values predicted a record price for her son. The message that the wires flashed presents to the dairy world and breeding fraternity two angles. One is that there is confidence among the big breeding interests in the stability of the business, both in progeny and in milk. Millionaires do not mount the ladder of success by rounds of mistakes. On the other hand, and coming probably from the pessimists, is the question whether the leaders are not running ahead of the ranks and getting on dangerous ground.

Will the sale of a hundred-thousand dollar bull help the sale of the thousands that are offered at $50? It should; but are there not many who will look to the top of the lengthening ladder to fame as a breeder or owner of breeding stock and who will say "What's the use?" Taking care of the ranks in the breeding fraternity, helping out the little fellow, is something that the boom in our breeding business must look out for. While looking after the $100,000 bull, the unsold $50 bulls need attention.

The Farmer repeats what it has already said with reference to this sale: "Strictly good stock is essential to dairy success. No dairyman can afford to keep an ordinary cow now, much less an ordinary bull. But when it costs $100,000, or $50,000, or even $10,000, to get a strictly good sire, or the makings of one, the dairyman that needs the good stock to keep from going bankrupt can not afford to invest. He must necessarily accept the ordinary animal."

# Heavy Crop of Alfalfa

(Continued from page two.)

good, considering the severe dry weather. There was some rain over a portion of the wheat belt in the last week, with a hopeful outlook for grain. The grain market is unchanged here as yet, but we are hopeful for better conditions for the oncoming crop. The net value of grain, after deducting costs, will be less if present prices of grain and wages are maintained. Hay hands are receiving from $3 on up, so, of course, harvest hands will receive that much or more. Everybody needing harvest help is planning to change work with each other, and there are quite a number of small combines to be used this year which will cut down the labor bill to some extent. The machinery and repair work has been looked after for some time back. The average farm road has been made as good as is possible under the war conditions. Fruit boxes will be a little more costly than formerly. A great many in the grain business are preparing bins. C. A. LESTER.

**Steady Power**

RED CROWN GASOLINE

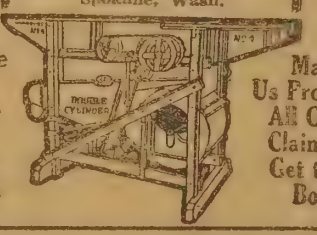
*The Gasoline of Quality*

A continuous, uniform chain of boiling points makes "Red Crown" *dependable*. No "mixture" can give the same satisfactory results. Look for the Red Crown sign before you fill.

STANDARD OIL COMPANY
(California)

**OWENS Double-Cylinder Bean and Pea Threshers**

from the largest to the smallest size, embody the essential features necessary to **thresh all varieties of peas and beans** direct from the rankest vines without splitting any of the seed.



They have more separating space and capacity than any machine on the market.

If you need a pea or bean thresher at all, get an "Owens."

They are the standard the world over. Built in sizes to suit any size grower from the smallest to the largest, and there are none better at any price.

Canadian Government Agent.

# Let Your Silage Crop Mature; Put Plenty Water in the Silo

The clovers and vetches mixed with the cereals and grasses are now being put in the silos. It is well to make sure that there is plenty of water going in with the crop. Water helps to make the silage settle and drives out the air. In most cases it is better that there is too much water than not enough. In the first case there will be some loss of feeding value pass out in the juice through the drain, but this loss will be slight as compared with that from mouldy silage all through the silo if the crop is put in too dry.

Immature green feed makes very poor silage. There is a steady increase in the amount of nutrients in the crop as it matures. To get the most out of it, no attempt should be made to cut it until it is fairly ripe. The grains should be in the soft dough stage or just past the milk stage. The legumes will not be as far along as would be desired, but if the crop is not cut until the legumes are ready the small grains will be too mature, the straw practically dry and the resulting silage will not be palatable. In case the legumes are seeded alone, however, it is well to wait until the seed in the pods are well formed, or in case of the clover, until the heads are beginning to brown.

Too much water is as bad as not enough water if it is allowed to fill up the bottom of the silo. If it were possible to determine exactly the amount of water the silage will take up, it would not be necessary to have a drain, but unfortunately this is not possible. There is certain to be some excess water to drain away, and unless there is no floor in the silo, the juices will ooze out under the stave or out of the cracks, making the premises decidedly unsanitary. Where the ground is porous and there is no flour in the silo, the juice often finds its way to the well and polutes the water.

In case the silo is absolutely watertight at the bottom so that it will hold water like a barrel, you can count on having spoiled, sour silage in that portion filled with the water. The amount spoiled will vary from a foot to several feet, depending upon how much free water there is present.

These difficulties due to excess water can be overcome by installing a drain at the lowest point of the silo floor. There should be a trap in the line to keep out the air. This may be either of the "U" shape or the "Bell" type. The latter is more easily cleaned and therefore preferred. The outlet of the drain should be 50 feet or more from the barn and away from the well.

## Pure-Bred Dairy Sires.

A. T. Flagg, county agriculturist of Waikiakum county, Wash., finds a practically universal desire on the part of the dairymen to improve their herds. There are more pure bred bulls in the county than ever before, a large per cent of the dairy herds now being headed by pure bred sires. Practically every farm in the county is a dairy farm. Mr. Flagg has boys' and girls' club work and some community work with granges and even with fishermen, who are very appreciative of garden and food conservation hints and lectures. Last year Mr. and Mrs. Flagg visited every community in the county on canning and drying work. They will probably make much the same series of visits this year, although Miss Troy, a graduate of the W. S. C., has been lecturing and demonstrating over the county on these subjects. On April 1 the county commissioners increased Mr. Flagg's salary $10 a month, which indicates the appreciation of his work.

## SUGAR BEET SUCCESS.

### Soil Preparation Is Essential.

John Henkel, who is one of the contract beet workers in the Yakima sugar beet fields this season, thinks that eastern Washington farmers do not realize the necessity for thorough preparation of the soil for this crop.

"With the soil and water they have here they should easily raise 25 tons to the acre right along," says Mr. Henkel. "I have worked at this business 17 years, principally in the Colorado fields, and I know what it means. Some of the trouble in getting a good stand here this spring was due to too deep seeding. There's a chance to lose money in beets as well as make it if you don't know the business."

### Tax Wealth After War.

The Berlin Tagliche Rundschau says the finance ministers of all the federated German states have agreed to levy a 10 per cent tax on wealth, beginning one year after the war and to remain in force for 15 following years.

THE DIFFERENCE IN DOLLARS

Grain can be stored in a good grain tank much more cheaply than it can be handled in expensive bags that last but one season.

INTERSTATE GRAIN TANKS

A Good Grain Tank Is a Permanent Investment

come to you complete and all ready to set up; floor, skids for moving, ventilator, spouts. There isn't a better grain tank made; very few as good. The Interstate tank is built for years of satisfactory service. You can not do better anywhere for so reasonable a figure.

# Gouging Methods Unnecessary in Driving Grain to Market

The Wall Street Journal sensibly says that "just because we are at war with Germany is no reason why the poorer farmers of a district should be called on this year to pay the elevator man a bonus equal to the salary of a brigadier general."

This comment was called out by the introduction in congress by Representative Elliott, of Indiana, of a bill to fix the wheat price at $2 and storage charges at 2 cents per month per bushel. The Journal adds that "an elevatorless farmer, even in Indiana, should not be driven to pay $100 per month for storing 5000 bushels of grain in an old building which at no stage of its existence was worth $5000."

The reputed purpose of the charge is to drive grain to market, but the experience of the last year is proof that no such gouging method is necessary. Mr. Hoover has succeeded very well, largely by patriotic appeal, in getting the wheat, and if more drastic means should be needed the coming year, the government is already vested with power to seize every bushel in the country, leaving the question of just compensation to judicial inquiry afterward. Here is the law:

Section 10. The president is authorized from time to time to requisition foods, feeds, and other supplies necessary to the support of the army or the maintenance of the navy, or any other public use connected with the common defense, and to requisition or otherwise provide storage facilities for such supplies; and he shall ascertain and pay a just compensation therefor. If the compensation so determined be not satisfactory to the person entitled to receive the same, such person shall be paid 75 per centum of the amount so determined by the president, and shall be entitled to sue the United States to recover such further sum as, added to said 75 per centum, will make up such amount as will be just compensation for such necessaries or storage space.

That authority would be ample to bring out hoarded wheat, if wheat should be hoarded, but, as said before, there has been little hoarding of grain by the farmers this year, and it is not likely there will be in future,.

## APPLE FARMING.

### Forget Patch of Rocky Land.

"If you have a patch of rocky land on your farm, one which won't raise anything else that you can think of don't make the usual mistake of planting it to apple trees," says William Plunkett of Ellensburg, Wash. "Some people think that apples will do well anywhere. The truth, as I have found it, is that they need both reasonably good soil and very good care."

Mr. Plunkett reports his potatoes as germinating well, but says that after being frosted back to the ground twice many of them decided to give up the struggle.

### W. S. S. or Pigs for Prizes.

War savings stamps or pigs will be the prizes for all pig club champions at local, county and state fairs, according to L. J. Allen, state pig club leader.

### County Agent for Whitman.

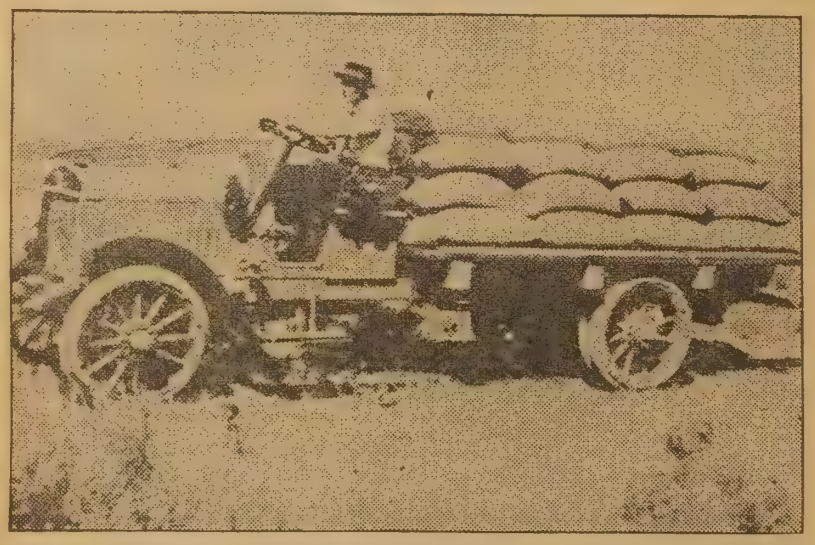
Charles Ficke was recently appointed county agent for Whitman county.

### Cold Storage Holdings Decrease.

A report just issued by the Office of Farm Markets at Pullman, Washington, cooperating with the U. S. department of agriculture, shows that the farms which reported on June 1 last year and on June 1 this year have decreased their cold storage holdings in the state of Washington in all products except cured beef, dried salt pork, butter, cheese and eggs, and that the decrease in frozen beef, frozen pork, sweet pickled pork and poultry have been considerable.

Only in dried salt pork and eggs have there been appreciable increases. The total holdings of all products to June 1 last year, were 14,055,539 pounds, and for June 1 this year, there were 13,186,374 pounds, showing a decrease this year of about 1,000,000 pounds.

### Cooperative Selling.



One thousand cases of eggs sold weekly; monthly poultry feed sales averaging $6000; 700 individual members and four associations holding membership. This is the record of the Washington Cooperative Egg and Poultry association at the present time, as reported by Manager J. H. Guffey.

### Register at O. A. C. Summer School.

One hundred and seventeen students registered at the O. A. C. summer school at Corvallis the opening day.

# A Few Cents Drop in the Wheat Market Will Pay for a GMC Truck

THE NEW WAY

This 2-ton GMC truck hauled 522 bushels of wheat a distance of 29 miles, round trip, making five trips in 13 hours at a cost of 2 1-3 cents per bushel, figuring depreciation, tires, gasoline, lubricants and driver.

THE OLD WAY

It would cost 6 cents per bushel for the above horses to haul the same amount the same distance and it would require 75 hours in which to do it.

# It Will Pay You to Get Your Wheat to Market

**in the shortest possible time and at the lowest cost per bushel. While you are hauling your wheat with a motor truck you can use your horses for other necessary farm work.**

It's just as easy to be a business farmer as it is to be just a farmer—and you make more money at it.

GMC Trucks are built to meet the demands of the farmer under all conditions, at less expense. Cost of operation and upkeep extremely low.

There must be a reason for the ever-increasing demand for GMC trucks.

# Problem of Making a Living

## *When Grandmother's Early Holstein Training Helped*

By Ida C. Young

When we set up our tent beside the spring in Douglas county, Washington, on that June day in 1883 our whole worldly possessions consisted of the wagon, some bedding, clothes, cooking utensils, furniture and one team of mules and one of horses, together with a little cash. During the first summer our possessions increased. A mower, hayrake and plow were brought in, also two "gentle" milch cows. One of the latter, named "Betsy," long before she arrived, was so given to spectacular exhibitions on her hind legs that a chute had to be built for her, wherein her head was tied up, her feet tied down and a stout pole thrust behind her to prevent her backing out. The other cow immediately took after brother Ed and chased him round and round the corral until he was rescued by one of our uncles.

Betsy never outgrew the chute habit, and it was as much as life was worth to try to milk her in the ordinary way. After the first summer, when the men were away and mother had learned to manage the cow, Betsy would march sedately into the chute all by herself when she saw mother approaching with the milk pail. However, let the tying of her foot be forgotten, Betsy immediately reverted to her original depravity. She was a bad cow and she knew it.

Many of the long summer days were spent in Northrup's canyon, where the men hewed pine logs for cabins subsequently to be built. Such lumber as was needed had to be hauled from a mill on Hawk creek, north of where Davenport now stands. On one occasion a raft was made up of the timber to be hauled, and the services of an Indian who knew the Columbia were solicited. The Indian shook his head, exclaiming warily, "Halo! Nika mem a loose!" ("Not so! I die!") So the three men in charge cast off and came down the stream into the Columbia and through Hell Gate. They landed at a point 12 miles north of us, and from there the lumber was hauled home. Frame houses were built that summer by John O'Flaherty, F. H. Bosworth and Frank Rusho. It was in the latter dwelling that Nellie was born the following winter. She was the first white child born in Douglas county, and, if I am not mistaken, is at present living at Coulee City, within 10 miles of her birthplace.

The matter of feed for our live stock for the coming winter was an important one. There was an abundance of bunch grass, if the winter should chance to be an open one, but we hesitated to take the chances which the big stockmen took. As it was too late to put in grain the tall, coarse rye grass, tules and tule grass were made into hay and stacked. The tules made the least desirable hay, as the long, leathery stalks were not relished by the stock.

In addition to this haying and to the breaking, which was done with the breaking plows, other work in the canyon was taken up, and by fall every one was ready to build. Mother was much concerned over the great gaps between the logs of our cabin, and even when she learned that these were to be filled with wooden strips and plastered over with mud she was not really enthusiastic. By the time we were settled inside, however, she had regained her accustomed cheerfulness. Potatoes and other vegetables had already been brought in from near where Davenport now stands. And so after two years of tent life we at last found ourselves sheltered by a roof and four solid walls.

One more trip to the railroad brought us a few slabs of bacon, beans, sugar, dried apples and prunes. I distinctly remember the sugar, probably 15 pounds of white and half as much brown, hanging from the upstairs rafters. There was a small hole in the sack that held the brown sugar, and when I could steal away from the other two I gave myself a treat by poking my finger through, getting it nicely crusted with brown sugar and licking it off. After a time both white and brown sugar disappeared, and I wisely asked no questions.

As through some mistake there was only half enough building paper with which to cover the inside walls of the cabin, the east and the south walls threatened for a time to remain bare. Mother filled in this gap in our equipment by bringing out the new brown rag carpet, which was hung on the bare east side. The stairway and window took up most of the south end, and so everything was lovely again.

I remember the house as pleasant, homelike and cozy. There was a second best piece of rag carpet on half the floor, and this half contained the organ, bureau and a big bedstead which father made that winter. The two windows were always hung with something white, and altogether we were very comfortable and happy in our new home.

Perhaps I should limit that statement to the downstairs portion of the house; overhead was not quite so good. The board roof sometimes let the howling blizzard in during that long, cold, snowy winter, and there were many mornings when we children hopped out of bed and left barefoot tracks in the snow as we hurried down to dress by the stove. More than once sifting snow on our faces woke us up.

The following summer the house was moved from its first location on the 160-acre preemption to the homestead adjoining. Legal residence on the homestead was established by taking to the tent again—the same old tent that had sheltered us in our travels. One night a heavy thunder shower came up, and the roar of the storm, the cataract of rain on the tent and the water streaming through all over everything forced us to make a hurried exit. Mother hung pieces of bedding around us and shoved us outside. Father, with sister Frances in his arms, went ahead and was swallowed up in the storm. "Don't step into that post hole by the gate!" shouted mother in our ears, as Ed and I followed after, splashing ankle deep in the water rushing along the footpath. The only thing visible in all that furious din and confusion was the gleam of Ed's bare legs just before me as they blinked faintly back and forth below his folded blanket. Of course, in all the space of 320 acres it was inevitable that we should hit the post hole. Ed, being ahead, was the victim. Down he went, with a hysterical gasp, and I halted and stood shivering until he had climbed out and was splashing onward. Next moment we were following father into the house.

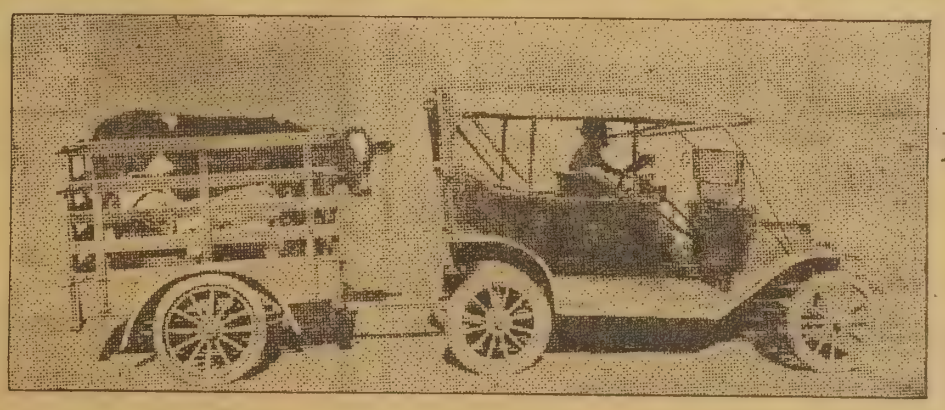
My pen picture of rainfall might lead one to forget that Douglas county is part of the great dry farm region of central Washington. Occasionally in this region rains were frequent and plentiful enough to bring to fruitage abundant crops. During the second summer father sowed and successfully grew a good crop of rye hay, enough wheat for the chickens and a good garden. The country had made good with us, and with the scablands to the west and north of us for pasture and rye hay for winter we felt that we could ask for nothing more.

This problem of making a living, even when helped out by the sale of butter and eggs to the railroad two or three times a year, was not always plain sailing. There were times when the Spokane, Sprague and Cheney markets were overstocked with butter, and when the milk had to be emptied into the pig troughs. In the long run, however, grandmother's early Holstein training in expert butter making won out, and the following winter mother's packed butter went over the stage line to the east and to the west to the tune of about $250.

The ground squirrel, puite squirrel or sage rat became a real menace to the settlers. One week the farmer walked over his fields of green, thrifty rye, oats or wheat; the next morning, perhaps, he went over the same ground to witness partial or even utter ruin. I have seen great fields of grain just starting to head with every stalk bitten through at the joint and left to lop over criss-cross, a whole field desolate.

To the Editor of the Washington Farmer: Please find enclosed a 50-cent subscription to the Washington Farmer. Please send me a farm service war flag.

MRS. B. F. SMALLWOOD.
Grandview, Wash.



The work of poisoning the squirrels fell mostly to the children. How we disliked it! Every other day when the fight was in full swing, father cooked a big iron pot full of wheat and mixed in the strychnine. Each of us children took a panful and a little paddle and started out. The half cent apiece which we were allowed for each squirrel we killed was the silver lining to our clouds, and many a mail order catalogue was torn to shreds by mere fingering in our efforts to decide what we wanted most for our money. We probably learned more English from these catalogues than we did from our school books.

Outside of these pests, which after a few years were driven out by farming or by some disease which attacked them, there was no enemy to farming other than occasional drouth. Nine years later the Central Washington railroad was built through Paradise valley, and after selling our bunch of about 80 head of stock, horses and cattle, we moved to Hartline, where the bunch grass boy takes up the story and carries it on to date.

**Flannel and Cloth for British.**

The British war office has purchased as many miles of cloth and flannel as would extend six or seven times around the earth at the equator.

# WARNER TRAILERS

**This Trailer Might Well Be Termed a Combination Utility Trailer**

While they are particularly designed for hauling steers, cows, calves, swine, as a matter of fact, any kind of livestock, the little body can be removed and then used for general delivery purposes.

This type of trailer has found an exceedingly ready market among breeders of fancy stock as it affords comfort to animals when transported at high speed over considerable distance.

The illustration above shows how live stock may be taken to market and unloaded while the farmer is on his way with his car, attending to other business matters in the city.

The particular cow and calf shown weighed 1200 lbs. and rode comfortably under high speed.

***We also have heavy duty trailers—two wheel type—for logs and poles; four wheel for grain, dairy, milk and other purposes***

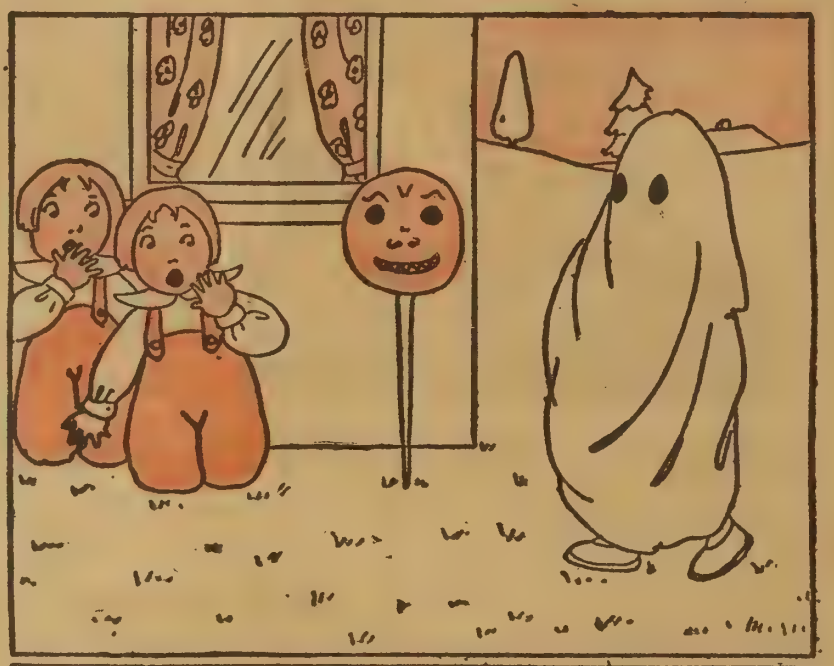
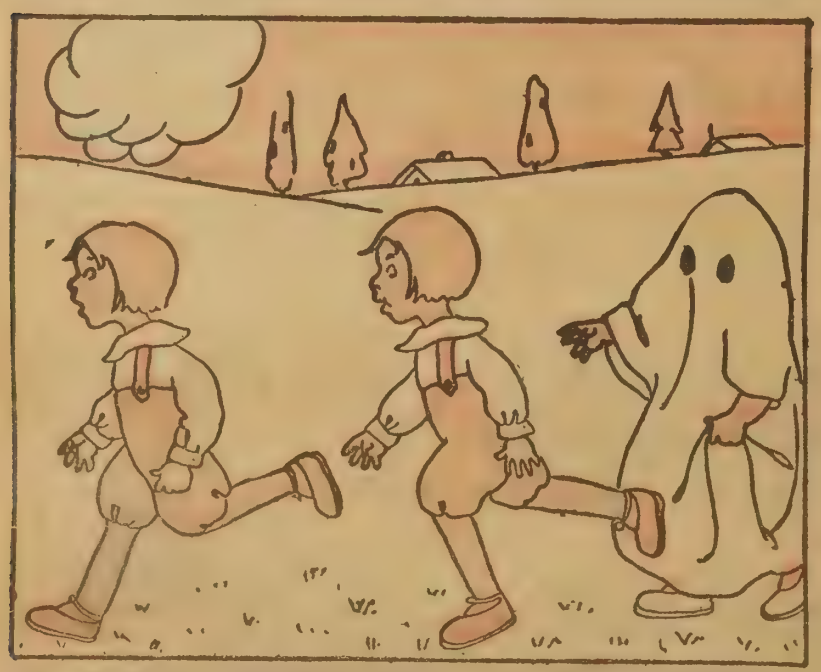
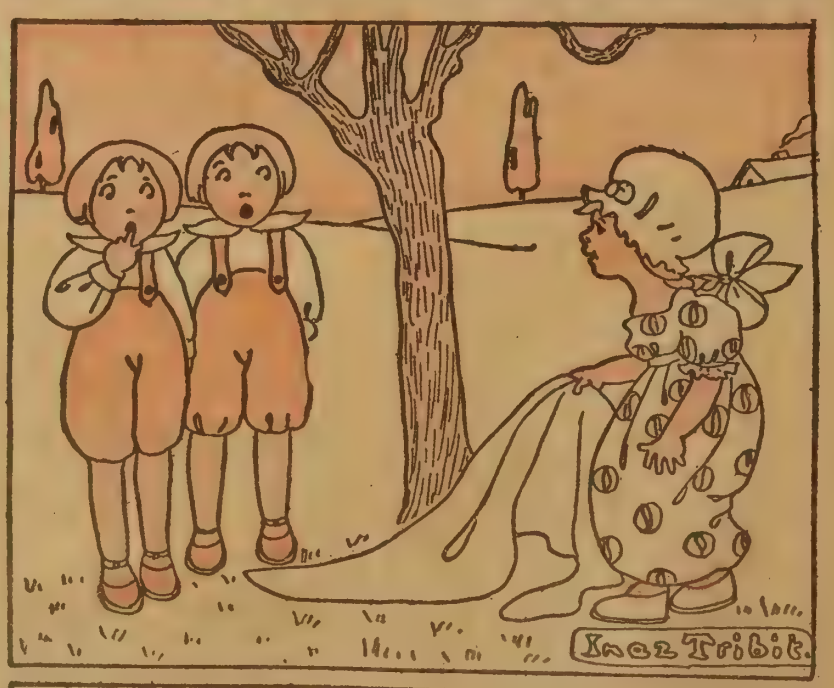
# SUSIE TURNS THE JOKE ON SNOOKS AND SNICKS



Said Snicks to Snooks, "See this queer face?
We'll have a little fun—
Let's hold it up to frighten Sue
And see how she will run!"



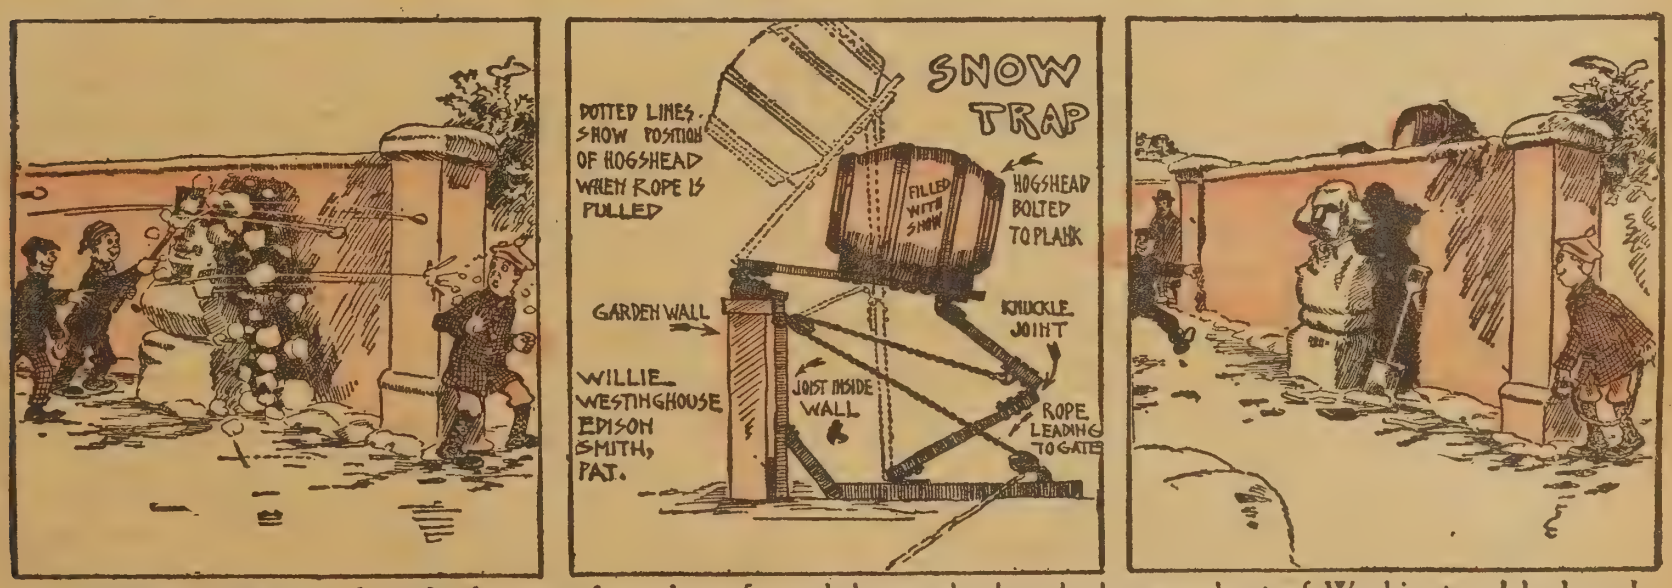
But Susie heard just what they said—
She hid behind the wall.
Said she, "Now I will scare the boys—
They won't scare me at all!"



The bad boys hid behind the house
When it was almost night.
They had the ugly face fixed up
To give poor Sue a fright.

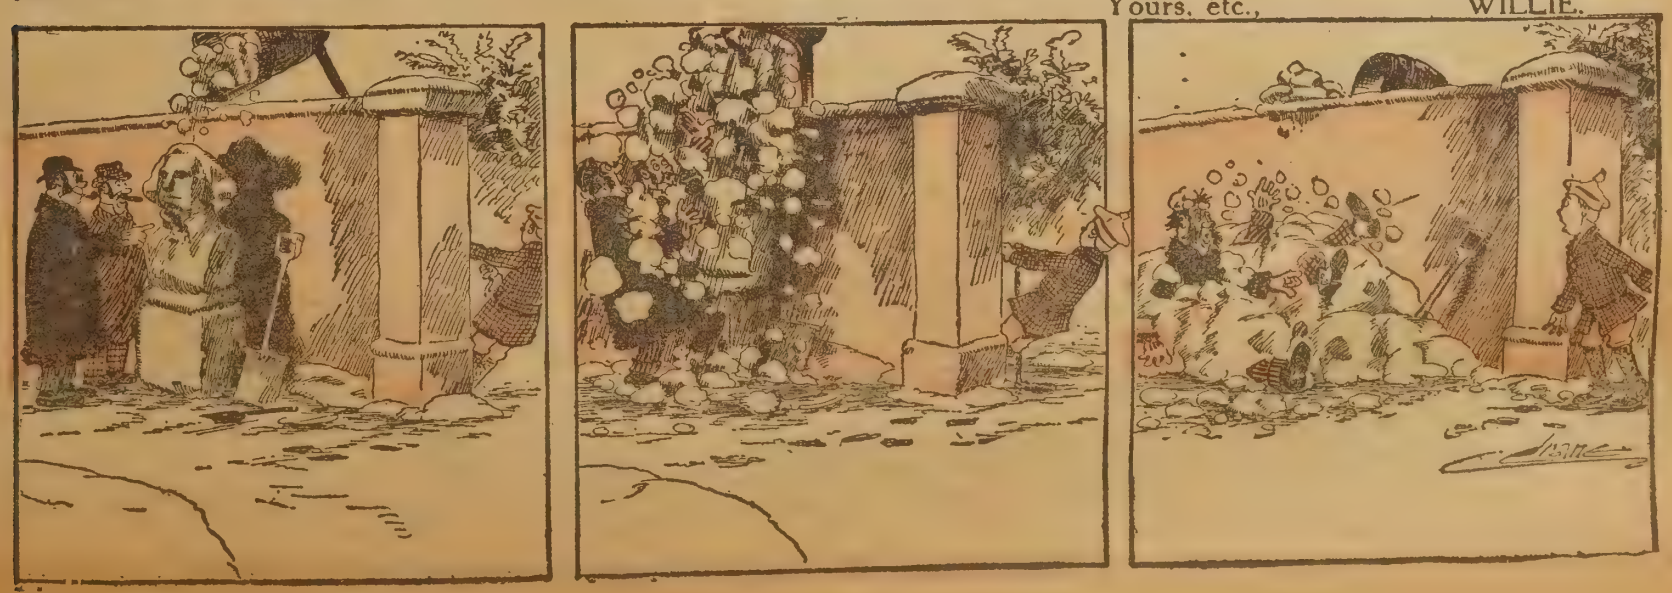
"Hark! Here she comes," said Snicks to Snooks.
"Now see how scared she'll be."
But what is this? A fearful ghost
Before their eyes they see!

With beating hearts so full of fear,
They quickly run away.
And after them with quick steps comes
The ghost without delay.



At last they stopped, quite out of breath—
And found 'twas little Sue!
"Ha! ha!" cried she. "I was not scared.
This time the joke's on you!"

# HAS THIS EVER HAPPENED TO YOU?



# WILLIE'S TRAP WORKS FINE, BUT CATCHES THE WRONG GAME

DEAR TOMMY: I made this trap for a lot of tough boys who knocked over a bust of Washington I had made out of snow. When I got the trap set up I made another snow figure and waited for the gang. I thought I had them just right, but Papa and Uncle Jim came along and scared them away just in time to get under the avalanche of snow!

Yours, etc., WILLIE.

# Women's Contest

## Mrs. Knoph Writes Prize Letter

The letter written by Mrs. John Knoph of Dungeness, Wash., took the first prize in The Washington Farmer contest. The contest was for the best article on the advantages of the automobile, a farm lighting system or a farm water system. Mrs. Knoph's letter was published in the issue of May 9.

The second prize was won by Mrs. Marilla Kidwell, Garfield, Wash., and her letter follows:

**Car a Necessity.**

To the Editor: Two years ago I thought an auto a luxury. After a year's use of one I not only think a car a necessity to the farmer; I almost feel that the man who needs and can afford a car and has none should be classed as a slacker. Now, with all the world clamoring for food, we must not only produce all the food we can, but we must save it. Every bit of horse feed saved is just that much more for human consumption. Tractors should replace horses for farm work as fast as proven practicable. The light auto already has been proven practical on most any road.

All the ground used to produce horse feed and all the time and energy spent on the roads by horses and driver is just that much diverted from cultivating crops. There was a time when feed and farm labor were plentiful, when the farmer could do without an auto, but that time is past, it is no longer a question of expenses, but of food production. And it is a saving of expense. We really must save gasoline when it is needed at the front, but a Ford takes little gas and it gets us there.

A short time ago my husband caught his hand in the belt of the engine (another farm necessity) while fanning grain. Suppose the few doctors we have left had all been busy or suppose it had been beyond the skill of an ordinary surgeon, the only feasible plan would have been to take him to where he could have expert medical attention. As it is, while the hand has been saved all except one finger, for two weeks (and no knowing how much longer) a 20-mile trip has been necessary three or four times a week to have it dressed. The car saves taking a team from the field and in the first stages the ride in the buggy would have been too hard for him.

The right use of the car promotes sociability. We can run over to see a sick neighbor two or three miles at noon while the horses rest. We can visit friends 20 miles away after church or Sunday school and go oftener to make up for the shortness of the visit, where formerly it was necessary to give up the services and we were all tired out, and so were the horses.

We can get our butter, etc., into town in good condition and afford to take it twice a week more easily than once a week with the team; and while we are going we can take many farm products to town folks that are not worth a trip, specially, and yet help them to save other food; things which would otherwise go to waste, sour milk, for instance, which is so necessary to make good corn bread.

The car has done away with the isolation of farm life. We work too hard to enjoy a long trip to town with a team, but when it only takes a short time, we can attend lectures, class plays, graduations, special church services, when we have none at home, and even the movies occasionally.

We farm women want to help with Red Cross work, but in the busy season the team is needed more to put in the crops. But a car can take one load and go for more.

I wouldn't like to be without a car and I think it will be nearer the millennium when all farm work that can be done by machinery is done that way and one man can handle twice the acreage where he does not have to waste time caring for horses and we can have our homes to ourselves and not be giving time to caring for the hired men that we want to give to our families and with fewer men to cook for we can raise more chickens and garden.

MARILLA KIDWELL,
Garfield, Wash., Cora farm.

# Prison Has Stock Farm

The Washington state penitentiary keeps a herd of high-grade Holsteins and purebred Hampshire swine, and Warden Drum, who is a fancier of each breed, finds that each is a profitable line of activity for the institution, besides furnishing the right kind of work for some of the inmates. The Holstein herd is headed by two registered bulls, one from the E. B. Marks, the other from the H. C. Davis herd. Both are grandsons of King Segis, out of the high-producing dams. The best of the heifer calves are saved. A few grade Shorthorns and Jerseys are still retained from the state's old herd, and Warden Drum occasionally saves a heifer from that herd. The dairy barn has no loft, and drop windows light it far in excess of legal requirements. A thoroughly modern creamery has recently been put in, and the state will manufacture its own butter. But Warden Drum will not allow the use of milk to be checked. He finds it one of the most useful and economical foods. The hogs are from foundation stock from the J. M. Fruits Hampshire herd, and are a fine lot of Hampshires. Not many hog herds have a well kept lawn for a center setting, but those that furnish meat for the Washington state convicts have, and Warden Drum takes considerable pride in it. Every spear of clippings is fed to the hogs, and he considers the space well used. Although a small field of alfalfa adjoins the pens, green feed has been scarce on account of lack of space. This, it is hoped, will soon be remedied, however, and good sized alfalfa runs be made available. The brood sows are each given a separate farrowing pen with a dirt floor, and they are producing big litters of strong pigs. All the other hogs are kept on concrete or brick flooring, so built as to be easily flushed and the water carried off. The young pigs are kept in one pen, or set of pens, the older ones in another, and the fattening hogs are finally moved up to the finishing pens, the whole arranged in a most convenient manner for feeding, for sanitation and for appearance.

H. A.

# Convicts Build Evaporating Plant

Last fall Warden Drum of the state penitentiary at Walla Walla had an evaporating plant erected by convict labor on the grounds owned by the state. The plant cost about $10,000. The machinery and all material were furnished by the fruitgrowers, who still own it, the labor only being furnished by the state. About 300 tons of fruit were handled and cider, jelly and fruit syrup were made from the cores and offal. The fruit used would practically all have been wasted but for the plant.

The state may purchase the plant when the next legislature meets, but it will be operated in the same manner this year as last, the work being done by the convicts on a toll basis.

# Dry Season Doubles Fire Danger

## Governor Lister Calls Upon State to Protect Its Grain in This Time of Crisis

IN the midst of one of the driest seasons the Inland Empire and other grain-growing districts of the Northwest have seen in years, Governor Lister of Washington calls upon the grain growers, as their loyal, patriotic duty, to bend every effort toward the protection of their crop from fire.

"Everything human beings can do should be done to prevent the terrible and general fire disaster this dry season invites," declares Governor Lister in a ringing appeal.

State Council of Defense, State Fire Marshal's office and many other agencies are joining hands to help the grain districts fight down fire wherever it shows its menacing head. To burn grain now, they feel, is to burn human lives, for starving men, women and children will die without the sustenance America MUST send.

How splendidly effective is this cooperation between grain growers and fire prevention workers was demonstrated last year, when, despite the most unfavorable conditions, fire losses were brought down to a minimum by a team work that received congratulations far and wide.

Cooperation—organization; they will win against the demon Fire!

Of course you have insurance—you are protected from personal loss. But with the whole world on a food-rationed basis, Uncle Sam's breadbasket here in the Northwest must deliver every grain of wheat that the fields can produce.

The Northwestern Mutual Fire Association, with its corps of trained specialists in fire prevention, is at your service to render you all the assistance possible in reducing your fire danger. Prepare to stamp out the little fire, and you will never be troubled with the big fire.

Despite increased expenses and a war tax on every dollar of premiums collected, we are offering you insurance on the same favorable basis as last year.

Reach us through your telephone or mail box.

# National Nonpartizan League

To the Editor: Granville Lowther writes in the Farmer of June 6, that he has investigated the nonpartizan league from several sources and that he must reject it as a result of his investigations.

Mr. Lowther has investigated the league from every source of information except the North Dakota farmer. This great body of progressive men, who are pointing the way to farmers of other states, Lowther directly insults by refusing their testimony and swallowing whole the words of their enemies.

The business and political elements in North Dakota have had hard sledding. They fought the Equity exchange by slandering its leaders and by breaking up its meetings with mob violence. But the Equity grew in spite of them.

When the nonpartizan league appeared the same sort of tactics were used against it. Mr. Townley was attacked on all sides and painted as a monster. If the Equity had frightened the politicians the league threw them into a terror. But they had shot their wad during Equity days and their assaults and slanders fell harmless in North Dakota. The farmers replied to them by a vote of 87,000 to 22,000, leaving no doubt that in this state the minority would no longer swing the majority, and that the former would not be able any longer to use the power of government to exploit the latter.

Then the war came on and this discredited minority seized on the loyalty issue in the hope of rehabilitating themselves. If any farmer in Washington wants to believe that all of the farmers of North Dakota are disloyal and only the money sharks, the corrupt politicians and the get-rich-quick artists in that state are loyal, that is his privilege, but he is doing it at the behest of the gang that wants to keep on exploiting him. So long as the farmers let the other fellows do the thinking for them we will have laws giving the farmers the worst of it.

So long as the unorganized farmers allow the organized business men to dictate not only their political actions, but their belief, we will have politics run in the interest of the organized business men.

Mr. Lowther doesn't think the people should be divided during the war. His idea of unity is for the farmers to take all of the insults and mob violence of the profiteers and pretend that they like it. But wouldn't the better way be for the business men, being in the minority, to go with the farmers in patriotic endeavor? Then after the war was over and it didn't matter so much, the business men could resume their rotten egg tactics.

If the bankers had a successful organization in North Dakota would the bankers of Washington go to the farmers of North Dakota to find out about it?

NATIONAL NONPARTIZAN LEAGUE.
By W. W. Liggett, Publicity Agent.
St. Paul, June 21.

The article on the nonpartizan league by Granville Lowther, published in the Farmer of June 6, to which W. W. Liggett refers, follows:

From several sources, I have had inquiries about the nonpartizan league. "What is it?" "What is its purpose?" "Should I join it?" Many other questions are generally connected with the inquiry, most of which I do not feel sufficiently informed to try to answer. About six months ago, I was solicited by an organizer to join the league. I had previously read something about it on both sides of the question; but had not reached a conclusion. The talk of the organizer was plausible, and in ordinary peace time, I have no doubt, I would have joined it. There is no question but they embody in their statement of principles many things the people need and will some time be able to obtain. The question in my mind was, "How will these good things be interpreted and used by the leaders, in the great crisis through which we are now passing?"

There are many things that should be different and many wrongs that might be righted. However, we are now in the midst of the greatest war of history, a war for universal democracy as opposed to a world-wide autocracy. The one, great, all-absorbing issue is to win the war; and all minor questions, all political differences, all family quarrels should be held in check until the world is made safe for representative governments, and the protection of free peoples from international robbers and murderers. Interpretation and the application of principles are very important factors. For instance the Bible is a good book; but I could never respect its teachings as interpreted by some very good and devout religionists. I could not respect the principles of the nonpartizan league as interpreted by I. W. W., pacifists, pro-Germans and Senator LaFollette, all of whom I am informed are operating through the league. This is not because I am in favor of war instead of peace; but because I know the only way to have peace is to compel the disturbers of the peace to respect the rights of others. This can not be done by writing essays, philosophising on social ethics or by making contracts that the disturbers regard as "scraps of paper," to be broken at will. In the hands and under the leadership of intelligent and loyal farmers or laborers, I would want to be counted in. In the hands of German pacifists, who are the most warlike nation on earth, except in countries they want Germany to conquer and rule, I want to be counted out. In the hands of the I. W. W., whose methods are impossible, count me out. In the hands of men of the views on the war expressed by LaFollette, at a meeting of the league members, count me out. In the hands of real workers like the average farmer and wage worker, count me in. Because I was in doubt about its direction and the use of power by its leaders I did not join. However, my action is not intended to be a guide for others; it was only satisfactory to myself, with my present understanding of the subject.

TO the Editor of The Washington Farmer: Enclosed you will find a three-year subscription to The Washington Farmer, which in return I would like for you to send me a farm service war flag with three extra small stars.

MRS. J. C. ROSS.
Port Orchard, Wash.

## Mormons Empty Granaries.

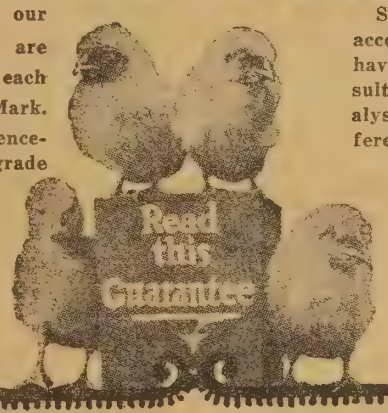
More than a quarter of a million bushels of wheat have been turned over to the food administration from the Mormon wheat storehouses in Utah, which are now being swept clean for the first time in more than 30 years.

This represents the enormous reserve supply built up under the tithing practice to protect the people against any emergency. After each harvest the church members who are farmers contribute one-tenth of their production to provide seed for future crops and as insurance against famine.

## Potato Acreage in Britain.

In response to appeals by Premier Lloyd George early in the spring, asking British farmers to increase their potato acreage, every county in England, Scotland and Wales shows an increase in potato planting over the 1917 area. Arrangements are already being made to turn a good part of the surplus crop into potato flour. The government factory in Edinburgh has already started work.

# Feeding for Eggs and Profit



## with Silver Quill Poultry Feeds

The poultry feeds described in our Poultry and Stock Feed Catalog are sold only in original packages, each bearing our SILVER QUILL Trade Mark.

Under this brand you will henceforth be able to secure extra high grade poultry feeds, each one backed by our broad satisfaction guarantee. These feeds are manufactured for us by several different feed makers of national reputation, for we will not put our Silver Quill brand on any feed except that which we consider to be the very finest in each class, and we often find that the manufacturer who makes the high-grade Chick Feed, for instance, does not necessarily make the highest grade Egg Mash.

This is the reason, then, why we have certain of our poultry feeds made by one manufacturer and others by one of his competitors. By this policy we can always be sure of getting goods of the highest quality.

Silver Quill Poultry Feeds are made according to scientific formulas that have been found to give very best results. They do not vary from their analyses and they always contain the different ingredients mentioned.

If you were to investigate every one of the poultry feeds on the market as carefully as we have, we know that you would select these very same feeds. Perhaps you already use them under their makers' own brands. At any rate we promise that they will give as good results as any other mixtures — and our prices need no recommendation.

Order a supply with your next shipment of goods and try these feeds at our risk.

Read our broad guarantee—we take all the risk. Can you afford NOT to try Silver Quill Poultry Feeds?

### This Guarantee Protects You

Silver Quill Poultry Feeds are guaranteed to be equal in nutritive feeding value and quality of ingredients to the very best poultry feeds. regardless of price.

They are guaranteed to be true to analyses and to contain at all times each ingredient mentioned. They are also guaranteed to contain only sweet, clean food products and to be truthfully and accurately described in this catalog.

Send in a trial order today. Feed one-third of the amount ordered. If not entirely satisfactory you may send back the remaining two-thirds of the feed at our expense and we will return your money in full and repay any freight you paid.

# Bay-Island Producers' Market

## *Unique, Having No Fees, Dues Nor Capital Stock*

By ALVARA P. WILLIAMS

After repeated efforts on the part of producers near Tacoma to establish a direct trade with the city dweller, and consequent failures from several causes, it has fallen to an association known as the Bay-Island Producers' Market to start a system which promises to be successful.

The association is unique in that it has no fees, no dues, no capital stock. It works on the farmers' money without his actually investing any cash. It is so loosely organized that any producer, anywhere, can belong to it, provided he can ship his produce to Tacoma. It has the distinction of having a manager at the city end, who is under bonds, and who draws his salary from almost invisible sources: it has the record of never failing to dispose of goods shipped; of catering to both wholesale and retail trade. On a Saturday only a few weeks after it started operation it did a business of over $1100; it has an average bank balance of $6000, in spite of this being constantly drawn on for checks as fast as the bookkeeping will allow.

What kind of creature is this, that it is not slaughtered by city trade? Let us suppose that John Jones of Gig Harbor, a district largely represented in the association, wants to join. He notifies Otto Jahn, the manager in Tacoma, just what he has to ship, when, and to what dock. This completes his part of the transaction, except for his duty to grade, pack and label his products carefully.

The Tacoma end, upon receiving this request, assigns to John Jones his number, which may be 136. When his shipments arrive in Tacoma they are taken from the dock to the stall in the new sanitary public market. This stall, by the way, is rent free on the condidition that it does not undersell its competitors. The number assigned is stamped on each container sent by Mr. Jones, the whole shipment entered in the books to Mr. Jones' credit, with number, date and quantity.

If it is possible, the shipment—a case of eggs, let us say—is sold at retail from the stall; if there is a surplus of eggs, they are readily sold wholesale. At present there are nowhere near enough eggs to meet the demand. Perhaps half the crate is retailed at 47 cents a dozen, and the rest, to be sold while strictly fresh, wholesale at 44 cents. Credit is given to No. 136 for half a crate at 47 cents, half a crate at 44 cents, and the standard deduction, 35 cents a crate, is made, netting John Jones $13.30, a check for which is sent the same week his shipment is received.

This standard deduction needs explanation. It covers freight to Tacoma, wharfage at the dock, transportation to the market, handling, loss of any kind, wrapping for retail trade, delivery of large retail orders, advertising, and salaries of the workers at the city stall, including that of the manager, assistant, and two bookkeepers. Thirty-five cents charge on a crate of 30 dozen eggs, 28 cents on a crate of strawberries, begins to seem modest in view of these expenses, when we consider that the producer always pays several of the items when he ships to wholesale or commission houses.

Does the bookkeeping end at first seem out of proportion? It is unusual in dealing with a farmer, but this is what it does for him: He obtains the exact amount due him for his shipment, without danger of confusion with somebody else's inferior stuff. No shipments are without records, and in case of dissatisfaction there is a permanent dated record to refer to. There is no guesswork about the price received, as the records show to whom each consignment is sold, and at what price. No produce is ever unsold. The clear record, kept in numerical order, enables each producer to receive his checks promptly, and thus keep in touch with market conditions, and to know whether he is the gainer or the loser by managing his own business.

Mr. Jahn says that at first there was a disposition among some of the city stores to boycott the Bay-Island Producers' Market, because he sold both wholesale and retail. "But it wouldn't work; they had to have the produce, and we had it to sell them." If the market surmounts all obstables in this calm fashion, there is every prospect that the long-looked-for "farmers' market" has come to stay.

If organized backing can help, there is no doubt of the permanent success of the market. It is indorsed, and more than that, enthusiastically so, by the labor unions of Tacoma. In the territory of the producers, it is backed by the Farmers' union and the grange. This does not mean financial backing in any sense, since that is not necessary. But it means the encouragement of these organizations for their members to deal with an association which is doing its best to give a square deal to both ends of the trade, without any recriminations for the missing quantity, the middleman.

# Let's Get Acquainted

By C. L. JAMISON.

They never liked the valley very well, somehow the children always seemed to be sickly, the road to school was muddy and bad in the winter, and the little farm never made more than a bare living. The task of clearing new fields and pastures seemed endless. One day a notice in the paper offering to trade a stock ranch for a farm in the lower valley was seen by the father of the family. He wrote and asked about it. An exchange of visits resulted, the stockman, tired of living in isolation and wanting a change of scenery, traded for the little farm and our friends moved to new scenes.

Their new home was in Lost Valley, for it nestled in the hills, surrounded on all sides by steep slopes of grass and tree-covered mountains. Beautiful green meadows covered the valley floor, and several white ranch houses were clustered along the edge of the timber. The children thought that this was a fairyland, cattle grazed in the pastures and a band of sheep looked like tufts of cotton blown against a rounded hillside. But there was plenty to do on the ranch, stock to be cared for, fences to be built and buildings to be repaired, so every one was busy. Just when things seemed to be working smoothly, an accident took away the father, and the home sustained its greatest loss.

It took considerable courage to stay on the ranch and not return to the old home, but somehow they liked the country, and it was hard to find a buyer who would pay them enough for the property. So the children started to school while the mother planned the work. There was plenty of this to do, but it was lonesome; the neighbors lived some distance away and seldom came over. The whole section felt this isolation, and for years it had been a drawback to the entire community.

It was hard to tell who first started the petition, but every one signed it, for a postoffice would save that 15-mile trip, and they might have a twice-a-week mail service. This seemed a beginning, for it was only a little while until some one began to talk about a grange, and, as enough wished to join, a day was set for the grand event. Of course, it rained, but who cared. Several drove 10 miles to be there, and a row of saddle horses filled the schoolhouse fence from end to end. It was surprising what interesting neighbors folks discovered around them, and how often the same problem that bothered one was making several scratch their heads. Every one went home feeling as though a good day's work had been done, and that they were not going to stop there, for a hall was next in view, and they were going to have more neighborhood parties at the various ranches.

A new spirit seems to have visited the community and brushed away the isolation, suspicion and distrust. As our little girl friend said: "I guess we just got acquainted."

# Sidelights

**Strategy.**

"Let us cut across the street."

"What's the matter?"

"I see an acquaintance coming who was in London during a Zeppelin raid. I haven't time this morning to hear him tell about it."

"Leave him to me. I'll introduce him to a man who was on board a neutral steamer when it was torpedoed by a submarine."—Kennebec Journal.

**A Forethought.**

Pat and Mike were obliged to halt their cart and make way for a funeral procession. While looking at it, Pat suddenly remarked: "I'd give $500 to know the place where I was going to die."

"Well, and what good would it do yez if you did know?"

"Lots," said Pat. "Shure, I'd never go near the place."—Boys' Life.

**Beats a Centipede.**

"Pop," inquired little Clarence Lily-white, "what am a millennium?"

"Sho," said his parent, "doan' yo' know what a millennium am, child? It's jes' about de same as a centennial, on'y it's got mo' laigs."—Exchange.

**No Plumbing There.**

The Plumber—I believe that we'll all follow the same vocations in the next world as we do in this.

The Janitor—Nonsense! What use will there be for men of your vocation where there isn't any water.—Boston Transcript.

**Ignorance Is Bliss.**

A small boy taking an examination in American history, handed in the following composition:

"General Braddock was killed in the Revolutionary war. He had three horses shot under him and a fourth went through his clothes."—Boys' Life.

**She Didn't Give It.**

"What!" exclaimed the summer boarder, "did that cow give all that milk?" pointing to the old farmer's pail.

"'Give' that milk, nawthin'!" growled the old farmer. "Sa-ay I tuck it frum 'er with a crowbar!"—Farm Life.

**Filial Support.**

"See here, daughter, I saw young Smith kissing you last night, and instead of rebuking his conduct you kissed him back."

"I was very angry with him, pa, but you know how you have been declaring that you believe in a strict policy of reprisals."—Baltimore American.

**Out of Luck.**

Tenderfoot—Mother says can she borrow some eggs and some sugar; she wants to make a sponge cake.

Tenderfoot to mother upon returning home—Mrs. Jones said that if you wanted to make a sponge cake you'd have to sponge off someone else."—Boys' Life.

**Against It.**

The city-bred boy's parents had just moved into the country and arrangements were being made for him to attend the public schools. One day he saw electricians at work there.

"What are those fellows doing?" he asked his father.

"Putting in an electric switch," was the reply.

"Well, I'm going back to town at once," was the boy's astonishing comment. "I won't stand a school where they do their licking by electricity."—New York Times.

**Thought He Was Mushy.**

In an Ohio town they tell of a Mr. Peet, a very diffident man, who was unable to prevent himself from being introduced one evening to a fascinating young woman, who, not catching his name, constantly addressed him as Mr. Peters, much to the gentleman's distress. Finally, summoning up the courage, he earnestly remonstrated: "Oh, don't call me Peters. Call me Peet."

"Oh, but I don't know you well enough, Mr. Peters," said the young woman, blushing.—Exchange.

# SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

## What You Ought to Do When You Have the Earache

Dr. Hirshberg.

Human nature, like water, tends to run down hill. It takes the lines of least resistance. You would rather have a thing told you, made for you or done by others than find out for yourself the drawbacks and errors associated with it.

These thoughts were emphasized to me when I happened upon two instances of "raw beef as a cure" for black eyes, and raw bacon for a nail in the foot. As absurd and illogical as these practices are, they have been in use since the time when the memory of man runneth not to the contrary.

Lockjaw germs are not injured or done away with by slabs of bacon. On the contrary, when well-intentioned persons advise you to use a piece of bacon or an onion over the foot into which you have run a nail they sometimes help to sign your death warrant. They cause a delay which postpones the use of lockjaw antitoxin and other scientific measures to ward off the mischief. In short, the tetanis baccilli are thus encouraged to thrive and cause serious trouble.

**Oils Inadvisable.**

Much of the same thing is true of the fallacious use of sweet oil and other fats for earache. Because grandmothers, old nurses and other ancients wag their fossil heads owlishly and describe how many times they think they have "cured" earache with oil, does not mean that it is true and good for the ear. Not a bit of it.

Earache must be fought with intelligence. A brisk purgative, such as Epsom salt, a hot water bag below or upon the ear, a nasal douche of hot salt water or the alkaline antiseptic fluid diluted, all contribute toward some relief.

Skilful aurists say that the dropping of oily solutions into the auditory canal for the purpose of the relief of pain is usually unwise and should seldom, if ever, be resorted to. The oil possesses little or no healing value, and only serves to obscure the parts for examination. Sweet oil and laudanum, so often used by many well-intentioned persons, have done much serious damage to the hearing.

What misled them was the apparent relief from the earache. This virtue, however, is not due to the oil but to the heat, which it—like the old-time flaxseed poultice—holds firmly for some little time.

**Have Special Attention.**

If a little warm glycerine with a drop of carbolic acide in the ear canal does not relieve, if the other applications do not stop the earache within a few hours, and there is some fever, the ear specialist must throw his spotlight upon the ear drum to detect the psychological moment for an incision of the ear drum membrane.

Deafness, ear noises and various auditory affections of middle life can occasionally be traced to the effects of "home" treatment. Such a misfortune could have been avoided by examination and treatment by a doctor who can tell the exact difference between the 57 varieties of earache.

## CHAPTER XXIII.

### Attacked by Pottawatomies

Next morning after returning to their trapping-camp, Ben and Jodo, leading and driving Spunky, set out for the place, more than a day's travel distant, where they had left their traps. And immediately after coming back they filled their big pots with salt water and put them on the fire again. The little spring appeared bolder than it had been, perhaps because of the melting of much snow, and the water did not taste quite so salty.

"Do you s'pose this will always be a salt spring, Ben?"

"No telling. The stream may in time wash out all the salt it passes through, and then this little spring will flow fresh."

The weather was very mild, and the two were not long deciding that it would be best for them to get ready and start for home as soon as they could. So they went to work, a mile or two up the creek, and dug out another canoe. This they brought down the creek and tied, near the mouth of Cave Branch. But the next morning after the canoe had been finished, the weather turned cold again, with driving sleet and biting winds. So the partners set their traps and dead-falls and went on with their salt-making. Their limited stock of ammunition made it impossible as yet for them to do much hunting.

"Now for a better supply of powder and lead," Ben said one dreary morning, after they had returned from their traps, and had tacked up their furs against the cabin-walls to dry. Their trapping was fully as good as it had been during the winter.

"Are you sure we can make gun-powder, Ben? I never saw anybody make any."

"Well, I have, as I told you. It was when I was down at Potosi, working for Mr. Austin. I watched the process carefully, because I knew I might want to make some some day. And when we started out here, I bought that three-pound bag of sulphur because I knew there was saltpeter here. And when you have saltpeter and sulphur, powder-making comes easy. I'm told the settlers make their own powder up in the Boone's Lick county. And now we've got not only the opportunity to make it, but the necessity of making it. So here goes."

"In what proportions do you mix the ingredients?"

"The formula, by weight, is 10 parts of sulphur, 15 of charcoal, and 75 of saltpeter."

During the next few days the two were busy preparing saltpeter, which they obtained from the cliff-cave, and in burning and beating up charcoal. They had some trouble getting the proper quantities of each. But by making a rule balance, and using their three-pound bag of sulphur for a weight, they succeeded in weighing out the proper quantities. Then the three ingredients were stirred together in their big pots, and the mixture wet and thoroughly stirred again. That done, the contents of the pots were spread out on flat stones in the sun.

When the mixture was very dry, Ben took a little of it away, laid it on a stone and applied a coal of fire to it. The result was a prompt flash.

"Good for us, Jodo boy! We've got plenty of powder now—30 pounds of good gun-powder. Now for some bullets!"

First they went to where they had killed a buffalo, got the horns, and after boiling them soft and scraping them thin, they made them a powder-horn apiece, to take the place of those they had been robbed of by the Osages. They had already emptied their powder into deer-skin bags; and those bags, excepting enough to fill their horns, they now put away for safe-keeping up in the cliff-cave.

After that they went hunting—hunting both for game and for other things. When they came back they were carrying a heavy bag with several pieces of peculiar-looking rock it it, known to miners as blossom of lead, or sulphuret of lead. By digging a hole in the ground, and there burning the mineral all day long, till the sulphur was driven out of it, they succeeded in getting a good-sized chunk of pure lead. Afterwards they obtained more by the same process.

Having brought all their lead, on coming out here, in the form of bullets, they had brought no bullet-molds. But they made some, of clay, and in two pieces, and after burning the clay hard, they went to work and molded for themselves a hundred bullets apiece.

"Now I feel like a man again, and like a hunter again!" Ben exclaimed. "No more begging or borrowing powder and bullets for us!"

"And now we can have fresh meat whenever we want it, and we needn't be in such mortal dread of the Osages."

"No, not quite. Still, we've got to be forever on our guard against those red rogues. They're too many for us to fight. Snappy Turkle has doubtless gone back home and reported that we were burnt to death. But a party of Osage hunters may come over here to hunt any day, and when they do come they'll mighty soon find out that we're not half as dead as they think."

To offset this constant danger, the young trappers agreed upon a plan of action. As far as possible they would keep everything concealed in the cliff-cave Then, if Indians came, the two would grab up the few things not hid and slip into the big cave with them. There at the mouth of the cave, if the redskins were not too numerous, they would defend themselves. But their canoe was still back at the edge of the lake, tied where they had left it. If they had to retreat, they could get into that and paddle away on the underground lake, and wait there till the Indians were gone.

Both trappers understood how risky it was to remain in this country. But they had known that when they came out here. And they did not care to go away till mild weather made the furs of little value. Also, it would be very unpleasant to travel the long water-trip of 600 or 700 miles, on five streams, in cold weather, or even in chilly weather.

Day after day winter cold continued, with sleet and ice and a heavy fall of snow. So the trapping and salt-boiling and hunting went on. As fast as dried their furs and skins, and even their salt, were concealed in the little upstairs cave.

But at last, six weeks or more after Ben and Jodo had returned here—it was now well on in April—the air grew mild and springlike, and the snow quickly disappeared. At once the trappers began preparations for their voyage homeward.

But they had to wait a few days longer for the green grass to spring up. Otherwise, little Spunky would be in danger of starving when they started him home. His hay-pile was already eaten up, and they were having to chop down trees for him to browse on the twigs. While waiting they busied themselves with making their third canoe. When it was finished, they concealed it down at the mouth of Cave Branch, near the canoe already there.

With the coming of mild weather and the melting of the snow, spots of bluegrass quickly began to start up. Soon many such spots appeared. Then, one morning. Ben and his partner shouldered their guns and, with Spunky between them, set out toward St. Louis, following the way they had first come. After going several miles, they stopped and tied a small bottle, with a note in it, on the mule's neck. Then they took off his rope, and each with a switch, started him galloping and braying toward his distant home.

He soon disappeared over a hill. They sat down and waited an hour, but he failed to come back. Now they felt practically sure that he had gone on.

"He ought to arrive there a few days before we do—long enough for that bottled note to announce our coming," Ben remarked.

"Yes, if some brush doesn't rake that bottled note off," his companion answered.

Soon they rose up and returned to their cabin. Then they began at once preparations to travel in the same general direction Spunky had gone, but in a different way.

First, in a canoe they followed down the creek to the Niangua, to make sure that there was water enough in the shoal places for a loaded canoe to pass. Having convinced themselves by actually measuring, that the stream was deep enough, they paddled back and tied the canoe to the bank, ready for loading. Then they walked up toward the cliff, intending to load their salt that afternoon.

But just as they were about to pass under the cliff, a rifle cracked overhead, and a bullet fanned the air by Ben's face!

Raising their eyes, they saw three Indians on top of the cliff. Two of them put arrows to their bowstrings and let fly at the white men. But the white men dashed under the cliff and ran into their cabin.

"Now," said Ben, "the question is: Shall we bar up and try to defend ourselves here?"

"If there are only three redskins we can."

"But there are more than three close by. You can be sure of that. I believe we'd better take refuge in the cave. They can't stick fire to that like they did—" He thinking of that other cabin they had tried to defend, far to the south, and of how near they had come to having it burnt down on their heads.

"No, the cave won't burn. If there are only a few Indians, we can fight 'em at the cave's mouth. But if they're too many for us, we can take to the water."

"Yes. And let's get into the cave as soon as possible. And we'd better take everything with us. Nothing but ashes here when we come out, I guess."

Hastily they gathered up the few things they had in the cabin. Having foreseen something of this kind, they had kept as little as possible down here. Knowing that they might need to light a torch, Ben filled their little camp-pot nearly full of coals, then covered the coals with ashes. As they passed out with their things, and around the inner end of the cabin, Jodo grabbed up three of the pine-knots lying there. They would be likely to need those. Thus loaded, they hurried on to the cave.

Not far inside the cave they put their things down, while they with their rifles, walked out to the entrance and stood ready to defend it. Not seeing any Indians, they hurried back and got their pots, the only things left in the cabin. Those they hid away in a dark corner at the side of the cave. They then returned to the cave's mouth.

And the first thing they saw, over at the east side of the valley, near the salt spring, was a band of about 20 Indians, coming at a trot!

"They're too many for us, Jodo. We could make it pretty hot for them if we had to, I guess. But that canoe back yonder is the safest place for us. And the sooner we get to it the better!"

So they hastily lighted a pine-knot at the kettle of coals, then caught up their things and ran back through the cave till they came to the underground lake. Here they deposited their things in the canoe. Then they stepped in, and after putting out their torch, paddled back a hundred yards or so into the darkness. There they sat still and waited to see what would happen.

"Do you s'pose the Osages will venture into the cave, Ben?"

"As to that I can't say. They know we're in here, for they saw us come in. They may try to follow us, or they may sit down at the cave's mouth and wait for us to come out. But I doubt if those Indians are Osages."

"Why so, Ben?"

"Well, we got so used to the Osages and to their dress and general appearance, that I believe I'd know them anywhere. But these Indians look different to me. And then old Snappy Turkle is not there, and I couldn't recognize a single face. My guess is that they're Pottawatomies. Those Indians are hostile to the Osages, and they like to come down here to hunt and to annoy their enemies. So Pottawatomies they must be."

"Do they know anything about this cave, would you guess?"

"I doubt if they've ever been inside of it. But, of course, I don't know."

From where the two were sitting they could see the mouth of the cave—a bright spot in the distance. While watching the spot, they noticed figures coming through it. A little later, however, the figures could be seen passing out again.

"I didn't think they'd come far, in the dark," was Jodo's remark.

But soon the figures could be seen coming through the cave's mouth again. And this time they were carrying a torch.

Now Ben said: "They've lighted one of our pine-knots."

"Why didn't we think to bring all those pine-knots with us? Then they couldn't have followed us."

"They'd found something else, it's safe to say. Here they come, right straight this way!"

"Hadn't we better paddle on a piece further?"

"I don't believe they can see us here. In fact, I know they can't. These dark walls will quickly absorb all the held his torch high while they tried to gaze into the light that one poor little pine-knot can give out."

For a good while they stood there, talking. Then they turned, and the torch could be seen glimmering on its way back to the cave's mouth. At last it passed out.

Again Ben and his partner sat in their canoe and waited. An hour or more went by. Then a torch came through the bright spot again, and close behind it followed several figures, carrying something.

"Looks to me like a log, Ben."

"And so it does to me. But it's a hollow log—that canoe of ours we took out of hiding to load."

"Guess that must—Yes, that's just what they're carrying—our canoe! And that means they're going to follow us!" Jodo was much alarmed.

"It certainly does!"

But that canoe had no paddles.

"Risk a redskin to know how to make paddles. They've made several, I'll be bound! And they'll soon be paddling after us!"

"Hadn't we better move back out of bow-shot, then light a pine-knot and run for it?"

Ben watched the Indians. They came straight on, carrying the canoe instead of trying to flot it on the shallow stream. Plainly they were coming to the lake.

"Now we've got to do something, Jodo! We're in a tight place—no denying that. If we run from 'em, they'll be sure to overtake us—at the back end of the cave, if not sooner."

"Maybe there is no back end. Maybe this cave is open at both ends, like the one where the redskins thought they had us bottled up."

"Dangerous to count on that. Not many caves are open at both ends. I believe—I believe—"

"What is it you believe, Benoni?"

"They're carrying only one torch. And I have a suspicion that I could knock that out of that Pottawatomi's hand with a bullet."

"Wouldn't it be easier to hit the Indian himself?"

"Yes. But I'm not quite sure I want to hit the Indian himself—not just yet. If we get them started to revenge a dead warrior, no telling how long they'd stay around here. But if I only put their light out maybe they'll get discouraged and leave the cave."

"But what if we missed, Ben?"

"That would be troublesome, with them so close. But we'd better be moving back. You hold your paddle out at that end and feel for the wall. I'll do the paddling. They'll soon come up with us; and when they get close enough I'll try a shot. If nothing else, I'll make the boogers cautious about crowding us in the dark."

The two now moved on into the cave, Ben paddling and Jodo feeling the way. But they kept glancing over their shoulders.

There were five Indians in the canoe. Four were down on their knees, paddling, but the fifth was erect in the prow, holding the blazing pine-knot aloft. Fast they gained upon the whites. Soon Ben laid down his paddle and took up his rifle. Waiting till the Indians were within easy rifle-shot, he pulled back the hammer and set his triggers.

Presently there was a flash in the darkness, followed by a thunderous roar. The confined noise made the rifle-shot sound like a cannon-shot. And almost at the same instant the torch flew from the warrior's hand, fell sizzling into the water, and left the whole cave in the blackness of darkness!

For a few moments whoops of rage could be heard, above the noisy fluttering of the bats overhead. Afterwards came silence.

"That was a center-shot, Ben!" whispered Jodo, in much elation.

Ben was hastily reloading his rifle. "I couldn't afford to miss," was all he said.

"What will they do next, do you think?"

"Listen, and we'll soon find out.

For several minutes no sound broke the restored stillness. Perhaps the Pottawatomies were also listening, to learn what the invisible rifleman was doing. But the whites were careful to make no noise.

At length the cautious dipping of paddles began to be heard. Soon it became evident that the Indians were trying to make their way back toward the cave's mouth. Later their canoe was heard to grate against the ground. After that the whites moved in the same direction, paddling noiselessly and cautiously. When in sight of the light spot they stopped and watched.

And they had not long to wait. Soon a figure was seen to pass out at the opening. A little later three figures came in, two of them carrying lighted pine-knots.

"Now it's high time for us to be paddling from here!" whispered Ben. "You feel the way and I'll push."

For a few minutes they groped along through pitchy darkness, moving as fast as they dared. When at length those glimmering torches were hid by the windings of the cavern, Jodo hastily opened the pot of coals and lighted a pine-knot. This he fixed in the prow, in the place they had made for it while exploring the case. Then he also took up a paddle, and they paddled on into the cave as fast as they could drive their canoe.

And as they paddled their eyes wandered everywhere, searching the dark, slimy walls in quest of a hiding place.

(To be continued.)

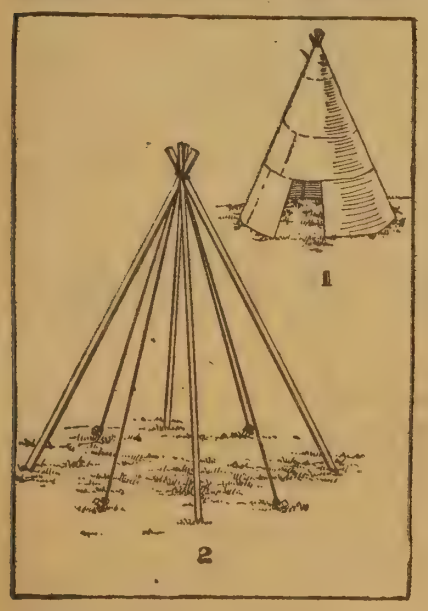
# Washington Men ir War Service

(From The Twice-a-Week Spokesman-Review.)

**FRED J. BLAIR, Kahlotus, Wash.**—Enlisted in the army, May 4, 1917, in the 19th aero squadron, and is now in France. His parents, Mr. and Mrs. C. Blair, have a wheat farm near Kahlotus.

**ELMER EVERT SCOTT, Tum Tum, Wash.**—Entered Camp Lewis, September 6, 1917, and is drilling with the 346th field artillery. His parents are Mr. and Mrs. Scott of Tum Tum, Wash.

**GUST A. PETERSON, Camden, Wash.**—Is in training at Camp Lewis and now serving with the 346th field artillery, supply company. He is the son of C. P. Peterson of Camden, Wash.



# Handicraft For Boys

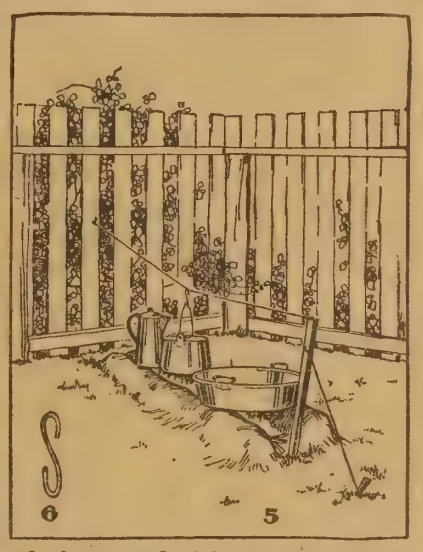
(Copyright by A. Neely Hall.)

## For Back-Yard Camping.

We can not all go camping in the woods this summer, but there is opportunity for every one of you boys to



buildy a camp in the back yard or a near-by lot, and the fun to be derived from such a camp is more than you would think possible before trying it. You can be just as far away on your camping trip as your imagination will carry you, with mountains, streams and forests all around, and you can have adventures just as exciting as that imagination can conjure up.

Best of all, the near-to-home camp requires no equipment other than what you can prepare with materials that can be picked up around home. There is the tepee shown in Fig. 1, for example, made of clothes poles, clothes line and old pieces of cloth. You can likely borrow four clothes poles for the purpose, as you will in no way destroy them. Stand these poles on the ground with their lower ends spread five or six feet apart, and their upper ends crossed as shown in Fig. 2. Then, taking pieces of clothes line, or any other heavy rope, tie them to the upper crossed ends of the poles, and run them down and tie to stakes driven into the ground half way between the poles, as shown in Fig. 2. Figure 1 shows the framework covered with odd-sized pieces of cloth. These may be pinned in place.

Make a doorway just large enough to crawl through, and provide a cloth flap for closing the opening.

The torpedo-shaped shelter tent shown in Fig. 3 is a new form that I have devised for you boys. Four barrel hoops and eight two-foot stakes are needed for its framework, and enough cloth to cover this.

Open the barrel hoops where their ends are joined, and nail each end of each hoop to one of the stakes. Then drive into the ground the other end of each stake of the frames thus formed, placing the frames in line with one another and about 18 inches apart. The covering material must be made long enough to extend sufficiently beyond the framework to enclose it in the manner shown in Fig. 3. Drive a stake into the ground about 18 inches away from each end of the framework, to fasten the covering to.

A small campfire can be built with safety in the back yard if you make a fireplace like that shown in Fig. 5, with earth banked up on each side to keep the fire within a confined area. Bank up the earth in the form of two ridges, with four or five inches between the ridges at one end and about 12 inches between at the other end. A coffee pot and other small utensils can be stood over the fire at the narrow end. Pots may be hung over the fire by fastening a wire above it in the manner shown, and bending pothooks similar to that shown in Fig. 6, out of wire, by which to suspend the pots.

# Corn Syrup

## For Preserves, Jellies, Etc.

Just how best to use corn syrup in preserving and jelly making is a question frequently asked. Herein is the reason for its use, as well as the best way to use it—always in combination with sugar.

Its use makes the product, whether preserves, jelly, marmalade or oldfashioned jam, much finer and smoother in texture, of far fruitier and richer flavor, as well as serving to prevent the hardening of the fruit and the crystallization of the sugar. In other words, corn syrup gives a better product, with better keeping qualities.

Here, then, is a distinct addition to our preserving methods. It has been practiced in Great Britain for many years, and England and Scotland produce the finest preserves, use large quantities and serve them in many ways.

The secret of their success lies in the blending of corn syrup with sugar—equal weight of each is used—to make up a three-fourths syrup.

Some fruits make better jelly than other fruits, this because of the pectin in them.

Currants, sour apples, crabapples, raspberries, blackberries, blueberries, partly ripened grapes and quinces make good jelly; but peaches, pears, strawberries and cherries are deficient in certain substances necessary to produce a jelly of good consistency and flavor. This deficiency may be overcome, however, by combining these juices with those that make good jelly.

A fruit juice that is good for making jelly is one that contains pectin, the essential jelly-making substance. Juices extracted by cooking are apparently far richer in this substance than juices extracted from the raw fruit. To determine whether a juice contains pectin, one or two tablespoonfuls of the hot juice should be mixed thoroughly with an equal volume of grain alcohol (90 to 95 per cent) and the mixture should be cooled. If pectin is present a gelatine mass which can be gathered on a spoon will appear in the liquid.

### Homemaking Requires Brains.

To the Editor: One of the ways women can save is by not cooking too much at a time. There is no good reason for leftover food in family management if the housewife makes a business of her profession.

I save all crumbs made by slicing bread and put with any old bread, dry in oven, roll fine and use in place of cracker crumbs. Study the value of different foods.

Every backyard, no matter how small, should contain parsley, radishes, lettuce and as much of more of the standard vegetables as space will permit.

Use every scrap of food, do not throw away even a teaspoonful of anything that has food value. Bring the same thought and efficiency to the problem of homemaking that the business world demands and waste will be eliminated.

When going to use the range for some time, for instance on wash day, plan to cook food that requires long slow heat thus utilizing heat which would otherwise be wasted. Above all things teach women that homemaking and housekeeping is a job, profession, business and requires as much brains as banking, railroading or bridge building. When men come to realize just how important women's work in the home is women will take more interest in that work. Heretofore the supposition has been that any failure could be a wife and mother. Teach boys and girls differently.

MRS. JAMES NELSON.

Cheney, Wash.

# Sponge Cakes

## Recipes Call for No Wheat

The following recipes were prepared by the United States food administration and will be welcomed by those who are trying to get along without using wheat flour until the next harvest:

**Barley Sponge Cake.**

Barley flour, one and one-third cups, three and one-half ounces; sugar, one cup, seven ounces; eggs, four, seven ounces; lemon juice, one tablespoon; salt, one-eighth teaspoon.

**Corn (Flour) Sponge Cake.**

Corn flour, one cup, three and one-half ounces; sugar, one cup, seven ounces; eggs, four, 7 ounces; lemon, two tablespoons; salt, one-eighth teaspoon.

**Oat Sponge Cake.**

Oat flour, half cup, two and two-third ounces; corn flour, one-third cup, one ounce; sugar, one cup, seven ounces; eggs, 4, seven ounces; lemon juice, one tablespoon; salt, one-eighth teaspoon.

**Results of Sponge Cakes.**

1. These cakes are all very nice and light, texture and color good—barley has characteristic flavor—corn cake is especially tender and all are good textured. The extra lemon juice in rice and corn is to cover up the tendency toward a starchy taste.

Note—The larger amount of lemon juice seems necessary with corn and rice flours to improve the flavor.

**Methods of Mixing Sponge Cakes.**

1. Separate whites and yolks. Beat the yolks until thick and light lemon color. Beat sugar into the stiffened yolks and add the lemon juice. Fold in alternately the stiffly beaten whites and flour. Bake in an ungreased pan for 35 to 40 minutes. Start in a moderate oven (185 degrees C. or 365 degrees F.), and when about half done raise the temperature to that of a hot oven (205 degrees C or 400 degrees F.),

**Rice Sponge Cake.**

Rice flour, three-fourth cup, three and one-half ounces; sugar, one cup, seven ounces; Eggs, four, seven ounces; lemon juice, two tablespoons; salt, one-eighth teaspoon.

# Signal Corps Uniform

The war department has officially recognized the above uniform for women of the telephone unit of the United States signal corps. These girls wear blue uniforms with Norfolk style coats, blue "trench caps" for every day and sailor shapes of blue felt for "dress." On the collar are crossed flags, the insignia of the signal corps, and on the sleeve a band with a telephone mouthpiece embroidered in blue.

# Save the Bones

By LISSIE C. FARMER.

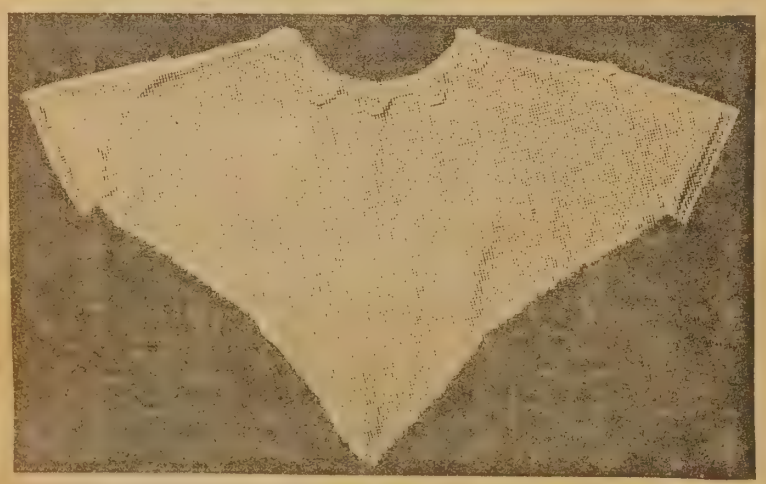
Do not throw away any bones from the meat of any kind that you have been eating until you have extracted their full value for your larder and garden. There is considerable nutritive value in the marrow inside bones as well as in the hard muscles and tendons about the joints which are seldom eaten with with rest of the meat, because they require so much more boiling. Put your leavings of bones and gristle in a kettle, set on the back of the stove so that they may be pushed to the front and be boiling at any time when there is a vacant space and extra heat. If the marrow of the bone is not exposed, break the bone so that the marrow can the boiled out; it makes one of the best soup foundations conceivable. When you have extracted all food value from the bones, put them in the cookstove and burn them up and use the ashes for fertilizer..

**Observation on German U-Boat.**

A German submarine without a periscope carries on its observation by means of lenses at either side and other lenses and mirrors properly arranged. The submarine this equipped is obliged to travel nearer the surface than is necessary in the case of the older model.

**Soldiers Soothe Skin Troubles with Cuticura**

Soap, Ointment, Talcum 25c. each
Samples of "Cuticura, Dept. F, Boston."



**DAISY FLY KILLER** placed anywhere, attracts and kills all flies. Neat, clean, ornamental, convenient, cheap. Lasts all season. Made of metal, can't spill or tip over; will not soil or injure anything. Guaranteed effective. Sold by dealers, or 6 sent by express prepaid for $1

HAROLD SOMERS, 150 DeKalb Ave., Brooklyn, N. Y.

# Maltese Negligee

By VINIFRED WORTH.

Here is the very boudoir negligee that you have been looking for. It is very easy to make, too.

This garment is made from a square piece of 45-inch lingerie batiste. Fold back two corners at opposite sides, as shown in illustration, to form sleeves.

Use three balls No. 40 Cordonnet.

Six yards of Maltese crochet lace is required for the yoke. After making lace, take 2 loops, ch. 2, 2 more loops, ch. 2, until 14 spaces have been made, 8 loops, 1 ch., 2 loops, 1 ch. sl. st. to other side of 8 loop, 1 ch., repeat until 7 loops have been joined. This makes 1 point. Repeat until required number of points have been made to finish pattern.

Twenty inches of Maltese crochet, with picot border, is required for each sleeve, and they are caught back with small crocheted roses.

**Your Local HOME PAPER and Your State FARM PAPER at a Special Club Price**

A special clubbing arrangement has been made with a number of newspapers throughout the northwest. We can now offer you a one-year subscription to your local home paper with a one-year subscription to your state family farm paper at a special rate for both.

**YOUR HOME PAPER** is of great value to you. It brings you all the local happenings and news of the affairs of your community and keeps you posted on the gossip of the social and commercial life. It brings you the news of the home boys at the front and prints many interesting letters from them.

**YOUR FARM PAPER** brings you each week interesting facts of the agricultural development of your state, all the farm news, features for every member of the family, including color comic pages, women's and children's pages Departments devoted to every phase of farming and farm life.

We can now send you your local home paper and your state family farm paper for one year each at the special clubbing rates as quoted below:

# Patterns

2342—Girls' dress. Cut in four sizes: 6, 8, 10 and 12 years. Size 8 requires 4 yards of 36-inch material. Price, 10 cents.

2513—Child's short clothes set. Cut in five sizes: 1, 2, 3, 4 and 5 years. Size 4 requires for the dress 2 3-8 yards. For the petticoat 1 5-8 yards. For the combination 1 1-2 yards of 36-inch material. Price, 10 cents.

2507—Girls' dress. Cut in four sizes: Small, 32-34; medium, 36-38; large, 40-42, and extra large, 44-46 inches bust measure. Size medium requires 5 1-2 yards of 36-inch material. Price, 10 cents.

2384-2381—Ladies' costume. Waist 2384 cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt 2381 cut in six sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. A dress for a medium size, as illustrated will require 5 7-8 yards of 36-inch material. The skirt measures about 2 1-8 yards at the foot. Two separate patterns, 10 cents for each pattern.

2509—Ladies' dress. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Size 38 requires 7 5-8 yards of 44-inch material. The skirt measures about 2 pards at the foot. Price, 10 cents.

2368—Ladies' apron. Cut in four sizes. Small, 32-34; medium, 36-38; large, 40-42, and extra large, 44-46 inches bust measure. Size medium requires 6 1-4 yards of 36-inch material. Price, 10 cents.

2345—Dress for misses and small women. Cut in three sizes: 16, 18 and 20 years. Size 18 requires 7 1-4 yards of 36-inch material. The skirt measures about 2 1-4 yards at the foot. Price, 10 cents.

2490—Child's rompers. Cut in five sizes: 1, 2, 3, 4 and 5 years. Size 4 requires 2 1-2 yards of 36-inch material. Price, 10 cents.

2178—Girls' dress. Cut in four sizes: 4, 6, 8 and 10 years. It requires 3 3-4 yards of 36-inch material for an 8-year size. Price, 10 cents.

2485—Ladies' house dress. Cut in seven sizes: 34, 36, 38, 48, 42, 44 and 46 inches bust measure. Size 38 requires 7 3-4 yards of 27-inch material. The dress measures abou 2 3-8 yards at the lower edge. Price, 10 cents.

2514—Set of new sleeves. Cut in four sizes: Small, 10 inches; medium, 12 inches; large, 14 inches; extra large, 16 inches arm size. No. 1 will require 1 yard, No. 2 will require 3-4 yard and No. 3 will require 1 1-8 yard of 36-inch material for one pair of sleeves in a medium size. Price, 10 cents.

## LOGANBERRY JUICE.

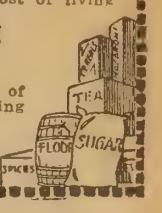
### Berries Must Be Dead Ripe.

To the Editor: Several of your readers here wish you will publish some information how to make loganberry juice.—Julius Steineke, Brookings, Ore.

**Answer.**

For juice purposes berries should be allowed to hang on the vines until dead ripe, which is not the case when picking for drying. It is advisable to let the berries stand for some time after picking, before pressing them. For home making a small press of almost any kind will do; a cider press has served. Some heat the berries before pressing, and it is claimed that a freer flow of juice is secured by heating. Not too much heat should be used, however. The juice may be bottled, and care should be taken to cork securely so no air can enter. It is advisable to bottle without sugar at present. For beverage purposes, the juice is diluted and sugar added to taste. The Oregon Agricultural college experiment station, Corvallis, Ore., has issued a bulletin entitled, "Loganberry Byproducts," which they will be glad to send you on application.

SANITARY CANNING OUTFITS



Home canning is more necessary and more profitable this year than ever before.
Steam pressure canning is the safe, quick and easy way. Our complete outfit saves time, labor and fuel, hermetically seals the cans and sterilizes the contents.
We include instructions and a $2 book of recipes.

# Preserving Small Fruits With Corn Syrup

Last week the Farmer published an article from Claudia Z. Murphy, consultant in home economics in New York city, on preserving small fruits with corn syrup, in order to save the much-needed sugar. Here is the second part, telling of the materials required and giving the rules for making jams, jellies and marmalades:

**Materials Required.**

**The fruit**—Sorted, washed and ready for putting up.

**Corn syrup**—An ample supply for the season's requirements. It keeps perfectly, does not crystallize; handy to have on hand.

Sugar—Sufficient for your needs or the allowance that is allotted to you. For some purposes brown sugar can be substituted for granulated, but the latter is preferable.

Utensils required—Preserving kettle, enameled preferred, but lacking this aluminum or tin can be substituted; wooden spoons—for stirring the mixture; cotton bag for straining jelly; jars—glass, plain or screw-top, or stone jars—suitable size; covers and rubbers for screw-top glass jars; parafine and heavy paper for covering either plain glass or stone jars; labels—to indicate kind of fruit in the jar and date of putting up.

All utensils must be perfectly clean. Jars must be freshly cleaned and scalded. Jelly bags sterilized.

It is a controversial point if the jam, jelly, marmalade or preserves should be covered while hot or left to become cold. Both courses are recommended by experts. In days gone by an excellent product was made and left until cold, then covered with tissue paper dipped in brandy, and a tightly tied-down cover of white paper dipped in white of egg. It must always be stored in a cool, dry place.

**Jams, Jellies or Marmalades.**

1. Observe the strictest cleanliness.
2. Use fresh, ripe and dry fruit, a bit under ripe is preferable.
3. Allow generally 3-4 pound of sweetening to each pound of fruit.
4. Have a steady, but bright fire. Boil continuously and fast, and skim and stir frequently.
5. Do not fill the preserving kettle too full.
6. A good test to ascertain if it is cooked sufficiently is to allow some juice to drop from the spoon, and when it sheets off—or sets—it is cooked enough.

The following table as to the amount of water to add is reliable, but it must be borne in mind that if the season is wet less water should be added; so more syrup is needed and longer cooking than in a dry season.

As a rule, the procedure is as follows, though in special recipes other methods may be advised:

Place the prepared fruit in a kettle and simmer for a few minutes. Add the sugar and cook gently until it has dissolved. This is important, for if allowed to boil before it is dissolved the jam will be thin. When the sugar has dissolved, add the corn syrup—equal weight, pound for pound to the sugar—then boil fast. This again is important, as otherwise the product, whether jam, jelly or marmalade, will not be of good color.

Stir well and skim with a silver spoon. When sugar of good quality and clean fruit is used there should not be very much scum.

**Time.**

The length of time for boiling will depend on the kind of fruit used, as well as its condition, whether wet, ripe or unripe. Roughly, 40 minutes is the time from when the fruit begins to boil, but after about 25 minutes it is wise to test by placing a very little in a saucer. If it sets, it is done; if you think it is done, put it on a cool part of the stove while you rest. Otherwise it may become overcooked.

**Preserving in Syrup.**

Another method, and many jam-makers prefer this, is to first make a blended syrup and then cook the fruit in it. For example: Equal weight of sugar and corn syrup; add half a pint of water, and dissolve it by gentle heat. Then boil for half an hour, add the fruit and boil quickly until the jam jellies, allowing three-fourths pound of blended syrup to each pound of fruit.

A number of special recipes for doing up the small fruits will be published in the next issue of the Farmer.

**Amount of Water Allowed to Each Pound of Fruit.**

| Fruit. | Proportion of Water. | Fruit. | Proportion of Water. |
|---|---|---|---|
| Apple | 1 gill to 1 lb. | Greengage | None |
| Apricot | 1 gill to 1 lb. | Gooseberry | 1 gill to 1 lb. |
| Blackberry | None | Plum | None |
| Cherry | 1 gill red currant juice to each lb. | Quince and apple | Water enough to cover bottom of pan. |
| Carrot | Enough to cover carrot | Raspberry | None |
| Currant, red | None—mash a bit. | Strawberry | None |
| Currant, black | ½ gill to 1 lb. | Rhubarb | ½ gill to 1 lb. |
| Damson | None | Marrow | ½ pint to each 3 lbs. of fruit. |
| Grape (unripe) | None | | |

## Australian Wheat Surplus.

The exportable surplus of this season's Australian wheat harvest is estimated at 80,000,000 bushels, to which must be added the quantity available at the beginning of the shipping season on November 1, making the total amount available for export at this time 200,000,000 bushels. Since December 1 shipments from the four provinces have amounted to only 6,691,000 bushels of wheat against 27,812,000 the previous season, although the amount of flour exported increased from 56,711 short tons in 1916-17 to 128,913 tons the current season since December 1 to May 15.

**What His Country Needs.**

No man is rich enough to eat what his country needs.

For Subscriptions to The Washington Farmer
**25c**
For One Year
**50c**
For 3 Years
**$1**
For 5 Years

We wish to extend cordial thanks to every one of the hundreds of friends and readers of The Washington Farmer who have co-operated in making our subscription plan a success.

The central idea of the plan was to deal direct with our subscribers in securing and renewing subscriptions, thus eliminating the middleman and giving our friends the benefit of every penny saved.

It is gratifying to know that the new cooperative system has had the heartiest kind of backing; and that it has been put on a successful basis. We could not have got along without the assistance of well wishers who have told their neighbors about the plan and passed along copies of the paper.

We appreciate this assistance very much. There is no question but what the readers of this paper are standing solidly back of the principle of co-operation. The low rates made possible by the new plan are still in effect.

So many of our girls and boys ask if they may be admitted to the Corner, if they may be a cousin, if it costs anything to join and how often they are supposed to write. And so Aunt Nellie is going to answer each one of these questions right here. To be a cousin, all you have to do is to write a letter to Aunt Nellie, you may write once, or regularly as many do. It takes no money to join, and one cousin is just as welcome as another. Just remember that if you have written you are counted among the cousins and your letter will be printed in its turn as all are published.

**Sunshine All the Time Now.**

Dear Aunt Nellie: I thought I would write to you for the first time. I enjoy reading the Children's Corner. I am in the eighth grade and my birthday comes July 19. We live on a farm and have 10 cows, three horses, one colt and a few calves. We have a family of 10, including mama and papa. There are five girls and three boys. I am going to plant a large garden this year and buy a Liberty Bond to help win the war. I see lots of soldiers over here and even know some of them. My teacher's husband is a soldier also. We all joined the Red Cross except the baby who is a month old. We had a Junior Red Cross at our school. Have any of the cousins read Uncle Tom's Cabin? It is surely a good book. It tells about how they treated poor Tom. Our teacher read it to us at school. We had only a few days of snow, but had lots of rain. There is sunshine all the time now and it surely is grand. All the trees and flowers are blooming. This year was lucky for me as I liked it fine. I guess I'll have to learn to knit better and knit for the Red Cross. My favorite flowers are carnations or sweetpeas. We used to have a colt named Queen and I liked her very much. One day she jumped over the fence and got in the oatfield so papa put something on her so she couldn't jump any more. One time I happened to be going through the field when I saw her lying down and the flies all around her. She was tangled up. I untangled her. She did this so much that we sold her. We have a cow and her name is Hattie. She is my cow. She is red polled and is like a pet. I am not gong to ask for a twin because I have some over here. I like a country home the best of all. You can have your own fruit, vegetables and your own milk which cost so much in town. You can romp around and have all the fun you want. In summer I help on the hay wagon and help shock up oats and other grain. —Olga Mirosh, age 13, Tono, Wash.

**Ruth Graduated Last Spring.**

Dear Aunt Nellie: This is my first letter to the Children's Corner, and I hope it will not be the last. I enjoy reading the letters very much. I was 13 years old last April 5,; am 5 feet 9½ inches tall and weigh 133 pounds. I have brown hair and gray eyes. Have I a twin? I have two brothers and no sisters. Roy is 11 and Marvin is 7. I graduated from school last spring. We have four cows, Topsy, Daisy, Heart and Spot; four heifers, Rose, Cutey, Red and Beauty, and three little calves, Cary, Bird and Ike; one little dog, two cats, four kittens, and two horses, Pet and Dolly. Dolly, the boys ride to school on. It is three miles to school. I will write again if I may join the Corner. May I?—Ruth Wastenberg, R. 1, Eatonville, Wash. (Every one who writes to the Corner is a cousin, Ruth, dear, and so we are glad that you write. Come again.—Aunt Nellie.)

**Make Pine Needle Baskets,**

Dear Aunt Nellie: This is the second time I have written to the Children's Corner and it has been a long time since I wrote to the Corner. I have light brown hair and blue eyes. I am 13 years old. My birthday is January 23. I weigh 105 pounds. My chum is Pearl Martin. She is 11 years old. I got a piano for my birthday. We have a new piano at the schoolhouse. We have a globe and an outline map in our schoolhouse. We have had a traveling library in our school ever since Christmas. We have made pine-needle baskets this year. They are made of dry pine needles and sewed with raffia. They make pretty work baskets, trays and mats. Our school let out May 17. Our whole school belongs to the Junior Red Cross. We made several outing flannel petticoats for the French children. Our schoolhouse is made of logs, but it is sealed inside so you couldn't tell the difference after you got inside. We have pine trees all around our schoolhouse. At school we play house, baseball, pump-pull-away, anti-over, marbles, jump rope, hot potato, three-deep, hide-and-seek, run sheep run, drop the handkerchief, last couple out, fox and geese, throw the stick and some other games. The different kinds of birds here are robins, blue birds, orioles, quails, blackbirds, snow birds, magpies, sparrows, hawks, eagles, owls, crossbills, grouse, wrens, and meadow lark. The wild flowers out here are buttercups, yellow bells, violets, birds bills, Johnnie-jump-ups, Mayflowers, cowslips, Easter lilies, lady slippers, Indian moccasins, wake-robins, wild tulip, shooting stars, baby faces, wild flags, roses and some other flowers. I made a flower garden. I put in sweet peas, pinks and asters. I have a pony, his name is Prince. I have a dog. His name is Jip. I taught him to pull me. He will pull me in my wagon and I have a little black and white kitten and a big gray one. I like cats and I like to play with them. If I can join the Corner I will write more letters to the Corner, so please let me know. I will be glad to join the Children's Corner.—Josephine Wagner, Tekoa, Wash. (Welcome, Cousin Josephine; your letter is so interesting that we are all going to watch for another one soon. Aunt Nellie.)

**Run a Ferryboat.**

Dear Aunt Nellie: This is my first letter to the Corner and I hope that it will be printed. May I join the cousins? I am 4 feet 11 inches tall, with brown hair and brown eyes. Our school closed and I passed into the seventh grade. I am 12 years old and my birthday is October 16. Have I a twin? If so I wish she would write to me. Jennie Loreen's birthday is on the same day as mine, but she is a year older than I am. I wish she or some of the other cousins would write to me. I have two brothers, Albert and George. Albert is 8 and George is 6. We live on a 640-acre farm at Page, on the Snake river. We have a store. My mother is postmistress here. We also run a ferryboat. We have three work horses, one colt and my saddle pony, Dolly. I just love to ride. We have three lambs, 25 rabbits, 16 cows, six calves and 25 big chickens and 30 little ones. We have a dog named Rover and a cat named Tommie. I joined the Red Cross and knitted wash rags and a pair of wristlets. I will write again.—Mary Bayer, Page, Wash.

**Goldie Has a Playmate.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I joined the Red Cross and the poultry club and the garden club. There were 17 pupils in our room and there are two rooms in our schoolhouse. I am 10 years old and in the fourth grade. I have four sisters and three brothers. My brothers' names are Galen, Kenneth and Earl, and my sisters' names are Verna, Orpha, Edith and Ruth. We have one dog and one cat. The dog's name is Ted and the cat's name is Pussy. My brother Galen is 7 and Kenneth is 2, Earl is 1 year old. Verna is 11 and Edith is 5. Ruth is 4. I have a playmate and her name is Treva Edna Rohrs. My birthday is June 24. I have a sister. Her birthday is December 25.—Goldie Neher, Garlam, Wash.

**Great Fun on a Farm.**

Dear Aunt Nellie: This is the first time I have ever written to the Children's Corner. I read the letters all the time and enjoy them very much. I am in the third grade and am nine years old. I go to Paradise school. My teacher's name is Mrs. Fowler. I have four brothers and three sisters. My brothers' names are Henry, Edward, Arthur and Fred. My sisters' names are Anna, Hilda and Dorothy. We have a pet pony which is very gentle. His name is Button. Our dog's name is Bob. We have eight rabbits, four big ones and four little ones. We live by the Nooksack river on a large farm. There is lots of fun on a farm.—Ruth O. Toyn, Ferndale, Wash.

**School Is Right Across the Road.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I have no dogs or cats for pets. I have six sisters and four brothers. I have three married sisters and two married brothers. I have four nephews. I am 8 years old. My birthday is January 10. I like to read the letters in the Children's Corner, as they are very interesting. I go to Big Flat school and only have to go across the road. I go home for dinner every day. We had a social and our teacher bought us each a Red Cross membership.—Daisy Homad, R. F. D. 1, Waverly, Wash.

**Lion, the Dog, Ran Away.**

Dear Aunt Nellie: This is the second time I have written to the Corner, but I hope it will not be the last. I have had a birthday since I wrote the last time. I am now 8 years old. My birthday is April 6. Have I a twin? If I have I wish they would write to me. My sister has found a twin, but she forgot her name. We did have a dog named Lion, but he ran away. We are going to try and find him. I got to the Alpowa school. I will be in the third grade next year.—Lola Ferrell, Alpowa, Wash.

**Anna Enjoys the Letters.**

Dear Aunt Nellie: This is my first letter to you. I have been going to write to you for a long time but just have got around to do it. I certainly enjoy reading the letters written by the other children and would like very much if some of the girls would write to me. I am 12 years old.—Anna Erickson, R. F. D. 3, Box 163, Mt. Vernon, Wash.

**Rather Live on a Farm.**

Dear Aunt Nellie: I have read most of the letters in the Children's Corner and think they are interesting, so I am going to write this time about living on a farm. I am only 10 years old. I have three sisters and two brothers. My oldest sister is in the eighth grade and my youngest sister is 3 years old and I love her the best. Her name is Agnes. Every morning and every night I milk three cows. Their names are Dolly, Pat and Nippy. We have seven cows, two calves, three pigs, two horses and about 30 chickens. My oldest sister, Annie, and I have joined the bean club. My garden is only one rod square, but Annie's is 66 feet square. I am going to work hard and try to raise more than she does. I like to live on a farm and work on it in the summer time and go to school in the winter. My teacher's name is Miss Wilson. I think she is nice to me. I have also joined the Red Cross. The way I earn money is by milking; when the milk check comes my father gets the dollars and I get the cents. That is about all I have to tell about what I do every day or how I work on the farm. But I would rather live on a farm than in a city because the city children have nothing to do and nothing interesting to work on like we have on a farm.—Edner Sofdahle, Ferndale, Wash.

**Makes Sister's Doll Clothes.**

Dear Aunt Nellie: This is my first letter to the Children's Corner and I would like to join. I am 12 years old and am in the seventh grade. I go to school at Big Flat. There are seven children in our school. My teacher's name is Miss West. My birthday is January 3. I like to read the children's letter and the stories in the Farmer, as they are verw interesting. I can crochet, embroider, sew and cross stitch. I make all my little sister's doll clothes and also my own. I don't know how to knit, but would like to learn so I could knit for the soldiers. I have no pets, but would like to have some. I would like to correspond with some of the girls in the Children's Corner. I will write again.—Emily Homad, Route 1, Waverly, Wash.

**Wilma Broke Her Arm.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I like to read the letters. On April 22 I broke both bones in my left arm. Mama and papa took me to town right away and I am still carrying it in the sling. I am 10 years old and my birthday is October 26. There has been an awful fire around here. It was quiet in the morning, but in the afternoon it turned to be windy. All week there have been fires around here. The peas and lettuce are up and the early potatoes are, too.—Wilma Erickson, R. R. 2, box 108, Lynden, Wash. (We hope by this time your arm is entirely well and that you won't need a sling any more. Come again, dear.—Aunt Nellie).

**Can Play the Snare Drum.**

Dear Aunt Nellie: May I join the Children's Corner? I have been reading the letters and enjoy them very much. I am eight years' old and in the third grade at school. My birthday is January 24. Have I a twin? If so I wish he or she would write to me. I have one sister, but have no brothers. My sister's name is Ethel. I am taking music lessons now from Miss Binkley and I can play the snare drum also. I live about eight miles west of Goldendale. I hope all the cousins are well. —Charlie Franklin Divers, Blockhouse, Wash. (Glad to have you join the Corner, Charlie. Come again soon, won't you? Aunt Nellie.)

**Bathing In the Creek.**

Dear Aunt Nellie: I have never written to the Corner before, so I thought I would write. I read most of the letters. I missed last week's paper so I didn't get to read the letters. I am reading the story in the paper. I like it very much. We live on a ranch. We have two ranches, one is up on a hill, the other is in a canyon by a creek. We go bathing in the creek in the summer. I have a sister and a brother. My sister wrote to the Corner once, but she has never written again. I am 12 years old. My birthday is November 14. I hope every little girl and boy will like my letter. —Florence Ferrell, Alpowa, Wash.

**A Red Cross Worker.**

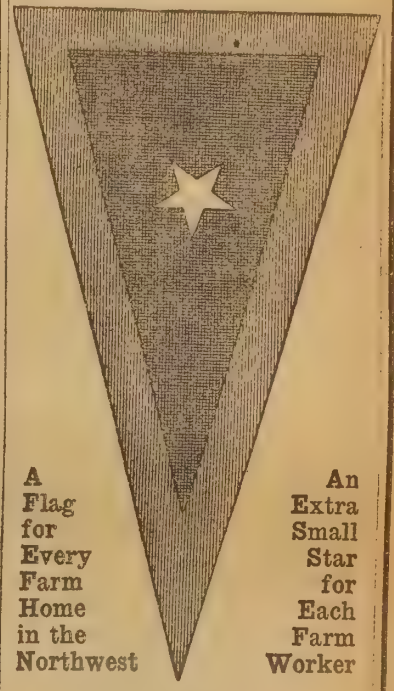
Dear Aunt Nellie: May I become a member of the Corner? I am 11 years old. I am in the fourth grade. I have light hair and dark blue eyes. My birthday is March 12. Have I a twin? I have one brother and two sisters. My brother is 12 and in the sixth grade. My youngest sister is in the second grade. My little sister does not go to school. I enjoy reading the letters very much. I would like to see my letter in print. I joined the Junior Red Cross. We work every Friday afternoon for the soldiers in France. We make gun wipers, pillows, napkins and tray cloths.—Rea Mathes, R. F. D. 2, Prosser, Wash.

**Planted All the Seeds.**

Dear Aunt Nellie: This is the second time I have written to the Children's Corner and I hope it won't be the last. I have a war savings stamp. Our school closed May 17. We have a selfplayer piano. I am taking music lessons. We have two canary birds. Our teacher gave us some seeds to plant. I planted all of mine. I like to go to school.—Henry Besel, Farmer, Wash.

**Will Be Ten in October.**

Dear Aunt Nellie: I am nine years old and am in the third grade at school. My birthday is October 2 and I will be 10 then. I have two brothers and one sister. We have six cats and one dog. One of our cats is named Beauty. We have two ducks and two little calves. My brothers' names are Bobby and Richard.—Luella Ray Meeks, Delrio, Wash.



**Has Marjorie a Twin?**

Dear Aunt Nellie: I live on a 1320-acre farm. We have 40 head of cattle, seven little calves, 37 head of horses and 17 hogs. I have two dogs and two cats. The cats' names are Roughy and Ready and the dogs' names are Rastus and Shep. I have one brother and no sisters. My brother's name is Donald. He has a pony and its name is Jimmie. He is a chestnut sorrel. I have a pony and her name is Babe. She is a white one. I have a mile and one-eighth to go to school. Our trail is very pretty all the way to school. Have I a twin? If so I wish she or he would write to me soon. I have light hair and light eyes and I am 5 feet 2 inches tall and rather slim. I am 12 years old and I will be 13, July 12.—Marjorie McCoy, Hartland, Wash.

During the last two weeks Aunt Nellie has received letters from the following cousins: Emma Brune, Johnnie Neiderprum, Genevieve Williams, Leonard Johnson, Ada Stichnoth, Irene Overdorff, Edna Cordill, Naima Kukka, Amy Bonney, Marie Runolfson, Mary Jean Shelton, Bertha Aldrich, Frankie Baldwin, Alice Clinesmith, Ethel Strom, Jennie Lane, Leta Lane, John Kelly, Muriel Vetters, Emma LaPine, Clara Staley, Esther Chalenor, Lena Duncan, Alice Duncan, Elna Mattson, Helen Berry, George Berry, Esther Anderson, Florence Burr, Vera Allen, Elizabeth Drenkhahn, Arnold A. Menger, Jewel Howard, Matie Burchett, Alta Kruse, Evelyn McKinney, Violet Howell, Lenore Fox, Elsa Mattson, Ella Sophie Brown, Alice Clifford, Mabel Stevens, Clara Hawkins, Erma Broyles, Derla McManamon, Margaret Ottmer, Evelyn Engstrom, Alice Larson, Ruth Potter, Graham Potter, Reva Lamb, Grace Hicks, Dortha Hicks, Verna Tittle, Charlotte Shepard, Victoria Thaden, Hazel May Nelson, Gladys Plemon, Effie Luddington, ——— Miller, Florence Scott, Evelyn Jolly, Cloe Jolly, Ellen Nybedk, Marvel Parriott, Edwidge La Fond, Bertha Wahl, Josephine Holland, Clara Baskette, Lita Forslund, Edwin Johnson, Fern Carlisle, Eugene E. Field, Verna Flower, Beulah Buckley, Dorothy Harris, Marian Halmer, Alma Hansen, Margaret Silver, Mabel Calvin.

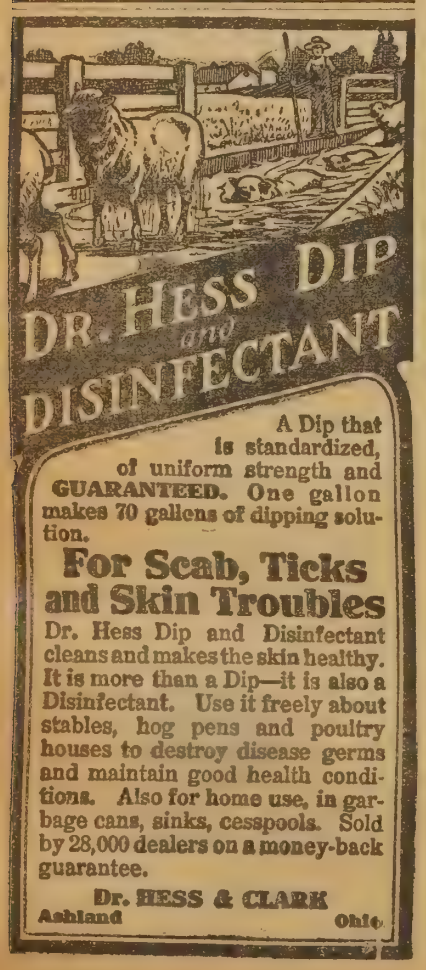
## News for Breeders



John Kirtman of Colfax, Wash., who has purchased the farm home of William Behrman Jr., near Cornelius, Ore., took with the ranch Mr. Behrman's fine Jersey herd. He also got the young Jersey bull, Fissy Fern's Noble 16th. This bull is out of Harry West's great imported cow, Onota, that won the gold medal in the public butter test on the Island of Jersey by producing three pounds, six ounces of butter at two years old, 29 days after calving. His sire, Fussy Fern's Noble, is by Imp. Golden Fern's Noble, that sold for $25,000 and is sire of 28 Register of Merit daughters, as well as a great show bull.

G. O. Swales of Crescent stock farm, Johnson, Wash., writes that the litter of pigs from the sow he bought in the east, bred to King of Orions 2d, are so good that he feels he was well justified in the price he paid. The sire is the great boar that sold for $1300 as a pig. There are eleven pigs in the litter. Crescent stock farm's own herd board, Burke's Cherry King, is siring big litters of pigs with fine Cherry color good heads and backs, heavy bone and good feet. Their grand champion sow at Spokane last fall farrowed ten and the first prize gilt at Salem in 1915 farrowed 15. Mr. Swales reports farm work well in hand, crops looking well and prospects good for ready sales of pigs. They expect to show a young herd at Lewiston this winter and possibly at Spokane this fall.

Francis T. Underhill of Santa Barbara, Cal., recently purchased from J. M. Fruitts of Enterprise, Ore., a junior yearling Hampshire sow to add to his show herd for exhibition at the fairs this fall as well as for breeding purposes. Mr. Underhill also got a March sow pig at the same time for $35 and has since ordered a couple of October gilts at $50 each. Mr. Fruitts is a breeder of Shorthorn cattle as well as Hampshire swine and at the Union Stock show purchased the senior bull calf that stood first in a class of 11 from J. M. Green & Sons, who owned and showed the calf.

The highest average of prices ever received at a Hereford sale were made at the great sale of Colonel E. H. Taylor, Frankfort, Ky., June 7, when 62 Herefords went through the ring for $186,850, an average of $3013 each. In fact, but one cattle sale in all history has ever surpassed this average. That was in 1873 when at New York Mills 100 Shorthorns averaged $3504. While Colonel Taylor paid the record price of $12,500 for the bull Woodford last fall, the high prices in his sale were all for females. Clive Iris 3d, a 4-year-old cow that has been champion in both England and America, topped the sale, going to W. A. Pickering of Kansas City, Mo., for a record price of $13,850. Seven other cows went $5000 or over. The Taylor sale was not the only sensational Hereford auction during the month of June, for at the O. Harris & Sons sale at Harris, Mo., June 4, the bull King Repeater brought $12,000, and 101 head averaged $1068. And the T. B. Bartlett Herefords at Green Castle, Mo., 62 head averaged $954, with a top price of $5500.

## Wheat Stays at $2.20

(Continued from page three.)

price of $2 a bushel for No. 1 wheat aboard cars in the intermountain territory will be made effective. Details of the plan will be made public soon.

**Prices for No. 1 Wheat.**

The corporation's announcement said No. 1 wheat of the northern spring, hard winter, red winter, durum and red and white grades will be sold in the various markets at the following prices:

| | |
|---|---|
| New York | $2.39½ |
| Philadelphia | 2.39 |
| Baltimore and Newport News | 2.38¾ |
| Duluth and Minneapolis | 2.21½ |
| Chicago | 2.26 |
| St. Louis | 2.24 |
| Kansas City and Omaha | 2.18 |
| New Orleans and Galveston | 2.23 |
| Tacoma, Seattle, Portland, Ore., Astoria, San Francisco and Los Angeles | 2.20 |

The price basis for No. 2 wheat will be three cents below No. 1 and for No. 3 four cents below No. 2. Grades below No. 3 will be dealt in on sample.

**Schedule for Special Classes.**

Special classes of wheat, the commission said, will be sold on the following schedule:

Dark hard winter, two cents above hard winter.

Dark northern spring, two cents above northern spring.

Amber durum, two cents above durum.

Yellow ard winter, two cents under hard winter.

Red spring, five cents under northern spring.

Red Walla, seven cents under red winter.

Red durum, seven cents under durum.

Soft white, two cents under hard white.

White club, four cents under hard white.

Changes in federal grading standards previously filed with the trade, it was declared, are expected to result in production of more high grade wheat than in 1917.

## Frazier Is Nominated

Lynn Frazier, nonpartizan governor of North Dakota, was renominated for the governorship in the primary election in that state last week over John Steen. His majority was more than 14,000. Congressman J. M. Baer, nonpartizan representative in congress, was renominated by a small majority over H. G. Vick. The nominations for congress in the other two congressional districts were likewise won by nonpartizans. These candidates will be opposed in the final election by democratic candidates, the nonpartizan nominees being candidates in the republican primaries indorsed by the nonpartizan league.

### Coming Events.

July 15-17, convention poultry instructors and investigators, Moscow, Idaho.

August 19-25—Convention National G. A. R., Portland, Ore.

**Fairs, Shows, Exhibits.**

August 26-30, Southwest Washington fair, Centralia-Chehalis.

September 2-7—Spokane Interstate fair, Spokane, Wash.

September 16-21—Washington State fair, Yakima, Wash.

September 19-21—Roundup, Pendleton, Ore.

October 1-6—Western Washington fair, Puyallup, Wash.

November 7-13—Northwest live stock show, Lewiston, Idaho.

**Y. M. C. A. Men Killed.**

Three Canadian Y. M. C. A. war work secretaries, working in dugouts close to the front line trenches, were killed recently by shell fire.

# Breeders' Department

## SHORTHORN CATTLE

**Herds Bulls**

Imported Doune Radiance No. 609412 and Gainford Perfection No. 442173.

**Hercules Shorthorns**

We can supply you with choice, well grown bulls and females of breeding age. Your inspection of our herd is invited. Visitors always welcome.

**Day & Rothrock Company**

205 Exchange Bank Bldg. Spokane, Wash.

**SHORTHORNS**

A few young stock for sale by such noted sires as Prime Prince, 421193, and Sultan Still, 493239.

R. E. BOYCE, Baker, Ore.

**LELAND BROTHERS**

Breeders of top registered Shorthorn cattle. Correspondence solicited.

WENDELL, Idaho.

**MILKING SHORTHORNS**

with world records behind them for milk production.

**A. R. O. HOLSTEINS**

A son of the King of the Pontiacs at head of herd.

Can make special prices on young bulls of each breed.

A. V. Bradrick & Son
Palouse, Wash.

**SHORTHORN BULLS**

from the FORK BRANCH HERD.

I have a few Shorthorn bulls of excellent breeding at a variety of prices. Have a lame bull at half price, guaranteed serviceable.

A. CHALMERS, Forest Grove, Ore.

**H. H. SCHILDMAN**

breeder of registered Shorthorn cattle, Hampshire sheep and big-type Poland China hogs. Filer, Idaho.

**REGISTERED SHORTHORN COWS.**

Young bulls and heifers, sired by Scotch bulls; liberal terms.

CALDWELL CATTLE CO., Caldwell, Idaho.

## ABERDEEN ANGUS

**ANGUS CATTLE**

In the famous valley of the Yakima there is located one of the best herds of Aberdeen Angus in America. Proof of this is evident by the many prizes won by this herd at all of the greatest shows of the northwest and central states, including the Chicago International.

Fifty extra good range bulls are now offered for sale. Also fancy herd headers and show cattle of both male and female. All prices very reasonable.

CONGDON & BATTLES.
OTTO V. BATTLES, Manager.
Yakima, Washington.

## BROWN SWISS CATTLE

**Brown Swiss Stock Farm**

Breeders of Brown Swiss Cattle, the Farmer's Dairy Cow. Young stock for sale.

THEO. BRUGGER, Route 3, Gresham, Ore.

## DUROC-JERSEY SWINE

**Crescent Stock Farm Durocs**

Spring pigs by the great $1300 boar, King of Orions 2d, and by our own great boar, Burke's Cherry King, out of prize sows. Uniform cherry color, finest of heads and backs, heavy bone and best of feet.

G. M. BECKETT & G. O. SWALES,
Johnson, Wash.

**Chas. G. Sprong**

BREEDER.

Registered Duroc-Jersey hogs. Weanling pigs for sale.

GRANDVIEW, WASH.

**Registered Duroc Jersey Pigs**

My herd contains the blood of old "Defenders," "Pathfinder," "Illustrator," and Burl's Good E. Nuff. Big type prize winning sows. Guaranteed to please.

V. R. FISHER, Oxford, Idaho.

**Growthy March Pigs**

Good breeding, good individuality, satisfaction guaranteed. Write for description and prices.

GEORGE DEBOK, Oregon City, Ore.

**DUROCS.**

Boars and open or bred gilts of excellent breeding.

E. E. PRICE, CABINET, IDAHO, OR
JAMES N. PRICE. Yakima, Wash.

## CHESTER WHITE SWINE

**Blue Ribbon Stock Farm**

Chester White Hogs. Hampshire and Rambouillet sheep. Swine of both sexes and a choice lot of ram lambs.

ED SCHOEL, Suver, Ore.

**COVE STOCK FARM**

Unrelated fall and spring Chester White pigs from prize winning stock.

ARCHIE CONLEY. Cove, Ore.

**The department editors of this paper are anxious to be of service to you. Do not fail to write to us if they can be of help to you.**

## GUERNSEY CATTLE

**Registered Guernsey Bulls**

From heavy producing cows, most of them with A. R. records, among them 402 lbs. fat (472 lbs. 85 per cent butter) and 392 lbs. fat (461 lbs. butter), both with first calf. Good type, well grown. Prices reasonable.

CHICONA FARM.
A. L. GILE, Prop. Chinook, Wash.

**ORCHARD HILL FARM**

"Home of High-Class Guernseys."
Dr. Park Weed Willis, Owner.
Redmond, Wash.

**FAIRVIEW FARM**

Breeders of high class registered and grade Guernseys.

A. J. SINNES.
Route 5. Mt. Vernon, Wash.

## POLAND CHINA SWINE

**Big Type Poland Chinas**

Peter Mouw and John B. Lawson strains. Young boars and bred or open gilts. Good individuals.

CLIFFORD RIGGS. Touchet, Wash.

**LOCUST HILL HERD**

Big type and medium Poland-Chinas. Bred gilts and spring pigs of both strains, unrelated. Sixteen years a breeder of Poland-Chinas in Oregon.

A. L. SWAGGART, Athena, Ore.

**LOCUST LAWN HERD**

Breeder of Big type Poland China swine. Some very choice spring pigs for sale.

W. F. HOWARD & SONS, Caldwell, Idaho.

**QUALITY AND UTILITY**

our hobby. Poland Chinas, our breed. Weanling pigs, both sexes, also a few service boars. Satisfaction assured.

FRANK NEEDHAM, Eugene, Ore.

**QUALITY HERD.**

If you want to improve your herd, try stock from my winners at the Oregon state fair.

RAY J. FOX. Lyons, Ore.

**PURE-BRED POLANDS.**

A good herd boar for sale; also booking orders for spring farrowed pigs. Will ship C. O. D. subject to your approval.

HERBERT WILLARD, Dayton, Ore.

## HAMPSHIRE SWINE

**REGISTERED HAMPSHIRE HOGS.**

Growthy and vigorous, great rustlers. Pigs from January and February litters, also other ages. Correspondence invited.

TUTTLE BROS., Asotin, Wash.

### Sow of Quality.

The above photo shows the Duroc Jersey sow, Lucile 315766, owned by the Oregon Agricultural college and bred by J. W. Fruit of Brooks, Ore. She weighs 800 pounds and has all the quality her picture shows and more. She is by Orion Col., and out of Lucy Wonder 2d, by Chief's Col. H. A.

### Builds Shorthorn Herd.

A. J. Day of Ammon, Idaho, is building up a splendid herd of Shorthorns. He now has 27 purebred Shorthorns and is acquiring more. Mr. Day is one of the men in the Idaho Falls section who are doing things in a large way. He has several farms and is operating them in a thorough, systematic manner.

### Don't Shoot Pigeons.

The United States department of agricultre urges hunters not to shoot pigeons in air, for they may be homing pigeons being trained in many sections by the signal corps of the United States army to carry messages across battlefields.

## It Saves Wheat

To the Editor: I am enclosing a good recipe for war ginger bread which I have tried and find satisfactory. Would you please print it in your column that other people may also be help-d?

**Wheatless Ginger Bread.**

One cup sugar, 1 cup sour milk, 1 cup molasses, 1-2 cup fat, 1 cup rolled oats, 1 1-2 cups barley flour. 1 cup raisins, 1 teaspoon each ginger and cinnamon, 2 eggs, pinch salt, 1 level tablespoon soda.

Cream the fat and sugar, add molasses and sour milk in which soda has been dissolved, then add rolled oats, stirring well that it may all be moistened, add beaten eggs and raisins. Mix flour, spices and salt and sift into the batter. Fold in lightly. Bake in a moderate oven for 45 minutes. This will stay moist for days.

MRS. F. F. WAYMIRE.
Wilcox, Wash.

### SOLDIERS' DIET.
### Needs More Food Than Civilian.

A soldier needs more food than the ordinary civilian because his life is more strenuous. Moreover, his whole diet must be made practically from wheat, fats, sugar, condensed milk and coffee, for excepting a few varieties of canned vegetables, these are the only foods that it is possible to ship to him from a distance.

Furthermore, Uncle Sam must lay up vast reserve stores of these foods to meet emergencies—such as food lost during a battle, food sunk by submarines, food spoiled in transportation, and bad crops next year.

Just how well fed the American soldiers are and just how well Uncle Sam is able to meet one or all of these emergencies depends on how thriftily American men and women save wheat, meat, sugar and fats.

**Portugal to Improve Agriculture.**

In a recent address before farmers, the Portuguese minister of agriculture discussed plans for development in the nation's agricultural methods and activities. Better agricultural instruction and the training of women for farm work were advised. Portugal depends absolutely on the products of her farms, and at least for the duration of the war most of the work must be done by women.

## SHEEP

**SHEEP FOR SALE**

Registered Shropshire, Oxfords, Lincoln, Hampshire and Cotswold rams; 50 head registered Shropshire ewes; 3000 stock ewes, Lincoln, Cotswold and Shropshire breeds; 500 ewes, lambs, Cotswold and Lincoln ram lambs. Write for prices.

PLATT BROS. Genesee, Idaho.

**BULL RANCH**

Hereford Cattle.
Berkshire Hogs.
Hampshire Sheep.

CHAS. BULL, Mabton, Wash.

## JERSEY CATTLE

**Foundation Herd of Jerseys**

To reduce our herd to a size proportionate to the available labor supply we make the following offerings: First of all the great Tennessee cow.

**Moyane Monine,** 803 lbs. butter. 10,406 lbs. milk in one year. Also
**Creole Bess,** 684 lbs. butter, 12,363 lbs. milk.
**Stockwell's Dahlia,** 619 lbs. butter, 8890 lbs. milk.
**Lucy's Convent Lassie,** 484 lbs. butter, 7568 lbs. milk.
**Princess of the West,** 477 lbs. butter, 6996 lbs. milk in 341 days.
**Pearl of Riga,** 458 lbs. butter, 7489 lbs. milk in 297 days.
**Diamond of Fair Acres,** now on test, milking 59 lbs. a day, as junior 3-year-old.

**One heavy producing** untested cow and one 2-year-old heifer.
(All butter regular Jersey standard, 85 per cent.)

This includes all our American bred cows and three choice imported cows, including the many times grand champion, Stockwell's Dahlia.

Free from abortion and will furnish certificate of health from federal veterinarian.

Prices, pedigrees and photos on request.

**J. B. STUMP & SON, Monmouth, Ore.**

**ASHBURN FARM**

REGISTER OF MERIT JERSEYS.

In nearly 13 years we have yet to get our first poor heifer or dissatisfied customer. We have the best of the Golden Glow's Chief and St. Mawes strains, with the cross of our great Kentucky bull, Valentine's Ashburn Baronet.

J. M. DICKSON & SON. Shedd, Ore.

**GOLDEN GLOW HERD.**

Winner of 1st and 2d prize in butter test, Oregon State Fair, 1917 (all breeds, 20 entries); breeder and owner of grand champion cow in show ring, 1916; breeder of grand champion cow, 1917. Breeder and owner of world's champion 3-year-old, with 1115 lbs. butter, 80 per cent fat. Every female a daughter, granddaughter or great-granddaughter of Golden Glow's Chief, sire of 34; 14 over 700 lbs.; 32 over 600 lbs.

PICKARD BROS., Marion, Ore.

**GOLDEN GLOW'S CHIEF**

has 35 Register of Merit daughters and 40 grand-daughters, 4 proven sons, and a WORLD RECORD JUNIOR 3-YEAR-OLD DAUGHTER, who is dam of ONE OF OUR HERD BULLS by the old bull himself. Our second sire is also a son of Golden Glow's Chief, out of a Gold Medal Hood Farm cow. Write us for a young bull calf.

D. Brooks Hogan, Mgr., Iron Mine Farm, Oswego, Oregon.

W. M. LADD, Owner, Portland, Oregon.

**All High Record Blood**

Bull calf out of Lucy of P. V., full sister to St. Mawes Susie; 936 lbs. butter in a year; to St. Mawes Blossom, 823 lbs., and to Susie's Twin Maiden, 642 lbs. Sire, Poppy's St. Mawes, son of St. Mawes Poppy, 1120 lbs.

ED CARY, Carlton, Ore.
Station, La Fayette, Ore.

**Jersey Bull for Sale**

Hermit's Duke 160472, dropped Dec. 18, 1916; dam Fanny Glow 2d, 241910, by Sunny Bill, by Golden Glow's Chief. Sire Hermit's Majesty, from imported parentage. Also full brother to above, dropped Feb. 14, 1918. Photo and records on application.

E. F. MARYATT, Grandview, Wash.

**Just What You Want**

may be offered in this week's Want Ads at a bargain. It's a good idea to look them over every week.

**Jersey Home Dairy**

Young bulls, winners at Washington State Fair, make good herd sires. Attractive prices for quick sale.

**Erickson Bros. Prop.**

North Yakima, Wash.

**WAIKIKI FARM**

Register of Merit Jerseys. Largest Jersey herd in the northwest. Young stock for sale.

IRA P. WHITNEY, Manager.
Route 7, Spokane, Wash.

**JUST ONE CALF LEFT**

on our farm, out of a daughter of Rosaire Olga Lad, with a record of 765 lbs. butter, and by Gerties Poppys St. Mawes. This calf has three crosses of Rosaire Olga Lad. He is a dandy. The last four bull calves brought us $250 each; all were from our herd bull G. P. St. Mawes. Our herd average now is 747 lbs. butter from the 11 head.

DOERFLER FARMS, Silverton, Ore.
F. A. Doerfler, Prop.

**Ashwood Farm Jerseys**

Senior herd bull, Holger, whose daughters are qualifying for register of merit in six months. Junior herd bull, St. Mawes of Ashwood, a son of Poppy's St. Mawes. Write us about your wants or come and see our herd.

M'ARTHUR & STAUFF, Rickreall, Ore.

**ANOKA FARM JERSEY**

We have for sale a bull calf dropped Oct. 25, from a register of merit cow. Solid color, good individual. His sire is a grandson of St. Mawes Poppy, with 1120-lb. record.

R. B. SEELEY, Sherwood, Ore.
R. R. Station, Wilsonville, on Oregon Elec.

## AYRSHIRE CATTLE

**Edgewater Farm**

Government accredited herd, headed by Peter Pan 63d. Bull calves available.

ELBERT M. CHANDLER, Burbank, Wash.

and
Berkshires of Quality.
Stock of All Ages, Either Sex, for Sale.

HUGH NISBET. Chimacum, Wash.

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, July 1.—Bearish crop reports and favorable weather had a weakening influence today on the corn market. Prices closed unsettled, 1-4c to 5-8c net lower, with July $1.47 1-2 to $1.47 5-8 and September $1.51 3-8. Oats lost 3-8c to 1c. In provisions the outcome varied from 20c decline to 27c advance.

An estimate by a leading authority that the condition of the whole corn crop was 85.4 against 81.1 a year ago did much to handicap the bulls in the last half of the day. Besides highly beneficial rains were reported in many sections, especially parts of Kansas and Nebraska. Heavy receipts here tended also to depress prices. During the first half of the session, though, values averaged higher, owing largely to scantiness of stocks available for July delivery, and as a result of assertions that from now on the enlargement of wheat shipments would curtail the rural movement of corn.

Oats were under more uniform selling pressure than corn was. The chief bearish factor aside from the ideal weather was the lack of export inquiry.

Lard showed notable strength, owing to the fact that deliveries which were made today on a big scale had passed into strong hands. Ribs held steady, but pork was dull and weak.

**Chicago Futures.**

## Seattle Market.

SEATTLE, June 29.—One more big week will finish the Washington cherry market so far as a dominating feature is concerned, and the singular part of the season is that consumers for three days have been able to buy the fruit at satisfactory prices and growers are well pleased with returns. The market closes weak.

With high grade fruit only as the equation, Bings have been moving freely at 10@12½c, and Royal Anns at 8@10c.

Strawberries are firm and very scarce. Clark seedlings are practically higher at $3.25@3.50, as all arrivals are small. Marshalls are moving at $2.50@2.75, with occasional sales at $3. The wind up of this fruit is near.

Kennewick new potatoes are due to start moving next week. Seattle jobbers are not much interested, and have turned down quotations of 2½c per pound, the basis on which some contracts have been made, declaring that California new stock will move to much better advantage and that there would be better profit in them.

**Jobbers' Purchasing Prices.**

Eggs—Select ranch, 40@42c per dozen; Oregon, eastern Washington and Idaho, 37c per dozen.

Butter—Fresh dairy, 30c per pound; butter fat, 50c per pound; baking, 30@35c per pound; raw milk, $2.15 per cwt.

Hay—Eastern Washington timothy, $34 per ton; do double compressed, $37@38; alfalfa, $26; Puget Sound, $26@27; straw, $15.

## Portland Market.

PORTLAND, Ore., June 29.—There was a sharp advance in the valley mohair market when 61 cents was paid for the pool at Lebanon. Eastern orders of limited amount are coming in and this has stirred up competition among the country dealers. Allotment of new clip wool will begin this week. Receipts are heavy.

The hide dealers of the three states, at a meeting here, organized the Northwest Hide Dealers' association with C. H. Hibbard of Seattle president and Joseph Thiebes of Spokane, one of the directors. The purpose of the association is to cooperate with the government in its control of the hide and leather industry.

The cube butter market is very firm with extras selling readily at 45 cents. Prints are unchanged.

The demand for eggs has decreased with the warm weather and with eastern in large supply. The market for Oregons is easier.

Poultry is firm with good shipping orders for hens and broilers. Veal is also firmer.

Butter—Cubes, extra, 45c; prime firsts, 44c; prints, extras, 48c; cartons, 1c extra; butterfat, No. 1, 47c delivered.

Eggs—Oregon ranch current receipts, 37c; candled, 40c; selects, 42½c per dozen.

Cheese—Jobbers' buying prices, f. o. b. dock, Portland; Tillamook, triplets, 23½c; Young Americas, 24½c per pound; Coos and Curry, f. o. b. Myrtle Point; triplets, 23c; longhorns, 34c per pound; ¼c discount to Portland trade.

Poultry—Hens, 27c; broilers, 30@32c; ducks, nominal; geese, nominal; turkeys, nominal.

Veal—Fancy, 17@17½c per pound.

Potatoes—Oregon, Burbank, $1.35@1.50 per hundred; new California, 3@3½c per pound.

Hay—Buying prices, f. o. b. Portland; eastern Oregon timothy, $32@33 per ton; valley timothy, $27@28; alfalfa, $21@24.50; valley, grain hay, $24@26; clover, $21; straw, $9@10.

## Spokane Market.

**MEAT.**

**Beef**—Beef steers, 15@20c lb; cow beef, 13@16c lb; heifers, 17c lb; best loin, 28@33c lb; steer chucks, 12½c lb; prime ribs, 20@24c lb; rump and round, 22c lb.

**Mutton**—Breakers, 24c lb; wethers, 23c lb.

**Lambs**—Diamond T. C. lambs, 30c lb; lambs, 28c.

**Pork**—Packer dressed hogs, 26@27c lb; pork loins, 31@32c lb; legs, 30c lb; shoulders, 25c lb; leaf lard, 28c lb; tenderloins, frozen, 40c lb; spareribs, 20c lb; country dressed hogs, with head on, 21c lb to producer; country dressed veal, 14c lb to producer.

**Smoked Meats**—Washington hams, 33¾c lb; T. C. hams, 35c lb; T. C. bacon, 46¼@48½c lb; Washington bacon, 39½@43¼c lb; picnics, 23½c lb; English bacon, 35c lb.

**Star Brand**—Hams, 35c lb; Shield hams, 33@34c lb; picnics, 24c lb; bacon backs, 25@34c lb; Star bacon, 46½@48½c lb; Shield bacon, 40@43½c lb; Simon Pure lard, $17.50 case; Shield lard, tierces, 26½c lb; White Cloud compound, tierces, 26½c lb.

**Dry Salt Meats**—Clear bellies, 25½@26½c lean backs, clear, 27¼c lb; sides, 26c per lb.

**Lard**—Tierces, 26¼c lb, $13.99@14.74 case; Diamond T. C. pure leaf lard, $15.50 case; $8 half case; Snowcap compound, tierces, 22¼c lb.

**POULTRY.**

**Live Poultry**—Live hens, 18@20c lb; spring chickens, 28@30c lb; roosters, 12½c lb to producers, f. o. b. Spokane.

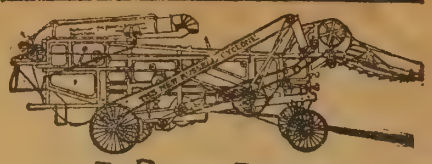
**Oats**—$73 ton whole, $76 rolled, delivered in city; steam rolled No. 2, $71 ton.

**Corn**—$75 ton; cracked corn, $77 ton.

**Bran**—$30 ton; shorts, $32 ton; bran and shorts, $31 ton.



**Barley**—Rolled, $76 per ton.

**Oil Meal**—$78 per ton.

## Portland Wheat.

PORTLAND, Ore., June 29.—The price of $2.20 a bushel for 1918 wheat at north Pacific ports, just fixed by the food administration, is an advance of 15 cents over the 1917 price. Allowing for the 25 per cent rise in freight rates it means a gain of 12 1-2 cents a bushel net to the farmers. M. H. Houser, the agent here for the grain corporation, estimates the new price will average to the producers $2 a bushel on the farms, making the value of the crop, which he puts at 55,000,000 bushels for the three states, exclusive of southern Idaho, which section does not ordinarily ship to the north coast, $110,000,000. Last year's crop of 45,000,000 bushels netted to the farmers about $85,000,000. The government price is what the trade anticipated, and it is believed it will be satisfactory to the growers.

The new flour price has also been fixed at $9.95 bulk, which is equivalent to about $10.65 sacked, against $10 the old terminal price. The advance is in line with the higher price set for wheat. Mixed feed is set at $24.44 bulk, or about the present price in sacks. Millers after June 30 will be allowed to purchase wheat from any of the available sources.

BUY NOW. LET US QUOTE YOU.

IMPERIAL TRADING CO.

SPOKANE, WASH.

United States Food Administration License No. G26654.

WOOL

We are now allowed to buy wool from growers. Returns will be made subject to government price, less our profit of 1½ cents per pound.

Market price paid for hides, metal and rubber. Write for prices if interested. Prompt returns guaranteed.

PACIFIC HIDE & FUR DEPOT.

Joseph Thiebes and C. T. Symmes.
1101-09 Railroad Ave., Spokane, Wash.

THE SELF-OILING WINDMILL

has become so popular in its first three years that thousands have been called for to replace, on their old towers, other makes of mills, and to replace, at small cost, the gearing of the earlier Aermotors, making them self-oiling. Its enclosed motor keeps in the oil and keeps out dust and rain. The Splash Oiling System constantly floods every bearing with oil preventing wear and enabling the mill to pump in the lightest breeze. The oil supply is renewed once a year. Double Gears are used, each carrying half the load. We make Gasoline Engines, Pumps, Tanks, Water Supply Goods and Steel Frame Saws.

Write AERMOTOR CO., 2500 Twelfth St., Chicago

Just What You Want

may be offered in this week's Want Ads at a bargain. It's a good idea to look them over every week.

# THE BEST LINIMENT

OR PAIN KILLER FOR THE HUMAN BODY

Gombault's

## Caustic Balsam

IT HAS NO EQUAL

**For the Human Body** — It is penetrating, soothing and healing, and for all Old Sores, Bruises, or Wounds, Felons, Exterior Cancers, Boils Corns and Bunions, CAUSTIC BALSAM has no equal as a Liniment.

We would say to all who buy it that it does not contain a particle of poisonous substance and therefore no harm can result from its external use. Persistent, thorough use will cure many old or chronic ailments and it can be used on any case that requires an outward application with perfect safety.

## To Test Seed Corn

To the Editor: What is the best time to break salt grass? I should like to know how and when to plow, and how deep. Can a crop be grown this season, and what kind of crop would do best the first year? What is the best and simplest way to test seed corn? R. H. MOWSLEY.

E. G. Schafer, agronomist at the Washington State college, answers the above question as follows:

I am uncertain what grass you mean when you say saltgrass. I have seen a grass which is commonly known as salt grass growing in low flats containing a high proportion of alkali. This grass seems to be fairly resistant. However, it is not of great value. It is very often on land which is too alkaline to produce useful plants.

Sweet clover is perhaps more resistant to alkali than other legumes, and barley more resistant than other cereals.

In testing seed corn six representative kernels are removed from different parts of each car to be tested. A common practice is to remove two from near the butt of the ear, two from the center and two from near the tip. These kernels may be placed between moist cloths, blotting paper or sand. If the entire six kernels germinate in from five to seven days the ear may be used for seed. If only five germinate it is questionable whether the corn should be used for seed or not.

## To Estimate Alfalfa Hay.

To the Editor: Will you kindly publish the number of cubic feet of alfalfa hay at the various times of the year that it takes to make one ton. L. GRAEHL.

The above question was answered as follows by E. G. Schafer, agronomist at the Washington State college:

A common rule used in estimating the number of tons of hay in a stack is as follows: Width plus over, divided by four and squared, then multiplied by the length and divided by 512. If the hay is settled slightly more perhaps 500 would be a better figure than 512. I do not know of any data giving the variation in weight per volume by the month. No doubt this would depend upon the character of the hay influenced by such factors as time of maturity when cut, proportion of leaves, size of stack and so on.

## State Fair Judges.

Judges of live stock for the Washington state fair at Yakima have been lined up by Frank Meredith, secretary. W. A. Kerrow will judge dairy cattle Mr. Kerrow is state leader of live stock and dairy extension work at the University of Minnesota, and has acted as a judge at the Illinois state fair, the National Dairy Show and the Dairy Cattle Congress, both at Columbus and Waterloo, Iowa. W. T. McDonald, now acting deputy minister of the British Columbia department of agriculture, will judge beef cattle and draft horses. Professor C. E. Howell of the state college at Pullman will judge the swine; William Coates, the well-known poultry expert of Vancouver, B. C., will be judge of poultry.

### FARM LANDS—FOR SALE 651

ATTENTION, LANDBUYERS!

Here's an excellent proposition:

40-acre farms, selling for $15 to $25 per acre; long-time payments, 6 per cent interest; in the best agricultural part of Snohomish county, where you have all the modern conveniences—paved roads, railways, schools, churches, mills and factories. This district has proven its worth by the many successful farmers now located there.

We also have some beautiful 10-acre water-front tracts.

OPPORTUNITY knocks at every man's door ONCE, but, believe me, it does not continue to knock forever, nor does it pound the door down. For further information address the owners, BROWNELL LAND CO., 904 Third ave., Seattle, Wash.

EASY TO PAY FOR GOOD LAND AT $40, ON TERMS OF
$1 CASH PER ACRE.
50C PER ACRE MONTHLY.

Interest on deferred payments 6 per cent. BUY 20 acres or more at $40 an acre on the above terms, in LEWIS COUNTY, south of CHEHALIS, on the main double track line between Seattle and Portland, the N. P., the G. N. and the O.-W., the best transportation in the state.

FINE, LEVEL LAND, SILTY CLAY SOIL, NO ROCK, NO GRAVEL, CLOSE TO RAILROAD AND PACIFIC HIGHWAY, LEWIS COUNTY, SOUTHWEST WASHINGTON. FREE CIRCULAR. Write to
DAVID P. EASTMAN,
1024 THIRD AVE., SEATTLE.

LAND BARGAIN.

1144 acres, all in cultivation; tractor land; 50 per cent of it summer fallowed, balance to be fall-plowed; ready for crop in the spring. Fair buildings. All fenced and cross-fenced. Price $25 per acre. Will take ¼ of value in trade. 16 miles from Walla Walla. Absolutely the best buy in the Walla Walla district. Owner is retiring. For further particulars write or call
HOUSE AND LAND ASSOCIATION,
514 RIVERSIDE.
MAIN 3079.
SPOKANE, WASH.

DESIRABLE DAIRY RANCH. 200 ACRES; 80 a. best river bottom; well improved; 28 well-graded dairy cows (has honor cow and honor herd in all cow-testing associations in Oregon in March); 18 yearlings and calves, good Jersey sire, 3 good horses, 20 shoats, 2 good brood sows, 60 hens, etc.; 12-room house, in good repair; outbuildings; good fences; income tax reports show $4000 gross income, 1917; $20,000; $8000 down, balance 10 years, 6 per cent. C. E. Ricker, Reedsport, Ore.

480 ACRES IN SHIELDS RIVER VALLEY, wheat and hay farm; good water right; 98 per cent tillable; 300 acres broken; running water; large barn, 3 granaries, chicken house, hoghouse, garage, frame house; schoolhouse on same section; telephone, mail route; 8 mi. from R. R. town. Price $50 per acre. Easy terms. Write owner, Guy T. McBane, Wilsall, Mont.

MR. RENTER—OWN A FARM.

New section of British Columbia just opened to transportation.

GOOD SOIL--LOW PRICE--EASY TERMS
Raise WHEAT-BARLEY-OATS-CORN.
ACT QUICK-GOING EAST. Join next party going up. Special low rates.
P. O. Box 2054, Spokane, Wash.

I WANT TO HEAR FROM OWNER OF farm or unimproved land for sale. Mrs. W. Booth, Pulaski, Iowa.

### FOR SALE OR EXCHANGE 702

FOR SALE—160 A. MONTANA WHEAT land. Would exchange for logged-off land of equal value near Spokane. A. B. Gaylord, owner, Roundup, Montana. No agents.

### TO EXCHANGE—REAL EST. 703

RHEUMATICS, HERE'S YOUR CHANCE. Change to dry climate, get well. 160 acres, diversified; part irrigated; Douglas county, Washington; valuation $2500; trade for land west of mountains. For particulars write Mrs. F. Brandt, Leahy, Wash.

# The Answer to the Farm Labor Shortage

THE farm labor situation is serious. And little relief is in sight. The new draft will take more men. More horses and mules must go. But, in the face of these handicaps *production must be increased*—and it can be if you adopt the right means.

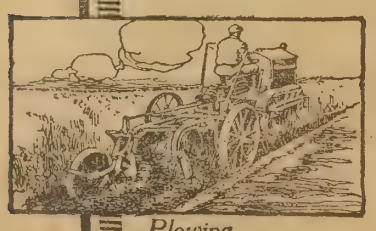
The Cleveland Tractor has shown the way on thousands of farms. It has successfully replaced muscle with machinery. It has proved itself the modern "Man-of-all-Work."

The Cleveland Tractor plows as much ground as *three* good 3-horse teams and three men—eight to ten acres a day.

It actually does the work *better*. And it harrows. It plants. It reaps. It cuts ensilage, fills silos, turns saws, hauls manure spreaders and road machinery, drags logs, and does the hundred and one chores that mechanical power can do about the farm. It delivers 12 horsepower at the drawbar and 20 horsepower at the pulley. But it weighs less than 3200 pounds. The

## Cleveland Tractor

*travels on its own tracks, like the giant "tanks" on the battlefields of Europe, and will go practically anywhere.* With 600 square inches of traction surface constantly on the ground, it goes through mud, sand, clay and gumbo without miring, floundering or packing the soil.



It steers easily—by the power of its own engine,—and will turn in a twelve-foot circle. It is so small that it can readily be operated under and among small fruit trees. It requires less housing space than a horse.

Rollin H. White, the well-known engineer, designed the Cleveland Tractor. It is built under his supervision—from the best materials. Gears and tracks are protected from dirt and mud, and are specially built for long service.

Let this modern "Man-of-all-Work" fill the gaps on *your* farm. Let it help you produce larger crops, with less help—and incidentally make greater profits for you. Write us now for detailed information and the name of the nearest Cleveland dealer.

# Timothy Harvest Begins

## Alfalfa Is Becoming More and More Important in Stevens County—Is Held Back Only by the High Price of Seed

COLVILLE, Stevens County, Wash., June 27.—There has been no change in the variety of crops in this section this year unless it may be an increase in the seeding of spring grain, in particular oats. Hay is a staple, timothy taking the lead, but alfalfa becoming more and more a dependence. The extension of this crop is only held back by the high price of seed. The prospect for this season is for a short yield. Hay will make about 50 per cent, winter wheat, 60, and spring grain yet an uncertain matter, as the drouth previous to the fine rain of June 23 was most serious. 8he prospect at this writing is for great improvement. Prices have been steadily climbing, but the farmers will not realize any reasonable profit on account of the short yields. Alfalfa is being cut. Timothy harvest begins soon after July 10, but grain harvest will be later than usual, except on the Columbia river hills. There will be no trouble to secure ample help, as the work on the farms of this county is spread over the season and there is little congestion. Dealers report few sales of farm machinery and even the blacksmith and repair shops do not seem to be more than ordinarily busy. The farmer is economizing. So far as my observation goes I believe the best improvement that could be suggested for this region would be the extension of alfalfa acreage and the building of silos. The silo would call for the growing of silage crops, corn, peas, clover, and the alfalfa would solve the forage problem. E. E. ELLIOTT.

### Yield Light Crop of Peas.

FAIRFIELD, Spokane County, Wash., June 26.—The crop which the farmers have been pinning their faith on here is peas, but the hot weather last week just about cooked them, so there will be a light crop this year, but the price is better, so the returns will not be a loss as last year. It is a little early yet to predict how the harvest help will be, but as the pea harvest is not heavy work, here should be no shortage in help, at least for the cutting. As the principal harvesting machine is the mower for peas, it does not take long to haul out a mower and look it over before going into the field. The mowers, however, are being repaired and will be in first-class shape before the peas are ready to cut.. Pea harvest should be on by July 10 to 15 if no more rain comes. However, we need the rain and will gladly delay harvest for it.
ROY G. ADAMS.

### Aphis Does Damage.

STEVENSON, Skamania County, Wash., July 1.—Weather conditions are not of the best here as it has been very dry for over a month, and unless it rains very soon, crops will be cut short. The spring grain, especially oats and vetch, has been greatly damaged by the aphis, which is spreading to the garden stuff. Peas, prsnips and beans are being literally eaten up by them and some say that is the only crop we will have this year. Yesterday was exceedingly warm, being 94 in the shade, but today is cooler. The help question is in a bad situation, as there is not enough to meet the requirements. This community is threatened with a fuel shortage, as thehe has been no wood cut to supply the demand and the number of teams being greatly lessened, there is no one to haul, and in winter, when the rainy season sets in, hauling can not be done.
W. T. JACKSON.

### Lowland Crops Look Good.

CHIMACUM, Jefferson County, Wash., June 29.—A good many peas have been planted this year, but on account of the extreme dry weather the highland crop looks like a failure this summer, but the lowlands look fairly well. Pastures are drying up and milk and cream supply is rapidly falling off. Hay crops in most parts of this county are not more than half a crop and there will be machinery and men to handle what there will be. Very little or no root crops have been planted this year for the stock on account of the scarcity of help. Late oats and peas have been planted the last of this month, but if we do not have rain soon the crop will be small.
JOHN VAN TROJEN JR.

### Strawberry Crop Profitable.

GIG HARBOR, Pierce county, Wash., July 1.—Oat hay, vetch, peas and the grass crops are undoubtedly in the lead in local importance. The vetch and peas have had rather a hard time of it this season; first the early and prolonged drouth, which is still on; then the most savage attack of aphis that this country has ever experienced about finished such crops. Some of the ranchers harvested these crops a little early and secured a little feed from them. Others plowed the ruined crop under. This loss, together with the short hay crop in other lines, is going to make it very difficult and expensive to carry the cows and other live stock through the coming winter. Those who have good crops of early strawberries have made a good thing from them. Those picked during the first 10 days of the run must have netted the owners something over $2 per crate. The later pickings have probably netted them something under $1. Pickers have been hard to get, even at a greatly increased price over former years. It will be still harder to secure enough help to gather in the raspberry, loganberry, and blackberry crops. Prices of crates are also very high and somewhat difficult to get in sufficient quantity. We, on this side of the water, are trying hard to secure a ferry across to the Tacoma side. The larger Gig Harbor ferry was secured last season, but the boat is still engaged in carrying workmen from the Tacoma waterfront to the shipyards on the far side of the tide flats. When the two ferries get to running across on their proper routes we think we shall have secured the connecting links that will bring greater development and community prosperity to this heretofore somewhat isolated section. A remodeled local traffic boat has been secured for this second ferry and is ready to commence its run as soon as the slips have been located and constructed. W. B. BOYNTON.

### Apple Crop Is Fair.

METHOW, Okanogan County, Wash., June 22.—The principal crop in this community is apples, and it will be 25 per cent less than the 1917 crop. It is hard to tell the set value. The farmers are ready to go into harvest and there are enough men, as the community feeling is so that no crop will suffer. There are enough facilities for handling it, the most worry being whether the crop will be an average or not. The one thing above all others that would improve conditions here would be the organizing of a farmers' club where every farmer and his family could meet Saturday afternoon and talk over their affairs and have a general visit, but so many clubs have lived for a short time and died that no one seems to encourage them any more.
CHAS. GRANT.

### Irrigated Wheat Looks Fine.

GRANDVIEW, Yakima County, Wash., June 21.—Alfalfa and apples are the main crops in this locality. Alfalfa is about the same as last year, but most of it is in better shape as there has been no rain. There are two or three fields of barley that are fine and some splendid corn. Most of the corn was planted late on account of the cold spring, but weather is good and hot and there is plenty of water for irrigation. I think prices of hay will start about the same as last year. We change work in stacking our hay so have plenty of help. The prospect for wheat on the dry land is reported very poor, but the wheat on irrigated land is fine. I think there should be a small flock of sheep on every home place, even if the place is only 10 acres and there should be more getting together, to plan and talk over crop and stock conditions.
E. H. FAULKNER.

### Will Save Okanogan Orchards.

Announcement has been made of the appropriation by congress of the sum of $125,000 to be used by government engineers to pump water into the Okanogan irrigation reservoir. The special appropriation was urged by the reclamation service because of the unusual shortage of water on the Okanogan irrigation project which threatened to result in the loss of many fruit trees in the newly developed orchards of that region. The water will be pumped either from the Okanogan river, Salmon lake or Green lake.

### Hay Rather Than Orchard.

"There have been wormy apples in and around Ellensburg, Wash., for 20 years, declares E. G. Grindrod of that city. "That old slogan, 'The home of the wormless apple, always was misleading. Orchardists around here discovered long ago that the same precautions in regard to pests were necessary here as elsewhere."

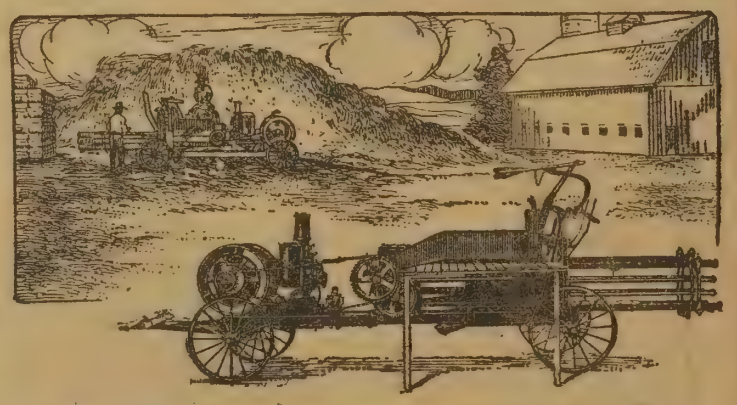
Even with this proviso, Mr. Grindrod does not think much of apple farming. Most of his own orchard has been taken out and the land seeded to hay.

### Use Bees In Greenhouse.

One of the most complete greenhouse plants in the northwest is operated by the Walla Walla Hot House company. About two acres are under glass and the equipment in regard to irrigation, ventilation, etc., is up to the minute. Bees are kept in the greenhouse to pollenate the growing crops, so that that limiting factor in greenhouse work is removed.

## Advertising Protects the Buyer

When a manufacturer gets to the point of advertising his produce in the farm papers, you can be sure that he has brought his goods to a high state of perfection.



Otherwise, he would be merely breeding trouble and dissatisfaction; and his announcements would not be admitted to reputable farm papers.

Advertising protects you from poor quality of goods and from inferior workmanship.

It also protects you from high prices, because the tendency of advertising is to cut down manufacturing and selling expense, and to lower prices to the consumer.

Moreover, when you buy goods advertised in this paper you get the protection given by our iron-clad guarantee. Are you in the market for advertised merchandise? Read the ads in this issue and see!

## Use an International Press

EXTRA hay profit is to be found in the line of **International Hay Presses.** Hay, in the smooth, uniform bales turned out by an **International** baler, brings market prices enough higher to allow a good profit on the work of baling. Baled hay can be shipped quickly to points where prices are highest. Baled hay takes up little storage space and is easily handled.

In the **International** line there are one-horse and two-horse presses for farmers who have no other power; motor presses for those who want the work done in a hurry, and have other uses for a high-grade portable engine; belt power presses for baling large crops or for doing custom work. The **International** hay press line is complete. Bale chamber sizes are standard, 14 x 18, 16 x 18, and 17 x 22. The capacity of the different styles ranges from 6 to 35 tons of baled hay per day.

It's no trouble to find out all about this handy, clean working line of hay presses, nor does it cost more than the price of a postage stamp. Drop us a line asking for information on **International** hay presses, and we'll send it without delay.

## Grain Must Not Be Wasted

### *Effort Will Be Made to Prevent Harvest Loss*

Thorough organization of the threshermen of the wheat growing districts of Washington is being effected by the national food administration. Richard J. Stephens of Spokane has been appointed superintendent of 25 counties in the state to direct the organization with a view to preventing grain losses during the threshing season. Under the system that is being worked out, the county food administrator in each county is chairman of the county committee having in charge the county organization. The chairman of the county council of defense is a member of the committee and appoints one representative of the threshing industry, who, with the county agricultural agent makes up the committee for the county.

"Just as much care should be taken in cleaning up all the unthreshed grain that accumulates around a machine as is taken with the rest of the job," says Mr. Stephens. "Even with the best of care a considerable amount of unthreshed grain will accumulate about the feeder in the course of a few hours. If the straw is very dry, a considerable amount of grain will shatter from the heads as it is being pitched from the wagons or stacks to the feeder. The machine should not be stopped at the end of the job until every bit of this is pitched back into the cylinder and carefully rethreshed.

Mr. Stephens estimates that careful threshing will result in saving at least three and one-half bushels in every hundred threshed. He suggests as means to effect this saving the following: That horses should not be fed from the header wagons or bundle wagons; that drivers should be careful not to tramp upon the unthreshed straw; that all loose grain be shoveled into sacks; that bundles should always to pitched so as to fall completely in the wagon or the feeder, not striking against the sides at any time; that horses be not permitted to eat from the grain stacks or shocks; that feeding should be so regulated as to prevent cracking of grain, and the machinery properly adjusted as to cylinder and concave teeth and speed, and that grain be never threshed too green or too wet following a rain.

Threshermen are being given cards of food administration membership upon their joining actively in the work of grain saving as outlined by the food administration. Ready loyalty is being manifested from every quarter, it is stated.

"Under the membership plan, every thresherman is being given an opportunity to take his place alongside other patriotic men who have put their business upon an efficient war basis and are thus supporting the efforts of the government and the boys at the front," says Mr. Stephens.

### Lowlands Are Flooded.

Reports from Clarke county tell of the flooding of considerable lowland along the Columbia river in southwestern Washington during the recent high water period of that river. Considerable damage is reported to have been done to some of the dairy farms on the river banks. It is believed that general improvement will be noted from now on until the river reaches its normal stage.

### STATE GOOD ROADS.
### Will Hold Convention in Pasco.

Officers of the Washington State Good Roads association are preparing for their annual convention to be held in Pasco Thursday and Friday, November 14 and 15 next.

The old members and others who are interested in good roads of the state are being asked to forward their dollar memberships to F. L. Crowe, membership secretary, 201 Empire State building, Spokane, Wash.

The good roads boosters of the state are being asked to transmit these memberships to Mr. Crowe at this time in order to do away with the confusion and multiplicity of work which is necessitated at the convention when all these registrations are made after the arrival of the delegates.

Continuing its announcement of the Pasco meeting, the officers say:

In addition to this saving of clerical work, it is the desire of President Arthur D. Jones and Chairman of the Executive Committee John P. Hartman that a somewhat larger fund be provided in order that nationally well-known road builders may be secured through the payment of their expenses as advisers to us of Washington in formulating our future actions and policies.

Every public-spirited citizen who desires to save the state of Washington in tax expenditures by saving in experimental construction work and types of roads which do not prove permanent should be willing to at once contribute a membership to the Washington State Good Roads association to help them in securing these experts for the convention and to provide a legislative fund for use in the next session of the legislature to incorporate sane policies into the road code of the state.

These public-spirited citizens should send in their memberships at once, whether they fully intend to be present at Pasco or not.

One of the well-known speakers who will be present is ("Good Roads") Horatio S. Earle of Detroit, Mich. Many residents of this state have heard Mr Earle and want to hear him again, and as often as they can.

### RED CROSS PICTURE PAGE.

**The open country and the rural towns have responded freely to the calls of the Red Cross. Nowhere have the women folks, or the men folks for that matter, been more anxious to help out in this work. In fact there has been no more popular method of raising money for the Red Cross than the repeated sale at auction of a farm animal or some other farm product. We are sure you will be much interested in our picture page this week where you will find the portraits of the men and women who are directing the Red Cross work of Washington, Oregon, Idaho and Alaska.**

### Coming Events.

July 15-17, convention poultry instructors and investigators, Moscow, Idaho.

August 19-25—Convention National G. A. R., Portland, Ore.

November 14-15, Good Roads convention, Pasco, Wash.

**Fairs, Shows, Exhibits.**

August 26-30, Southwest Washington fair, Centralia-Chehalis.

September 2-7—Spokane Interstate fair, Spokane, Wash.

September 16-21—Washington State fair, Yakima, Wash.

September 19-21—Roundup, Pendleton, Ore.

October 1-6—Western Washington fair, Puyallup, Wash.

November 7-13—Northwest live stock show, Lewiston, Idaho.

## Farm Service War Flag

### *Why Not Adopt This as a National Emblem?*

**The following letters largely explain themselves. It may be added, however, that while the farm service war flag was designed primarily for use in the Pacific northwest, yet there is nothing in the design, or in the motive which prompted the design, which would not lend itself for use among farm folks all over the country. Before its publication a copy of the proposed flag, in colors, was forwarded to President Wilson, preceded by a telegram saying:**

**"We believe in using every incentive which shall encourage each member of a farm family in food production. To this end we have devised a farm service war flag, distinct from wartime service flag, on which every farmer, every farmer's wife and every farm boy or girl who is actively speeding up food production, shall be represented by a star."**

**The same telegram indicated a desire to dedicate the flag to the entire nation as a patriotic farm emblem.**

To the Editor: Please accept my thanks for your letter enclosing sample of your farm service war flag. I enclose herewith copy of a letter which I am sending to C. B. Smith of the states relations service, Washington, D. C. I think your idea of a service flag is a most excellent one, and since the flag has already been adopted in four states of the Pacific northwest, it might very properly be used as a national emblem, provided it meets the approval of the Washington authorities.

A. J. MEYER, Director.
University of Missouri.

The following is the copy of the letter sent by Director Meyer to the United States department of agriculture:

Mr. C. B. Smith, States Relations Service, Washington, D. C.: I enclose herewith the farm service war flag originally suggested by the Cowles Publishing company, Spokane, Wash., publishers of the Oregon Farmer, the Idaho Farmer and the Washington Farmer. From information at hand, this flag is being adopted quite generally in four states of the Pacific northwest. If the idea is a good one, if the flag is satisfactory, and if there are no strings tied to its use, why would it not be well to adopt this as a national emblem? This would be taking advantage of the fact that it is already in use in four states in the Union, and would create no disturbance elsewhere unless there are similar emblems being used in other states. A. J. MEYER, Director.

## Fix Prune Price

### Conference Is Held at Portland

Following a conference in Portland, Ore., between representatives of the federal food administration and a large number of prune growers of the northwest the maximum prices to be paid growers for the 1918 prune crop was announced. The prices range from 4 cents a pound for 120s up to 11 7-8 cents a pound for 30s and 35s. These prices are for Italian prunes. For the Petite variety the prices range from 4 cents to 12 cents per pound. The maximum prices agreed upon for Italian prunes are as follows:

| | Grader Test, Lb. | Sack Test, Lb |
|---|---|---|
| 30-35s | $0.11⅞ | $0.11⅞ |
| 35-40s | .11⅝ | .11⅝ |
| 40-45s | .10⅞ | .10⅞ |
| 45-50s | .10⅝ | .10⅝ |
| 50-55s | .09½ | .09⅝ |
| 55-60s | .09¼ | .09¼ |
| 60-65s | .09 | .09 |
| 65-70s | .08⅝ | .08¼ |
| 70-75s | .08¾ | .08⅜ |
| 75-80s | .08⅛ | .08⅛ |
| 80-85s | .07½ | .07⅛ |
| 85-90s | .07¼ | .07 |
| 90-95s | .07 | .06⅞ |
| 95-100s | .06¾ | .06⅝ |
| 100-120s | .04½ | .04¼ |
| 120 up | .04 | .04 |

The prices agreed upon for Petite prunes varies somewhat as indicated by the following schedule as adopted:

| | Grader Test, Lb. | Sack Test, Lb |
|---|---|---|
| 35-40s | $0.12 | $0.12 |
| 40-45s | .11¼ | .11¼ |
| 45-50s | .11 | .11 |
| 50-55s | .09¾ | .10¼ |
| 55-60s | .09½ | .09¼ |
| 60-65s | .09¼ | .09¼ |
| 65-70s | .09 | .09 |
| 70-75s | .08¾ | .08¾ |
| 75-80s | .08½ | .08¼ |
| 80-85s | .07¾ | .07⅜ |
| 85-90s | .07⅜ | .07⅛ |
| 90-95s | .07⅛ | .06⅞ |
| 95-100s | .07 | .06 |
| 100-120s | .04½ | .04½ |
| 120 up | .04 | .04 |

Several food administration authorities of the northwest were in attendance at the conference, including Administrator W. D. Ayer of Oregon and Administrator Charles Hebberd of Washington. E. N. Richardson was present from Washington, D. C., as personal representative of the national food administrator. Explaining the purpose and result of the conference Mr. Richardson said, following the adoption of the schedule of prices:

"The schedule agreed upon by the Oregon and Washington growers are from one-fourth to three-eighths of a cent lower, according to grade, than those adopted by the California growers. This difference is due to the fact that the California prune absorbs a much greater quantity of moisture in the process of packing than does the prune of northwest sections, this moisture content adding substantially to the weight of the prunes after they reach the packer and before they are passed on to the consumer. As the packer sells the prune by weight it will be seen that the Oregon and Washington packers who handle prunes that do not absorb so much moisture would be at a disadvantage if they had to pay as high a figure for their fruit as does the California packer. For this reason the lower price was adopted in the northwest. Oregon and Washington Petite prunes are the same price as in California.

"The margin of profit made by the Oregon and Washington packers which under the food administration regulations must not exceed 5 per cent on the turnover of the pack, will be the same as that made by the California packer selling at the same price. These prices, it should be understood, are the maximum prices at which prunes are to be sold by the growers, and have been voluntarily agreed upon and adopted as the selling basis for the new northwest crop. The schedule has been sent to Washington and will be indorsed by the food administration within the next few days."

One of the requirements made by the food administration to the prune growers was that the average profit on the production of prunes this season should not exceed 5 per cent above expenses. It was stated that any greater profit than this would subject the grower to charges of profiteering.

## *Don't Give Up the Poor Crop*

A common error on the part of farmers everywhere is shown in their failure to take first class care of the crop that promises an inferior yield. If there is any crop that should receive special care it is the crop that, for one reason or another, shows indications of shortage or possible failure. To allow a beet field, or corn field, or potato field to go uncultivated because of a poor stand or because weather conditions threaten it, is poor policy. It is poor policy not only from the standpoint of the yield that might be obtained, but from the standpoint as well of the preparation of the soil for a crop the succeeding year. Cultivation is seldom wasted even though it has little effect on the crop already in the ground. Furthermore, food products are too badly needed this season to permit of anything going to waste or failing to yield when a reasonable amount of effort would save it.

## *The Farmer's Automobile.*

Judge William H. Wadhams of the New York court of general sessions, recently returned from a three months' visit to France, told the grand jury in his court that upon landing in New York it gave him a distinct shock to see the streets crowded with expensive automobiles being used for the mere pleasure of the owners, and men spending money as lavishly as in the days before the war.

"There is not a private motor car driven in Great Britain today," continued Judge Wadhams. "They have been turned over to the government for war uses, and every great country house in England is being used for government purposes."

Undoubtedly pleasure automobiling is interfering with our vigorous conduct of the war. Hundreds of thousands of people would have more money to put into Liberty bonds, war savings stamps and the Red Cross if they were not burning up so much of their income in joy riding. Heavy consumption of gasoline runs up the price and costs the government just that much more for its own requirements.

It is difficult, however, in this country, to draw the line between utility and pleasure use of the automobile. Thousands of farmers use their cars chiefly for farm service, and pleasure riding with them is only incidental. They find it a wonderful time saver and real aid to increase food production.

Another point is not to be disregarded. The automobile makes farm life more attractive to the young people, and holds young men on the farm against the growing enticements of town and city life.

Any regulatory or prohibitive action by our government must therefore be carefully considered. It is possible that as the war goes on we may have to come more and more to the British and French methods, but we are to remember that this country differs from Europe. The United States is a land of magnificent distances, and farm life does not center here around the villages as in France and England, with the opportunities there presented for quick and easy access to trading points. Many American farmers living several miles from town would have to waste a good many half days every season if they should be thrown back on the old ways of going to town.

Undoubtedly it is these considerations that cause our government to hesitate before interfering with the established uses of the automobile.

## *Lessons of a Century*

It is a terrible thing to sacrifice life, but after all, would it not have been a calamity had America been spared participation in the present war? Her grasp of industrial life and even of spiritual life would have been a century out of date at the close of the war, for the lessons of the past four years have been as the lessons of a century.

## *Universal Inter-Relations*

In our social evolution we are following the law of physical evolution. The first social units were self centered. The first forms of life were unicellular. In that form of life the individual cell was the highest expression of life. These forms multiply by division, and the yeast plant is an example. The multicellular forms are those that are composed of more than one cell. There are generally many cells, and sometimes many million cells. The cells become organized so as to perform different functions, as in the roots of a tree, its trunk and leaves. In such an organism all the parts are inter-related, and each and every part necessary to every other part, and to the whole. In sociology we have not yet learned the lesson of universal inter-relations, and we are struggling, seriously struggling with the questions now. We can not fix the price of one commodity, and not at the same time fix the prices of other commodities to which it is related. We can not fix the prices of commodities without at the same time fixing the prices of labor producing these commodities. We can not fix the prices of labor producing commodities, and of the commodities themselves without fixing the profits or the commissions that shall be received by distributors, merchants and others conveying them to the people. One thing logically follows another, because every thing is related to every other thing.

I am not finding fault with our legislative and executive bodies for not doing every thing in a short period of time, it is of necessity an evolution of thought, and in the meantime millions of people must suffer injustice. G. L.

## *Cooperative Creamery a Success*

That cooperative creameries can be made a success, and that the dairymen will stay with them and show executive ability in their management, is indicated by the Skamokawa cooperative creamery at Skamokawa, Wash. This creamery has been in existence over 20 years. Skamokawa has no railroad nor highway, its only outlet being by boat on the Columbia river. But this creamery's output has steadily grown as more land comes into cultivation in the little valley. Last year's output was 176,000 pounds. The butter has a high reputation, and is sought for in Portland, where the largest sales are made, in Seattle and in smaller markets. The plant is thoroughly modern and sanitary, with concrete floor and plastered walls. Only butter is made; there is no ice cream or byproducts, and the reputation and success is built entirely on the butter.

## *Making Excessive Profit*

The stunning report on profiteering by the federal trade commission confirms the belief repeatedly expressed by the farmer that in spite of all of Mr. Hoover's restraining efforts the flour mills have been making excessive profits.

The great packers and other profiteers also come in for scathing condemnation from this high national commission for their unpatriotic conduct at a time when every consideration of loyalty demanded that they hold down their profits.

These are not the findings of an irresponsible muck-raking body. They are the carefully delved facts of an able government commission that seems to have gone at its work with a spirit of zeal and thoroughness, and which has laid before the country proofs gathered from the books and records of the investigated companies.

Some of the practices uncovered by the commission, such as padded depreciations, increased salaries of officials, new construction charged off as repairs, fictitious values on raw materials and manipulated inventories, now call for vigorous prosecution by the United States department of justice. The country will demand vigorous action by the government, to the end that lawless profiteers shall be exposed and punished, and just creedit be given to those patriotic business men who have not taken advantage of the nation's war necessities to pile up ill-gotten gains extorted from the consuming public and drained from the national treasury at a time when every patriotic impulse is for the speedy winning of the war with the minimum of loss of life and treasure.

## *Men Who Do Real Things*

How petty is the pride of the average one of us who does something, or thinks he does! How small-minded to complain of our troubles! Look at the men who do real things, and our pride will turn to a blush of shame. Look at Foch, Haig, Pershing. Look at real trouble and suffering, and our complaint will turn to compassion. Look at Belgium and northern France, Serbia and Armenia.

## *Fancy and Utility*

Professor Edward Brown of England informed us in his talks that the fancy poultry business has been destroyed in Great Britain by the war, and that practically all the poultry shows had been discontinued. The commercial poultry farms had also been injured, but there was some increase in poultry keeping on the general farms and on the backyards.

Everything must serve a utility end in these war days, and the experience of poultry keepers in England should serve a valuable lesson to our own poultry keepers. The fancy poultry that has been bred mainly for winning prizes in the shows has been found wanting, and has given way to utility strains. The same thing will happen in this country if the war goes on, and even if it doesn't, and it is well to be forewarned. J. D.

IT has well been asked why the country church should not be made a community center, why farmers should not meet there for business meetings and picnics as well as for religious purposes, and why the church property should not be kept comfortable and attractive and equipped with conveniences.

NOW is the time to demonstrate whether success is possible to us as individuals. One of the most successful men of America, the late James J. Hill, said: "Unless you can save money you can not succeed in business."

IF you do not have to go; if your son doesn't have to go; if your husband or brother doesn't have to go, you ought to be ashamed to utter one syllable of complaint, let come what will at home.

FOUR dollars and eighteen cents invested in a war savings stamp is just that much more than most of us would have a year from now if we didn't buy the stamp.

DID you ever turn on the light to see whether or not the room was dark? Try it sometime and you will get an inkling of one of the profoundest principles of life.

AS a rule, failure is due to lack of attention to details. The little thing is the biggest thing in the world.

# Increase in Wheat Price Fails

## *Congress Agrees on $2.40 Price; President Promises Veto*

Although congress has been wrestling for months with the proposition to increase the price of wheat the announcement last Saturday that both houses had agreed to increase the price to $2.40 a bushel came as a sensation to the people of the country, producers and consumers alike. Hardly had the news spread, however, until it was announced that President Wilson had stated that he would veto the measure on the ground that the increased price of wheat would increase the cost of bread to the consumers out of proportion to the benefit derived by the farmer from the increased price. The measure to increase the price was in the form of a "rider" on the agricultural appropriation bill. Should the president veto the measure it would not seriously handicap the work of the department of agriculture, as congress recently passed a measure continuing the old appropriation act until the new measure becomes effective.

### Farmers May Appeal to the President.

It is possible that the farmers of the country will make formal appeal to the president not to veto the measure. Following the announcement of the passage of the measure by congress and the statement that the president would veto it, A. A. Elmore, president of the Farmers' Union of Washington and Northern Idaho, said that officers of the union were getting in touch with each other with a view to taking the matter up with the president. In a formal interview President Elmore said:

"The union is standing behind the president in the prosecution of the war, and we probably will appeal to him to consider the $2.40 a bushel as fair to the farmers, all things considered. There are thousands of acres of wheat in the Pacific northwest that will not be cut this year. There are tens of thousands of acres that will not produce more than five or six bushels an acre.

"The farmer will not make any money this year at the $2.40 minimum. Of course, in some favored sections they will make money, but the farmer as a class will not. Everything the farmer uses has advanced tremendously in price. The feed for his stock to raise the crop costs $50 to $70 a ton. Farm machinery has gone out of sight. We will appeal to the president to consider these things before vetoing the bill.

"Let us consider what $2.40 wheat means. It is the cheapest food one can eat at that price. It takes four and one-half bushels of wheat to make a barrel of flour. That makes the wheat cost $10.80 for a barrel. Add $1 for cost of milling and $1 for cost of distribution, and the cost to the consumer should be $12.80. There are approximately 300 loaves of bread in a barrel of flour. On this basis the flour in a loaf of bread costs 4.2 cents. Half a loaf a day is sufficient for any person, which makes the wheat cost in a day's bread supply 2.1 cents. Suppose you invested 2.1 cents in meat, you would not get enough for a taste.

"The average wheat crop is 600,000,000 bushels. Adding 20 cents a bushel to the crop we would have an additional $120,000,000. Let us now look at the situation from another angle. The railroads were granted an increase in rates amounting to $900,000,000. The railroad employes were granted a raise amounting to $600,000,000 a year. This increase would pay the farmer $1 a bushel additional for his entire wheat crop.

"The railroads which were taken over by the government have been guaranteed a dividend equal to that made by them for three years previous to the government's plan of action. Those years were the most prosperous in the history of railroading in this country. The shipbuilders and the cantonment builders have been guaranteed cost plus 10 per cent on their operations. The millers have had a prosperous year, so much so that the government has declared they were profiteering. The farmers will be perfectly willing to go on a basis of cost plus 10 per cent if the government will make the same requirements of other lines of industry.

"We appeal to the president not to overlook us while he is doing so well by the railroads and others whose activity is necessary for the welfare of the nation, because our products certainly are essential."

### What to Expect on Battlefront Is Puzzle.

The uncertainty that has existed for the last few weeks on the situation at the battlefront continues. At this writing there is no positive evidence of what is in store, though before this reaches the readers stupendous events may have occurred. Great drives are launched in this war with a suddenness that sometimes completely staggers the noncombatant world.

It would seem that two possibilities are worthy of consideration: First, Germany may renew her offensive on a scale even greater than that of the drives that have occurred during the last few months; second, she may wait and change her policy to one of defense rather than offense. Military critics, as a rule, look for a resumption of the supreme effort to win by sheer force of arms this summer, but there is an undercurrent of feeling that the Kaiser knows he can not win that way, and is planning an organization of his forces and resources to withstand the offensive that the allies are sure to launch in due time.

While the war lords of the central empires undoubtedly had dreams of world domination when they started the war, and while those dreams have not been realized, it remains a fact that up to the present time Germany and her allies are the victors. They possess at this time territorial gains that it seems safe to say double their antebellum resources. Russia, with all her fertile lands, is in Teutonic possession. Belgium, millions of acres of northern France and Serbia and Rumania are occupied by the Germans and the Austrians. Through her alliance with Turkey the Germans have access to the Mediterranean through the Dardanelles.

Give the Kaiser a little time to organize this stupendous aggregate of resources and provide for its defense with modern and complete fortification and equipment he could withstand for years anything but an irresistible force from the allies. Is this what he plans? Does he believe that England and France and America would make peace rather than undertake the great task of invading his increased empire?

The next few days, or the next few weeks may reveal what may be expected in the future. The fortunes of war hinge on many things. So tense is every nerve on the one great event that a little thing might start a break that would wreck the hopes of either side. It is not impossible that a psychological breakdown somewhere will put a new face on the situation. Some one nation may fail and turn the tide one way or the other. The greatest problem before each side is to prevent such a catastrophe—to keep popular morale perfect and to guard every possibility of international events that might add power to the enemy. It is a fact that must be recognized that the winning side draws friends. The world loves a winner, and, besides, it is safer to be with the victor when the final adjustment takes place. For this, if for no other reason, it behooves America to bend her utmost effort to become immediately the winner. The whole world must be convinced—and nothing but irresistible force of arms can convince—that America and her allies will ultimately win.

### Quarter Million Americans at Battlefront.

Official announcement has been made that of the American forces now in France a full quarter of a million are on the front battle line. This means that at least three-quarters of a million men are in active service in France, as not to exceed one man in three is available for actual fighting in the trenches. At least two-thirds of the men actively engaged in war operation devote their time to duties back of the line, such as railroad building, transportation of munitions and food supplies and the like. President Wilson on July 1 made formal announcement that the number of Americans in France had been placed at the one million mark, and that there are approximately two million men under arms in this country or already abroad.

### Allies Take Many Prisoners.

It is officially reported that the French, British and American armies on the western battle front took more than 5000 German prisoners in the fighting during the last week. While there were no major offensives launched during the week by either the allies or the Germans, a considerable number of minor operations, covering distances from one to three or four miles and penetrating from a few rods to one or two miles in depth were successfully carried out by the allies. So far as gaining of ground, capture of troops and the general improvement of positions are concerned the last week may be credited as one of victory for the allies.

### British Casualties Continue Heavy.

The tremendous casualties on the battlefront are indicated somewhat by the report that expresses satisfaction that the British losses were only 17,336 during the past week. This is a decrease from the previous week, when the losses were something like twice that many. It must be remembered that these last weeks have been weeks of comparative quiet. Only local fighting has occurred. No big battles have been fought. Of last week's losses nearly 3000 were deaths, the remaining 14,000 being wounded. Multiply this number of casualties by six (America, England, France, Italy, Germany and Austria, the major nations at war) and it would indicate a possible loss of more than 100,000 a week to all the combatant nations. This, of course, is assuming that the losses to each nation average those reported for the British, which may or may not be true.

### Excess Profits Pay Heavy Taxes.

The official records show that for the year ended June 30 taxes on incomes and excess profits in this country totaled over $2,821,000,000. The government's total revenue, collected from all sources, totaled approximately $3,672,000,000. New York state led in the payment of these revenues with a total of $689,917,000. Pennsylvania was second, with $496,087,000.

### Get a Farm Service Flag.

The man, woman, boy or girl who stays at home and works hard to produce necessaries for the soldiers in Europe are entitled to real war service recognition. That is the idea back of the Washington Farmers farm service war flag. It is pennant-shaped, made of the good old red, white and blue, and has a star representing the producing farm home. Small stars are added to represent each worker of that home.

.....

Convenient Order Blank.

THE WASHINGTON FARMER, ————1918.

Review Building, Spokane, Wash.

Enclosed find five cents (5c), for which please send me a Farm War Service Flag (priuted on enamel paper) with ..... extra small stars for farm workers.

Name .....

R. F. D. ..... Postoffice .....

Box ..... State .....

## *Washington Gleanings*

The fruit crop in the Big Bottom valley, near Morton, is the best in years, according to farmers there.

J. C. Peterson of Ferndale has become the owner of the Captain Butts farm of 64 acres. The consideration was $9500 cash.

M. Riddle of Tacoma has presented Camp Lewis with the largest flag in the world. The flag was run to the top of a 325-foot pole.

Daniel C. Corbin, multi-millionaire, railroad builder, died at Spokane of pneumonia, which developed after an operation. He was 83 years old.

S. B. Helmick of Pe Ell recently found a gold nugget weighing seven and four-tenths grains in the crop of a fowl which he had killed for dinner.

The Girls' Canning club has been organized at Castlerock, with Vera Hubert as president, Gladys Wheeler vice president, Mrs. O. K. Wolf, leader.

The Snohomish County Fruit Growers' association recently shipped a carload of potatoes to British Columbia to be manufactured into potato flour.

At a recent meeting of the Pacific county commissioners the Peninsula highway, from Nahcotta to Oysterville, was declared a county road and public highway.

More than 6000 barrels of flour in this state have been returned to the channels of trade since June 10, and this amount is now available for export to France.

The Lincoln county rural letter carriers have reorganized and elected Captain Alitzer, Wilbur, president; G. Schatz, Odessa, vice president; Harvey C. Sprinkle, Reardan, secretary-treasurer.

Merchants at Vancouver, Wash., have agreed that they will not sell flour to strangers, and the people purchasing flour must show that they are residents of Vancouver or Clarke county.

With a view to preventing the importation of weevil-infected hay the state of Montana has placed a quarantine on hay from several districts of Idaho, Utah and Wyoming, where the pest is known to exist.

The farmers of Snohomish, Clallam and Lewis counties are to make an excursion to the experimental station at Puyallup July 22, and the farmers from Whatcom, San Juan and Skagit counties on July 24.

A big farmers' elevator is to be erected in Toppenish for this season's business at an approximated cost of $16,000, the necessary stock being subscribed within a few hours. The elevators will handle 1500 bushels per hour and will be modern in every respect.

Fir lumber manufacturers of Oregon and Washington have pledged themselves to furnish at least 600 cars of airplane fir per month to the government cut-up plant at Vancouver, and to speed solid trainloads of cantonment stock to eastern destinations in record time.

The seventh and last car of beans gathered at Yakima in response to the call of the government for supplies for the army overseas is ready for shipment. These bean consignments averaged 80,000 pounds to the car, which at 8 cents returned $44,800 to the growers.

There is a general feeling that the I. W. W. is whipped in the northwest. Possibly he is. Let it be hoped so. But too much optimism is a bad policy. A constant watch should be kept and every one should be ready to take part in the suppression of destructive efforts from any source.

The farmers of Whatcom county are fearing a shortage of berry pickers this summer, as the Canadian growers are making a strong bid for the available pickers. The Canadian growers are receiving a higher price for their berries, and thus are able to offer the pickers a better wage.

One of the latest additions to the general note of unrest in the dairy industry of the northwest comes from Tacoma, Wash., where the dairy association has called a meeting for July 15 for the purpose of seeing what can be done to improve conditions. Movements like this are reported from all over the four northwestern states.

Peter Munson has a patch of vetch growing on his farm near Ferndale which has stalks that measure seven feet eight inches in length. The land on which it was raised is ordinary upland, which had no special preparation aside from a light coating of barnyard manure. The vetch was sown last fall, with a little wheat added to hold up the stalk.

While an occasional case is still reported of hoarding of food the federal authorities report a general observance of the rules. Since the food administration asked the people to return all the flour that they could spare from their home supplies, large quantities have been brought in, thereby increasing the amount available for exportation to the armies.

Another beneficial influence of the war is felt in the development among farmers of the uniform wage system. One of the evils of the labor situation in the past has been bidding against each other of the farmers of even the same locality for help. There is a general sentiment throughout the country now favoring the payment of a uniform wage, with punishment being meted out to any laborer who refuses to work for the wage agreed upon by the farmers.

# Idaho Nonpartizan League Nominates

The nonpartizan league of Idaho met at Boise in state convention July 2, 3 and 4, drawing up a platform and indorsing candidates for the state, senatorial and congressional elections this fall. H. F. Samuels, a retired mine operator, now farming some 2000 acres of stump land in northern Idaho, was nominated for Governor. Mr. Samuels will file as candidate at the primaries on the democratic ticket. Until a few weeks ago he was chairman of the republican central committee of the county in which he lives. For the United States senate the league indorsed both present senators, William E. Borah, republican, and J. F. Nugent, democrat. For congress, L. J. Purcell of Weiser, Idaho, and C. R. Jeppesen of Arco, Idaho were nominated. A full state ticket was indorsed, though the league, it is understood, will take no direct part in the nomination of county officers. It was announced at the convention that all of the candidates indorsed by the league with the exception of present office holders who are members of the republican party, will file for nomination as democrats.

The platform as adopted urges the immediate amendment to the constitution permitting the enfranchisement of women. One of the statements of principles declares the chief qualification for office is loyalty—100 per cent Americanism. State-owned packing plants, elevators, flour mills and sugar factories are urged, as well as state-owned warehouses and storage plants for farm products. Rural credit banks operated at cost are demanded as well as state ownership and distribution of water power. Candidates are pledged to the carrying out of legislation for labor laws to protect labor and the just demands of organized labor, the taxation of idle property at a higher rate in order to force such property to more largely assist in the financing of the war, and a workable initiative, referendum and recall law.

While the attendance at the convention was not as large as had been predicted by nonpartizan workers, it is estimated that at one time 1000 persons were in attendance, though what proportion of them were members of the league was not known.

President A. C. Townley of the league did not appear at the convention, owing to the action of the defense league of the county in which Boise is located in ruling that he should not be allowed to speak owing to the suspicion under which he was held as a result of the case brought against him in Minnesota on the charge of discouraging enlistments.

Organized labor played a part in framing the platform of the league as adopted at Boise. Several planks in the platform are wholly foreign to agriculture and rural life matters. The following are a number of the principal planks of the platform:

One-man operation of streetcars in any city is dangerous to public safety.

An eight-hour day with a minimum pay of $15 per week for women and girl workers.

Amendment of the lien law giving collection of wages preference over all other claims.

Protection of American barbers from Asiatic competition by regulating hours for opening and closing of all barber shops.

Compulsory state fund insurance under the workmen's compensation law, with larger minimum weekly payments.

Demanding of congress that it accede to the request of the president and grant further authority for regulating the prices of farm products and other commodities in which there is excessive profit-making.

Petitioning the federal government so to shape its plans that it will not reliquish control of the grain markets after the war, but keep them open and free from the oppressive practices of monopoly.

Indorsing the taking over by the federal government of all railroads.

Recommending government seizure and operation of all war supply factories where excessive profit-taking takes place.

Recommending government seizure and operation of all factories in which industrial disputes do not yield to mediation.

Recommending government operation of all mines and all shipyards on government work. Direct contracts between the workers on government supplies and work, through their organizations.

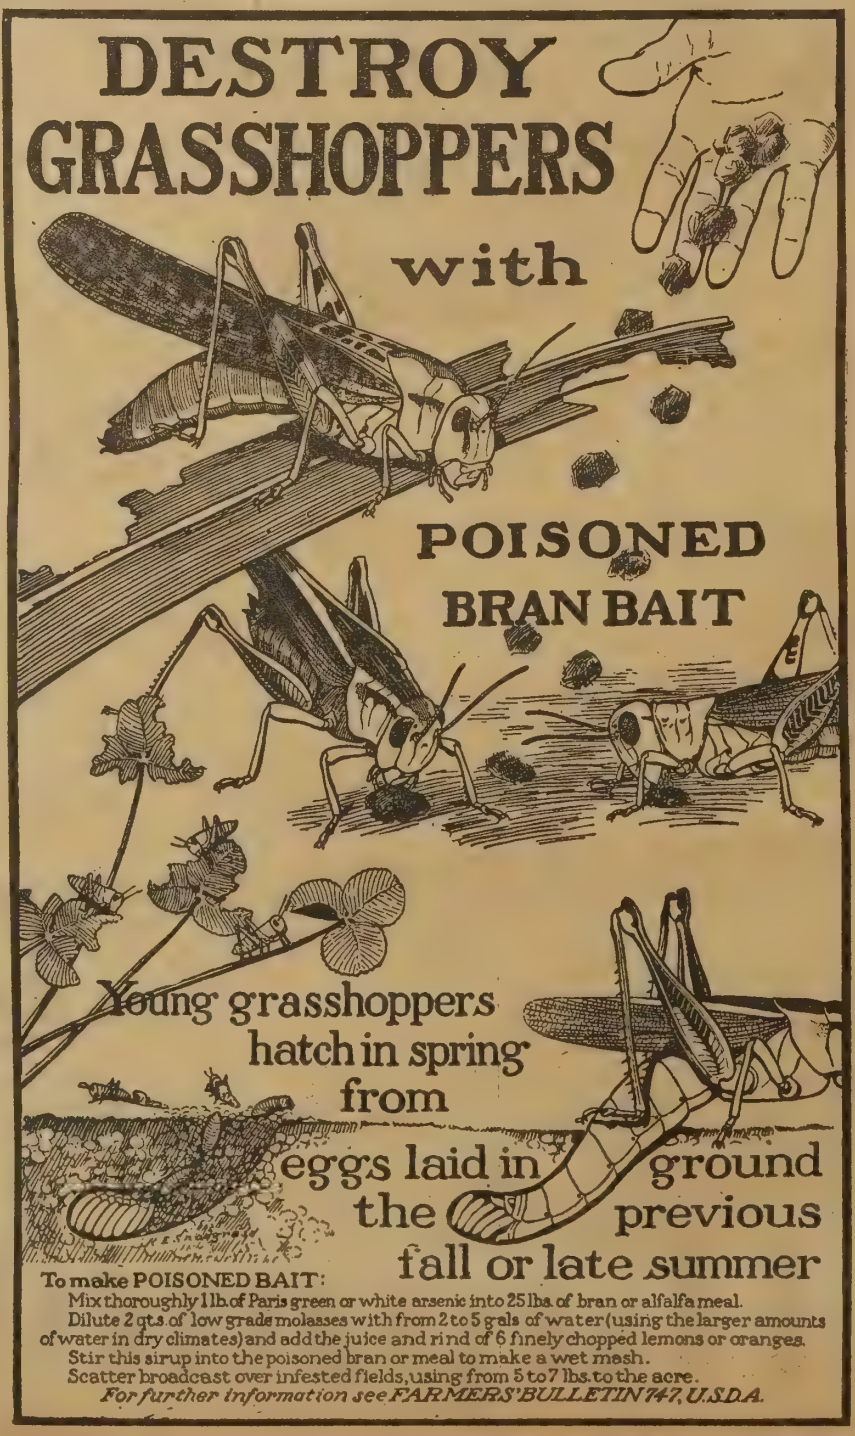
Recommending short-time loans to the farmers by the government on crop security, whether owned or rented land.

Recommending government control of the prices of the commodities necessary for the farmers' use.

The convention pledged its loyalty and support to the government in the world war and in a lengthy preamble indorsed President Wilson and his policies and denounced profiteers "who place above patriotism dollars and blood-drenched dividends."

**One Day's Gain.**

A Chase county (Kan.) steer, which had just come in off pasture, gained 45 pounds in 24 hours the first day it was put on feed on the farm of Henry Starkey. This is considered to be a record.



## Minnesota Court Frees A. C. Townley

Under date of July 5, a dispatch from St. Paul, Minn., says:

The Minnesota supreme court held today that A. C. Townley, president of the nonpartizan league, and Joseph Gilbert, league organizer, did not violate any state law by circulating certain literature which referred to the war. The men were indicted in Martin county on charges of attempting to discourage enlistments.

The court, referring to the circulation of nonpartizan league resolutions, said:

"These resolutions, taken as a whole, appear to be nothing more serious than a somewhat flamboyant platform upon which a certain class of citizens are solicited to join an organization whose avowed purpose is the amelioration of alleged evils of present economic conditions. The pursuit of this object does not violate the statute in question. It is perhaps not out of place to say that the resolutions have not yet attracted the attention of the federal authorities."

U. S. Food Administration.

**Free Information for All.**

# Harvest Labor

## Be Ready to Meet an Emergency

It was with much satisfaction that the Farmer learned from J. C. Scott of the active interest taken in the towns throughout the Inland Empire in the movement to furnish harvest help. Mr. Scott has been organizing committees under the auspices of the department of agriculture and in cooperation with the county and town councils of defense. Committees have been appointed and the business men of the towns assure Mr. Scott that they will not only spare men from their employment in the harvest field, but will go to the extent of closing their places of business now and then to allow the men employed by them to help out the farmers. The three phases of this labor question which are prominently coming to the front, Mr. Scott says, are: First, the enforcement of the vagrancy law of the state of Washington; second, the postponement of public and private work wherever possible, and, third, the registering of city men for farm labor.

Perhaps the very nature of the word "vagrant" has tended to confuse the public mind with regard to the state law on vagrancy. There is nothing definite about a vagrant. He is simply without definiteness in his character. As a rule he is a person supposed to have no particular business, undesirous of employment, eking out an existence by odd jobs or by petty thefts, if not induced to graver crimes. The more the state law on vagrancy is investigated the more sweeping is its character. Especially is this paragraph pertinent to the present situation with regard to labor needed in the harvest fields: "Every person having no visible means of support, who does not seek employment nor work when employment is offered to him." If a man is found loafing around town who has no visible means of support, who is not out looking for work nor accepting work offered to him, he is simply a subject for the authorities. If a man is willing to work, is looking for work, is waiting for a position, he has nothing to fear from the vagrant law. It is simply for those who do not care for work and will not work. Here is the vagrancy law on the statute books in the state of Washington:

**VAGRANCY—EVERY—**

1. Person who asks or receives any compensation, gratuity or reward for practicing fortune telling, palmistry or clairvoyance, or

2. Person who keeps a place where lost or stolen property is concealed.

3. Person practicing, or soliciting, prostitution, or keeping a house of prostitution, or

4. Common drunkards found in any place where intoxicating liquors are sold or kept for sale, or in an intoxicated condition.

5. Common gambler found in any place where gambling is conducted, or where gambling paraphernalia, or devices are kept.

6. A healthy person who solicits alms.

7. Lewd, disorderly or dissolute persons, or

8. Persons who wander about the streets at late or unusual hours of the night without any visible or lawful business, or

9. Person who lodges in any barn, shed, outhouse, vessel, car, saloon or other place not kept for lodging purposes, without the permission of the owner or person entitled to the possession thereof, or

10. Person who lives, or works, in a house of prostitution, or solicits for any prostitute, or house of prostitution, or

11. Person who solicits business for any attorney around any court, jail, morgue, or hospital, or elsewhere, or

12. Habitual use of opium, morphine, alkaloid, cocaine, or alpha, or beta eucaine or any derivation or mixture, or preparation of any of them, or

13. Person having no visible means of support, who does not seek employment, nor work when employment is offered to him, or

14. Person who, by his own confession thereto, or prior conviction thereof, is known to have been guilty of larceny, burglary, robbery, or any crime of which fraud, or intent to defraud, is any element, who shall be found in any drinking saloon, or cellar, or any public dance hall, or music hall, where intoxicating liquors are sold, or be found intoxicated, or who except upon lawful business, shall go about any dark street or alley or any residence section, of any city or town in the night time, or loiter about any steamboat landing, passenger depot, banking institution, or crowded street, shop or thoroughfare, or any public meeting or gathering, or place where people gather in crowds,

is a vagrant, and shall be punished by imprisonment in the county jail for not more than six months or by a fine of not more than five hundred dollars.

**Forbid Child Labor.**

Children under 16 are forbidden to work in factories in Mexico.

# It Must Be Settled Now, Once for All

In an address delivered on July 4, President Wilson again stated clearly the objects and aims of America in the present war and pledged this country to continue without relaxation until the great question at stake is settled once for all. His address follows:

"Gentlemen of the Diplomatic Corps and My Fellow Citizens: I am happy to draw apart with you to this quiet place of old counsel in order to speak a little of the meaning of this day of our nation's independence. The place seems very still and remote. It is as serene and untouched by the hurry of the world as it was in those great days long ago when George Washington was here and held leisurely conference with the men who were to be associated with him in the creation of a nation. From these gentle slopes they looked out upon the world and saw it whole; saw it with the light of the future upon it; saw it with modern eyes that turned away from a past which men of liberated spirits could no longer endure.

"It is for that reason that we can not feel, even here, in the immediate presence of this sacred tomb, that this is a place of death. It was a place of achievement. A great promise that was meant for all mankind was here given plan and reality. The associations by which we are here surrounded are the inspiring associations of that noble death which is only a glorious consummation. From this green hillside we also ought to be able to see with comprehending eyes the world that lies about us and should conceive anew the purposes that must set men free.

**Acted for All Mankind.**

"It is significant—significant of their own character and purpose and of the influences they were setting afoot—that Washington and his associates, like the barons of Runnymede, spoke and acted, not as a class, but for a people. It has been left for us to see to it that it shall be understood that they spoke and acted, not for a single people only, but for all mankind. They were thinking, not of themselves and of the material interests which centered in the little groups of landholders and merchants and men of affairs with whom they were accustomed to act, in Virginia and the colonies to the north and south of her, but of a people which wished to be done with classes and special interests and the authority of men whom they had not themselves chosen to rule over them. They entertained no private purpose, desired no peculiar privilege. They were consciously planning that men of every class should be free and America a place to which men out of every nation might resort who wished to share with them the rights and privileges of free men. And we take our cue from them—do we not? We intend what they intended.

**Insure Liberty for All Nations.**

We here in America believe our participation in this present war to be only the fruitage of what they planted. Our case differs from theirs only in this, that it is our inestimable privilege to consort with men out of every nation what shall make not only the liberties of America secure, but the liberties of every other people as well. We are happy in the thought that we are permitted to do what they would have done had they been in our place. There must now be settled once for all what was settled for America in the great age upon whose inspiration we draw today. This is surely a fitting place from which calmly to look out upon our work, that we may fortify our spirits for its accomplishment. And this is the appropriate place from which to avow, alike to the friends who look on and to the friends with whom we have the happiness to be associated in action, the faith and purpose with which we act.

**Past and Present Grapple.**

"This, then, is our conception of the great struggle in which we are engaged. The plot is written plain upon every scene and every act of the supreme tragedy. On the one hand stand the peopes of the world—not only the peoples actually engaged, but many others also who suffer under mastery but can not act; peoples of many races and in every part of the world—the people of stricken Russia still among the rest, although they are for the moment unorganized and helpless. Opposed to them, masters of many armies, stand an isolated, friendless group of governments who speak no common purpose, but only selfish ambitions of their own by which none can profit but themselves and whose peoples are fuel in their hands; governments which fear their people and yet are for the time their sovereign lords, making every choice for them and disposing of their lives and fortunes as they will, as well as of the lives and fortunes of every people who fall under their power; governments clothed with the strange trappings and the primitive authority of an age that is altogether alien and hostile to our own. The past and the present are in deadly grapple and the peoples of the world are being done to death between them.

**No Half-Way Decision.**

"There can be but one issue. The settlement must be final. There can be no compromise. No half-way decision would be tolerable. No half-way decision is conceivable. These are ends for which the associated peoples of the world are fighting and which must be conceded them before there can be peace:

"1. The destruction of every arbitrary power anywhere that can separately, secretly and of its single choice disturb the peace of the world; or, if it can not be presently destroyed, at the least its reduction to virtual impotence.

"2. The settlement of every question, whether of territory, of sovereignty, of economic arrangement, or of political relationship upon the basis of the free acceptance of that settlement by the people immediately concerned and not upon the basis of the material interest or advantages of any other nation or people which may desire a different settlement for the sake of its own exterior influence or mastery.

"3. The consent of all nations to be governed in their conduct toward each other by the same principles of honor and of respect for the common law of civilized society that govern the individual citizens of all modern states in their relations with one another; to the end that all promises and covenants may be sacredly observed, no private plots or conspiracies hatched, no selfish injuries wrought with impunity and a mutual trust established upon the handsome foundation of a mutual respect for right.

**Make Peace, Justice Secure.**

"4. The establishment of an organization of peace which shall make it certain that the combined power of free nations will check every invasion of right and serve to make peace and justice the more secure by affording a definite tribunal of opinion to which all must submit and by which every international readjustment that can not be amicably agreed upon by the peoples directly concerned shall be sanctioned.

"These great objects can be put into a single sentence. What we seek is the reign of law based on the consent of the governed and sustained by the organized opinion of mankind.

"These great ends can not be achieved by debating and seeking to reconcile and accommodate what statesmen may wish, with their projects for balances of power and of national opportunity. They can be realized only by the determination of what the thinking peoples of the world desire with their longing nope for justice and for social freedom and opportunity.

**Air Carries Such Principles.**

"I can say that the air of this place carries the accents of such principles with a peculiar kindness. Here were started forces which the great nation against which they were primarily directed at first regarded as a revolt against its rightful authority, but which it has long since seen to have been a step in the liberation of its own people as well as of the people of the United States; and I stand here now to speak, to speak proudly and with confident hope of the spread of this revolt, this liberation, to the great stage of the world itself! The blinded rulers of Prussia have roused forces they knew little of, forces which once roused can never be crushed to earth again; for they have at their heart an inspiration and a purpose which are deathless and of the very stuff of triumph."

**A Fine Home Paper.**

We could not do without the Washington Farmer. It is a fine home paper. We always look forward to its coming every week.

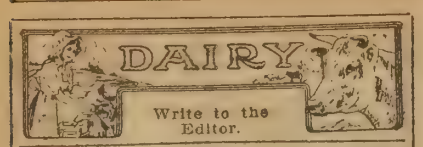
*The Comfort Car*

H

OWNERS of earlier Hupmobiles are so well satisfied that they can scarcely believe that the new Hupmobile is more comfortable and more efficient than their cars—*until they have taken a ride in the new Car.*

Then capitulation is complete. The old enthusiasm is redoubled.



The Hupmobile has always been noteworthy for the wholehearted endorsement it has received from owners everywhere.

But it is an actual fact that the astonishing *power-and-comfort* qualities of this new Hupmobile are already building up a broader and deeper loyalty. We feel perfectly safe in referring you to the first owner of the new car that you meet, for confirmation of all our comfort claims.

## MILK AND CREAM.

### Their Proper Care on the Farm.

By F. R. CAMMACK, Field Dairyman, University of Idaho.

At this season of the year it is especially important that we give particular attention to the care of milk and cream from which an excellent quality of cheese and butter can be produced with very little extra care and small expense. The important factors in this are:

First—A little extra care in keeping cows, and especially their udders clean. This can be accomplished by a curry comb and brush and a damp cloth in a few moments. It is quite customary to curry the horses, but very little time has been given to such work with dairy cattle, regardless of the fact that they produce human food.

Second—Clean utensils. This is important because of the rapidity with which bacteria grow in milk. The easiest way of keeping utensils clean is by the use of hot water, a good cleaning powder and plenty of elbow grease, and then rinsed with hot water or steamed out. This is of vital importance and a little attention to this detail will add to the quality of the milk and eventually to the value of the product made from it.

Third—Small top pail. This to prevent the entrance of so much dirt to the milk while milking. These pails cost very little more and are readily worth the extra price paid.

Fourth—The temperature at which the milk and cream are kept is perhaps the most crucial point in the production of dairy products. At a temperature a little above 50 degrees F., there is a decided change in the growth of the bacteria, which tends to spoil or sour the milk or cream. By cooking them soon after milking to a temperature of about 50 degrees F. or lower the growth of undesirable bacteria is reduced to a minimum. This is best accomplished by placing the milk container (an ordinary 5 or 10 gallon milk can, or so-called "shotgun" can) in as cold water as possible. This may be an ordinary irrigation ditch or a place especially prepared. It is more quickly cooled by the use of an "agitator" or long handled spoon or dipper.

Fifth—Keeping flies, dirt or any other foreign material out of the milk will, of course, be essential to produce the best results. It has been found that one fly left in milk can produce, in a very short time, over a million bacteria.

The equipment necessary to produce a better quality of milk and cream need not cost over 10 or 20 dollars. A bulletin published by the department of agriculture describing the necessary apparatus can be secured by writing to the field dairyman, University of Idaho, extension division, Boise, and do not forget that every bit of milk or cream spoiled, or its human food value reduced is giving assistance to the kaiser.

## Central Oregon Cow Tests.

During the month of May 209 cows were tested in the Central Oregon Cow Testing association. The average pounds of milk per cow was 670.2. The average fat per cow was 28.02, and the average cost of feed per cow was $5.29. Forty-nine cows produced over 40 pounds of butterfat for the 31 days. Henry McCall of Prineville had the honor purebred for the month, eight Holsteins and Jerseys averaging 396 pounds of milk and 39.1 pounds of butterfat. S. M. Wood's purebred Jerseys averaged 511.1 pounds of milk and 25.8 pounds of fat.

Henry McCall also had the honor purebred cow for the month. Pearl, a purebred Holstein, produced 1745 pounds of milk and 62.8 pounds of fat.

The three highest grade herds of more than 10 cows were:

H. A. Helmholtz's 17 grade Holsteins averaged 1021.6 pounds of milk and 43.7 pounds of butterfat.

John Kemmling's 16 Jerseys averaged 755.4 pounds of milk and 37.5 pounds of fat.

Mrs. F. C. Collin's 17 Jerseys averaged 645 pounds of milk and 32.6 pounds of fat.

The honor grade cow for the month was owned by Olaf Anderson of Deschutes. Sofia, a 7-year-old grade Jersey, produced 1271 pounds of milk and 61 pounds of fat. The second highest grade cow was owned by H. A. Helmholtz of Redmond. A 7-year-old Guernsey produced 1240 pounds of milk and 60.8 pounds of fat.

The three highest grade herds of under 10 cows were S. L. Reynolds of Prineville, 6 Jerseys averaging 907 pounds of milk and 44.5 pounds of fat. Olaf Anderson of Deschutes was second, his four Jerseys averaging 670.5 pounds of milk and 43.8 pounds of fat. Bert Torkelson was third, his four Jerseys averaging 767.5 pounds of milk and 40 pounds of fat.

## In Nine Months, 10,139 Pounds.

Priscilla, a grade Holstein owned by P. C. Burt of Bend, Ore., has produced in the nine months she has been under test, 10,139 pounds of milk and 397.7 pounds of butterfat, showing her owner a profit of $80.58 above cost of feed on her butterfat alone. Giving the skim milk a value of $1 per 100 will bring her total profit in the nine months up to $166.76.

Before Mr. Burt entered this cow on test he had kept a daily record of her milk and she produced in the first three months she was fresh 4838 pounds of milk, giving her for the year 14,977 pounds of milk.

**Sponge Growth in Mediterranean.**

The best sponges come from the Lavant, in the eastern Mediterranean, and are obtained by diving. The Levantin sponge divers often cut pieces from large sponges, replant the pieces, and tie them to stakes to keep them from being swept away by the current. They soon grow at an enormous rate.

## Pioneer Cow Testing Report.

In the first half of this fiscal year 444 cows, owned by members of the Pioneer Cow Testing association of Idaho, have produced 1,887,573 pounds of milk containing 74,027.7 pounds butter fat. This is an average of 166.7 pounds fat per cow. Figured at the present market price for butter fat plus the feeding value of the skim milk this amounts to the enormous sum of $37,013.90.

Mr. Irwin's Brownie is now in the lead for first place for butter fat production this year, with 350.7 pounds of fat to her credit. Owners of herds averaging 50 pounds of butter fat or more per cow per months follows:

Irwin brothers, Twin Falls, 13 cows; S. H. Kayler, Twin Falls, nine cows; George Childs, Buhl, seven cows; Karl Reding, Buhl, six cows; Gustav Kunze, Buhl, three cows.

**Facts About the Bloodhound.**

Bloodhounds were first known as sleuthhounds, owing to their ability to track the deer, wild boar or the wolf. When the wounded game broke away and was lost, these good-nosed dogs were used in trailing the quarry by the blood trail, and hence they were finally called bloodhounds.

# Cost of Market Milk Production

Here are some diagrams which will be of special interest to our farm dairy producers. They are from a bulletin of the Michigan state experiment station, on the cost of market milk production. It will continue in the future as it has been proved out repeatedly in the past, that the profitable cow is at the basis of profitable dairying, and the profitable cow comes from good blood, good feeding and good care.

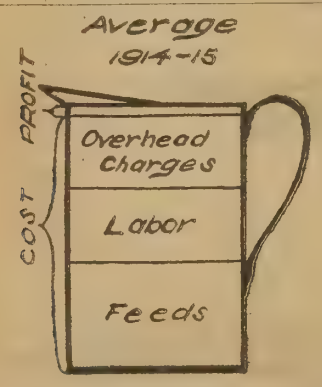

Diagram showing the relative proportions of the three classes of costs & the profit in the average gallon of milk which represents the entire output of all the farms for the two years.

# Save Dollars in Bestowing Mercy

By J. L. ASHLOCK.

A lamb received by the First National bank of Pullman, along with others, for distribution to boys and girls of the adjacent countryside, was panting and weak—to all appearances about ready to die. Those who saw it believed it had eaten a poison weed and that the $7.50 invested in the lamb would go to the red side of the ledger.

Dr. Wegner, one of the veterinarians teaching at the state college, took a look at the lamb. Its temperature was above 109. But it didn't look like a a case of poisoning. After examining the suffering creature Wegner asked for a tub of cold water and into the tub he soused the lamb and held it there.

Its temperature went down to 102. In the morning it was frisky and tricky and now is owned and worshiped by a little boy. Some day it will be a big sheep and later will contribute some mutton to the relief of a rising meat market.

This lamb was saved, but in the history of the sheep industry of the northwest thousands have not been saved when a little timely aid could have saved the mutton. When one passes from sheep to other farm animals—horses, cattle, swine and poultry—and makes an understanding guess at the appalling losses of the past and the vast total of unspoken suffering among the dumb creatures at our feet and on the farm and range he is staggered.

It is a fact that dumb animals can suffer, be sick and die, much the same as humans, and likewise can they be saved from suffering, sickness and death. This is a fairly recent idea. The recent idea has given rise to a recent profession—that of the veterinarian.

It is the business of today's veterinarian to relieve animal suffering. In one sense his mission is that of the Red Cross applied to the dumb who can not speak for themselves but serve, suffer and die silently.

Any one raised on a farm can recall seeing work horses turn the head to one side while drinking cold water or eating. A sensitive tooth was the cause. Perhaps the horse worked all day with the jumping toothache. After awhile, one may recall, the horse refused to eat and presently died.

It was the horse's teeth. One or several of them were in such condition that eating or drinking was agony—and preferred slow starvation to this agony. Thousands of farm horses have died in that very way.

Some horses eat anyway, however. With teeth that tear their mouths to pieces they lunge into their oats or hay and chew just the same. Others are so sensitive that a single tooth with a sharp edge cutting into the fleshy part of the mouth will cause them to quit eating and starve slowly to death. Oftentimes these "tooth troubles" are simply a question of a few minutes' work by a competent veterinarian.

# Work the Sires Constantly

## *To Get Better, Stronger, More Virile Type of Animal*

By S. B. NELSON

Efficiency is the watchword of today. Work or fight. In other words, be able to do the best that is demanded. This is absolutely necessary now.

For that reason I have been urging that animals kept for breeding purposes be worked steadily, especially outside of the breeding season, when they should have light work.

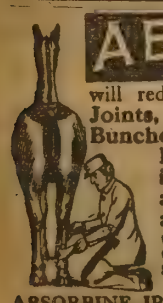
If it is desired to get from a stallion his best and strongest colts, he should not be confined in a corral. The same applies to the bull, which also should be required to do some physical work.

I have often said that I believe the Hazlewood Holstein breed of cattle have such great vitality because in the early days especially, the bulls did physical work. In the harness or between the shafts of the manure cart they got abundant exercise.

Mr. Caspar L. Redfield of Chicago, Ill., in a recent article in The Northwestern Medicine, under date of March, 1918, states, from the results of his investigations into the virility of animals that the first 180 trotters to reach a speed limit of 2:10 were produced at the rate of seven generations to the century—or, at an age when the sires were 14.62 years of age. Out of that group of 2860 sires, of which these are examples, were horses that were used principally for road work, and only occasionally for breeding purposes. He says further that "of these sires the horses which were raced first and bred afterwards got their best progeny immediately after retiring from the track. Those gotten earlier or later were inferior, the amount of inferiority being determined by the length of time from the date of retirement from the track."

These are facts which any one can verify for himself by going into pedigrees and horse history.

Therefore, if we want animals that are strong and able to withstand the ravages of disease, animals that are virile and able to procreate strong offspring, work the sires constantly, and occasionally hard. Work the sires the same as the dams are often worked. If this is done we will get a better, stronger and more virile type of animal, less subject to many forms of disease.



### Another Tractor Meet in 1919.

The Pacific northwest is to have its second important tractor and power farming demonstration and exhibition in May, 1919. Such was the sentiment expressed by a unanimous vote of the Pacific Tractor and Power Farming association which held a meeting in Spokane recently. No definite place has been selected for next year's demonstration, although the consensus of opinion among those present at the meeting was that it should be at some point near Spokane, where suitable land is available.

The Washington State college, it is thought, will take a leading part in making the 1919 demonstration an even more important event than that held at Pullman, Wash., this year, when the college put on the first event of the kind in the northwest.

### Egyptians Raise Pigeons.

Certain Egyptians carry on to a remarkable degree the business of raising pigeons. On one estate are 14 pigeon towers, each composed of about 1200 clay jars, set one upon another. Each jar forms a comfortable house for the family of pigeons occupying it.

ABSORBINE

# Laying Contest

## May Report of All Northwest

The May report of the all-northwest egg laying contest at Pullman, Wash., has been received from the director, Helen Dow Whitaker. This report covers the first seven months of the contest, and the records are very satisfactory for the full period as well as for the month. The average production for the month was 9.416 eggs per hen. The April production was 14.7 eggs.

The Barred Rock pen from the Oregon Agricultural college was again first for the month, having been first in April. This pen produced in May 132 eggs, an average of 26 2-5 egg a hen, a yield of 88 per cent of a possible egg per day per hen. The second was a pen of White Leghorns owned by C. C. Lamb of Kirkland, Wash., which made a record of 131 eggs.

For the full period of seven months there has been no change in the standing of the first pen. The first three pens are running a close race. The O. A. C. Rocks gained 33 eggs on the first pen during the month and is now only seven eggs behind the B. C. pen. The prospect now is for some phenomenal pen averages for the year. Hens that lay 150 eggs in seven months, as the first two pens have, have the capacity to lay considerably over 200 eggs in a year.

The high record hens for the month were the following: Ill-A-Hee Co., Grants Pass, 29 eggs; Oregon Agricultural college, J. R. McRae, F. C. Park, C. O. Engel, C. Daniels, C. F. Williams, each 28 eggs.

Other data in the report include the feed cost per dozen eggs, 19.2 cents; return above feed cost for average fowl, 22.31 cents; return above feed cost for best fowl, 38.5 cents. The Leghorn on the average made the best showing financially for the month, averaging return above feed cost for average fowl 27 cents. The best pen returned for the month $3.63, and the best hen 79 cents, both Barred Rocks. The best pen for the seven months has made $28.59.

Between 22.31 cents return above feed cost for the average fowl in the contest and 79 cents for the best fowl, there is a wide range which indicates clearly the necessity for careful selection of breeding stock. —J. D.

## CORRECT ERRORS

### By Experimenting With Poultry.

By HORACE ADDIS.

Setting a hen in an incubator and, by means of a bulb among the eggs, keeping an exact record of the temperature of the eggs from the time she starts to set until the eggs hatch is one of the experiments being carried on at the O. A. C. poultry plant.

This and many other very instructive as well as interesting matters connected with the working of the plant were shown the county agriculturists touring Benton county with State Leader Maris. The indicator showed a slightly higher temperature in summer, but it also showed the hen will stay off the nest longer in summer than winter, though a hen with plenty of feed and water close by will attend to business more closely than one that comes out in a yard with other chickens and has to hustle for what she gets. The experiments are expected to make it possible to correct some errors commonly made in the temperature of incubators.

Professor Dryden distributed a chart showing the average number of eggs laid by a certain number of hens for 12 months beginning with December, 1915. The feed cost for that year was $1.80 per hen, while for the following year it was $2.97 per hen, or a profit of 42 cents per hen, 1915-16, and a loss of 9 cents per hen, 1916-17, at the prevailing prices and allowing 85 eggs laid per hen. In other words, it took only 77 eggs to balance feed cost the first named period, while it took 97 eggs the second period.

The hen houses, the yards and runways, the growing chicks, the famous "Oregons" and other breeds, were visited. The college has several living hens that have laid over 1000 eggs each and one white Leghorn hen laid 1187 before her death.

All the members of the party expressed themselves as having gained much useful information that might be passed on to farmers and others raising poultry.

## CHICKS IN SUMMER.

### Grow Slowly in Warm Weather.

Now is the hardest time of the year for the growing chicks. It is common experience that the early chicks grow well, while the late chicks grow very slowly and often lack thrift during the warm weather.

The trouble is not altogether one of heat or temperature, but other conditions are not as favorable usually in the summer as in the early spring. A little earnest study of the conditions will well pay the poultryman. One of the conditions that is radically different in the early spring and summer, especially in western Oregon and Washington, is a difference in soil and vegetation. In the early spring the whole country is covered with tender green vegetation. The tender grasses and clovers are everywhere and the chicks have a choice of many kinds, and a large proportion of their diet is made up of this vegetation. Now, in midsummer, especially in seasons like the present, the ground is dry and the vegetation is dried up, and the chicks are suddenly deprived of their supply of natural forage. This is one reason, probably the main reason, why the summer chicks often lack in thrift.

But the green food can be grown artificially. Kale and rape planted early in the season will take the place of the natural forage, and if one wants to keep his chickens growing in the summer in this country there must be a supply of green stuff before the natural grasses have withered.

Another condition that is unfavorable for the summer care of chicks is hard soil. The mechanical condition of the soil has a bearing on the growth of the chicks. Many of our soils bake hard in the summer, so hard that the natural propensity of the chicken to scratch in the earth is defeated. If they are confined to such soil during the summer they will pine because they can not get their toes into mother earth. It is impossible to raise good chicks on wooden floors and it is just as bad on baked yards. They will do better in a swamp, where they can wet their feet and scratch in loose earth. The chicken scratches for something to eat and it finds a great deal of food in the ground under natural conditions, and in scratching for the food it gets exercise. There are two reasons, therefore, in favor of the moist soil in summer: First, it furnishes natural food for the chick, and, second, the chicken gets exercise in scratching for the food.

If the poultryman can locate his poultry where they can have loose soil, preferably somewhat moist, in summer he will be able to raise more and better chicks. The hard, bare baked yard is an abomination and spells ruin in the raising of chickens. J. D.

## Mrs. Whitaker Resigns.

The resignation of Professor Helen Dow Whitaker as head of the poultry department of the Washington State college has been announced. This action will be regretted by a wide circle of poultry keepers of the northwest. With rare energy and enthusiam, Mrs. Whitaker, since she took charge of the poultry department of the state college a few years ago, has sought to create a deeper interest in a better and more productive poultry industry in her state. Her helpful hand and good counsel were indicated in many ways, and it is hoped that her counsel will not be lost to the poultry keepers of the state, though she has severed her connection with the college. J. D.

## FRANK N. MEYER.

### Death of Noted Plant Explorer.

Richard Hamilton Byrd.

Word has come to Washington that Frank N. Meyer, one of the leading explorers of the department of agriculture, and the man who gave to the western world many new plants of the orient, is dead in China. He disappeared June 2 from a steamer between Hankow and Nanking, and a week later his body was found in the Yangste river 30 miles from Wu Hu, with which he was connected.

Mr. Meyer had traveled as an agricultural explorer through China, Siberia and Turkestan for nearly 10 years. There are now growing in this country hundreds of species and varieties of plants he discovered and successfully introduced. He also won distinction as a botanist through the discovery of the existence in China of a true species of hickory.

Meyer had the rare experience of living to see large numbers of fruit trees of some of his introductions in bearing, and of standing under the shade of trees grown from seeds and cuttings which he himself had gathered in the wilds of China and Turkestan.

"I bought 5 boxes"

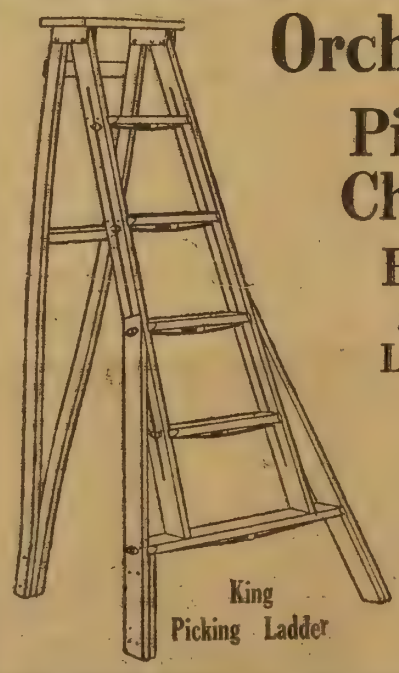
of Eureka Stumping Powder and now I want to sell a lot of other powder that I have," writes Rudolph Stadeli, Silverton, Ore. "The other powder makes me terribly sick when I try to use it, but Eureka does not give me the least headache."

Eureka Stumping Powder is one of the two

GIANT FARM POWDERS
STUMPING — AGRICULTURAL

Eureka goes further and costs less for all agricultural blasting than ordinary powder or dynamite.

Eureka and Giant Farm Powders are made especially to meet western farm conditions. They are made by a Pacific Coast Company, with more than a half a century of experience—the company that originated all "giant powders." Your dealer can supply you. If he does not, write us and we will see that you get the genuine, which has the Giant brand on every box.



Save money on farm work. Send this coupon for our big free book, "Better Farming." It tells you how to do scores of farm jobs cheaper and better.

# Useful Birds

## Help the Farmer and Orchardist

Perhaps there should be no distinction in this connection between the farmer and the orchardist, because orcharding is a branch of farming, but generally we make distinctions.

Several lists have been published, giving the names of birds useful as insect destroyers. When it is remembered that in the United States every year, insects cause a loss to the farmers of $700,000,000 the subject of what will destroy the insects is worth whole. The following is a list of common birds with their relative importance as insect destroyers. The figures denote the percentage of foods used that are classed as insects, or small animals such as mice, young rats, gophers and the like that are more or less injurious to the farmer. It should he noted that the larger birds feed largely on small animals rather than upon insects, and yet these small animals are many of them injurious. Among the most injurious small animals are gophers and ground squirrels.

Blue bird, 68 per cent of its food insects. Robin, 42; chickadee, 70, white breasted nut thrasher, 50; brown creeper, 100; wren, estimated by various authorities at 80 to 98; brown thrasher, 65; cat bird, 50; mocking bird, 25 (lives mostly on fruit); myrtle warbler, 78 (lives mostly on aphids and scale insects); loggerhead shrike, 90; barn swallow, 100 (mostly flies); purple martin, 95; rose-breasted grosbeak (mostly on insects, chief of which is the potato beetle); song sparrow, 25 (most of the rest is composed of the seeds of noxious weeds); chipping sparrow, 42; white crowned sparrow 10 (most of the remainder, weed seeds); English sparrow, mostly on weed seeds, fruits and insects. (Upon the whole the English sparrow would not be bad, were it not for its habit of attacking in numbers, and driving out more useful birds. It is especially fond of the alfalfa weevil); crow blackbirds go in flocks and feed on insects, fruits, vegetables and the nestlings of small birds. Bullock's oriole, 80 (mostly scale insects and caterpillars); meadow lark, 76; red winged black bird, 27; bobolink, mostly seeds (this bird is the especial enemy of the rice growers of the south).

Common crow pulls up sprouting corn, eats eggs and insects; California jay, eats eggs, young birds, chicks, fruits and seeds; blue jay, similar in habits to the California jay; horned lark, 20; Arkansas king bird, 87; king bird, 85; night hawk, 95; flicker, 60 (mostly ants); yellow bellied sapsucker, 50 (the other 50 being mostly the cambium of the tree, which it sometimes kills); downy woodpecker, 76 (mostly beetles and insects that burrow in the wood); yellow bellied cuckoo, 90 (mostly caterpillars); screech owl, 95 (including mice, gophers, birds, reptiles, fish, craw-fish, etc); barn owl, mice, young rats, gophers, frogs, etc.; sparrow hawk, includes the small mammals; red tailed hawk, small mammals, insects, birds, frogs, snakes, young rabbits, etc.; coopers hawk, birds, chickens, etc. The mourning dove is strictly vegetarian, feeding on seeds, grasses and other vegetable matter; ruffled grouse, fruits, nuts, vegetables and seeds. Bobwhite, mostly on grain, seeds and wild fruits; killdeer, 100; upland plover, 97; wren, 98; phebe, 90; chimney swift, 100.

Some authors place the meadow lark at 100, but this is doubtful. The reason why it is so difficult to tell is that birds, like human beings, have their preferences, and if they can not get what they like most, will eat something else.

The black-headed grosbeak eats mostly fruits.

Among the many hundreds of species and thousands of varieties, it is impractical to give a full list of useful or injurious birds to farm and orchard. The list already given will show that most birds are useful. Even where they seem not to be so. They often are of greater benefit than injury.

As I write this, I am looking out into some of our cherry trees, and seeing the birds devour the fruit. But I would not molest them because I know that these same birds devour aphids, scale, codling moth and other orchard pests.

G. L.

### Those Dear Girls.

Mabel—I let Jack kiss me on condition that he wouldn't mention it.

Marie—I suppose you wanted to break the news yourself.—Boston Transcript.

## MUST POISON PEST.

### Specialist Gives Three Remedies.

How to destroy the currant worm, the leaf hopper and the tent caterpillar is told by Arthur Frank of the Western Washington experiment station at Puyallup, Wash., in an article on combating garden pests. The three formulas given are as follows:

**Currant worms**—For worms eating the foliage of currant and gooseberry plants, spray the leaves with lead arsenate, one pound to 50 gallons of water, being careful to cover the entire leaf surface. If they bother before the fruit is picked use one pound of helebore to 25 gallons of water.

**Leaf hoppers**—These are small insects that feed on the under side of leaves and give the foliage of roses, blackberries and other plants a whitish appearance. Spray the insects while they are in a numphal state (that is, before they develop wings), using black leaf 40 at the rate of one-third of a pint to 50 gallons of water. After they develop wings the hoppers fly away when disturbed and it is difficult to touch them with a spray.

**Tent caterpillars**—Burn off the "tents" when the caterpillars are inside or spray the foliage of trees with lead arsenate (one pound to 50 gallons of water). Watch for them early in the season and get them at the start. They lay their eggs in black masses encircling the twigs of a tree. Find them and prune them off before they hatch in the spring.

## New Zealand Apple Show.

New Zealand's third national apple show was held at Auckland May 1 and continued for four days. The show is declared to have been a marked success. There were 45 entries for one variety, the Sturmer desert apple, while there were others that ranged from 25 up. Conferences were held during the day and lectures given at night by expert growers and government officials. For the season of 1916-17, according to consular reports, there were 856,979 bearing apple trees in New Zealland, the production of 618,625 bushels being marketed at an average price of $1.23 per bushel.

At several of the conferences and lectures much was said about the large surplus of apples in New Zealand at this time, which was reported to include 250,000 cases in cold storage, and many urged that some action be taken to prevent the importation of American apples that might interfere with the consumption of the New Zealand supply while others considered that the New Zealand apple would not keep until late in the season and retain its flavor because of the moist, even climate here, and concluded that there would be a fair opening here for American apples from October 1 until the middle or last of December.

## Trend of Fur Prices.

At the spring sale of furs in London, taking place in May, as compared with the spring sale in 1917, black bear rose 30 per cent and brown and white, 50 per cent; mink advanced 25 per cent, while beaver advanced 100 per cent. Red fox advanced 70 per cent; squirrel, 60 per cent; mole, 20 per cent; skunk, 50 per cent raccoon, 25 per cent; American opossum, 35 per cent; spring musquash, 60 per cent, and winter musquash, 80 per cent. The prices do not reach those obtained at the winter sale. In the number of skins sold musquash included nearly 300,000, skunk and American opossum each over 200,000, and moles and Australian opossum each over 100,000.

### Typewriters for British.

Some 30,000 or 35,000 typewriting machines have been supplied to the British government departments at home and abroad.

# Will Walnuts Pay?

We have had wrong ideas of the value of the walnut industry in California. The impression has prevailed that it was one of the best paying crops of the state. To my mind the figures do not prove it, and this is important in deciding whether or not the walnut industry will pay in this state.

There are in the state of California 65,000 acres planted to walnuts. Of this acreage 45,000 are in bearing. The value of the crop is $65,000,000 per annum. This is equal to $144.44 per acre.

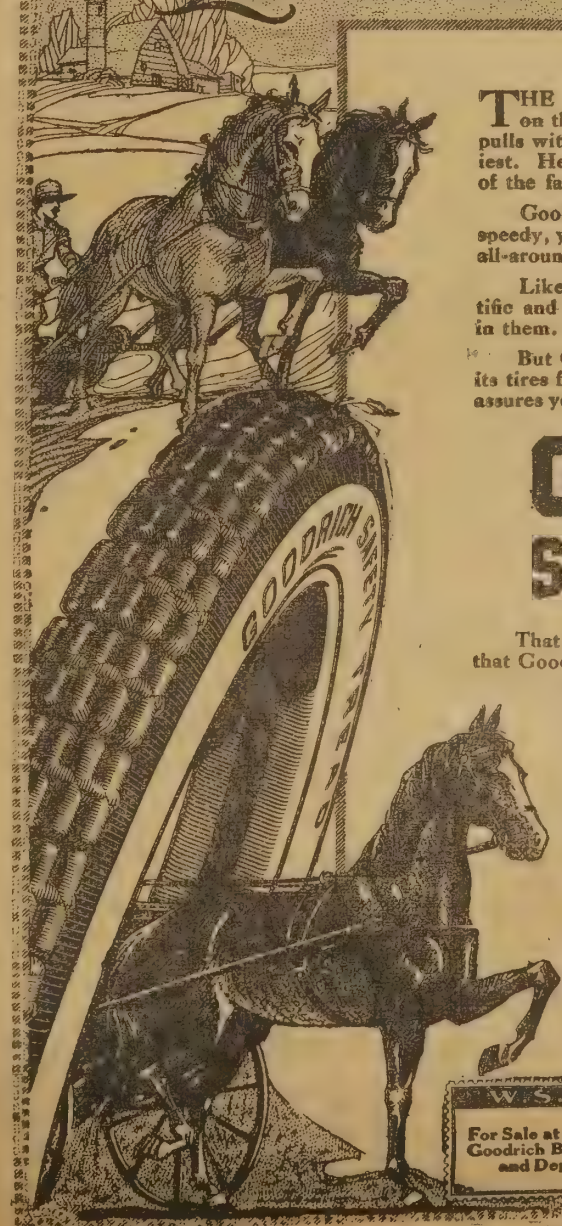
Now suppose the land is valued at $2000 per acre, as is true with many of the walnut orchards of California, and suppose the interest is counted at 8 per cent, the interest on investment for land is $160 per acre, or $15.56 more than the value of the fruit. If the interest is 7 per cent, it is $4.44 less than the fruit, but this is less than the cost of water for irrigation.

If the land is estimated at $1000 per acre, and the interest is 7 per cent, there is $74.44 per acre, for water, taxes, equipment labor and profits.

I see no reason why the walnut industry in this country should pay better than in California. If it does not pay better, than I would not consider it equal to the average farm crop. Of course every one may want a few trees to furnish nuts for the family, and in some cases they may be used as shade trees or wind brakes and the nuts be gathered and sold at a profit.

As an orchard proposition it looks to me like we can do better with something else.

G. L.



### Sea Erosion Reduces Helgoland.

Helgoland, the present German naval base in the North sea, was five times its present size two centuries ago. The erosion of the sea claimed the greater part of its land, but htis has now been stopped by the use of concrete.

BEST IN THE LONG RUN

FAIR TREATMENT

# Like a Hambletonian Horse

THE all-around usefulness of the Hambletonian Horse is proverbial on the farm. A fine looker, yet a husky worker. At the plough he pulls with the best; in a neat roadster he steps a gait with the speediest. He rides fine, or he will carry a load. You know him, you men of the farm, for a Kentucky thoroughbred, and a pulling horse in one.

Goodrich Tires are the Hambletonians of tires. Fine lookers, speedy, yet husky workers for heavy loads and rough going, they fit all-around service of the farm as no other tires.

Like the Hambletonian Horse, they have pedigree. The scientific and workmanship skill of the oldest and largest rubber factory is in them. Like the name Hambletonian, Goodrich stands for prestige.

But Goodrich does not ask you to buy on blind faith. It proves its tires for you as an assayer proves gold, or a chemist food, before it assures you the tested service of—

# GOODRICH
## SERVICE VALUE TIRES

That word, *tested*, is the last word in tires for the farmer. It means that Goodrich Test Car Fleets, six of them, throughout the year 1917, battled Goodrich Tires from state to state, mauling them over sand, gravel and rock roads through mud, snow and frozen slush; and the tires proved their durability in mileage that ran to 4,178,744 tire miles.

Think of it, more than 4,000,000 miles of mileage vouch for the sure service of Goodrich Tires. The roads of every region of our country—perhaps the roads that run by your own farm—vouch for their strength.

These tires coin themselves into real money for you, the same as your ploughs and your reapers.

Whatever tires you need; for an automobile large or small, for your truck, bicycle, or motor cycle, the Goodrich brand is your guide to sure service. You know it of old from the service of the Goodrich Hipress Boot.

The husky, generous size of Goodrich Pneumatic Tires tell you their strength at a glance. Actual working tests show Goodrich Truck Tires outwear steel.

# Veterinary

Dr. S. B. Nelson

**Sheep Was Bloated**—We have a sheep that was bloated late last fall and we stuck him and he got along all right, but it has never healed up. The flies bother it. We can kill the eggs, but would like to know how to heal the cut up. Can you tell me what to do for it? Mrs. J. C. G.
Sterling, Idaho.

Clean up the wound, clipping the wool very close to the skin. Then scrape the edges of the wound. Paint around it with tincture of iodine. Then sew up the wound in the stomach, turning the edges inward. After this, take the necessary number of stitches in the skin on the outside. Paint again with tincture of iodine very thinly. Dust with boracic acid and cover with a litle cotton, dipped in collodium. Leave for a few days. Choke off, and cleanse the field, taking out the stitches. The inside stitches in the stomach should be taken with catgut.

**Ox Warble Stock Fly Attacks Cows.**—Will you kindly advise me as to what causes my cows, when in the pasture, to lift their tails straight up and run as if they were stung? What is the cause and what can I do to stop it or help them. J. W.
Helena, Mont.

The condition that you mention affecting your cattle is due to their fright from the attack of the ox warble stock fly. I would suggest to you that you paint the cows around the head and throat and neck and front legs, especially, with a preparation of fish oil and a litle tar mixed in it. Others add to this a little whale oil soap, but any oily preparation, especially fish oil with a little tar, aids in keeping the flies away from the cows. These are the flies which, after they have laid their eggs and their eggs pass through the animal, in the spring-time you find the lumps in the skin on the backs of the cows. Upon opening these lumps they contain pus and a larva which burrows in the ground, pupates and later comes out as the fly. You can help in exterminating these flies by destroying the larvae in the backs of the cows during the early spring months.

**Potatoes for Milch Cows**—I would like some information regarding the feeding of small potatoes to milch cows. Some tell me they will dry cows up and others say they are a milk producer. At present I am feeding five pounds of shorts, five pounds of bran mixed with about that amount of beet pulp twice a day. Would five pounds of potatoes once a day be a good thing? I have a good many small potatoes and I would like to feed to the best advantage. Would it be better to stop feeding beet pulp and feed more potatoes? —A Reader, Bay View, Wash.

Potatoes when fed as roots as you are doing is a good feed for milch cows. If you are feeding good hay and grass, as it may be, as far as the grain is concerned you can figure that pretty close to three to three and a half pounds of grain per gallon of milk which the cow gives per day is the proper amount of grain for her. That is what she can use well, and with potatoes, whatever you can feed and feed well in reasonable quantities, which five to 10 pounds are, simply aid that much in bulk. Be sure to cut up the potatoes so that she will not choke on them, even if they are small potatoes.

**Breeding to Sire.**—Can a young heifer, 18 months old, be bred to the male which was her father? If so, what results, and if not, give reasons. I am feeding this heifer one and a half pounds of bran and one pound of shorts with an alternating handful of whole oats and rolled barley. She has pasture and also plenty of hay, alfalfa and clover. She is well matured now at 11 months. Mrs. F. M. R., Seattle, Wash.

A daughter can be bred to her sire, if that is the thing that the owner wishes to do. This is known as inbreeding and is used to stick certain strong characteristics that the heifer has inherited from the sire. It is not generally used, except in very high-bred animals, for the purpose above named. If animals that are not so highly bred or are not registered, or are not strong in points of build or vitality, it may be that poorer results will be gotten from in-breeding than from cross-breeding. You are feeding the heifer well and she ought to grow rapidly with the grain that you are giving her in addition to the hay and pasture.

**To Hold Horse's Mouth Open**—How can I hold a horse's mouth open while I examine his molars? A. E. W.
Rebel Creek, Nev.

To examine the left molars, take the tongue in the left hand, closing firmly but gently. Turn the hand and place it in the space between the front and the back teeth; raise up your thumb into the space above, holding the mouth open. Grasp the left cheek, pulling it out, raising the horse's head so that you can look at the teeth. To see the molars on the right side, reverse, using the right hand and pulling the tongue to the left side. There are also instruments known as speculums which may be attached to a horse's mouth which will hold the mouth open. If you want to examine the horse's teeth with your hands, you had better have a speculum. Until you become accustomed to it, you are liable to get a pinched finger, although a person with experience can examine a horse's mouth without speculum without any injury to himself.

**Red Water in Cows.**—Will you please give me a remedy for red water in cows? Also, what is the direct cause for same. Have an old red cow coming fresh July 25 which is affected with same. Just noticed it a few days ago. J. F. A., Mount Vernon, Wash.

Write to Professor J. W. Kalkus, Experiment Station Veterinarian, Pullman, Wash. He has made a deep study of red water in cattle. He can give you the latest information with regard to this disease.

Make more Money
Pull big stumps by hand

Clear your stump land cheaply—no digging, no expense for teams and powder. One man with a K can rip out any stump that can be pulled with the best inch steel cable.

Works by leverage—same principle as a jack. 100 pound pull on the lever gives a 48-ton pull on the stump. Made of the finest steel—guaranteed against breakage. Endorsed by U. S. Government experts.

# Economical Production of Hay

By C. L. JAMISON.

Economical production of hay is of prime importance to every man who has either an alfalfa or wild hay meadow and methods used by others often give one an idea that may save money.

The following hay was put up on three level fields containing in all about 50 acres. The mowers were followed in about two hours by a side delivery rake and the hay allowed to cure slightly in the windrow. The windrows were then bundled with an ordinary hay rake with very little hand labor. After curing, the hay was loaded by a revolving loader and hauled to the stack.

The cutting and raking costs were about as usual while the bunching was done very economically. The loader picked the hay from the cocks and made a very clean job of the work. Very few leaves were shaken off and in an adjoining field a crew of hand-loaders left more leaves and loose hay than did the mechanical loader. Two men were used to load and one to drive. It was found that when the load was taken from cocks the hay came up in bunches and two men were required to handle the load. The work was hard on horses as the haul averaged more than a quarter of a mile.

The hay was unloaded by slings made of chains. Each sling was made of two chains a little longer than the rack. Rings were placed on the ends of the chain and a cable fastened in them at the stack. A team then unloaded half the load at each pull.

The cost of handling this hay reduced to simplest terms was as follows:

| | |
|---|---|
| Cutting—Man and team—6 days at $7 per day | $ 42.00 |
| Raking—Man and team—five days at $7 per day | 35.00 |
| Hauling—Man and team—8 days at 7 per day | 56.00 |
| Derrick—Man and team—4 days at 7 per day | 28.00 |
| Labor—Man—48 days at $3 per day | 144.00 |
| Board—Man—71 days, at $1 per day | 71.00 |
| Total | $376.00 |

Eighty tons of hay were placed in the stack and this gives a total cost of $4.70 a ton.

# Need Cooperation

## To Exterminate the Gopher Pest

To the Editor: The gopher problem, I believe, is as serious as represented in an article in your paper of June 20. We came to this ranch in January, 1916. In that year we had a surprise of an amazing character and magnitude concerning gophers on the farm. They came from holes in the ground everywhere, for the place was veritably honeycombed. It was a great task to handle irrigating water. The water would flow into and follow gopher holes in the orchard, fields, garden and pastures. Efficient use of water was greatly reduced and difficulties of irrigating greatly increased.

Then came the positive damage in destruction of grains grown on the ranch, which was the most serious and appalling on the non-irrigated fields. We set some traps and caught 19 gophers at the nearest hole. The ranch had thousands of holes and traps could not catch them fast enough. We started out with a pound package of squirrel poison, but it was only a starter. We saw a formula for poisoning on a larger scale and made our gopher bait by the bushel. By the diligent use of the poison we slaughtered them by thousands, but our fields being surrounded on three sides by sage brush pastures, it seemed there was an inexhaustible base of supply.

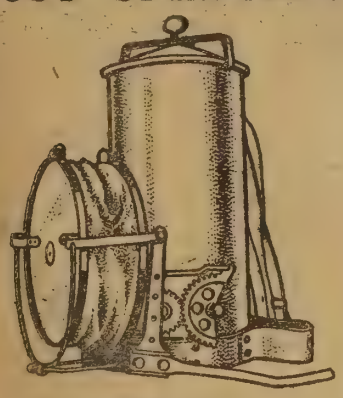
The second year was a great improvement in the orchard garden and nearby fields, but in the grain fields we had the same experience, using poison by the bushel and in that way feel sure we saved grain by the hundred bushels.

This year we are trying to raise all the wheat and barley possible, doing our best to help win the war. We have used over 7000 poison baits already and are going to use more this year. We shall save a lot of grain and will help a little—yes, a lot—on next year's extermination campaign. Now we welcome the cooperative idea in your very valuable article. It would be comparatively easy if the neighbors on three sides would cooperate. Then the whole neighborhood and the farmers of the entire county would join in the work.

County agents and county commissioners could help greatly by publishing and circulating formulas for preparing poison and advising activity in the using of it. I think the Government could cooperate through the food administration by using cards, pledging the signers to help exterminate the gophers as a patriotic aid to conserve food by increasing the crop yield. There should be action by the county commissioners to secure the ingredients used in preparing the poison as cheaply as possible. Strychnine and saccharine have gone to a very high figure. I paid $2.25 per ounce for the strychnine sulphate. I hope your management will in some way enlist the food administration in the campaign for exterminating the greatest enemy of the grain growers of the state.

GEORGE F. RICHARDSON.
Ellensburg, Wash.

## Make War on Squirrels.



The gray digger squirrel has led the farmers of Linn county to a declaration of war and a ruthless campaign of extermination. Led by their agricultural agent and two representative farmers, Oren Stratton and Charles Holloway, grain growers have served out enough poisoned grain to account for 25,000 rodents, if reasonably taken.

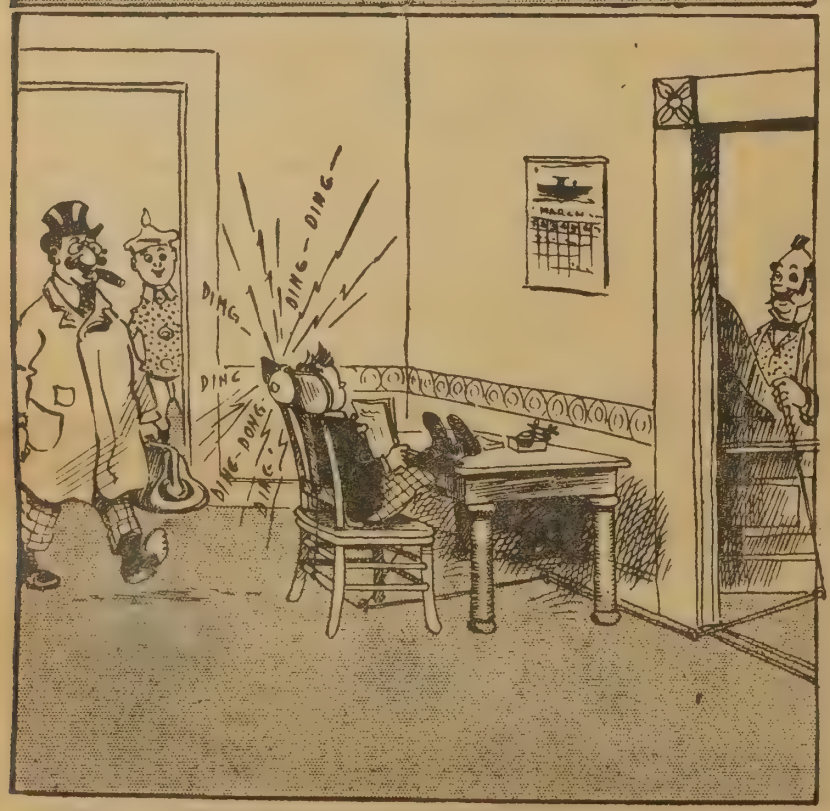
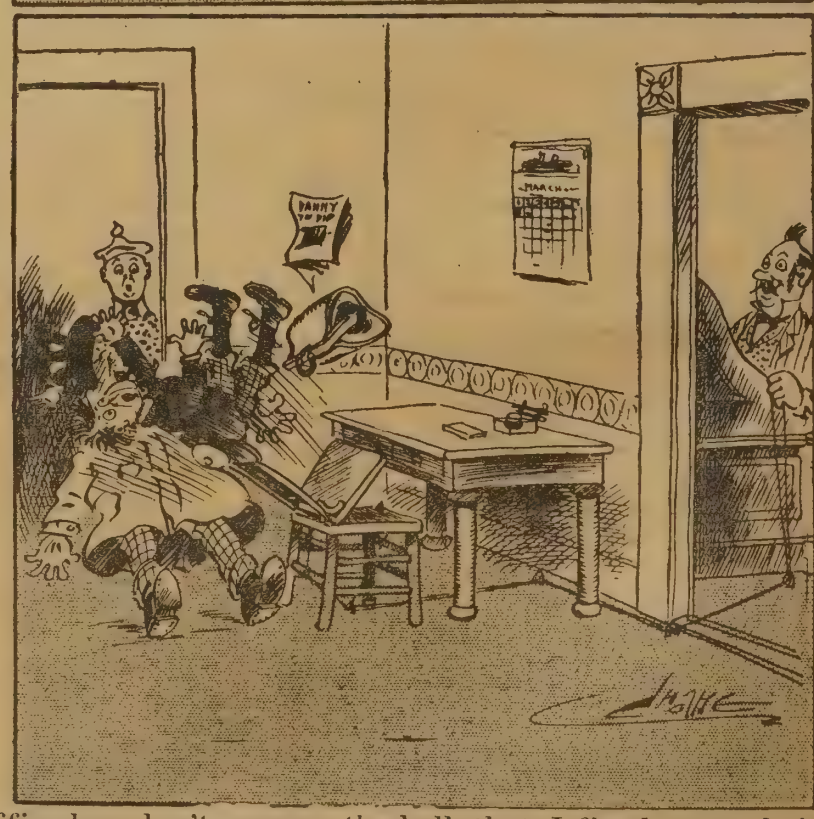
# WILLIE GIVES ONE OF PAPA'S CUSTOMERS A SURPRISE





DEAR TOMMY: It annoys Papa so much when his office boy don't answer the bell that I fixed up a chair like this to shake him up. I fixed the spring for a big office boy, but Papa fired him and got a smaller one. Then, when we tried the chair, the spring was too strong and catapulted him right on top of one of our western customers who happened in!

Yours, etc.

WILLIE.

# Sidelights

**The Situation.**

Clerk—I would like more salary, sir, as I am going to get married.

Employer—Sorry, but I'll have to reduce it. I am going to get married myself.—Boston Transcript.

**News From the Front.**

Messenger—Madame, I am sorry to tell you that your brother has just had his arm shot off in battle.

Loving Sister—Now, isn't that a shame—and I had just bought the dear boy a pair of gloves for a birthday present.—Tiger.

**A Toast.**

At a stag party the following toast was given:

Woman—the morning star of infancy, the day star of manhood and the evening star of old age. Bless our stars—and may they always be kept at a telescopic distance.—Boston Transcript.

**All She Had.**

Marian Alice, aged 4 years, visited a neighbor with her right shoe on her left foot and the left shoe on the right foot. The neighbor noticed the trouble and suggested that she had her shoes on the wrong feet.

"But," answered Marian Alice, ruefully, "these are all the feet I have."—Indianapolis News.

**Feathered.**

Two drummers having a few hours in a small town decided to dine at the village hotel.

One of them turned to the pretty waitress and asked:

"How's the chicken?"

"Oh, I'm all right," she blushed. "How are you?"—Exchange.

**At a Pink Tea, Maybe.**

It happened on a crowded street car. Feminine knitters were on every hand, working on sweaters and socks in various stages of completion. One woman, however, was engaged with a piece of dainty white embroidery.

After the conductor punched her ticket he stood watching the progress of the work. Finally curiosity got the better of him, and he queried innocently:

"Madam, where does a soldier wear that?"—Indianapolis News.

**Hen Stuff.**

They were having an argument as to whether it was correct to say of a hen she is "setting" or "sitting," and not being able to arrive at a satisfactory conclusion, they decided to submit the problem to Farmer Giles.

"My friends," said he, "that don't interest me at all. What I wants to know when I hear a hen cackle is whether she is laying or lying."

**Boiling It Down.**

Tom Callahan got a job on the section working for a railroad. The superintendent told him to go along the line looking for washouts.

"And don't be as long-winded in your next reports as you have been in the past," said the superintendent; "just report the condition of the roadbed as you find it, and don't use a lot of needless words that are not to the point. Write like a business letter, not like a love letter."

Tom, as related by Everybody's, proceeded on his tour of inspection, and when he reached the river he wrote his report to the superintendent:

"Sir: Where the railroad was, the river is."

## HANDLING HORSES.

### Typical Western Ranch Method.

"The purpose of handling horses on a typical western horse ranch," says C. L. Jamison of Walla Walla, "is to teach them what they are supposed to do; there is none of the old-fashioned 'breaking,' where the horse is manhandled until its disposition is ruined."

"The Ball ranch in central Oregon is a good example of efficient horse business," continued Mr. Jamison. "The mares and colts run on the rocky hills of the range surrounding the ranch, and with a little feeding in winter the stock is kept in a thriving condition. The 2-year-old stock is halter broken early in the spring, but the real education begins when the 3 to 4 year-old is bridled and side reined to teach him to respond to the reins. After a little of this preliminary work the youngsters are matched into teams and are started carefully in a large level field that allows them plenty of room if they want to run. After a few trips in the breaking wagon they are driven into town and around the neighboring roads, and are ready to turn over to a buyer. From start to finish great care is used to be gentle and quiet around the horses, and to prevent their forming bad habits. If the team starts to run when hitched to the wagon they are held to the road and kept running, even after they want to stop and rest.

"In dealing with horses bought right off the open range, many of which have never had a rope on more than twice and are as wild as deer, the bunch is worked from a large corral into successively smaller ones until an individual horse is caught between the two sides of a small pen called a 'squeezer.' Here he is rubbed down, clipped and bridled and side reined. After more or less fighting against the inevitable the horse learns to respond to the bit, and is ready to be halter broken. Weighting, measuring for height, and matching into teams follows, and after a few days' more work the team is ready for the market.

"The various market classifications are well understood, and the horse is placed where he will bring the most money. Carload lots are handled and the buyer is enabled to fill a load of uniform kind that is clean of blemishing, and of good color, and of the right size.

"It may seem from this description that with the coming of system most of the excitement and romance have departed from ranch life, but even with improved methods there is action enough to suit almost any one."

## FLOUR IS RETURNED.

### Farmers Prove Their Patriotism.

Garfield county, Washington, is strictly a farming county and for this reason its record in returning flour as requested some time ago by the food administration is especially interesting. The county council of defense reports that since the food administration's request was made the people of that county have returned the equivalent of 800 sacks of flour to local dealers, who have thereby been able to continue their flour selling business with considerably reduced orders from the mills. The reports show that many households returned flour in less than sack lots, which indicates that the people are living up to the letter as well as the spirit of the administration's regulation. Owing to the fact that many farmers lay in a supply of flour to do them several months or even a year, some of the amounts returned by individuals when the request was made amounted to as high as 30 sacks.

## BEETS HAVE SUFFERED.

### Will Reduce Northwest Sugar

That there will be a considerable shortage in the beet sugar production in the northwest this season, is the statement made by Mark Austin, agriculturist for the Utah-Idaho Sugar company. Mr. Austin recently made a trip into several of the beet growing districts and reports finding a considerable reduction in the crop prospects owing to the cold spring which was followed by unusual drouth and heat for this time of year. Mr. Austin says that there has been nearly twice the acreage of last year planted this season, but that it is not likely the production will exceed last year's. He reports the same general condition existing in the Idaho, Utah and Washington beet growing districts.

Mr. Austin says there is a possibility that only one factory will be operated in the Yakima valley of Washington this season, though it had been expected to have three in operation. This will be true, if at all, because of inability to get the two new factories equipped as well as because of the shortage in the beet yield.

# To The People of Washington:

★

TO CLEAR up any confusion that may exist in the minds of housewives concerning food conservation, the following definite program of food saving is issued with the explanation that frequent changes are made necessary according to the needs of the allies and our own people.

1. All kinds of staple foods, especially wheat, meats, fats and sugar should be most economically used. Use substitutes for these four commodities.

2. No food should be hoarded. Hoarding is the holding, contracting or arranging for food by any person in excess of his reasonable requirements for use or consumption by himself and dependents for a reasonable time. This does not refer to stocks of home-grown vegetables and home-canned or preserved fruits.

3. All householders who can entirely eliminate the use of wheat until the next harvest, about September 1, should do so.

4. Householders who are obliged to use wheat should not use more than a total of 1 1-2 pounds of wheat flour or prepared wheat, in any form, per person per week, including the wheat flour in victory bread, and including the wheat flour or prepared wheat in crackers, pastry, macaroni, breakfast and other foods.

5. Victory bread is bread manufactured by bakers under the rules of the United States food administration. In estimating flour consumption, 1 3-4 pounds of victory bread may be considered equal to one pound of wheat flour.

6. In buying wheat flour an equal weight of other cereals as substitutes for wheat flour must be bought pound for pound. This is the 50-50 rule. In buying mixed flours, the substitutes in them may be counted so that a smaller proportion of substitutes may be bought with these flours than with white flour. In buying graham and whole wheat flours (containing not less than 95 per cent of the entire wheat) 6-10 pound of substitutes shall be purchased with every pound of such flours.

7. Wheat flour substitutes are hominy, corn, grits, cornmeal, corn flour, edible cornstarch, barley flour, rolled oats, oatmeal, rice, rice flour, buckwheat flour, potato flour, sweet potato flour, soya bean flour and feterita flour and meals and milo maize flour and meal.

8. Householders in towns and cities may not buy more than 1-4 of a barrel of flour or 2 pounds of sugar at any one time. Householders in rural districts may not buy more than 1-4 of a barrel of flour or 5 pounds of sugar at any one time. In no event shall any purchaser have more than 30 days' supply of flour on hand.

9. Householders should not use more than 3 pounds of sugar per person per month.

10. In addition to the above, however, 25 pounds of sugar may be used for home canning, and will be available to the householder for that purpose upon signing a certificate that such sugar is desired and will be used for that purpose only. Additional amounts for canning and preserving may be purchased only by special permission of county food administrator.

11. No wheat flour, or prepared wheat in any form, should be used for any purpose other than human consumption.

12. Meats of all kinds should be most economically used, eliminating all waste.

13. Fresh milk and milk in evaporated and condensed form and cheese may be liberally used.

14. Butter may be used for normal consumption.

15. To save transportation local supplies should be grown and used.

# "Undoing the Almighty's Job"

By ALVARA P. WILLIAMS

Stumps Ready to burn.

Once upon a time there was a back-to-the-lander who started with a grim determination to clean 10 acres of logged-off land (deluding title). Many others have done the same, and accomplished their results, but I doubt if they did it with his tools. First he started with a jack knife and an old cross-cut saw. This was not so bad, inasmuch as it savored of the Yankee's pastime of whittling. The cross-cut saw had a habit of running on the bias, so that if you started a cut on a log the proper length for stovewood, you ended it up suitably carved for the fireplace.

But even at the alarming rate the wife used stovewood, it seemed that disposing of 10 acres full of three to six foot logs in this way, would leave much to his heirs. Fortunately for this man, his jack knife only lasted his vacation out, and then he began to put his brains as well as muscle to work. Muscle is all right, but brains work nearly as well when focused on a stump six feet in diameter.

Being intelligent and up-to-date, he then supplied himself with many government bulletins and experiment station reports on clearing land. He learned, much to his delight, several little helpful details, such as that a mattock is a convenient tool for peeling bark from roots and logs. He had already bought one and used it to peel the bark from his forehead, but he was rapidly learning to avoid obstructions with it.

He also found many excellent suggestions regarding methods of burning, and the use of donkey engines. This latter was said to be as cheap as any way. A donkey rents at $10 a day, according to the experts, and then you hire a crew of five or six men, set up your gin-pole, whatever that may be, in the middle of a 10-acre field, and fall to, with a resultant expense of $100 or maybe less per acre. But what if you haven't the thousand dollars, and only want, perhaps, a garden space and an acre of spuds a year?

Of the suggestions received in his free education, blasting, and burning the refuse, seemed to be the easiest way with limited capital. Twenty-five dollars' worth of powder at before-the-war prices put some undesirable hardpan and most of half an acre of stumps above ground. About $50 worth of lame back and sore muscles put these where they would burn. Time was too valuable to count at all, unless you were going to hold your land at city prices of so much per square foot. After a few months, the ground was cleared so that by grubbing every foot with a mattock, burning three successive layers of rubbish, raking up a fourth layer and burning; plowing, harrowing, burning some more, he could then plaster the ground with starfish and raise some spuds. These were irregular in shape because the ground was not yet in proper condition, etc., etc. More combings the second year helped some. At that rate, in order to get the acre of spuds a year on new ground, he would have had to start two years before.

Burning the stumps out as they stood was a splendid theory, as put forth in the bulletins, and he and the wife went at it. They had a spell of frantic zeal, in which they tried every method described, and a few more. They bored holes one way, and a neighbor showed them how to do it a different way, so they tried that, too. Then the wife dropped kindling in the holes, and wasted matches and coal oil. The directions must have been given for some part of the state where the wind wasn't always in the southwest. They banked stumps and left airholes according to specifications, and packed kindling around a half acre of stumps; they went out morning, noon and night to keep the fires going, and it was only when some stump got away from them and burned of its own free will, that the desired result was accomplished. All those directions must have been for partly decayed stumps on sandy soil, because these were green stumps on a shot-clay soil, and they would not burn. The mattock, then, to the rescue. The man pried and pulled, and the wife blocked and sat on the lever, till the roots were above ground and could be piled.

Then there appeared a one-man-power home-made stump puller, which was excellent but slow. It needed another man as dentist's assistant to work with the stump. Unfortunately, there was only one man in the family, and the wife couldn't run a stump puller.

A man with a team of horses cleared an easy patch of canine teeth, and this paid for itself the first year. But the spaces where the molars were, was beyond such treatment.

By this time things looked desperate. The man had acquired another 10 acres, and of the whole 20, less than four were cleared, after four years. Fortune, as it were, threw a donkey engine in his way, and as he could finance about two acres of such work, he and the owner of the donkey started in. There was only one favorable condition to this experiment, as was later proved. The work was done before the fall rains started, when the ground was dry, but by using $30 worth of powder on the two acres, the stumps were split so as to be taken out more easily. The mere process of dragging the stumps about shook off most of the dirt, and very little of the hardpan had been brought to the surface. There were several adverse conditions—the donkey was not in good repair; in order to be near the water supply it was not in sight of the work; there was no practicable method of piling the stumps, as no gin pole had been left, and none could be erected; the crew of two lost fully 50 per cent of their time in unnecessary running back and forth. Even so, the work was done at about $80 per acre, but with more than $20 per acre still to be spent in getting the ground ready for the first crop.

From all these experiences, the experimenter has drawn up, by finding out how not to do it, a set of first principles of land clearing, which by the grace of God and the federal farm loan act, he may try sometime.

Foremost of these—the ideal way to clear land, by a donkey with a crew of at least five; the donkey to be in sight of the work, a natural gin pole to have been left, in the shape of a large tree, in the center of the space to be cleared, as by this means the line can be kept up out of the way of rubbish, and the stumps pulled in from all directions with little loss of time in changing rigging. The most economical area to clear is 10 acres or more; a smaller tract would hardly pay for importing a donkey. The greatest loss, outside of possible breakage, is in wasted time on the part of a crew. The greatest advantage is not in getting the stumps out in the first place, but in disposing of them after they are out, if there are many too large to be handled easily.

Result of a shot where most of surface soil had been washed away.

Failing this method, the next best is the combined use of powder, stump puller, and burning. Just enough powder to loosen and split the stump, without actually littering the landscape with it; a stump puller with power and speed enough to pull the remnants together, piling them as well as possible for the future burning. Some very large ones may have to be blasted again in order to handle them. Occasionally one meets an old-timer too large to dispose of in any way, and has to resort to the method of a neighbor who dug under one until he could completely bury it below plow level.

Without the use of at least powder and stump puller, the process of undoing the Almighty's little job may be discouragingly slow, and painfully accomplished if at all. The result of much effort is to clutter up the would-be garden worse than it was before, with only a vision of man's numbered days here as encouragement.

## SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

## What You Ought to Eat to Turn Weakness Into Strength

Dr. Hirshberg

While it seems to be true that meat, fish and eggs are great supports to those who needs must do heavy muscular labor as well as strenuous athletics, nevertheless, persons whose diet is predominantly of vegetables and fruits do not grow fatigued as readily as those of an abundant meat diet.

It has been observed over and over again by American, French and English physicians that there is extraordinary improvement in muscle-weariness, especially in those ill with diabetes, when such persons are given vegetables and fruits to eat with no meats.

Perhaps this improvement is due to the sugar and starches present in a vegetarian diet, perhaps to the salts in them. However that may be, the fact remains that there is something in friuts and vegetables which enhances muscular activity. At all events, this has been the explanation put forth for the almost unbelievable capacity of the French and Russian pesant for muscular work without fatigue. Their food consists only of vegetables with black bread and a little cheese.

### Salts That Aid.

Rats and fowl kept upon an abundant variety and quantity of victuals with ample albumin, from which, nevertheless, all potash was chemically extracted, succumbed to paralysis, hemorrhages, scurvy, emaciation and other symptoms of the so-called "food deficiency diseases."

This proves the importance of potassium salts in vegetables. Unless it is present in plentiful amounts, nerve degenerations occur, and "neuritis," "rheumatism" and "gout" result. Fresh vegetables with potash in them will effect a quick cure. If potash in foods, drinks or medicine is fed to the sufferer, health, strength and usually recuperation follow.

The living fabric of a sound human creature, particularly his muscle and nerve tissues, demand potash. This mineral is indispensable to your well being.

The heart is scarcely anything more than an automatic, pulsating muscle. It, too, contains a modicum of potash, lime and other minerals. To promote regularity and strength of its pulsations these chemicals are needed.

Muscular fatigue is a pronounced symptom in diabetes, goitre, high blood pressure and various other maladies. If under such conditions a well mixed vegetarian diet of cereals, vegetables and fruits is adopted the helpful, necessary potash and phosphates are brought into action and the heart, and muscles are restored nearly or completely to health.

### For Weak Heart.

The instinctive longing for bread and potatoes is perhaps traceable to the presence of such minerals in them, not to the starches and sugars in them. Similarly, it gives a hint of why these articles of the table are so much missed.

When the heart is weak no greater mistake can be made than to ignore the elements of the diet. Such intangible elements as "calories" anl "nitrogen contents" are less essential than the potash, lime and phsophoric acid. An unbalanced diet which ignores these minerals may result disastrously.

All of this is emphatically true for those who have diabetes or sugar disease, or who put themselves on an anti-fat diet. Similarly those who are beyond 40 or who appear to have the gout must be closely watched as to their diet. Their heart action must be constantly supervised. Any undernourishment of the above mentioned disease may have much more serious results than the advocates of the starvation diets realize.

Elderly persons should not be allowed to fast for any length of time for any purpose, nor should a person with a weak heart go long without food.

The dependence of the heart action on the intake of nourishment is shown by the fact that the heart beat is less vigorous when a stomach fasts. In fatal diseases the heart gives out entirely, that is to say, death occurs in the early morning hours when the stomach has long been empty.

## INDIANA FARM MEDALS

### For Exceptional Yields of Corn.

Indiana farmers who produce exceptional yields of corn this year will be given war medals by the state. The average corn production of Indiana is 40 bushels. Farmers who produce 100 bushels this year will be awarded a gold medal; and those producing 75 bushels a bronze medal. The yield must be maintained on a tract of at least five acres.

This plan was proposed by G. I. Christie, director of agricultural extension work in Indiana, and now directing the farm-labor work of the United States department of agriculture under Assistant Secretary Clarence Ousley. The medals will be paid for by the state, and the awards determined by representatives of the United States department of agriculture and the State Agricultural college. Already 45 counties of Indiana have been organized for the contest. Organization will continue until August 1, and every farmer who intends to compete must notify his county agent and conform to certain requirements. No field will be examined by the judges or considered in the contest, no matter what its yield may be, unless the farmer has been properly enrolled. Through the county agents, the United States department of agriculture and the Indiana extension service will disseminate information regarding the cultural methods calculated to bring about increased corn production.

# All the World's a Stage, and All the Men and Women Merely Players

## Eight Hundred Thousand Men and Women Are Working in Pacific Northwest Red Cross Division

Photos by Curtis Studio, Seattle.

The northwest division of the American Red Cross, comprising states of Washington, Oregon and Idaho, and the territory of Alaska, has 800,000 members and is doing an annual business of more than $5,000,000. The officers, whose photos appear above, are:

1. Charles Stimson, manager.
2. Mrs. Helena E. Cline, director, bureau of information.
3. Robert Max Garrett, director of junior membership.
4. Mrs. Lucy Hilton, associate manager.
5. Harry M. Clark, director of bureau of accounting. Mr. Clark or his assistants visit the chapters and branches, check up their accounts, systematize their office work and audit their expenditures.
6. Earl Kilpatrick, director of bureau of development. This bureau organizes the chapters and branches and supervises the work done by the chapters and their subsidiaries.
7. Mrs. Margaret G. Hulbert, associate director development bureau.
8. Arthur B. Grindell, director of publicity, who is responsible for the news service for the division.
9. Miss May S. Loomis, director division of nursing. Up to the middle of May 450 nurses in the northwest have enlisted for foreign or cantonment service.
10. J. H. Ballinger, counselor.
11. F. P. Foisie, director bureau of civilian relief. During the month of April 2142 families of soldiers or sailors in the division were assisted, either by information service or through the visitors dealing with family problems.
12. A. A. Hilton, director of supplies. From 15 to 20 carloads of raw material, including gauze, yarn and goods for the making of hospital garments, bed linen, etc., are received each month and distributed to the various chapters in the northwest.
13. Leslie K. Getchell, director bureau of military relief.
14. Dr. Casper W. Sharples, director first aid.

Division headquarters are in the White Building, Seattle, being entirely separate from the Seattle chapter. There are under the direction of this office 39 chapters in Idaho, 24 in Oregon, 35 in Washington and 15 in Alaska, making 113 in all. These chapters have more than 500 branches, and the branches have more than 2100 auxiliaries.

In the first three months of this year the northwest division shipped 268,343 hospital garments, 220,884 articles billed as hospital supplies, 190,191 miscellaneous articles, including 101,790 pairs of socks and 2,644,228 surgical dressings.

## CHAPTER XXIV.

### Bottled Up in the Big Cave.

To the white fugitives' relief, they soon began to see, not one hiding-place, but many. Numerous smaller caves branched off from the big one.

"Hadn't we better hide, Ben?"

"Yes. But we'll push on a little farther first."

A few minutes later Jodo said: "There's a small cave leading off. Why not slip into that?"

"Let's take a look into it."

The branch-cave proved to be low—not much above their heads. They paddled into it, a rather narrow passage-way, expecting that it would lead upward till the bottom rose above water. But it did not. And after following its windings for a hundred yards or more, they were surprised to find themselves out in the big cave again.

"The very place we're looking for, Jodo. I don't like the idea of getting bottled up in a blind hole, and that can't happen here. If the reds come in at one end, out we dodge at the other! So here's where we do our hiding."

Paddling back several yards into the branch-cave, they smothered out their torch in the ashes, then sat still and waited.

A few minutes later they began to detect a faint light shining against the far wall of the big cave. Now they knew that the Pottawatomies could not be far away. Soon, also, the dipping of paddles could be heard.

"Here they come!" whispered Ben. "If they start in toward us, we must either move faster than they move, or stop them with lead. Think you can hit a torch?"

"Hard telling. I'm pretty nervous just now. But I could hit a canoe-load of Indians."

"We may have to shoot some of 'em later. They're bent on getting us. But— There they are now!"

The canoe and the Pottawatomies were emerging into view. One warrior was standing in the prow, holding a torch, five were on their knees, using paddles, and the seventh was sitting in the stern, holding another torch. All carried either guns or bows and arrows.

Every Indian seemed to be peering straight ahead. The canoe moved swiftly on before the five paddles, and had soon passed beyond where the two watchers could see it. For a few minutes the noise of paddles could be heard and a faint light seen. But soon both had passed, and only the splashing and gurgling of waves against the rock walls remained.

"Jodo, if all the Pottawatomies had been in that canoe, now would be a good time for us to make for the mouth of the cave and slip out of here."

"I feel safer in the cave than out. And we wouldn't dare try to escape."

"No. A dozen or 15 Indians out there somewhere. We're all right for the present. I'm hoping we can keep on giving the Pottawatomies the dodge. But the trouble is, when they don't find us they'll guard the entrance. We can't stay in here a great while; and when we do want to get out, we're pretty sure to find ourselves bottled up cork-tight."

"But if these Indians are Pottawatomies, they won't be likely to hang around in the hunting-grounds of the Osages very long, will they?"

"Longer than we can stay in this awful darkness. I should be crazy—as crazy as a loon—if I had to inhabit this black place very long. The blackness would soak into my brain!"

"I can stand a lot of darkness better than I can stand being in the hands of these savages. And we can light up now and then, to give our eyes a change. We could light a pine-knot now if we wanted to."

"Yes. But we don't want to—not until that canoe goes back by."

For perhaps an hour longer the two sat in the dark, listening for paddles and watching for a light. At last the paddles began to be heard, and then the light of the torches flashing against the far wall became visible. But several minutes passed, and the torches themselves were not yet in sight. Now it seemed evident that the Indians were searching the cave as they went back.

"Ben, my guess is that they've been to the other end of the cave without finding us, and now they're trying to poke into every nook and corner as they go out."

"That's right, I think. And it sounds to me like—" Ben listened a few moments. "Yes, that's just what they're doing! They're paddling into this branch-cave to learn what's here."

Both listened intently, to make sure. Then they whispered together and, with their hands on the rock wall, began to move their canoe toward the big cave. Soon they had emerged into it.

With their hands on the slimy wall, they moved up toward the other entrance to the branch-cave which the light from the Indians' torches still made dimly visible. But the light quickly vanished, and they had to grope their way.

Just as they reached the other end of the side-cave, the light from the Pottawatomies' torches began to shine out of the end the whites had come out of. It seemed to the fugitive pair that they would never get their canoe turned into the hiding-place. And even as they pushed it in they half suspected that the torch-bearer in the prow of the Indians' canoe might have caught a glimpse of them. But he was doubtless too far away; for the Pottawatomies were heard paddling on.

As soon as it was safe to do so, Ben and his companion pushed their canoe out into the main cave, where they could watch the Indians. When the lighted canoe was about to disappear, Ben said:

"Let's follow. I've a mind that they'll go on out, and we want to see whether they do or not."

With only the light from the Indians' torches to guide them, the whites kept following, as fast as they could without making a noise with their paddles. And they had no trouble keeping the lights in sight, because the Indians appeared to be examining every nook and corner in their search for the white men.

"Those red fellows must have been in here before," Ben remarked. "They know the cave pretty well. That's plain."

Long time the Pottawatomies continued to search the cave, moving gradually toward the entrance. And the whites, with the glimmering torches to guide them, followed with cautious paddles. At last the warriors found themselves where the lake ended. There they all got out and after dragging their canoe well upon dry land, they started toward the cave's mouth.

Having counted the Indians, to make sure that all seven were going out, Ben and Jodo paddled to the place and promptly took possession of the abandoned canoe.

"Now, Jodo boy, we'll see to it that they don't lay hands on this canoe again. Unless they drag our other canoe out of hiding, they'll have no show in this round world to capture us."

"I don't think they'll be apt to discover the other canoe, Ben. But what's gone with the cave's mouth?

"Night outside now. The mouth doesn't show. I'm wondering if the Pottawatomies will come back. We mustn't let them surprise us if they do."

Towing the other canoe, they paddled back to a safe distance. There they wrapped their blankets around them, fixed themselves as comfortable as they could, and fell asleep. But they did not sleep soundly, and were awake from time to time.

"Day's coming. You can see the mouth of the cave now," Jodo remarked once, when both happened to be awake.

Ben sat up and looked. "I didn't think it was so late. Jodo, that light's too red for daylight. The Pottawatomies have kindled a fire near the cave's mouth. No question now that they're guarding the cave. They've bottled us up."

"Yes. I can make out Indians there now. So that's how they expect to capture us—by squatting in the entrance and waiting for us to come out."

"My word for it, Jodo boy, they'll get mighty tired of waiting before we walk out and let 'em nab us."

Both soon fell asleep again. When they awoke, the reddish spot had turned to white, and they knew that daylight had come. After gazing at the cave's mouth till they caught glimpses of several Indians, they found some dried venison and some cold corn-bread among their things, and of those they made their breakfast.

After that they leaned back and watched the cave's entrance. And before they had watched long, several Indians came through that bright spot, two of them bearing torches.

"Ben, they think they're going to rummage through this cave for us again."

"If they do they'll have to swim. And they may find it chilly swimming."

"Hadn't we better move back?"

"Not a glimpse can they catch of us here, I think. I want to stay close enough to see what they do."

When the Pottawatomies came to where they had left the canoe, they seemed not a little excited to find it gone. They stood and jabbered at one another, as they tried to peer into the thick darkness. So long they stood there that more than once Ben raised his rifle and took aim at a warrior. But, like every sensible person, he had an aversion to shedding human blood, even when it happened to be the blood of a savage. He thought of sending a bullet over their heads to scatter them, but did not do even that.

Finally the warriors turned and went back. After all had passed out, the white men sat and watched the bright spot. They felt not a little anxious lest the Pottawatomies should discover the canoe hid under the creek bank, and come carrying that in.

Hour after hour passed. Ben and Jodo took turns at watching and sleeping during the day. Finally the bright spot changed from white to red. That meant that day had gone and night had come, and that the Indians were still guarding the cave.

All through the night the two took turns at sleeping and keeping watch. And though they wrapped themselves well in their blankets and buffalo-robes, the damp and chill of the watery cave seemed to be soaking into them. When at length the whitening of that bright spot indicated that day was dawning, both were in the humor to do something—desperate enough to do almost anything, for a change. After they had eaten their breakfast, and made certain that the Pottawatomies were not gone, Ben said:

"I've got about enough of this and I'm wondering if it would be possible to discover a back door to this cave."

"Whether we find it or not, I'm for trying. Anything's better than sitting here till we're mildewed."

"All right, Jodo boy! Here goes for an exploring trip, to see what's to be seen and to find what's to be found. Maybe it would be better to get out of sight of that bright spot before we light up."

When they had groped their way for a good distance through the blackness, they stopped and dug into their little pot. All the coals had gone out under the ashes but one, and they had hard work to light their pine-knot from that.

After fixing the torch in the place for it, they paddled on till they found a knob of rock projecting from the wall. To this they tied the canoe they were towing. Then they moved ahead, deeper and deeper into the great subterranean vault.

At length they came to the branch-cave where they had eluded the savages the night before. And still they kept on.

In time they began to hear a faint roar. It grew most distinct as they advanced, and they paused to listen.

"What can it be, Ben?"

"A water-fall is my guess. But we'll soon know for certain."

They paddled ahead. Louder and louder swelled the roar, till it seemed to fill all the cave.

"Do you s'pose it's dangerous?" Jodo had almost to shout to make himself heard.

"Not if the water is running this way. It it's running the other way it might be. We can tell before we get there."

So they kept paddling. The roar from the fall almost deafened them. At length they came to where the water seemed to be moving slightly. But the motion was away from the fall, and they knew there was no danger.

At last they were in sight of the fall itself. A thin sheet of water 15 or 20 feet wide was falling from a ledge of rock at least 20 feet high. It dropped into deep water, and that fact combined with the confinement of the noise, made this underground water-fall roar like another Niagara.

The canoemen approached to within a few yards of the fall, where they stood up, held their torch aloft, and gazed around. Ben had to put his mouth close to Jodo's ear to make himself heard:

"The cave goes on, you see, at the higher level. If we could get up there we could follow it no telling how much farther."

"Yes. But we can't get up there. If we could, though, we'd find the cave dry from here on. Don't you see? This falling water comes from between two ledges."

"So it does. Once up there, we could walk the rest of the way dry-shod. And we might easily find another outlet if we followed far enough. But it seems impossible to get up there without a ladder. So we're no better off than if we hadn't come."

"But neither are we any worse off. How deep is this water, I wonder." Jodo thrust his paddle down full length, but failed to touch bottom.

A few moments later Ben punched Jodo, then pointed to the ledge above the fall. On the very edge of the ledge stood a panther, gazing down at the men in the canoe. His mouth was open and his teeth displayed; and while they could hear no sound, they knew from his actions that he was snarling and growling down at them.

Quickly Ben dropped his paddle, caught up his rifle, and took aim.

But when he pressed the trigger the hammer fell noiselessly, without any result.

And scarcely had Ben's gun missed fire when Jodo made an attempt to shoot. But there was another failure.

"We've been in this soggy place too long. Our priming-powder is damp," Ben said, as he emptied the pan of his rifle and put in fresh powder from his horn.

Jodo did the same. While doing this, both kept glancing upward, half fearful that the beast would leap down on them. But probably the panther had no thought of plunging into so much water.

Just before the men had finished priming their rifles, the panther turned and walked back as he had come, disappearing into the darkness. For several minutes the two stood watching, but he failed to return.

"Oh, well, no matter!" exclaimed Ben. "As long as we can't get up there and go farther, it's all the same whether the varmint is alive or dead."

For a good while the two stood in their canoe, watching the water pour down, and trying to think what they ought to do next. While they were still undecided, their first pine-knot burned out and they had to light another. Now Ben said:

"I don't see what we can do but tough it out in here till the Pottawatomies get tired and go their way."

"How long will that be, do you think?"

"A week or two, maybe. They can make their headquarters here, and while a few guard the cave all the others can go hunting. So they won't find their waiting as tiresome as we find ours."

"I'd hate mightily to think we have to stay in here a week or two longer. It would be simply frightful."

"Yes. But we'd better be paddling back while we've got light. That pine-knot won't burn forever."

So, after a last look at the waterfall, they turned their canoe and started back as they had come. When, after much paddling, they arrived near the outer end of the lake, they stopped, smothered out their torch, and ate some dinner. It was now probably the middle of the afternoon.

Dinner ended, they sat and waited till the bright spot faded out. The fact that it had faded out instead of changing color meant that the Indians had started no camp-fire. But while the two were still wondering if the Pottawatomies were gone, a light began to appear. And it kept growing brighter till they knew that a big fire must be burning near the cave's mouth.

After watching it a good while, they became curious. Soon they paddled over to dry ground, and both got out. After tying their canoe to the boulder there, they began to steal toward the bright spot. The noise of the shallow stream flowing over its stony bed, guided them and drowned their footfalls as they advanced cautiously through the darkness.

But even before they had reached the cave's mouth, the roaring and crackling of flames told them—what they had suspected from the first—that their cabin was burning. Now they were hopeful that the Pottawatomies might be gone, having fired the cabin before starting. No Indian was in sight. But when, stealing up to the cave's mouth, the two came to where they could look at the fire, they saw numerous Indians around it. Some lay far back, asleep, while others seemed to be broiling meat and eating.

After watching a minute or two, the white men withdrew a short distance.

"How do you s'pose they came to fire the cabin this time of night, Ben?"

"From what I could see, I'd guess that they just kindled their camp-fire against the east wall."

"You think they didn't intend to fire it?"

"Oh, they didn't care what happened."

"Do you think they'll be likely to go away now, when morning comes?"

"They may. I certainly hope they will. I'm weary unto death of life in a dungeon."

"So am I. Not so weary, though, as I would be of life in captivity."

"I know. But if the Pottawatomies— What under the heavens is the matter now?"

Both listened for a few minutes, then moved toward the cave's mouth. Fierce war-whoops were ringing outside, as a big band of savages were rushing into battle!

(To be continued.)

# Washington Boys in War Service

From The Twice-a-Week Spokesman-Review.

**CHARLES W. KALLMAN, Almira, Wash.**—Enlisted in the navy June, 1917, and was trained at Mare Island, Cal. He is now on the U. S. S. Ryndham out of New York. His brother Arthur is in the navy, working out of Honolulu. His parents are Mr. and Mrs. F. A. Kallman of Almira, Wash.

**ELMER LEE DUTTON, Columbia River, Wash.**—Enlisted in the navy December 4, 1917, at Wenatchee, Wash., and is on the U. S. S. Missouri, Fortress Monroe, Va., doing transport service. His parents, Mr. and Mrs. Dutton, and three younger brothers and a sister live at Columbia River, Wash.

**ROBERT H. KECK, Aeneas, Wash.**—Was in training at Mt. Clemens, Mich., until February 16, when he was transferred to France. He is now at a rest camp in England, with the 157th aero squadron. Private Keck has spent the greater part of his life on his father's stock ranch.

## WORLD WAR
## Will Not Be Won by a Miracle.

**By DAVID FRANKLIN HOUSTON, Secretary of Agriculture.**

This war will not be won by a miracle or by enchantment. There can be no turning back, no faltering, no hesitation. We are determined to teach the lesson that law must rule among nations as among individuals and to establish guarantees for future peace and the prevention of a recurrence of such a calamity as this.

Farmers planted 23,000,000 acres more in leading food crops in 1917 than in 1916. They greatly increased the numbers of live stock in spite of exportations. They increased the number of milch cows by 390,000, of other cattle by nearly two million, the number of sheep, for the first time in a generation and a half, by 1,300,000, and of swine by nearly 4,000,000. In spite of exportations of horses and mules they increased the number by 454,000. The indications are that they will do better even this year. We shall not fail to win the war because of food shortage.

These statements mean another thing. They mean difficulties of harvesting. It is a matter of patriotism and business to omit no effort to help in the matter of labor supply.

We fight a nation that knows no law, except its own law of necessity, made in Prussia, exclusively interpreted by her, and to be changed by her at will. From this power the orders came to us in February, 1917. What answer was there except one? Life is precious, but not at the sacrifice of everything that makes it worth while. National peace is desirable, but not at the cost of everything that makes a nation worth saving. We have discovered the truth in Jefferson's assertion that the tree of liberty is a tender plant; and that as it grows from more to more it has to be watered by the blood of patriots. We shall not fail. We are aligned with the free forces of the world, and have back of us the conscience of civilization.

## WHAT IS EMBARGO?
## Food Administration Answers.

What is an embargo?
An authoritative stopping of any special trade.

What is the value of an embargo?
It keeps a check on all supplies coming in or going out of the country.

What object can we obtain by it?
We can keep neutral countries from delivering to Germany food ostensibly wanted by the neutral country itself.

What significant example is there of this?
Fats. Fats sufficient to supply the fat requirement of 7,700,000 soldiers entered Germany in 1916. A large percentage of those fats came from this country. The embargo stops such leaks as that.

## No Lack of Patriotism.

**By J. P. CHRISTENSEN.**

You will find no lack in the performance of their patriotic duty and loyalty among the farmers of Clallam county and they have a large share of the substantial proofs recorded by our county in the oversubscription to the Liberty loan and the war savings campaign. Our farmers have been doing exceedingly well and they have opened their purse strings.

## County Agent at Large.

Aside from the individual county agents, Washington has a county agent at large—A. B. Crane, who has charge of farm engineering and drainage projects throughout the state.

# Protest of Farm Producers

When you have a just cause it pays to protest against injustice. The Farmer had that thought in mind when it urged the farm producers of the Pacific northwest to send remonstrances to Washington against the 25 per cent flat increase in freight rates. The increase will probably stand, but as a result of intelligent objection from the farmers, the food administration has decided to increase wheat prices and thus make the product absorb the increase instead of taking it from the pockets of the growers.

A Washington dispatch says this is the first time deviation from the fixed $2.20 basic wheat price has received serious consideration from the food administration, and that the decision to allow slightly higher wheat prices "follows protests from farmers, who say they face losses of from one to five or six cents a bushel on wheat because of the 25 per cent increase in freight rates, which will affect the entire wheat belt."

The farmer is entirely justified in launching reasonable, intelligent protests against laws and acts of government officials that lay an injustice upon him. The remonstrance against excessive freight rates is a case in point, and the protest last year against the government's failure to give the wheat growers of the northwest a basic market was another.

# SUBSCRIPTION PLAN SAVES YOU MONEY

**RATES**
For Subscriptions to The Washington Farmer
**25c** For One Year
**50c** For 3 Years
**$1** For 5 Years

We are holding open our direct-to-the-reader subscription plan during the summer months. It means a real saving at a time when most things cost more.

The central idea of the plan is to deal direct with our subscribers in securing and renewing subscriptions, thus eliminating the middleman and giving our friends the benefit of every penny saved.

It is gratifying to know that the new cooperative system has had the heartiest kind of backing; and that it has been put on a successful basis. We could not have got along without the assistance of well wishers who have told their neighbors about the plan and passed along copies of the paper.

There are many things of value which your state farm paper can bring you and your neighbors during the summer months. The various departments will be full of helpful hints, instructive articles and entertainment. Send in the orders!

**THE WASHINGTON FARMER**
**Review Bldg., Spokane, Wash.**

# Time for Music

By C. C. GOTT.

How often one hears a farmer say, "Oh, I haven't time for music, games or dancing; no time to go anywhere"; or "Hard work makes my fingers too stiff to play."

To all of which I say, "Nonsense." A farmer is too apt to get into a rut, so easy for the careless ones to do.

No place on earth is music needed so much as in the farm home. I have a 200-acre farm, with 100 acres under cultivation, and with the exception of harvest time I do all my own work, milking, churning and housework, and all the chores, and my home is always ready to receive visitors, and still I find time for music, dancing and recreation. I play the violin and piano, and do not find that hard work stiffens my fingers one bit. I have a neighbor who is a fine cornet player; we exchange work at times, and, after a hard day's work, supper over and the dishes washed, we take our instruments and tear off some of the latest hits from Broadway, and they are none too hard for us. We forget today's work, as well as tomorrow, our brain as well as our muscles is resting. After a couple of hours of good, lively music we roll in and sleep. In the morning we forget music and think of work.

How nice for a father and mother son and daughter to have a little orchestra at home on the farm, especially during the long winter evenings. How few girls can play the the violin or cornet and how many find useless novels. How few boys can play the violin or cornet and hoy many find time for playing cards and billiards. It is true, some can not learn music, but how many could learn, want to learn and could make good at it if only given a chance to learn.

# A Garden Hint

By Elizabeth Quaker.

Did you know that green beans, especially the Black Wax variety, are like pansies in that "the more you pick them, the more is sure to grow?"

If you wish to let some ripen for seed, select and reserve some good vigorous hills for that purpose. Keep them well picked from the rest of the patch. In this way the bearing will be prolonged until the frosts come. When the pods are allowed to ripen the strength of the vine goes into the ripening pod and it stops sending out new blossoms and young pods.

# War-Time Meals for the Harvester

By MISS A. GRACE JOHNSON, Professor House Administration, School of Home Economics, O. A. C.

The feeding of the harvester has always been looked upon with dread and now when the food situation is so serious it will no doubt have added terrors for the average person, whether that person be a cook for a threshing crew or the housewife. This article will not serve as a cure for all the ills of the harvest meal, but it will give general suggestions which, if followed, will serve to simplify the problem to some extent.

Since proper nourishment and conservation, taken together, form the keynote of all meal planning at the present time, we must consider the following points in planning harvest menus:

1. Proper nourishment of body. This involves kind, quality and quality of foods.
2. The observance of conservation rules of food administration.
3. Waste of food.
4. Waste of time and energy.
5. Cost of food, fuel, etc.

The harvest-time meal has developed largely through tradition or from a spirit of rivalry rather than from a knowledge of the needs of the worker. A false idea of what this meal should be has led to some of the following customs, all of which are bad:

1—Too much variety in one meal.
2—Too many desserts at one meal.
3—Duplication of foods of same kind. Such as rice and potatoes.
4—Serving of more than one kind of meat at a meal.
5—Serving of too many fried or very fat foods.
6—Serving too many beverages at one meal.

All of these mistakes in planning meals have done much to develop a very bad harvest time eating habit—that of "gobbling" the foods. They have been the cause of an enormous waste of foods as well as of time and energy of the persons who prepare the meals. If the men could have less interruption from the passing of numerous unnecessary dishes they would have more time for conversation and thus be less liable to "bolt" the food. The food would be enjoyed more, and less would be left on the plate. The persons who do the preparing would be saved an enormous amount of work, not only in preparation, but also in care of dishes, the problem of the use of left-overs would be reduced and much fuel would be saved.

How shall we solve the problem? No one can wave the magic wand and solve the entire problem.

At the present time when there is a scarcity of foods in the world we should all realize that each person, and especially the housewife, should begin to study the feeding of the family just as conscientiously as the farmer has studied the feeding of his hogs or the selection of labor saving devices.

The food which men eat in harvest time will have a direct bearing upon their efficiency in the field just as surely as the food fed the farm animals will determine their economic value.

A wholesome and yet economical day's diet for an average working man may be built upon the following plan:

14 ounces of cereal food.
1 pint of milk.
2 to 4 ounces of meat or a good meat substitute.
2 ounces of fat.
3 ounces of sugar or other sweetening.
At least one kind of fruit.
One kind of vegetables besides potatoes (more when one has a garden).

As a part of war-time patriotism those feeding the harvester would do well to make use of the following suggestion: 1. Reduce the amount of meat usually served. 2. Reduce the amount of sugar used. 3. Use less fat. 4. Use only 45 per cent substitute yeast breads and 100 per cent substitute quick breads when possible. The foregoing skeleton is much more limited than the average harvest menu.

There is a perverted idea that large amounts of meat are necessary to the man who works hard. While it is true that the man who does hard muscular work out of doors requires more food than the sedentary man and he can with comfort take care of larger servings of rich foods it is not true that the extra food need be meat. Meat is a good fuel for the human machine if used in moderate amounts along with other foods, but meat is no better fuel than other foods.

When meat is high in price and is so much needed by our allies, as it is at present, is a good time for us to begin to limit the amount in the diet of the harvester as well as in that of other people. By so doing we will improve the health of the nation, for many ills of old age are encouraged by a diet rich in meat.

Meat should be used more for flavor and the large place it has taken may well be filled by dried beans, peas, cheese, milk, eggs, etc. More green vegetables are most welcome to the harvester and are very good from a dietetic standpoint.

Since sugar is quickly converted into heat and energy it is a valuable form of food, but its use is often abused. By far the largest amount of the sugar in the harvest diet should come through the use of large amounts of fruits. Dried fruits such as raisins, prunes, etc., if properly soaked and cooked, require no extra sugar. Much of the sugar used in coffee goes into the dishwater. Sweetening the coffee in the kitchen might reduce this waste. Milk is a splendid hot weather beverage and a greater use of it will do much to conserve sugar. Sirups may be used in cooking and thus a greater reduction made in the amount of sugar purchased.

It is true that there is a physiological reason for fried foods, due to the length of time they remain in the stomach before digestion, which gives a feeling of fullness and satisfaction a longer time than the more easily digested food does. But even so it is wise especially in war time to conserve fat by doing less frying. The puddings which make use of cereals and dried fruits, as well as the fresh fruit sauces served with conservation cookies will also save large amounts of fat, wheat flour and sugar to say nothing of saving no end of time and energy spent in making the time honored harvest time dessert—PIE.

It will be difficult to greatly reduce the amount of bread served in harvest time but if quick breads, using no wheat flour, are served for breakfast, and yeast breads using 45 or 50 per cent of substitutes are used at dinner and cornbread is eaten for supper, there will be no difficulty concerning the use of too much wheat flour. Corn, oat or rice flour, or cornstarch can be used for thickening gravies. Substitute flours should be used in all cakes and only very plain ones should be made. Icings should not be used, in fact they are needed only to cover a poor product.

The potato and corn products should take more prominent places in the harvester's diet during the coming summer. The former can be served three times a day if care is taken to serve it so as to give variety. Hominy or brown rice served with a cheese sauce may well take the place of a meat dish at the evening meal.

Avoid the use of macaroni and spaghetti.

Use more breakfast cereals. Serve more of the green vegetable and salad plants from the garden and less canned goods.

Use a liberal amount of milk.

Serve coffee for breakfast only.

Serve only foods which are properly cooked and well flavored, thus making it possible for the men to observe the "gospel of the clean plate."

The following menus are merely suggestive:

Breakfast—Fruit, oatmeal, eggs, creamed potatoes, barley muffins, butter, coffee.

Dinner—Pot roast, gravy, browned potatoes, creamed corn, sliced tomatoes, war bread, stewed apples, war cookies, milk.

Supper—Cold sliced beef, chili sauce, browned potatoes heated in gravy, stewed tomatoes, corn bread, corn syrup, baked custard, tea, milk.

Breakfast—Fruit, cornmeal mush, hash, potato cakes, oat muffins, jelly, butter, coffee.

Dinner—New England boiled dinner, horse radish, lettuce salad, corn bread, honey, tapioca pudding with fruit, milk.

Supper—Baked beans, potato salad, buttered beets, pickles, war bread, stewed fruit, war cake, milk.

# Clover Yoke in Tatting Designs

By WINIFRED WORTH

Every one likes pretty yokes. Here's one that probably strikes your fancy.

**1st Row**—This yoke is begun by making the row of flowers, first ch. 12, double tu back into 4 ch. from needle. Ch. 4, double tu back into 1st stitch of 4 ch., 3 times. This 1st stitch of 4 ch. is used as the center. Ch. 4, put needle through center and pull thread through. Ch. 4, and tu 3 times ch. 4 rp. until there are 5 petals, then ch. 4, and tu 2 times to complete 1st petal, join to the 1st ch. made where the first part of 1st petal was begun.

**2d Row**—Ch. 12 and rp. until the 1st 2 t. of second petal is made, then take hook out of work and insert in 2d petal of first flower, pull thread through, connect next petal same way, at corner leave two outer petals loose and connect as shown to form corner. Rp. flowers until yoke is large enough, then ch. on open side of flowers with 8 ch. between, use ch. already formed for outside and new ch. for inside, cover ch. with 4 groups of 4 dc. and 3 p., then at corner miss one 8 ch. The next row on either side is formed by a t. in each p. with a 2 ch. between.

**4th Row**—The next row by 4 t. over a 2 ch. ch. 2 over next 2 ch. rp. on each side. Then there is a row of spaces on either side formed by a t. in first t. of 4 t. a 2 ch. all the way on each side. The bottom of the front is finished with a row of solid t.

Leaves and part of the first one remaining unfinished, finish this by a 3 ch. 2 t., connect to first 3 ch. and t. made like the flower in the center the first stitch of the first 3 ch. is used as center, now ch. 3 slip stitch to a t. ch. 6 and rp. clover leaf, connecting second petal. The underneath arm is made from making a ch. the required length then t. over this and finish with clover edge.

**Kill All Flies!** They Spread Disease

Placed anywhere, Daisy Fly Killer attracts and kills all flies. Neat, clean, ornamental, convenient, and cheap. Lasts all season. Made of metal, can't spill or tip over; will not soil or injure anything. Guaranteed effective. Ask for

**Daisy Fly Killer**

Sold by dealers, or 6 cents by express, prepaid, $1.00.

HAROLD SOMERS, 150 DeKalb Ave., Brooklyn, N. Y.

**FARM SERVICE WAR FLAG**

A Flag for Every Farm Home in the Northwest

An Extra Small Star for Each Farm Worker

(Patent applied for.)

**Designed by The Washington Farmer in connection with The Oregon Farmer and The Idaho Farmer for the farm and farm home that is increasing food production in helping to win the war.**

**OFFER NO. 1.**

A farm service war flag, 9x22, printed on heavy enamel paper, in full colors, will be postpaid to any one securing and sending in ONE NEW subscription to this paper. (One year 25c, three years 50c, five years $1.00.)

2324—Ladies' Work Dress—Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 6 1-4 yards of 44-inch material. The dress measures about 2 1-2 yards at the foot. Price, 10 cents.

2533—Girls' Dress—Cut in 5 sizes: 4, 6, 8, 10 and 12 years. Size 10 will require 3 3-8 yards of 44-inch material. Price, 10 cents.

2390—Girls' Dress—Cut in 4 sizes: 2, 4, 6 and 8 years. Size 6 requires 3 yards of 44-inch material. Price, 10 cents.

2531—Girls' Dress—Cut in 4 sizes: 6, 8, 10 and 12 years. Size 12 requires 3 1-4 yards of 44-inch material. Price, 10 cents.

2344—Ladies' Waist—Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 3 3-4 yards of 36-inch material. Price, 10 cents.

2536—Ladies' House Dress—Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 6 3-4 yards of 36-inch material. The skirt measures about 2 1-4 yards at the foot. Price, 10 cents.

2530—Boudoir Set—Cut in 4 sizes: Small, 32-34; medium, 36-38; large, 40-42, and extra large, 44-46 inches bust measure. Size medium requires 4 1-8 yards of 36-inch material for the gown. The cap requires 7-8 yard. Price, 10 cents.

2537—Ladies' Skirt—Cut in 7 sizes: 22, 24, 26, 28, 30 32 and 34 inches waist measure. Size 24 requires 4 3-4 yards of 40-inch material. The skirt measures about 2 yards at the foot. Price, 10 cents.

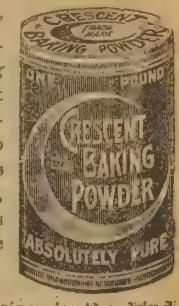
## Hints About Canning.

Ordinary intelligence and individuality are as important in canning as in anything else. There are times when you can follow no rule, and you must rely on your own judgment.

All fruits, vegetables, juices, meats and foodstuffs must be completely sterilized and kept in air-tight containers. Sterilize and cleanse all containers, vegetables and fruit before proceeding with your work.

Use only fresh fruit and vegetables, and always can fruit the same day it is picked.

Be sure you have good rubber rings before sealing. A good rubber should stand being pulled, and should return to its original shape.



Foodstuffs must be sealed absolutely air-tight to insure preservation.

### Ribbon Sashes.

Sashes of brilliantly colored ribbon wound about the hips are a pleasing detail of some lovely French dresses recently imported .

A War Time Baking Powder

Using "Crescent" is true conservation—the saving in both first cost and quantity required will help buy thrift stamps—and your bread, biscuits, muffins and the like are better.

Buying the 5-lb. size is the kind of economy recommended by food authorities.

Crescent
Double Acting
Baking Powder
(B-201)

SANITARY CANNING OUTFITS

Can your surplus foods in a modern, scientific way that will make them easy to sell.

Steam pressure canning hermetically seals the cans and sterilizes the contents. You save time, labor and fuel with our complete outfit, which includes full instructions and $2 recipe book. Write for information.

SEATTLE CAN CO.

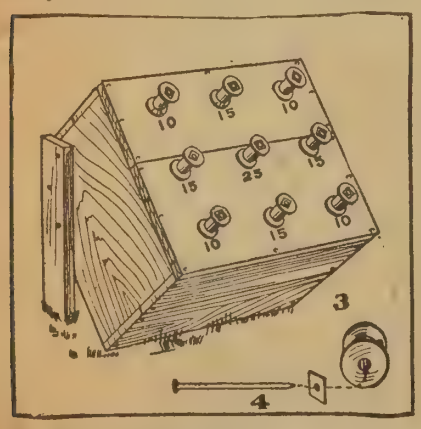
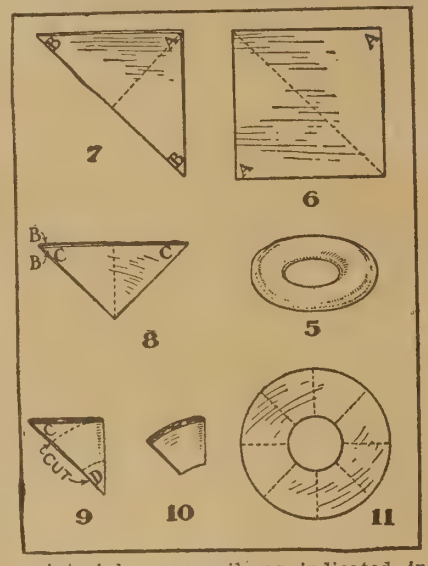
### Jack-Sticks and Ring-Toss.



Here are two unique games that are just right for a summer afternoon too warm to permit of much exertion, because they require no jumping or running about and may be played in the shade.

No doubt you are familiar with the game of jack-straws, in which a pile of tiny sticks in the forms of hammers, saws, shovels, picks, etc., are placed in the center of a table, and then, in turn, each player tries to remove, by means of a small, hooked stick, as many of the "straws" as possible, without disturbing any other "straws" in the pile.



The only difference between the "straw" game and our "stick" game is in the substitution of real hammers, saws, etc., for the small ones. Figure 1 shows the large assortment of articles that may be used — brooms, umbrellas, coat hangers, pans, pot covers, pails, dustpans, etc. Throw these articles in a heap, crossed and recrossed as in the illustration. For the hooked stick for removing the articles from the pile, take a broom handle and drive a long nail into it near one end, as shown in figure 2.

Two or more may play the game of jack-sticks. Taking turns, each player should try to remove, one at a time, as many "sticks" from the pile as she can without disturbing anything else. The turn passes to the next player the instant she disturbs other than the article she is trying to remove. The player securing the largest number of articles is winner.

The game of ring-toss requires an easily made target (figure 3). The target requires a grocery box, two stick uprights to support the box, nine thread spools for pins, and nine nails, one-half inch longer than the spools, with which to fasten them to the box.

The spool pins should be placed four or four and a half inches apart. The heads of the nails for fastening them will likely be smaller than the holes in the spools, and in that case, in order to make the nails hold, it will be necessary to cut small squares of cardboard and run these over the nails as far as the heads (figures 3 and 4). After nailing the spools in their proper positions, number them with black paint, ink or pencil, as indicated in figure 3. Each number represents the score of the spool pin above it.

The tossing rings have a hole through their centers, and are filled with beans, like beanbags (figure 5). Cut two pieces of cloth eight or nine inches square for each (figure 6). Fold each piece in half diagonally, so as to bring corners A together (figures 6 and 7); then fold corner B over on to corner B (figures 7 and 8), and fold corner C over on to corner C (figures 8 and 9). Cut off corners C and D, as indicated by dotted lines in figure 9 (figure 10), and, unfolded, the piece will have the form shown in figure 11. Sew the pair of cloth rings together, both around the outer and inner edges, leaving but a small opening between the outer edges. Fill the bag solid with beans, through the opening, then sew up the opening.

There should be three rings, so each player may have three tosses each turn. The distance from which the rings are tossed may be 10, 15 or 20 feet away from the target. The score is counted by adding up the numbers beneath the spool pins over which the rings are thrown.

### AT THE KNEES.

### Prevent Wearing Out Stockings.

While a group of mothers were talking one day one chanced to remark, as one of her children was crawling on the grass, that all her children were hard on their stockings, and in particular on the knees of them.

"Why, that is easy to prevent," said another mother who had brought up a large family. "When my children were young I prevented that very easy. Over each knee, on the inside of the stocking, I sewed a few shoe buttons. Over the buttons I sewed a piece of lining so that when the children put the stockings on they could not feel the buttons. I never told them that I did this. When they got on their knees to crawl, the buttons hurt their knees and they then had to get up or change their position." C. M.

**Free Information for All.**

**The Washington Farmer pays for this splendid service in order that every one of its readers may take free advantage of it.**

**This service bureau is located in the national capital, where it is in immediate touch with all the great resouces of the United States government.**

**It can answer practically any question you want to ask, but—it can not give advice, nor make exhaustive research.**

**Write your request briefly, sign your name and address plainly, enclose a 3-cent stamp for return postage, and address.**

**Each reader of The Washington Farmer is offered the free and unlimited use of the largest information bureau in the world.**

**School Is Out Now.**

Dear Aunt Nellie: I have found a twin, or rother one found me, and I found the other. The one that found me was Alice Ruth Ralston, Goldendale, Wash. The one I found was Alice Kuper, Mohler, Wash. I am going to write to Alice Kuper when I get some stamps. I have written to Alice Ralston, but she has not answered yet. I have two thrift stamps and I have learned to knit since the last time I wrote. I have about half a wash rag done already. School is out now. I passed into the eighth grade. All of the school passed one grade ahead. I am glad they did, too. I hope all the cousins pass into the next grade. My grandma went to Walla Walla this morning to be operated on for gallstones. I hope that she will be better when she comes back. I will put my age in again, so I may find another twin. I give my love to Aunt Nellie and all the cousins.—Edna Light, Pomeroy, Wash. (Aunt Nellie hopes that by this time grandma is well again. I am always glad when the cousins get along well at school.—Aunt Nellie.)

**Reading Is Her Favorite Study.**

Dear Aunt Nellie: This is the first time I have written to the Corner and I hope to see my letter in print. I have a twin sister who is writing you a letter too. I just have one brother, and he is in the army. He is 20 years old and is an engineer. He is in Maryland now at Camp Meade. My two uncles are in the army, too, one is in San Francisco and the other is in Fremont, Cal. I am 11 years old and am in the sixth grade. My studies are arithmetic, spelling, geography, reading and language. Reading is my favorite study. My teacher's name is Miss Ritchie and I like her very much. We have a Junior Red Cross and a war saving society at our school and I belong to both. We have about 20 head of cattle and two horses. Papa has a car and I will be glad when I get old enough to run it. We have a large farm and a big red barn, a potato house and a granary. The name of our farm is River View, and it is written on a big sign upon the top of the barn I must close, as it is dinner time.—Georgia Lewis, Castle Rock, Wash.

**A Day at Jane's School.**

Dear Aunt Nellie: My subject is about what I do at school. I first go to school, then I take my reader and read, then my speller, and teacher hears me spell. After recess I take my grammar. After noon I take arithmetic and geography, then school is out. I come home and change my dress. Then I go and put in the cows and feed them. I come back and help get supper. We eat supper and I wash the dishes for mama. When we got up this morning I got dressed quick and sat down to write to you. I hope my letter is interesting. I am writing so as to make the Corner grow bigger. —Jane Osborn, Ashford, Wash. (Your letter is interesting, Jane dear, and Aunt Nellie is glad that you are writing to the Corner. You are a busy little girl. Write again soon.—Aunt Nellie.)

**White Kitty Named Snowball.**

Dear Aunt Nellie: This is my second time I have written to the Corner. One of the girls in the Corner wrote to me. I have got two letters from her. Her name is Clara Lybeck. I have joined the Junior Red Cross. I am going to knit a sweater for the Junior Red Cross. The children in our school sold candy one night and we made $5.15. We had a program. Our school let out May 29. I am going to get a white kitty and its name is Snowball. We have two dozen chickens. One of my girl friends wrote a letter to the Corner. I hope that I will see her letter in print. I enjoy reading the letters in the Corner and I hope that the Corner will grow. I go to Sunday school every Sunday. My Sunday school teacher's name is Mr. Carter.—Hazel Elsie Stock, R. F. D. 1, Box 10, Castle Rock, Wash.

**Live on Uncle's Place.**

Dear Aunt Nellie: I am writing to the Corner for the first time. I am 14 years old. I will be 15 December 29. I have brown hair, blue eyes and a light complexion. Have I a twin? If so, please write to me. Our school was built in 1916. We have joined the Junior Red Cross. I also belong to the big Red Cross. I have two brothers, Clifford and Clarence. Clifford is 10 years old and Clarence is 5 years old. They both go to school. I have no sisters. We live on my uncle's place. We came from Seattle two years ago, March 20, 1918. I like to read the letters in the Corner very much and I hope it will grow larger.—Frances Lambert, Penawawa, Wash.

**Take Many Different Magazines.**

Dear Aunt Nellie: So many are writing to the Corner that I thought I would write, too. I am 14 years of age and am in the eighth grade. My birthday is March 8. Have I a twin? If so, I would like to have her write to me. My teacher is Miss Ice nad I like her very much. I have three brothers and five sisters. The girls are: **Helen,** Mabel, Marguerite, Louise and Esther. The boys are Harold, Gordon and Arthur. We have five cows, 26 horses, four calves, about 65 chickens, two geese and four pigs. My two oldest sisters helped can the kaiser by helping papa put in the crop. Papa farms 700 acres of land. He has two threshing machines. I like to read and have read about all the books at home and in the library at school. We take many different magazines. Papa has a $100 Liberty bond. I have no brother old enough to go to war. The oldest being 7 years old.—Freda Felgenhauer, R. F. D. 1, Waverly, Wash.

**Elma's Uncle Has a Store.**

Dear Aunt Nellie: I wonder if there is any more room for one more girl to be a cousin of the Corner. I go to school and I am in the fourth grade. I am 9 years of age. My birthday is January 19. I have two brothers and four sisters. My brothers' names are John, 14 years old; Willie, 17 years old; Clara, 11, Ruth, 19; Bertha, 4 years old, and Mary, 22 years old. Mary and Ruth are married. Mary has a little baby. We live with our uncle and he has a store. We have to walk a mile to school. I will send my name and address so some of you will write.—Elma Bacon, Wawanal, Wash. (Yes, dear, there is plenty of room for one more cousin, but you have to wait awhile for your letters to be printed, you know. Come again.—Aunt Nellie.)

**Named the Calf Cherry.**

Dear Aunt Nellie: How are you and all the cousins? I thought I would write you a few lines today. This makes the second time that I have written to the Corner. Our old cat has four kittens now. I am going to have one for my pet. It is white and it has a few little black spots on it. We have a little calf. We named it Cherry. I have a twin. Her name is Margaret MacLaren. Her birthday is March 24 and mine is March 27. Our school let out May 24. We get the Farmer. I am 12 years old. I wish I could help make the Farmer larger. I love to read the letters. I have two sisters that are married. They both live at Lincoln. I am going down there and stay with them a while. May I be a cousin?—Vera I. McCord, Box 30, Fruitland, Wash.

**Stella Will Write Again.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 11 years old. My birthday is January 10. Have I a twin? If so I would like to hear from her. I live on a 40-acre farm. We have three horses and one cow. We also have four pigs, two dozen chickens and two ducks. We have 22 little chickens. My father takes the Farmer. I enjoy reading the other letters. I have three miles to go to school. I am in the fourth grade. My teacher's name is Clara Nelson. We have 22 pupils at our school. We drive in a one-horse buggy. I have two sisters and two brothers. I will write again.—Stella Johnson, Box 57, Fruitland, Wash.

**Humming Bird Sips the Honey Dew.**

Dear Aunt Nellie: I have not found a twin yet. I was 9 years old April 28, 1918. There are two logging trains past our house. We have 70 little Easter chickens. We are close to a logging camp where my papa works. We live five miles from school. There are 18 scholars in my room. My teacher's name is Miss Bunker. We just moved to Washington this spring. I have three sisters and one brother. Our baby, Lois, is 2 years old. Pearl is 4 years old and Ruth is 7. My brother, Glen, is 6 years old. Glen is in the first grade at school. There is a humming bird that gets honey dew from our flowers.—Ellen Hay, Shelton, Wash.

**Sister's Name Is Helen.**

Dear Aunt Nellie: May I join the Children's Corner? This is my first letter, but I hope it won't be the last one. Have I a twin? One cousin said her birthday was September 20. Her name was Laurella Tarthung. I thought, maybe she was 13. I am 13 and my birthday is September 20. I will be 14 then. We have two horses and one cow. I am in the sixth grade. The horses' names are Tony and Snip. The cow's name is Blackie. Tony is my pet horse. I have three brothers. Their names are George, Raymond and Ralph. I have one sister. Her name is Helen. Ruth Land, Winthrop, Wash.

**Play Many Games at School.**

Dear Aunt Nellie: I would like to write to the Children's Corner. I am 6 years old. I went to school all this year. This was my first year of school and I went through two books and a half. I had 10 playmates at school. We play games at school. We play wring the dishrag and New Orleans. The names of the children are Dale, Ruby, Biillie, Velta, Ruth and Ruby, Edna, Elva, Alice, Erma. Ruth and Ruby are twins.—Constance McDonald, Wash.

**Ruth Is Now a Cousin.**

Dear Aunt Nellie: May I join the Children's Corner? I had meningitis last spring and could not talk or move, but I kept getting better, so I talked some and crawled around in the summer. By October I could walk, but fell down lots. I started to school in November and went when papa could take me.—Ruth Hay, Shelton, Wash.

**Win the War by Saving.**

Dear Aunt Nellie: I have been so busy that I haven't had time to write to the Corner for a long time. I am 11 years old. The last time I wrote I was 10 years old. We are having quite a time with the Germans, but the only way we will win the war is to save. I

> TO the Children's Corner: Children I love to read your Corner and the editor is a good man to let you have it. So be good children and obey your parents and attend Sunday school. When you grow up be brave men and women and help in this time of trouble all you can. I have no twin. I am 64 years old. I live alone and take the Farmer.
>
> E. C. HADLEY.
> Box 14, Entiat, Wash.

am saving and eating less. We have graham bread half of the time. My father has bought three bonds. Six of us have bought thrift stamps. I received the samples of The Farmer and will try to get some new subscribers. I hope every one is doing their best toward saving food. I am in th fifth grade. My teacher' name is Miss MacDonald. I have dark brown eyes and dark brown hair. Have I a twin?—Reeta Bateman, West Jordan, Wash.

**Work Easier in Overalls.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner and I hope it will not be the last time. I am 14 years old. My birthday was December 17. I have dark hair, dark brown eyes and a light complexion, when I am not all tanned up. I am 5 feet 5 inches tall. I go to the Pleasant Hill school. My teacher's name is Miss Feterson. I go to the same school that Hazel Stock goes to. I go to school with her nearly every morning. I live on a 40-acre farm about three and one-half miles from the town of Castle Rock. We have five cows, two horses and one dog. Our cows' names are Jersey, Mabel, Daisy, Flossy and Star. Our horses' names are Pet and Topsy. We have six old rabbits and about 30 little ones. My little brother and I go fishing in our creek. There aren't very big fish but it is fun to catch them. In the summer time I wear overalls. You can work so much easier in them. I surely hope the Children's Corner stays large because I like to read the letters. I would gladly correspond with any of the cousins if they wish.—Elva Richards, R. F. D. 1, Castle Rock, Wash.

**Uncle Floyd Writes Often.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 10 years old. My birthday is January 20. We have two horses. Their names are Doll and Bird. We have three colts, Dick, May and Cleve. We have two cows, Judy and Goldy, and two heifers, Susia and Silver; a dog named King and a cat, Veley. I have three sisters. Their names are Verda, 8 years old; Emma, 6 years old; Lola, 3 years old, and two brothers, Kenneth, 11 years old, and Baby Roy, 1 year and 6 months old. I have two uncles in the army. Uncle Frank is in France and Uncle Floyd is in New Jersey. He is a cook. He cooks for the headquarters company. We hear from him nearly every day. He likes us children. My teacher's name is Miss Thelma Schrender. There are 22 children in our school. I am in the third grade and my brother Kenneth is in the third grade and Verda is in the first. We do not have very far to go to school. My papa has seven and one-half acres of land. We have 24 chickens. Have I a twin?—Nerna Ritter, Tenino, Wash.

**Soon Have Little Chickens.**

Dear Aunt Nellie: Have I a twin? This is the first time I have written to the Children's Corner. I live in a town three blocks from school. I am in the fourth grade. I would like to live on a farm like some of the cousins do. My father has two horses. Their names are Topsy and Kate. Their color is red. We have nine chickens; one of the hens is setting. We will soon have some little chickens. We set her on 15 eggs. I hope they will all hatch. There are 33 pupils in my room. I belong to the Red Cross. I am 11 years old. My birthday is February 13. I will be 12 years old my next birthday. There are 12 pupils in my class. The fourth and fifth grades are in the same room. My teacher's name is Miss Hinshaw. I like her. I think that she is the best teacher I ever had. My hair is dark brown and my eyes are dark brown.—Ida Smalley, age 11, White Salmon, Wash.

**Catch Their Wood in the River.**

Dear Aunt Nellie: This is the third time I have written to the Children's Corner. I am in the sixth and seventh grades at school. We live right along the Snake river. It is up pretty high now. We catch our wood in the river when the water is high. My papa rows the boat and my sister or my mama catches the wood. Sometimes I go to hold the boat for them. One time when the river was high we were going along the river and my sister saw a rubber ball. She threw some sticks in and tried to bring it to the shore, then our old dog saw her throwing and he went in after the sticks and brought the ball out on his tail. When I was up there holding the boat for the folks I was standing on a steep bank and just as I went to sit down I saw a rattlesnake, right by me, lying in a hole. Then my papa killed and threw it in the river. My mama belongs to the Red Cross. My mama and sister Olive and I are going to make a quilt for the Red Cross. I have got two letters from Margaret Kane and one from Sallie Garry. Margaret sent me her picture and I was surely glad to get it.—Elva Green, Penawawa, Wash.

**To Raise a Garden of Their Own.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner and I would like to join. I am 10 years old and in the sixth grade. We have four milk cows, four calves, eight head of wild cattle, 11 horses, three sows and seven pigs. I bought a thrift stamp and this summer I am going to save money for some more. I have two brothers and one sister. Their names are Robert, Sten and Anna. She is the baby. I set two hens now. Mama and papa set the incubator with 140 eggs in it. I have a pony and his name is Kino. We live one mile from school. We drive our pony to school. In the summer we drive the buggy and in the winter we drive the sleigh. I've got a new saddle horse, and sometimes we ride to school. My brothers and I are raising a garden of our own. I will write again.—Swanhild Frostenson, Fairfield, Idaho.

**Hazel Found a Twin Cousin.**

Dear Aunt Nellie: I have not written to the Corner for a long time, so I thought that I would write again. Can I still be a cousin? I found a twin sister the other time when I wrote. Her name was Hazel Dowell. She lives at Burbank, Wash. I belong to the Junior Red Cross. I will tell you some riddles. As I was going over London bridge, I met a cart full of fingers and thumbs. What comes around the house and throws a white glove in the window? Higher than a house and higher than a tree, oh, whatever can that be?—Hazel Ethredge, age 12, Mohler, Wash. (I know the cousins will be glad to hear from you again, Hazel, for we have missed you. Aunt Nellie.)

**Sarah Writes Again.**

Dear Aunt Nellie: This is the second time I have written to the Corner. I am 11 years old and will be 12 October 12. I wish somebody would write to me, either a twin or not a twin. We had lots of fun playing at school. We played Pump Pump Pull Away, Statue and Rotten Egg. I have four sisters and three brothers. There are 10 in our family, but I think my oldest brother will join the army pretty soon. —Sarah Millenaar, Oak Harbor, Wash.

**Belongs to a Garden Club.**

Dear Aunt Nellie: This is my first letter to the Children's Corner. I am 10 years old and in the fifth grade. My birthday is May 16. My teacher's name is Miss Snider. I enjoy reading the letters. I have two brothers and two sisters. Their names are Hazel, Stanley, Nellie and Kenneth. I have a pet cat. She is a little kitten now. I am buying Thrift stamps. I belong to the Garden club and the War Savings society.—Ruby Price, Yelm, Wash.

**Likes Wild Flowers.**

Dear Aunt Nellie: I am 9 years old. I like to go to school. I go five miles to town school in a car. I have two brothers and their names are Edgar and Levi. We live on a 160-acre farm. I like the wild flowers. We go flower-picking nearly every day. We all like the Farmer. This is the first letter I have written to the Children's Corner. —Lester L. Thompson, R. R. 1, Box 4, Goldendale, Wash.

# Here Is a Home-Made Stump Puller

By CARL J. MENZE.

Clearing timber land is not a difficult proposition providing one has the necessary capital. But those who have no capital to speak of, and there are many in this position, must act accordingly; they face a condition and not a theory. Therefore, the accompanying illustration of a home-made stump puller, from the field of experience, will be found a great help.

It is operated by hand-power. Two sweeps are used—a long one for a heavy pull, and a short one for a light pull. Blocks may be used on a heavy pull, if necessary.

The whole frame is securely bolted together. Four long bolts pass through the frame from top to bottom. These bolts are essential to keep the top from being pulled off.

The drum is made from a maple log. Where it passes through the top and bottom planks it is notched in and made narrower. On the top of the drum two iron bands are fitted on to prevent it from being twisted off. The main cable is fastened onto the drum by means of a large staple which is driven into the drum.

The complete stump-puller can be constructed by any one who is handy with tools.

## ALL-STAR CHAMPIONS.

### They Will Go to Washington, D. C.

Six youthful members of the boys' and girls' clubs throughout the state of Washington are wearing the badge of the all-star champions, and will go to Washington, D. C., when the next conference is called by O. H. Benson, who has charge of boys' and girls' club work for the northern and western states.

A member from each branch of club work was chosen—those whose reports showed the greatest profit for the year being the successful candidates. Following are the winners and their net profits for the year of 1917:

Ivan Anderson of Toppenish, champion of potato clubs, with a profit of $323.85.

Benjamin Franklin of Mt. Vernon, champion of garden clubs, with a profit of $249.50.

Ellen Hummel of Wapato, champion of garden clubs, with a profit of $143.46. Miss Hummel canned 775 quarts of produce during the year.

Roy Stroh of Snohomish, poultry club champion, who made a profit of $151 from 63 chickens.

Hershall May of Toppenish. This pig club champion was the raiser of 1470 pounds of pork and won several prizes.

Earl Cheldelin of Toppenish, champion of corn clubs, with a net profit of $208.55.

## STATE FAIR.

### Increased Offerings for 1918.

The superintendents of the Washington State fair, to be held at Yakima September 16-21, are as follows: Dr. R. J. Donohue, horses, cattle, sheep and swine; William Hislop, sheep; M. L. Dean, agriculture, horticulture and bees and apiary; Mrs. Granville Ross Pike, bird conservation; Miss Mary Remy, floriculture, culinary, arts and crafts; William H. Adams, pure foods; S. W. Ness, children's industrial and agricultural department; Miss Mary Gupe, child welfare; Frank Meredith, mines, minerals, amusements, attractions and concessions; Harry H. Collier, poultry; A. D. Fish, dairy and milch cow test.

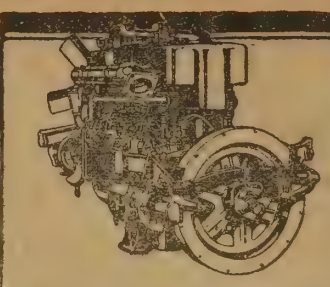
The premium list shows increased offerings in both the live stock and agricultural departments.

In the county exhibits which are to be made a special feature again this year the counties scoring 666 points out of a possible 1000 are to be given an additional $50 for their achievements. This is in addition to the $100 prize for each county exhibiting, the $100 prizes to be pooled and prorated according to the scores, and $25 for the most attractive, the best decorated and the best arranged exhibit.

The scheme of awarding prizes looks to bringing out exhibits which will be of such a character that they will command the attention and admiration of all spectators.

The offerings on fat cattle have been increased from $12.50, $7.50 and $5 to $20, $15 and $10 and the champion fat animal which drew only a ribbon in the past will call for a $10 bill this year.

Again looking toward quality exhibits, the management has seen fit to increase the size of the prize offered for the best pen of poultry from $5, $3 and $2 to $10, $5 and $3.



Some increases are also noted in the draft horse department and for Shetland ponies.

Responding to a demand, Romney sheep have been added to the sheep division. The interest in sheep last year, and especially in the sheep sale, has made the department one of the most popular with exhibitors and those having stock for sale in all sections of the northwest.

Other increases in prizes are for wheat, corn, potatoes and fruit.

A site has been arranged adjacent to the live stock headquarters where exhibitors of live stock, their families and attendants may camp, under the rules of the state fair. The location is described as pleasant and the stock men are invited to take advantage of the accommodation. Parties desiring to camp should notify the secretary as early as possible, as the camp lots will be assigned in the order in which they are received. Full information is given in the premium list on all matters pertaining to the fair and which, as long as they last, may be obtained from the secretary, Frank Meredith, Yakima, Wash.

*Experts Say*
"ZEROLENE IS BETTER"
—because it holds better compression, gives better protection to the moving parts and deposits less carbon.
Zerolene is the correct oil for *all types* of automobile engines—the correct oil for your automobile.
Get our Lubrication Chart showing the correct consistency for your car.
STANDARD OIL COMPANY
(California)

The "T"-Head type engine, illustrated here, like all *internal combustion engines*, requires an oil that holds its lubricating qualities at cylinder heat, burns clean in the cylinders and goes out with exhaust. Zerolene fills these requirements perfectly, *because it is correctly refined from selected California asphalt-base crude.*

## News for Breeders

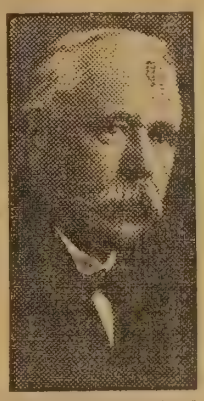
George DeBok, the Oregon City, Ore., Duroc Jersey breeder, will show in the Oregon futurity for the first time this year. He has two early March litters by Chief Oregon 2d, a grandson of Golden Rod. Mr. DeBok lets his pigs run in a two-acre orchard, as he believes growing pigs need exercise and says Durocs will take the exercise if given the room, no matter how well they are fed.

Last year Judge Grant B. Dimick of Oregon City, Ore., kept over 26 registered Shropshire ram lambs. This year the wool from the yearlings averaged $7.05 each. It is true that they were well sheltered and cared for and this, with the high price, explains the immense wool yield. The fleece from one of Judge Dimick's Cotswold rams sold this year for $10.50 and last year for $10.

O. P. Bjornsgard is the only breeder of registered Berkshire swine in the Skamokawa valley, Washington. He has a good herd with a grandson of Laurel Champion, from F. R. Steele, as herd boar. Mr. Bjornsgard has good foundation sows from Hudson and Talmadge. He has been breeding for four years and has found ready sale for his pigs. He uses skim milk and buttermilk as feed and uses very little grain, though he says there must be some grain combined with the milk to get good results. Mr. Bjornsgard says every farmer should have one brood sow, if no more, and is glad that nearly all the farms in Wahkiakum county fatten a few pigs each year, whether they keep a sow or not.

At the E. R. Brady dispersal sale of Guernseys June 26, 39 head were sold for $6435, an average of $165. Several baby calves were included, and as the cattle were not all in first-class sale condition and feed prospects and labor conditions are bad, it must be considered a fairly good sale. The Pilchuck Ranch company of Pilchuck, Wash., topped the sale, paying $415 for the show cow, Annie Truth of Coventry Lake, with a good A. R. record. They were the heaviest buyers, taking seven head for $1730. None of the cattle went outside of the state and most of the offerings stayed in the big dairy regions of western Washington, though a few purchasers were from the eastern part of the state. H. A.

## Baby Calves on Fair Acres Farm



The above photo shows some of the baby Jersey calves on Fair Acres Farm of J. B. Stump & Son, Monmouth, Ore. These gentlemen have recently put 11 head of Jerseys on official test and have several large records in prospect. Diamond of Fair Acres began her test at 3 years and 2 months old. At her first month she milked 1580 pounds. Her dam was a very persistent milker and she has shown persistency in her previous lactation. If she comes up to her present promise she will make a world's record for Jersey milk production for age. One mature cow is milking 63 pounds a day. The Stump Jerseys will be pastured on rape this summer. H. A.

### GIVES TO RED CROSS.

### Sharples Donates Pure Breds.

P. N. Sharples, president of the Sharples Separator company of West Chester, Pa., announces that he will donate to the American Red Cross four pure-bred dairy cows, outstanding representatives of the four dairy breeds of cattle—the Jersey, Guernsey, Holstein and Ayrshire. Mr. Sharples' offer has been indorsed by the National Red Cross society and details of the plan are now being perfected by the dairy council, and a committee representing the four breed associations. Sixty cities will be visited. The plan is to feature the cattle in every city visited during a Red Cross dairy day, when they will be sold at public auction to the people of each city. Every bid will be accepted, thus realizing a large sum—all money so bid and subscribed to go to the Red Cross through the local Red Cross organization in charge of the auction sale. It is also suggested that the cows be so routed that they be in Waterloo, Iowa, the last week in September at the dairy cattle congress and at Columbus, Ohio, the week commencing October 10 for the national dairy show. Mr. Sharples also suggests that at the last-named show these cows be finally donated by the people of the United States through the American Red Cross to the government of France as a foundation of four breeding herds of dairy cattle. The support and assistance of Children's Welfare organizations are also asked to the extent that speakers may talk in each city where the cows are sold concerning the unequaled value of dairy products as economical food and especially the need of milk for growing children.

## BERKSHIRE SWINE

### Berkshire Hogs for Sale

Have a number of sows, 18 months old; will farrow second litter this fall. Also young gilts and boars of all ages; all from prize winners. Write for prices.

EARL WOOD. Silverton, Oregon.

# Breeders' Department

## JERSEY CATTLE

### High Producing Jersey Stock

**Golden Maid's Prince,** sire of three Register of Merit daughters. One, beginning at 1 year 10 months, produced 341.27 pounds 85 per cent butter in one year; two junior yearlings, 480.40 and 450.08 pounds. Five more, over six months on test, will average over 600 pounds. He was grand champion Oregon State fair, 1913.

**Monmouth Noble**—4 Register of Merit daughters. Three 2-year-olds produced 482.10, 401.30 and 377.07 pounds butter, and one, beginning at 1 year 10 months, 427 pounds.

ABOUT 25 HEIFERS

From 8 months to 2 years old. Several to freshen this fall. All daughters of above bulls and nearly all out of Register of Merit cows. Heifers are well grown, typy, best of udders and some are extra fine show animals. Write for full particulars or call and see them. Will be sold very reasonably.

WM. SCHULMERICK, Hillsboro, Ore.

## SHORTHORN CATTLE

### HERD BULLS

Imported Donne Radiance No. 609412 and Gainford Perfection No. 442173.

### Hercules Shorthorns

Our surplus stock has been sold. No orders can be taken until later in season. Your inspection of our herd is invited. Visitors always welcome.

DAY & ROTHROCK COMPANY, 205 Exchange Bank Building
SPOKANE, WASH.

### LELAND BROTHERS

Breeders of top registered Shorthorn cattle. Correspondence solicited.

WENDELL, Idaho.

REGISTERED SHORTHORN COWS.
Young bulls and heifers, sired by Scotch bulls; liberal terms.
CALDWELL CATTLE CO., Caldwell, Idaho.

## DUROC-JERSEY SWINE

OVER 150 SPRING PIGS.

Yeksa. Gov. of the Chene, Sequel and May Rose strains. More prizes at Oregon state fair, 1916 and 1917, than any other exhibitor for number of cattle shown. A few choice animals of both sexes now offered.

W. A. GOODIN, Cornelius, Oregon.

## HEREFORD CATTLE

### Highland Stock Farm

offers for sale Hereford bulls, 1 or 2 years old. One or a carload.

PLATT BROS. Genesee, Idaho.

## AYRSHIRE CATTLE

EDGEWATER FARM
Only one bull left, calved Dec. 14, 1917, with high producing dam; grand dam and great grand dam both world's record cows.
ELBERT M. CHANDLER, Burbank, Wash.

## ABERDEEN ANGUS

### Aberdeen Angus Cattle

A. H. EAGLESON & SONS.
Boise, Idaho.

## HAMPSHIRE SWINE

REGISTERED HAMPSHIRE HOGS.
Growthy and vigorous, great rustlers. Pigs from January and February litters, also other ages. Correspondence invited.
TUTTLE BROS., Asotin, Wash.

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, July 8.—Action of congress looking to higher prices on wheat stimulated an advance in the value of corn today, notwithstanding the announcement of a veto forthcoming from President Wilson. The market, however, closed unsettled, 1-4c net lower to 1 1-4c up, with August at $1.54 1-4 to $1.54 3-8 and September at $1.55 1-4. Oats finished 5-8c off to 1-8c advance, and provisions varied from 25c down to a rise of 20c.

Commission house buying of corn was strongly in evidence throughout the day except just before the close, when sales to realize profits became the rule. Bulls contended that even aside from the action of congress corn was worth more money on the basis of current premiums paid for new wheat.

Oats were inclined to advance with wheat, but encountered hedging sales. Rains in western Canada operated as an element of depression

Provisions averaged higher owing to a falling off in receipts of hogs and because of large exports. Most of the demand, though, came from shorts.

**Cash Quotations.**

Cattle—Receipts 184, market steady. Prime steers, $12.50@13.25; good to choice steers, $11@12; medium to good steers, $9.25@10; fair to medium steers, $8.25@9.25; common to fair steers, $6.25@8; choice cows and heifers, $8.25@9; good cows and heifers, $6.25@7.25; common to medium cows and heifers, $5@6.25; canners, $3@5; bulls, $6@9; calves, $7.50@10.50; stockers and feeders, $6.50@8.50.

Sheep—Receipts none, market steady. Prime lambs, $14@14.50; good lambs, $12.50@13; prime yearlings, $8.25@9.25; prime wethers, $7.25@8; best mutton ewes, $5@8.

## Portland Market.

PORTLAND, Ore., July 8.—Wool receipts at the Portland warehouses were very large in the last week. All preparations are complete to begin valuing and distributing this week. Mohair prices have dropped back to 55 cents since competition between country merchants ceased. Growers are less disposed to sell at the present price.

The coarse grain markets were very quiet in the last week. At the close all prices were steady with sacked oats quoted at $60, bulk oats at $55.50@56.50, bulk corn at $64.50@66, brewing barley at $54 and feed barley at $52. The milling division of the food administration has issued notice to millers that after this month it will cease to exist.

The demand for cube butter has slowed down, but the market is fairly steady at 45 cents. Print prices are still being shaded by city creamery men.

There is the usual summer dulness in the egg market. Receipts are not large, but are sufficient for all purposes. The ruling quotation on current receipts is 37 cents. Poultry and dressed meats continue scarce and firm.

Oregon peaches are coming in more plentifully and the best Alexanders from The Dalles are selling at $1.25, while half-ripe stock drags at 75 cents. Local potatoes are in fair supply, but are rather small and immature.

Butter—Cubes, extra, 45 cents; prime firsts, 44c; prints, extras, 48c; cartons, 1c extra; butterfat, No. 1, 47c delivered.

Eggs—Oregon ranch current receipts, 37c; candled, 40c; selects, 42½c per dozen.

Cheese—Jobbers' buying prices, f. o. b. dock, Portland; Tillamook, triplets, 23½c; Young Americas, 24½c per pound; Coos and Curry, f. o. b. Myrtle Point; triplets, 23c; longhorns, 34c per pound; ¼c discount to Portland trade.

Poultry—Hens, 27c; broilers, 30@32c; ducks, nominal; geese, nominal; turkeys, nominal.

Veal—Fancy, 17@17½c per pound.

Potatoes—Oregon, Burbank, $1.50 per hundred; new California, 3½c per pound.

Hay—Buying prices, f. o. b. Portland; eastern Oregon timothy, $32@33 per ton; valley timothy, $27@28; alfalfa, $21@24.50; valley, grain hay, $24@26; clover, $21; straw, $9@10.

## Seattle Market.

SEATTLE, July 6.—In the produce markets there has been little change during the week. Prices have remained firm and shipments have been good, notwithstanding a car shortage in some sections.

More apples have arrived and are now selling at $1@1.50. This is a reduction of 25c on former quoted prices. Peaches are getting more plentiful, although the crop is not what was expected earlier in the season.

Butter will advance 1c per pound Monday.

**Purchasing Prices.**

Eggs—Select ranch, 40@42c per doz; Oregon, eastern Washington and Idaho, 37c per doz.

Butter—Fresh dairy, 30c per lb; butter fat, 50c per lb; baking, 30@35c per lb; raw milk, $2.25 per cwt.

## Butter and Eggs.

PORTLAND, Ore., July 8.—Butter—Prints, extras, 48@49c; cubes, extras, 45c; prime firsts, 44c; dairy, 34c. Butterfat, Portland delivery, No. 1 sour cream, 49@51c.

SAN FRANCISCO, July 8.—Butter—46½ @50c. Eggs—Fresh, extras, 48c; firsts, 41s; fresh, extra pullets, 46½c. Cheese—New firsts, 24½c; Young Americas, 25c.

CHICAGO, July 8.—Butter—Unsettled. Creamery, 38@42½c. Eggs—Hibher. Receipts, 10,230 cases; firsts, 36@37c; ordinary firsts, 34@35c; at mark, cases included, 33@36c.

## Spokane Market.

The fruit and produce market is beginning to feel the 25 per cent increase in freight rates. Bananas have jumped wholesale from 7 3-4 to 8 cents up to 8 1-4 to 8 1-2 cents. As a result dealers will have to pay 35 cents extra, including war tax, per hundredweight for freight, which amounts to $68 to $70 a car on bananas.

The next car of lemons will cost an extra $75 a car, which will be immediately reflected in the increased wholesale and retail prices.

Both the Standard Oil and Shell companies have raised the price of gasoline here to 25 cents, an increase of half a cent, as the result of the June freight rate, which has increased the cost of shipping gasoline products. Pearl oil, which formerly sold at 13 cents a gallon, now sells at 14 cents. Distillate has advanced half a cent a gallon.

**Beef**—Beef steers, 14½ @20c lb; cow beef, 12½15c lb; heifers, 16½ @17c lb; best loin, 25@33c lb; steer chucks, 11½ @12½c lb; prime ribs, 20@24c lb; rump and round, 19c lb.

**Mutton**—Breakers, 21c lb; wethers, 20c lb; **Lambs**—Diamond T. C. lambs, 28c lb; lambs, 27c lb.

**Pork**—Packer dressed hogs, 26@27c lb; pork loins, 30@32c lb; legs, 30c lb; shoulders, 25c lb; leaf lard, 28c lb; tenderloins, frozen, 40c lb; spareribs, 15c lb; country dressed hogs, with head on, 21c lb to producer; country dressed veal, 14c lb to producer.

**Smoked Meats**—Washington hams, 34c lb; T. C. hams, 35c lb; T. C. bacon, 46½ @48½c lb; Washington bacon, 39½ @43¼c lb; picnics, 24c lb; English bacon, 35c lb.

**Star Brand**—Hams, 35c lb; Shield hams, 33@34c lb; picnics, 24c lb; bacon backs, 25@34c lb; Star bacon, 46½ @48½c lb; Shield bacon, 40@43½c lb; Simon Pure lard, $17.50 case; Shield lard, tierces, 26½c lb; White Cloud compound, tierces, 26½c lb.

**Dry Salt Meats**—Clear bellies, 25½ @26c; lean backs, clear, 26½c lb; sides, 26c lb.

**Lard**—Tierces, 26¼c lb, $13.99@14.74 case; Diamond T. C. pure leaf lard, $15.50 case, $8 half case; Snowcap compound, tierces, 23c lb.

**POULTRY.**

**Live Poultry**—Live hens, 18@20c lb; spring chickens, 28@30c lb; roosters, 12½c lb to producers, f. o. b. Spokane.

**GASOLINE, LINSEED OIL, ETC.**

**Gasoline**—Red Crown, bulk, 25c gal, cases 35c gal; Shell, 25c gal; refined oil (Pearl), bulk, 14c gal, cases 23c gal; Eocene, 15½c gal in bulk, cases 26½c gal; engine distillate, 17c gal, bulk.

**Linseed Oil**—Raw, bbl, $1.73 gal, cases $1.91 gal; boiled, bbl, $1.75 gal, cases $1.93 gal.

**Turpentine**—Bulk, 79c gal, cases 99c gal.

**White Lead**—Strictly pure white lead in oil, ton lots, 12⅜c lb; 50-lb lots, 13½c.

**GRAIN AND FEED.**

**Rice**—Fancy head, $7.50@9.50 cwt.

**Flour**—Bluestem, $9.40; Blend, $9.40; graham, $8.65 bbl., 49-lb sacks; whole wheat, $8.85; eastern rye, $9.90; eastern rye meal, $10.30; oat flour, $12.15, 4 45-lb sacks.

**Oats**—$67 ton whole, $70 rolled, delivered in city; steam rolled No. 2, $65 ton.

**Corn**—$72 ton; cracked corn, $74 ton.

**Barley**—Rolled, $70 per ton.

**Oil Meal**—$75 per ton.

**Spokane Quotations on Hides.**

## Hay Growers May Unite.

A movement is understood to be on foot in the hay-growing districts of central Washington looking toward the coordination of the efforts of the producers on both sides of the mountains. It is stated that a representative of the East Side producers will soon make a trip onto the West Side to consult with the growers there. There is also talk of devising some plan whereby the growers may, through cooperative efforts, get in direct touch with the consumers and thereby save much handling charges and middle men's profit. It is considered that the requirements of the army will considerably influence the hay marketing situation this year.

**San Francisco Produce Market.**

SAN FRANCISCO, July 6.—Butter, 46½ @50c.

Eggs—Fresh extras, 47½c; firsts, 41c; fresh extra pullets, 46c per dozen.

Cheese—New firsts, 23½c; Young Americas, 25c.

## CORN IN ARGENTINA.

### Price Continues to Decrease.

The market for maize (corn) in Rosario is in an anomalous position and it is predicted that if the price continues to decrease corn will be burned as fuel in northern Argentina, is the report of Consul W. L. Bonney of Rosario. The ocean shipping situation is responsible both for the low price of corn and the high price of fuel. With the new crop of corn now coming on, and with no prospect of ready exportation, maize is selling for the equivalent of 54 cents per bushel at Rosario, and for correspondingly less in the remote interior districts. Hogs are not raised to any great extent in northern Argentina, and corn is not popular in any form for human food. The crop therefore is raised for exportation, and at present both wheat and linseed are preferred cargoes for outgoing boats, leaving the corn producer with an abundant new crop and without much probability of being able to export in quantities for many months to come. The lack of storage facilities and bags adds to the embarrassment of the situation. At the same time the price of hard coal, ton for ton, is more than double the price of corn, and the price of the best burning wood is but little less, ton for ton, than the price of corn. It is therefore entirely possible that in the country districts corn will be burned for steaming purposes the coming winter.

suggest that two things, good roads, and communicating system, would improve rural conditions greatly.

C. M. YEARRINGTON.

## Farm Labor Situation.

Colonel Clarence Ousley, assistant secretary of agriculture, in a recent address put the need for farm labor squarely up to the cities. "We have got to strip for war as England, France, Italy and Belgium have stripped," he said. "We can not win the war and maintain peace-time habits and conveniences. We can not win it by depending upon the men, women and children who are now on the farms and who are working from daylight to black dark.

"Last year in many agricultural regions where ordinary farm labor was not available on call the people of the towns and cities closed their stores and shops and offices for a day at a time or for such time as was necessary, and saved the crops. By concert this can be done anywhere without material loss to any business or any industry."

## Adds to Acreage.

W. W. Davis, who recently bought the Frock farm of 280 acres south of Palouse, has purchased an additional 80 from George N. Lamphere, paying $85 an acre. The land was isolated from Mr. Lamphere's other holdings, but joined Mr. Davis' farm, giving him 360 acres in a body.

**SHIP** your cattle where they will bring you the most money.

## CACTUS GROWING.

### Not a Success in Washington.

"From experiments made on cactus in various southern states, it has been found that it is not hardy where the winter temperature drops very low," says E. G. Schafer, professor of farm crops at Pullman.

Because of this limiting factor, Professor Schafer believes the cactus is not suited for Washington, although such use is periodically suggested by farmers and students of agricultural conditions. In confirmation of his opinion as to the climatic limitation on cactus growing, the Pullman man quotes Luther Foster of the New Mexico experiment station, who says: "The Burbank spineless cactus will not live through the winter here, although we seldom have it lower than 12 degrees and the ground is never frozen enough to interfere with plowing." T. Francis Hunt of the California station says: "Spineless cactus will stand a light frost, but when we have a rather cold winter, which is probably a medium winter in your state, the cactus is usually badly nipped by these frosts. If the thermometer gets down to 15 or 16 degrees many times during the winter, or even 20 or 21 degrees, I think it would be out of the question to think of attempting to grow this crop."

The Arizona station has come to the conclusion that alfalfa is a better forage crop for Arizona conditions than cactus, as the latter is made up largely of water and is deficient in protein.

After reviewing these findings in other states, Professor Schafer sums up the case for the cactus as a forage crop in Washington:

"The cactus has not been a dependable forage crop in southwestern United States, where conditions are fairly well suited for its production. In critical times and during a shortage of other foods it has been used to a certain extent with a fair degree of success. Investigations conducted and observations made in these states show quite clearly the limitations of the crop, and it would not seem at all likely that any of the numerous forms would be of value in the state of Washington."

**Recruits Get 60 Days' Leave.**

Sixty days' leave for farm work is being granted United States naval recruits at Providence, R I.

## Want Ads

### HELP WANTED—MALE 3

MARRIED MAN FOR FARM WORK; steady job for good teamster. Address A. C. Solle, Wilbur, Ore.

### FARM LANDS—FOR SALE 651

ATTENTION, LANDBUYERS!

Here's an excellent proposition:

40-acre farms, selling for $25 to $35 per acre; long-time payments, 6 per cent interest; in the best agricultural part of Snohomish county, where you have all the modern conveniences—paved roads, railways, schools, churches, mills and factories. This district has proven its worth by the many successful farmers now located there.

We also have some beautiful 10-acre water-front tracts.

OPPORTUNITY knocks at every man's door ONCE, but, believe me, it does not continue to knock forever, nor does it pound the door down. For further information address the owners, BROWNELL LAND CO., 904 Third ave., Seattle, Wash.

EASY TO PAY FOR GOOD LAND AT $40, ON TERMS OF
$1 CASH PER ACRE.
50C PER ACRE MONTHLY.

Interest on deferred payments 6 per cent. BUY 20 acres or more at $40 an acre on the above terms, in LEWIS COUNTY, south of CHEHALIS, on the main double track line between Seattle and Portland, the N. P., the G. N. and the O.-W., the best transportation in the state.

FINE, LEVEL LAND, SILTY CLAY SOIL, NO ROCK, NO GRAVEL, CLOSE TO RAILROAD AND PACIFIC HIGHWAY, LEWIS COUNTY, SOUTHWEST WASHINGTON. FREE CIRCULAR. Write to
DAVID P. EASTMAN,
1024 THIRD AVE., SEATTLE.

9 MILES FROM CENTER OF SPOKANE. 70 acres; on paved Appleway, Spokane valley; 30 minutes' ride on electric R. R.; station on place; finest black loam soil; private well for irrigation; 50 acres cultivated, balance natural sod; road on all sides; no buildings. Price $12,000. Will take $5000, other real estate. Your own terms on balance, 6 per cent. Absolutely in choicest district. Best located tract in Spokane valley. If you see this, you will want it. Don't delay.

HOUSE AND LAND ASSOCIATION.
514 RIVERSIDE. MAIN 3079.
SPOKANE, WASH.

160 ACRES; STEVENS COUNTY; 45 UNDER cultivation, in crop; 30 acres slashed; all fenced; family orchard set out this spring; 7 miles from Colville, 3 to ry., on mail route. 20 rods school; running water and well; 1 good young team, harness, wagon, sleds, harrows, plow, blacksmith outfit and tools; 5 No. 1 milch cows, 3 calves, pigs, turkeys, chickens. Price $6500, or will trade for small, well-improved place in western Wash. up to $4500, balance cash. An ideal place to raise stock; lots of open range. Write to owner, John F. Matheson, R. 1, Box 7, Orin, Wash.

DESIRABLE DAIRY RANCH, 200 ACRES; 80 a. best river bottom; well improved; 28 well-graded dairy cows (has honor cow and honor herd in all cow-testing associations in Oregon in March); 13 yearlings and calves, good Jersey sire, 3 good horses, 20 shoats, 2 good brood sows, 60 hens, etc.; 12-room house, in good repair; outbuildings; good fences; income tax reports show $4000 gross income, 1917; $20,000; $8000 down, balance 10 years, 6 per cent. C. E. Ricker, Reedsport, Ore.

480 ACRES IN SHIELDS RIVER VALLEY, wheat and hay farm; good water right; 98 per cent tillable; 300 acres broken; running water; large barn, 3 granaries, chicken house, hoghouse, garage, frame house; schoolhouse on same section; telephone, mail route; 8 mi. from R. R. town. Price $50 per acre. Easy terms. Write owner, Guy T. McBane, Wilsall, Mont.

IDEAL SHEEP OR STOCK RANCH.

80 acres; in Nevada; with excellent outside range; fine location and good improvements; a bargain worth investigating. Address Dr. W. F. Boylan, owner, Amos, Nev.

FOR SALE—363-ACRE STOCK RANCH; 250 a. cultivated; 6-room plastered house and other buildings; ½ mile from school; $35 per acre. Write owner, J. A. Sipe, Midvale, Idaho.

### FARM LANDS—WANTED 654

I WANT TO HEAR FROM OWNER OF farm or unimproved land for sale. Mrs. W. Booth, Pulaski, Iowa.

WANTED—TO HEAR FROM OWNER OF farm or unimproved land for sale. K. Hawley, Baldwin, Wis.

### FOR SALE OR EXCHANGE 702

FOR SALE—160 A. MONTANA WHEAT land. Would exchange for logged-off land of equal value near Spokane. A. B. Gaylord, owner, Roundup, Montana. No agents.

**In answering advertisements don't fail to mention this paper.**

Jordon valley is famous as a sheep feeding section.

Cutting native hay on the William Skinner ranch, Jordon valley. This land has never been plowed nor seeded.

*A new country with an "even break" for all.*

# Jordon Valley, Oregon

## *"The Heart of the Range"*

*Land of proven worth at attractive prices.*

### *The Cry for Food*

The world is calling for food. Our country is organized as never before to help you produce it and sell it at a fair profit. The appeal is insistent, earnest and direct to you. Stock raising and farming offer an opportunity both for patriotic service and personal gain. Can you ignore it?

### *Jordon Valley Awaits You*

The Jordon Valley Project embraces approximately 38,000 acres of fine agricultural land situated in the center of one of the most extensive grazing and free range sections in the northwest. The land is now being placed under irrigation through the construction of a reservoir, main canal lines, etc., which are being built under the general direction of the state engineer of Oregon by a construction company that is bonded to the amount of $100,000 as a guarantee to the state and to the settlers that the irrigation works will be properly built within a specified time, and the entire completed system turned over to the land owners, ready for operation. Jordon valley is situated in the east central part of Malheur county, Oregon, and extends for a distance of about 30 miles in a westerly direction from the extreme eastern boundary of Oregon, following the general course of the Jordon river, which is one of the main tributaries of the Owyhee river.

### *Many Natural Advantages*

From the standpoint of general farming and stock raising there are few locations that offer the many natural advantages to be found in Jordon valley. Surrounded as it is by a very large free range for stock grazing, with a long growing season and climate and soil especially adapted to raising grain and hay, with mild winters and an abundant water supply both for irrigation and domestic use, the valley presents unusual inducements to the homeseeker and farmer wishing to engage in general farming and stock raising, and also offers ONE OF THE REMAINING OPPPORTUNITIES FOR ACQUIRING GOOD FARMING LAND AT A LOW PRICE, direct from the government or the state, or from railroad grants which have heretofore been held in large ownership without development.

### *The Irrigation System*

The irrigation system, which is already partially constructed, is being built under the general direction of the state engineer of Oregon and the work is in direct charge of one of the leading irrigation engineers of the northwest—a man who demonstrated his ability as chief engineer of both the north and south side tracts of the great Twin Falls (Idaho) country. The interests of prospective settlers are being carefully guarded by the laws of the state of Oregon and every effort is being made to secure an irrigation system for these lands that will be the most efficient and will render the best service to the farmers that can possibly be obtained. A reservoir with capacity of storing 127,000 acre feet of water, or sufficient to water 40,000 acres, is one of the features of the system. Large feeder canals, a system of main canals, headgates, diversion works—everything to insure a safe and efficient system—is being constructed. We will mail you descriptive matter concerning the project and the irrigation system in detail, if you will make your desire known.

### *Rich, Virgin Soil*

The Jordon valley is an extensive winter feeding ground for cattle, sheep and horses, and the numbers fed there in the past will be largely increased by the development of the Jordon valley farms. Nature has blended soil and climate and put water within easy reach of Jordon valley. The engineers are leading the water from the natural beds to the lands we are now offering for sale. These lands, under our development, will begin to do what an All-Wise Providence intended they should do—produce food for man and beast, and produce it in abundance. The land can be bought now, not only at a low price, but on easy terms. Now it is in sagebrush—it is virgin soil—well stored with nitrogen, potash, phosphorous, lime and other essentials for plant food, and unlike most sagebrush lands, the soil is already supplied with considerable humus, due to the fact that there is a good growth of grass in the sagebrush which not only supplies humus to the soil, but makes splendid spring pasture for stock. Cattle, horses and sheep are always fat in Jordon valley—and it necessarily follows that stock men are always prosperous there. But the most prosperous of all will be the farmer who raises his own grain and hay to supplement the grazing that is all around him. During the winter months is when the hay will have the most value to the farmer-stockman for feeding his own stock and to be sold in condensed form.

### *We Want You to Investigate*

We want you to investigate Jordon valley, then see it. Our automobiles leave Boise, Idaho, twice weekly and they are at your disposal. If you want to get into a new country where land is cheap, water plentiful and climate favorable, this is the place to go. We desire to continue our policy of colonizing this land with earnest, industrious people who will make dependable, permanent settlers. If you are interested, drop us a postal card right now and we will send you detailed descriptive matter. Address all communications to

# Whitman Fall Wheat Ripe

## Spring Grain Is Not Far Behind—Crops Smaller but of a Better Quality Than a Year Ago—Pastures Poor; Must Feed Stock

LA CROSSE, Whitman County, Wash., July 7.—Wheat is the principal crop here. While it is a little too early to estimate, would judge the quantity may be slightly less, but the quality better than a year ago. There are some exceptionally good fields of wheat, but the drouth and heat has done considerable damage. When it is considered, however, that there has been a rainfall of less than 10 inches from July 1, 1917, to date, it is really a wonder that we have any crop at all. The most serious consideration right now is pasture, which has been poor all spring, and now it is a case of feeding stock until fields are harvested. Fall wheat is ripe and spring wheat is not far behind. Harvest will start next week and by the 15th to the 20th it ought to be general. There seems to be plenty of machinery, but am afraid the help problem will be more serious than expected. M. E. SCHRECK.

### Have Had but Little Rain.

SOUTH BEND, Pacific County, Wash., July 8.—The principal products in this county are dairy products. The shortage in labor is partially overcome by the use of machinery. Five milking machines are in use in the valley. Tideland pasture is nice and green, but the upland pastures are drying up. We need rain badly. Since the 1st of June we have had only .17 of an inch and the average rainfall for June is 2.50. The gardens are almost at a standstill and the fruit seems to be small—that is, the berries of later varieties. The dry weather was excellent for hay and for the strawberry crop. A trebling is expected from the cranberry crop this fall. The prices are higher than ever. The growers will market their product through an exchange. Last year this plan was tried and it proved so satisfactory that the cranberry growers, association agreed to try it again this year. An interesting experiment in the use of fertilizers has been tried by some of our market gardeners. They find that a small portion of commercial fertilizer mixed with barnyard manure helps the garden crops to mature from one to two weeks earlier than those simply fertilized with the barnyard fertilizer. The main crop of potatoes will be light, also later vegetables if we do not have a good rain soon. Our community life could be helped greatly by small fairs this fall. A little diversity like this would be welcomed, for every one is working hard and vacations and pleasure trips seem to belong to a different age.
MRS. WINNIFRED BUCKINGHAM.

### All Pulling Together.

CASTLE ROCK, Cowlitz County, Wash., July 9.—Farmers of this community are nearly finished with their hay crop and have started in to gather the remainder of grain oats, barley and in some cases wheat, the latter being a good crop considering the dry season, which goes to prove that no amount of research will make an exact science out of farming. There seems to be enough help such as it is to do the work on the farms. Women are putting on the coveralls, working in the fields and leaving their kitchen work for a later hour and sometimes for the next day. It is a noticeable fact that all rule and regulation has been lost in the shuffle for the general pull together for gathering the crops, harvesting the berries and giving the available men a chance to work in the shipyards. Machinery, however, has entered into prominence and takes the place of men and horses. The prune crop promises to be a banner one this year at good prices. Orchard men are cleaning out the dryers, fixing up the boxes, getting ready for picking. Help is bound to be scarce this fall during the prune season, but with the boys and girls that will take jobs, it will loosen up the stringency. Roads are in first class condition. The dry weather has cut the feed in the pastures down to a small part of the necessary feed. Butterfat has raised to 50 cents. Eggs are 50 cents and not enough to supply the local demand. The corn for silo filling is small, but has time to develop before winter sets in. Farmers are organizing community clubs for testing out the different methods for handling the crop, combating with insect pests, especially the aphis and black rot in the potato, and with these branches cow testing has taken a prominent part. Hay is selling from the field for $25 per ton. Old potatoes are $1.50 per cwt., owing to the stringency of feeds for stock. Farmers are disposing of the hogs and surplus cows. C. C. BROWN.

### Grain Crops About Half.

COLVILLE, Stevens County, Wash., July 5.—The principal crops of this county are as follows: Wheat, oats, barley, alfalfa, timothy, mixed grasses, apples, pears and cherries. I think from what I have seen of the crops that the cereals will produce from one-third to one-half of the normal crop this year on about two-thirds of the acreage that was planted. Part of the crop will be cut for hay and a part of the acreage will not get far enough along to make hay. The alfalfa is making from one-third to one-half of a crop on the acreage that is not irrigated, and that is most of the acreage that is in. The dry weather last fall and the cold, dry spring kept the alfalfa back until the moisture that was in the ground was lost. The timothy crop in a large part of the county has been almost a total failure because of the dry weather, and also on account of the attacks of a new pest that has been especially bad because of the dry weather. The mixed grasses are producing about a half crop. In the fruit-growing districts the apple and pear crop seem to be good. The cherry crop will be short. The market value and the net value for most of the crops are going to be high because of the great crop shortage in the county. There is going to be plenty of men and other essentials for the same reason. The thing that I would recommend for the county would be that every farmer plan on raising everything that he needs for the home and everything that he needs in the way of feed for his live stock and then keep enough live stock of good grade to use all of the feed that he raises. Some years he will have extra feed and some years he will have to buy feed or sell live stock in order to have things even up; but on the whole this system will save a great deal of expense to the farmer.
E. C. DURDLE.

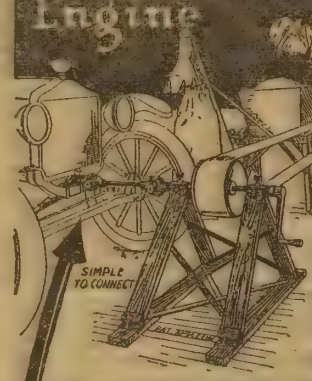
### Field Peas Yield Well.

PORT ANGELES, Clallam County, Wash., July 2.—The principal crop here is field peas and the yield will be about 50 per cent more, owing to increased acreage. The market value probably will be about 20 per cent higher owing to increased cost of production. The harvest of the hay crop has commenced and we think there are enough men to handle it, also we think we have enough harvesting machinery and it is in good repair. Our roads in Clallam county are of high standard. As to the most popular thing recommendable for improvement of conditions and welfare, I should say the organization of granges and cooperative districts with the object in view of purchasing and owning of traction plows would be most essential, for this is absolutely necessary for the development and consequent prosperity of rural life.
J. P. CHRISTENSEN.

#### Dogs Must Have Fish.

The connection between fish, dogs and mail in Alaska is shown in a letter recently received at the postoffice department in Washington from a mail carrier in Alaska. "The whole trouble is on account of my dogs," he writes in explanation of late mail. "I was and am still unable to get fish for them. The dogs I use are wolf dogs that have worked on fish all their lives and it is almost impossible to change their diet and work them."

#### Increased in Beet Sugar Production.



A large number of Belgian sugar workers are now residing in Canada, and beet production is increasing

#### Irish Clerks Strike for Bonus.

Mayo county (Ireland) council clerks have been on a strike for a war bonus of $1.25 a week.

**Fill Your Own Silo**

**SAVE $200**
**Use Your Auto As A Stationary Engine**

**ONLY $35 Complete**

A simple, easily attached, equipment—makes a powerful engine out of your car. Positively no trouble to connect. You don't need any other power engine when you have a Lawrence Auto Power Equipment—it goes wherever your work is—good for 14 H. P. and is economical to operate.

LAWRENCE AUTO POWER EQUIPMENT

Fits—Ford, Dodge, Overland, Reo, Chevrolet 490 and others.
Operates—Silo fillers, feed grinders, grain cleaners, pumps, saws, cream separators, bean binders and all other farm machinery.
Sold only on an absolute money-back guarantee of satisfaction.
Only $35. Write today for big free circular.

## President Vetoes $2.40 Wheat

### *Says Neither Principle Nor Expediency Warrant It*

Efforts on the part of wheat producers, their senators and representatives in congress and western commercial organizations, failed to induce President Wilson to sign the bill passed a week ago increasing the price of wheat from a $2.20 minimum to a $2.40 minimum. Statements from the national capital say that western senators and congressment will endeavor to pass the agricultural appropriation bill, which included the $2.40 wheat price, over the president's veto, but there appears no possibilities that the measure could be so enacted without striking from it the wheat price feature.

Following the statements from Washington that the president would not sign the measure, farmers' unions and other organizations appealed both to President Wilson and Secretary Houston of the department of Agriculture, urging the signing of the measure. The president, however, vetoed the measure on July 12. The following is his veto message in which he states his objections to the increased wheat price:

"I regret to return without my signature so important a measure as H. R. 9054, entitled an act making appropriations for the department of agriculture for the fiscal year ending June 30, 1919,' but I feel constrained to do so because of my earnest dissent from the point of view of principle as well as wise expediency from the provisions of that part of section 14 which prescribes a uniform minimum price for No. 2 northern spring wheat of $2.40 a bushel.

"I dissent upon principle because I believe that such inelastic legislative price provisions are insusceptible of being administered in a way that would be advantageous either to the producer or to the consumer, establishing, as they do, arbitrary levels which are quite independent of the normal market conditions, and because I believe that the present method of regulation by conference with all concerned has resulted in the most satisfactory manner, considering the complexity and variety of the subject matter dealt with.

"It is evident that the present method of determining the price to be paid for wheat has had the most stimulating effect upon production, the estimated crop of spring wheat for this year exceeding all high records in a very remarkable and gratifying way. By an overwhelming majority of the farmers of the United States the price administratively fixed has been regarded as fair and liberal and objections to it have come only from those sections of the country where, unfortunately, it has in recent years proved impossible to rely upon climatic conditions to produce a full crop of wheat, and where, therefore, many disappointments to the farmer have proven to be unavoidable.

"Personally, I do not believe that the farmers of the country depend upon the stimulation of price to do their utmost to serve the nation and the world at this time of crisis by exerting themselves to an extraordinary degree to produce the largest and best crops possible. Their patriotic spirit in this matter has been worthy of all praise, and has shown them playing a most admirable and gratifying part in the full mobilization of the resources of the country. To a very greatly increased production of wheat they have added an increased production of almost every other important grain, so that our granaries are likely to overflow, and the anxiety of the nations arrayed against Germany with regard to their food supplies has been relieved.

"The administrative method of agreeing upon a fair price has this very great advantage which any element of rigidity would in large part destroy, namely, the advantage of flexibility, of rendering possible at every stage and in the view of every change of experience a readjustment which will be fair to producer and consumer.

**Raise Price of Flour.**

"A fixed minimum price of $2.40 per bushel would, it is estimated, add $2 per barrel to the price of flour; in other words, raise the price of flour from the present price of $10.50 to $12.50 at the mill, and inasmuch as we are anticipating a crop of about 900,000,000 bushels of wheat this increase would be equivalent to the immense sum of $387,000,000.

"Such an increase of the price of wheat in the United States would force a corresponding increase in the price of Canadian wheat. The allied governments would, of course, be obliged to make all of their purchases at the increased figure, and the whole scale of their financial operations in this country, in which the government of the United States is directly assisting, would be thereby correspondingly enlarged. The increase would also add very materially to the cost of living, and there would inevitably ensue an increase in the wages paid in practically every industry in the country. These added financial and economic difficulties, affecting practically the whole world, can not, I assume, have been in contemplation by the congress in passing this legislation.

"WOODROW WILSON."

President Wilson's objection to $2.40 wheat springs in part from a belief that the increased price would entail a proportionate increase in the price of bread; but as former State Senator R. C. McCroskey of Garfield, Wash., points out, that fear was unfounded:

**The main cost of the loaf is the labor and material that enter into the composition outside of the flour. These will not be increased by an advance in the price of flour. The increase in the price of the loaf of bread will be only raising the price of wheat from $2.20 a bushel to $2.40 a bushesl. It costs no more for labor and material outside of flour to manufacture a loaf of bread out of high-priced flour than it does out of low-priced flour.**

A great deal of nonsense has been heard about the American farmer "rolling in wealth" on the profits of $2 wheat, but the hard truth is that the business of producing $2 wheat in the Pacific northwest since the United States entered the war is more precarious than was the growing of 60-cent wheat here 20 years ago. Production costs of all kinds have about trebled in 20 years, and the yields are not quite as abundant as they were on the newer soil.

Some farmers in the more favored sections have done well on $2 wheat, but many others have found scant profits at the end of the year, and a considerable number have actually gone "in the red."

Another important point ought to be kept in mind at Washington. The American nation and our allies must look to the western United States for wheat to be exported to the allied armies and nations. Production can not be greatly stimulated in the eastern states of the Union. Heavy wheat production lies west of the Mississippi; heavy consumption east. If it were not for wheat grown west of that river, the populous states east of it would have to turn to foreign sources for a great part of their supply, for they do not grow enough for their own needs.

The force of that fact comes home to us when we consider the United States department of agriculture records of wheat production in 1917. Of the total wheat crop in 1917, states west of the Mississippi grew 417,617,000 bushels, and states east of that river grew but 233,211,000 bushels. Here is the western record by states in bushels:

| | |
|---|---|
| Minnesota | 57,965,000 |
| North Dakota | 56,000,000 |
| South Dakota | 52,024,000 |
| Kansas | 45,934,000 |
| Oklahoma | 35,650,000 |
| Washington | 29,218,000 |
| Missouri | 27,540,000 |
| Montana | 17,963,000 |
| Texas | 16,200,000 |
| Idaho | 13,830,000 |
| Nebraska | 13,764,000 |
| Colorado | 13,536,000 |
| Oregon | 12,811,000 |
| California | 7,425,000 |
| Utah | 5,650,000 |
| Wyoming | 4,206,000 |
| Arkansas | 3,360,000 |
| New Mexico | 2,582,000 |
| Nevada | 1,140,000 |
| Arizona | 825,000 |

A study of these figures shows that it is sound public policy to let the western farmers take a generous price for their wheat. To them the government must look for all its exports, and also for wheat to feed the people living east of the Mississippi. But the western areas from which this wheat must come have had now two unfortunate years of light yields. In many districts crops failed in 1917, and again in 1918. Farmers are becoming discouraged and will need encouragement next year.

With these conditions confronting the nation, it is poor judgment for the government to deny the producers and the greatest stimulus possible for maximum production.

## Harvest Wages Create Problem

With harvest beginning in several sections of the state, and the grain in other parts rapidly ripening, the harvest wage scale is prominent in the discussions of threshermen and farmers.

Meetings have been held in several, if not all, of the grain growing counties and wage scales worked out. In general they vary only a little and it is probable that the scale adopted by southern Spokane county threshermen and farmers will be about the general wage paid. The scale adopted for Spokane county is as follows: Common hay hands and pea shockers, 10-hour day, $3; boys, 14 to 16 years old, 10-hour day, $2.50; shockers of bundle grain, 10-hour day, $3.50; common harvest labor, 12-hour day, $4; harvest field cooks, $3.50; sack sewers, 12-hour day, $5.50; man, team and wagon, $6; team and wagon alone, $2.

Some of the counties have adopted a wage based on the 10-hour day with time-and-a-half for overtime. While the daily wages for the 10-hour day appear to be lower than the wage paid where 10 hours was not used as a basis, additional wage for overtime makes the total about the same.

B. A. Hunter, federal labor representative with headquarters at Spokane, says that harvest wages during the last years have been regulated largely by the wages paid in the woods for timber work. The harvest wage, he indicated, is usually the same with board free, whereas in the timber camps the workmen are charged for their board. The wage in the woods this year for common labor, he says, is in general $4.

Under the leadership of the county agents and others directly interested a system is being worked out in the grain growing counties of the state whereby there will be in each locality one man designated to cooperate with the county agent and with the 140 or so labor bureaus throughout the state in placing the men available where they are needed. It is urged that farmers or threshermen needing help anticipate their needs a day or two ahead and send in their applications one or two days before the men are actually needed.

## Can Get Sugar

### The System Worked Out Is Simple

The widespread feeling that it is a difficult thing for farmers to secure more than 25 pounds of sugar for canning purposes is not justified by the facts, say food administration officials. Reports indicate that many farmers are under the impression that they have to present a lot of technical proof that they have used their first or second 25-pound lots of sugar economically in canning and preserving before they will be allowed to get an additional 25 pounds.

While it is absolutely true that the sugar obtained for canning purposes must be used for those purposes only, the written statement of any one that he needs an additional 25 pounds and will use it for canning purposes is all that is required to secure the additional allowance.

There is no absolute rule allowing a family just 100 pounds of sugar and no more, though it is a general policy that that is about an adequate supply. Members of the food administration point out that small families do not need that much sugar, while there are perhaps cases where large families need more than that amount for the season's fruit conservation.

The general policy throughout the state is that the county food administrator appoints one person in each small locality throughout his county to whom the local people may apply for their sugar permits. These local representatives are authorized to grant the permit, which can be taken to the local dealer, who will, upon its presentation, fill the order. While there is no set form for application for sugar, one something like the following would be sufficient where it is necessary to write to the local representative of the food administration instead of going in person to make the application:

I hereby state that I have, up to this time, secured ..... pounds of sugar for canning purposes and that I have used or am using it for that purpose only. My canning needs require that I have 25 pounds additional. There are ..... members in my family. I therefore apply for a permit to purchase 25 pounds more sugar for canning purposes only.

The permit will be granted in the form of a card which reads something as follows:

**Repurchase Permit.**

Upon the representation that the sugar heretofore purchased by the person hereinafter named for the purposes of canning and preserving has been actually used, and that an additional supply of sugar is needed to meet the requirements of said person for canning and preserving, this season, ..... of ....., Washington, is hereby authorized to purchase not to exceed 25 pounds more of sugar for the purpose of canning or preserving only, and subject to all the limitations and conditions under which the original purchase was authorized.

Date .....1918.

COUNTY FOOD ADMINISTRATOR.

### THRESHING IS HIGH.

### Crop Condition Is Big Influence.

With harvest already on in some districts and the grain rapidly ripening in others the question of the price for threshing is taking attention. Owing to the great difference in the quality of crops, no general price seems to prevail. A report from Waterville says that the price there will be about 15 cents a bushel straight. Farmers and threshermen at a meeting at Waverly recently agreed upon a price of 15 cents a bushel for grain threshed in bulk and 35 cents a sack for grain sacked.

### Flax Needs Rain.

A report from Gifford, Wash., says that if a little rain were received soon the flax in that district would yield reasonably well, some of it producing as much as 20 bushels to the acre.

This guarantee applies to live stock, except that we will not be responsible for claims for damages on acconut of disease in stock sold through these columns.

## *Our Mistakes in Marketing*

It is not strange that we have made mistakes in the marketing of our products, there have been so many problems entering into the question and so many systems in conflict with one another. But it would seem that we had paid enough and learned enough not to consign our fruit to representatives of unknown, or irresponsible firms when there are buyers and commission houses with whom we are acquainted, and on whom we can with reasonable safety rely. "If a man fools me once, that is his fault. If he fools me twice, that is my fault."

IT would not be a bad idea to dedicate a calf or a colt or a part of the grain field to the purchase of war savings stamps.

## *Strength of the Moral Order.*

Justice is the only right for beings with a moral sense.

Below the moral order are plants, beasts and fishes, where might is right.

We are now testing the strength of the moral order as developed in human nature. If man on this earth is sufficiently evolved Prussianism will be defeated. If not, then the race will require another period of evolution before right becomes dominant.

Let no one deceive himself by thinking God will fight the battles for those who represent the highest ideals. God expresses through human agencies, and can only give such expression as men are sufficiently evolved to manifest.

G. L.

WHEN we sing "Three Cheers for the Red, White and Blue," we are singing for the Union Jack of Great Britain and the tri-color of France, as well as our own Old Glory. Hence, we can sing it three times as lustily as heretofore.

## *Yakima Agricultural History*

The remarkable development of the Yakima valley is broadly sketched by a staff correspondent of the Farmer. From the time, in 1860, that F. Mortimer Thorp, bringing in a herd of 250 fine Durhams and becoming the first settler of the valley, to 1917, when 1545 cars of live stock were sold for $4,000,000, there is included a great story of agricultural progress.

Looking back to the past from the vantage ground of the present, it is evident that practically every branch of agricultural activity which today contributes its share to the payroll of Yakima valley, had its beginnings, humble and unpretentious enough in most instances, back in the late '60s and early '70s. What men are doing on a big scale and with the assurance of success now, was done in smaller measure and tentatively then. And if the physical presence of these sturdy pioneers has passed on, their spirit is as potent in these strenuous days of 1918 as it ever was—for Yakima valley is typically American, and is doing its share to supply both men and food for men in the great war against darkness and the forces of evil.

THE building of American ships as a war measure will, after the war, place us in position to take first rank in ocean production and transportation.

## *Universal Social Justice*

It is a long road from savagery, where might made right, to universal social justice. We have come politically through gens, tribes, monarchies, republics and democracies. We have come economically through individualism, barter, trusts, combines, and are now trying out the collective or government management of railroads and other industries.

We are learning as a result of the war some of the most important lessons of human history. We are learning how all things are inter-related, inter-active and inter-dependent. We are learning one of Newton's mathematical laws, that "everything affects every other thing, according to the size, and inversely according to the square of the distance." We are learning Herbert Spencer's law of the "persistence of relations among forces." We are learning what moralists would teach us, that "mankind must be considered as a whole, not as an aggregate of individual units, each and every one working for himself." We are learning what Theologians would teach us, "the universal fatherhood of God, and the universal brotherhod of man."

AFTER all, the great mass of the people are sane and steady. Only a few at each extreme are making the troublesome noise.

## *The Menace of the Weeds*

How to deal with the problem of the weeds, and the weed seed nuisance, is just as pressing as ever, and seems little, if any, nearer of solution.

Not only are the highways, streets, sidewalks and public places, all too frequently lined with unsightly and menacing weeds, but farms, private lots, parking and lawns are far from being exempt.

The condition is too often aggravated by the use of irrigation water, so much so, in fact, that a nice lawn is almost out of the question where ditch water is used for irrigation. Noxious seeds are almost certain to be distributed through the main canals and laterals, and there seems to be no way to avoid this, excepting by a state-wide campaign, and united effort.

Civic pride should, and will, appeal to some people, and they can always be relied on to assist in such a movement, but there are far too many who appear to be indifferent to it. Local laws providing for weed control, or extermination, are in the right direction, but are so limited in their scope as to be only partially successful. Some plan must be thought out that will deal with the noxious weed as a public nuisance and an economic menace, and hence put under the ban the individual, association, or organization, no matter what the name, or title, that is in any way responsible for its growth.

The discussion of this subject is suggested and provoked at this particular time of the year, when weeds are seen nearly everywhere, as one passes along the streets and public highways and the farms, as well as town lots. They are maturing a crop of seeds to be carried far and wide. The situation in many localities is almost distressing, and yet is too often taken lightly, if thought of at all. Such weeds take heavy toll both from the soil and the crops, and any theory or movement regarding soil and crop conservation, or economic production, that leaves out of the question the weed problem, is falling short, by a good deal, of getting at the bottom of the subject.

THE war has aroused a sleeping world to the possibilities of accomplishment. We never before knew how to attack problems.

## *Must Prevent Waste of Grain*

One of the most commendable of many things that the food administration is undertaking is that of stimulating farmers and harvesting crews in the prevention of loss of grain through various forms of waste. While much of the effort is being directed to the thresherman, it is not to be overlooked that the farmer himself is often the cause of waste at threshing time even though he thinks he is working to his own interests. It is seldom the case that the owner of a field of grain does not hurry the threshing of it, his object being to get the threshing crew with their horses and men off of his place as soon as possible. One of the results is that grain is fed into the machine more rapidly than it can be properly threshed, some of it is cracked in the cylinder and some of it is blown over into the straw. The cracked wheat causes a lower grade at marketing time and a less valuable product for the manufacture of flour. The grain blown into the stack is a total loss except as live stock may salvage it.

One of the most noteworthy causes of loss of grain is found in the open grain rack or the header box or hauling tank that is not absolutely grain proof. It doesn't take a great while for a trickle of grain, one kernel at a time, through a hole or over the edge to aggregate a number of bushels. A similar trickle in each of a thousand or a hundred thousand grain fields multiplies the loss by a thousand or a hundred thousand.

## *Graining Pure Bred Calves*

The high cost of grain and mill feed of all kinds makes the question of how much grain to give our pure-bred calves very acute. The best grades of stock have reached price levels that make even present feed prices of no material significance, but price of range bulls and similar stock has not increased in due ratio to the price of feed. A bull calf fed all he will eat until he is 20 months old will consume at present prices $200 worth of feed, and range bulls do not bring enough money to pay this bill, although herd headers that bring $500 and upwards will show a good profit.

The breeder of range bulls is therefore up against the proposition of feeding less, or selling younger, and it is our judgment in the matter that the latter is the better course. A yearling bull, or a bull of any other age for that matter, that has been on light feed will lack size and form. He will tend to be long in the legs and thin in the body. When such a bull is offered for sale it is impossible for the buyer to know how much of this small size and inferior form is due to lack of breeding. Even if he knows positively that the bull has been poorly fed he has no way of telling if the bull had breeding enough to develop into anything if he had had the feed. This condition is aggravated by the well known fact that most breeders of inferior stock maintain, and perhaps even conscientiously, that the only difference between their small-long-legged bulls and the prize winner is the matter of a little feed.

The finger of suspicion always, therefore, points to the undeveloped bull. There are, however, many range men who want first class bulls that are not fed too heavily.

It is therefore our judgment that when the breeder feels that the feed bill is getting a little too heavy he had better sell a little younger rather than to grow his stuff on lighter feed. As stated, however, the question of the amount of feed depends upon the quality of the stock. Second rate range bulls will not pay for a full grain ration until they are of breeding age. The best range bulls and herd headers will pay for all they will eat, while any bull that promises to make a show bull or to sell for over $500, will pay for all the feed he can eat even at present feed prices, and with a nurse cow.

E. L. P.

# Germans Start New Paris Drive

## *Violent Battle Is Launched Along a Fifty-Mile Front*

As this paper goes to press word is received of the launching of another great drive by the Germans. Only preliminary reports are available, but it is evident that the struggle is to be a violent one. The drive is directed straight toward Paris, which is distant from the battle line about 45 miles. The drive is being made along the Marne river, from Chateau Thierry, the nearest point to Paris, to and past Rheims. Early reports say that the enemy has crossed the Marne at a few points. The Americans are holding part of the line attacked, being especially in evidence at the left flank, near which they launched a counter attack that is reported at this writing to have received a measure of success.

The magnitude and the success or failure of the drive may have been well determined before this writing reaches the readers. It is not to be expected, however; that the allied lines will hold so solidly that some German advance will not be made. This does not mean that the French and Americans along the attacked front are not ready. It is stated that their preparations are good and that they are not surprised at the new drive. It is probable, however, that the allied lines will bend before the attack as they have previously done, rather than sacrifice men while the German blow is at its height. It may be expected, however, that no great advance will be permitted unless the enemy is overwhelming, as any considerable shortening of the distance to Paris would be a serious menace to that city. It is reported that German shells of 10 and 12 inches diameter have been falling in towns and villages 25 miles behind the allied lines.

### Hindenburg Is Reported Dead.

The report still continues to be circulated that General von Hindenburg, the famous German war leader, is dead. At this writing no official denial of it has been made. The latest report says that the general, who has for a long time been the German field marshal, had a violent quarrel with the kaiser on May 16, following which he suffered a stroke of apoplexy from which he later died. Before this reaches the readers the report may be confirmed or denied, as official information is not available. It is recalled that a marked change in the German activity on the western front was noted about the time the report indicates the general died, which adds some credence to the report. The death of Hindenburg, even if confirmed, is a matter of curious interest rather than one affecting the war situation. It may have caused a delay in the resumption of the drive in the west, but that is probably the greatest effect it will have. There are other German leaders almost as prominent. The loss of no one man, with the possible exception of the kaiser, can greatly influence the course of the war. It is doubtful if even the death of the kaiser would result in any radical change in the situation.

### Allies More Than Hold Their Own.

During the last week the various elements of the allied armies have continued to improve their positions at several points along the battlefront. At nearly all points along the line they have been on the offensive, though in no case has an offensive of major proportions been undertaken. The activities of the allies has been sufficient, however, to recover a considerable number of strategic points taken by the Germans since March and is believed to be sufficient in addition to prevent the German leaders from organizing their forces as they would like to for a resumption of the drive on either Paris or the English channel ports. The allied activities have been such as to require that German and Austrian forces be scattered well along the greater part of the battle line, thus preventing their concentration on any given point for a resumption of the drive. The last drive of the French was over a three-mile front southeast of the railroad town of Amiens. It resulted in the capture of a number of villages and surrounding areas a mile or more into the territory held by the Germans. French activities have also been noted with corresponding improvements of positions and recapture of territory on the front directly before Paris. The British have also been active in the northern section. Reports from the Italian front indicate a continuation of successful operations by the Italians and the French against the Bulgarians and Austrians. In a few instances local attacks were made at various points along the fronts by the Germans as well as the Austrian troops, but in no instance are they reported to compare with the improvements affected by the allies.

### Blow Delivered Against Spy System.

The arrest some days ago of Dr. E. A. Rumely and the seizure of the New York Evening Mail as alien property are believed to mark a final step in the penetration of the inner circle of the German spy movement in this country. Evidences indicate that the Evening Mail was purchased with German money to be conducted by Dr. Rumely and his assistants in the furthering of German propaganda in this country. The United States secret service is said to have in its possession evidence showing that the offices of the newspaper were used as a general center for the carrying on of German spy and propaganda work.

### Germany Says She Is Insulted.

A report of an address delivered in the German reichstag by Imperial Chancelelor von Hertling says that the chancellor expressed a willingness on behalf of the German people to discuss peace at any time that the allied governments would make an honorable offer. Referring to addresses by President Wilson and Secretary Balfour of the British department of state, the chancellor said that they "must really drive the flush of anger to the cheeks of every German. We feel for the honor of our fatherland and we can not allow ourselves to be constantly and openly insulted in this manner. Behind these insults is the desire for our destruction. As long as this desire for our destruction exists we must endure. As long as the desire for our destruction exists we must hold out and we will hold out with confidence in our troops, in our army administration and our magnificent nation which bears so wonderfully these difficult times with their great privations and continuous sacrifices."

Reports indicate that German officials are at least convinced that complete victory can not be won by force of arms. Bernhard Dernberg, former German minister of colonial affairs, said recently that a peace was never concluded on the battlefield alone, but that diplomacy must cooperate. He said that if Germany was to maintain her leading position she must make and continue to make moral conquests, and he added that he was rather doubtful whether she had succeeded in this respect.

### Turks Murder German Officers.

A report coming through Greece says that in a number of instances Turkish soldiers have mutinied against their German officers. In some cases the officers have been slain, it is stated. Mutinies in the Austrian army are also reported.

### Bolsheviki Government Is Waning.

Indications are that the bolsheviki government in Russia is tottering, and when it falls it will be a blow to Germany and an aid to the cause of the allies, it is believed. The new government in Siberia, which is anti-bolsheviki, is expected to support the allies. It is reported that a detachment of British troops are in Siberia with a view to operating with the loyalists against the element of Russians that are favorable to the German invasion. Whether the presence of these troops is due to an agreement with the other allied nations, including this country, or whether it is due to the independent action of England, is not officially announced. It is stated that American, British and Japanese marines are on shore at Vladivostok for the purpose of guarding stores there.

### Rumanian People Feel Food Shortage.

It is officially reported that the people of Rumania are suffering greatly from lack of food. It is stated that crops this season are virtually a failure and that foodstuffs in the country have been appropriated for the use of the German and Austrian armies. Rumania fell into the hands of the Germans and Austrians when Russia collapsed, leaving the little nation isolated, with enemies on all sides.

### World Honors French Holiday.

July 14 was the great national holiday of France, amounting to its July 4. The celebration marks the anniversary of the fall of the Bastile, the turninig point in the transformatiton of France into a republican form of government. American officials sent many messages to the officers of France on that day and President Wilson caused the French flag to fly over the White House at Washington, D. C.

### Government Takes Over Telegraph Wires.

Congress has granted President Wilson authority to exercise federal control over the telegraph and telephone systems of the country. The provision includes ocean cable systems and wireless systems also. It is the intention of the government to operate these communication systems in like manner as it is now operating the railroads, the idea being to increase their efficiency for service during the war.

### British Aviators Control the Air.

An official British report says that the aviation department of that country has brought down a total of more than 3800 German or Austrian aeroplanes in one year. This has been done, it is stated, with a loss of a little more than 1100 British machines, less than one-third the number of those of the enemy destroyed.

### Rainy Weather Interferes With War.

While the people of the northwestern part of the United States are hoping for rain, northern France, where the great struggle between the allies and Germany is being waged, is soaked with rain. It is probable that this has delayed the expected resumption of the German drive.

### Get a Farm Service Flag.

The man, woman, boy or girl who stays at home and works hard to produce necessaries for the soldiers in Europe are entitled to real war service recognition. That is the idea back of the Washington Farmer's farm service war flag. It is pennant-shaped, made of the good old red, white and blue, and has a star representing the producing farm home. Small stars are added to represent each worker of that home.

.....

**Convenient Order Blank.**

THE WASHINGTON FARMER, ————1918.

Review Building, Spokane, Wash.

Enclosed find five cents (5c), for which please send me a Farm War Service Flag (printed on enamel paper) with ..... extra small stars for farm workers.

Name .....

R. F. D. ..... Postoffice .....

Box ..... State .....

## *Washington Gleanings*

The Molson district oversubscribed its war saving stamp quota $2460.

The Washington Good Roads association will meet in Pasco November 14-15.

The Adams county fair will be held at the fair grounds near Ritzville September 26, 27, 28.

Harvey Thompson has been appointed superintendent of the Federal condenser in Mount Vernon, to succeed Charles Harvey, resigned.

More than 500,000 feet of standing timber destroyed and 1000 acres of land burned over is the toll taken by a forest fire north of Sedro-Woolley.

The Hunters council of defense has been organized with the following officers: J. M. Glasgow, president; F. R. Anderson, secretary-treasurer.

Yakima county has spent $297,000 in hard surfaced roads this year and built five concrete bridges, and in addition is spending $27,000 monthly in keeping graveled roads in repair.

L. Vogel, a farmer in diking district No. 2 near Kelso, has sold his entire crop of cabbage to Camp Lewis. He will have about 400 crates of first-class cabbage on four acres of ground.

Poles are being set for the extension of the Okanogan Valley Power company's line from Riverside north to Tonasket, and it is expected to be able to give service in Tonasket not later than the middle of September.

Preparations for opening several hundred million feet of spruce owned by the state in Clallam county have been authorized by the state capitol commission in the event the timber is needed for airplane construction.

At a recent meeting of the Touchet Valley Stock association a committee of Robert Lee of Starbuck, Grant Law, Harry Rainwater of Dayton, was appointed to arrange for an exhibit of range beef for the Walla Walla fair.

The first consignment of game birds from the state game farm at Walla Walla is being divided among the western counties. Pierce, Thurston, King, Grays Harbor, Whatcom and Snohomish counties are to receive 50 Chinese pheasants each.

To Klickitat county attaches the distinction of being the first community in the northwest to consecrate a memorial to its sons who have met death while in the nation's service in the existing war. The memorial was erected at Maryhill.

Many farmers near Sunnyside, who plowed up their sugar beet fields with the intention of sowing other crops, have decided to give the beets another trial. The Utah-Idaho Sugar company, which is building a factory there, will provide free seed and labor.

Reports indicate that a large number of men are being called out to fight forest fires. In some instances these men are being given permission to return to the harvest fields if they desire, but many of them are signing up for the entire forest fire season.

A report to the state agricultural department gives an estimate of the apple tonnage for Cashmere this year at 1450 cars. The figures are from a survey made by the district horticulturist. Last week marked the close of the cherry harvest. About 20 carloads were sent out.

The Kennewick high school canning team, whose members are Ruth Dickinson, Gladys Motter and Winnifred Huntington, has been selected by the state club leader to represent Washington in an interstate canning competition at the Spokane Interstate fair in September.

On the farm of Grant Farmer on Fords prairie, west of Centralia, is a cherry tree that was planted 84 years ago when General U. S. Grant was a lieutenant stationed at Fort Vancouver. The tree still bears fruit. It has a spread of 65 feet and its trunk is 10 feet 11 inches in circumference.

Girls of the canning club at Yakima have contracted with the county commissioners to put up all fruit and vegetables the poor farm may need during the coming year; and in addition to can all fruit and vegetables grown on the farm and sell their product to the county at the usual commercial rate for canned fruit.

The wide difference between the yields of various kinds of grain this year has added greatly to the question of price for threshing. In some sections the price will be as high as 18 cents a bushel. Some combines are cutting and threshing at $4 an acre. Grain threshed in bulk also adds a problem, especially as there are few districts where all the growers use the bulk system.

There is not only a lack of recognition among farmers of the value of lime in soil fertilization, but there is a lack of lime at prices that warrant its widespread use. There are great possibilities in the development of the liming custom and every farmer should study the question with a view to learning if lime might not be a good thing for his farm or part of it.

The pea crop is a sufferer from the hot and dry weather of the last several weeks. In some of the peagrowing sections of the northwest the crop will be about half normal, it is estimated. In others a fair crop will be harvested. In the Fairfield district of Washington some of the Alaska peas are already cut, having ripened somewhat early owing to the drouth.

# Life-Giving Eggs and Milk

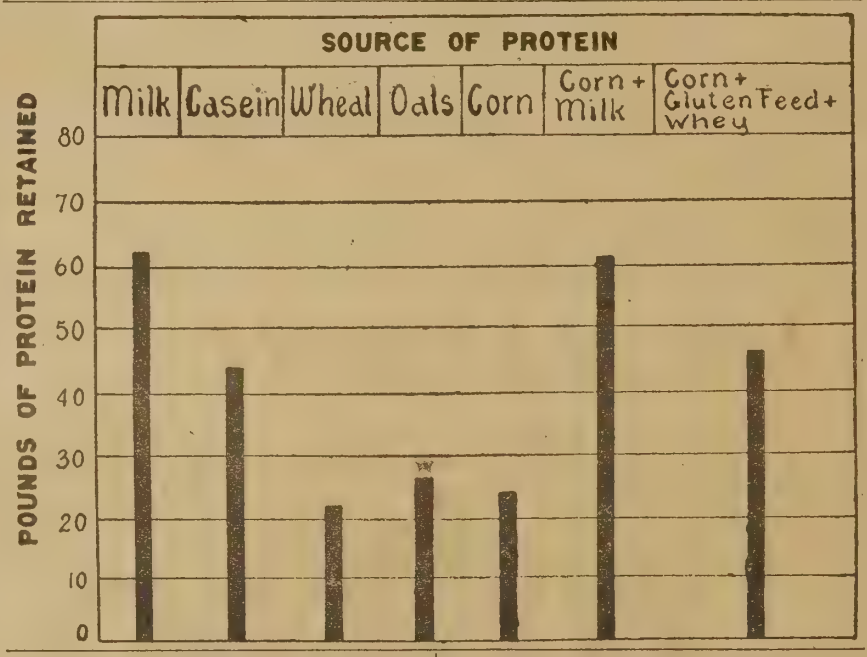
## *Away With Calories and Talk More Vitamines*

By JAMES DRYDEN.

**IMPORTANT DISCOVERY IN FOOD VALUES.**

Vitamines are necessary to satisfactory bodily growth, and are found in sufficient abundance only in eggs and milk. These vitamines are concentrated from the feed of the cow and placed in the milk, and by the hen and placed in the egg; and why?—that the young of both may be properly nourished. These vitamines are not placed in any quantity in the meat of the cow and the hen. These are conserved only for the calf and the chick, or for purposes of reproduction. Children, therefore, to obtain these necessary vitamines for growth and development must use milk or eggs, or both.

Eggs have been spoken of as very nutritious since the days they were first discovered and eaten, just a little more nutritious possibly than any other food, and we ate them without any misgivings. But when we tried to find out what their real food value was; when we sought for a real measure of their value compared with other foods, the chemists came along and said they contained so much protein, so much fat, ash and so many calories, and from the showing it did not appear that the egg had any special claims to superiority. They, the chemists and dieticians, judged food values by protein and calories.



But chemical analysis did not always check up with actual results of feeding experiments with animals, nor did they explain why the protein of milk gave better results in the feeding of children than the protein of other foods.

The chemists, however, have been pursuing their investigation of the subject with the result that some most significant discoveries have recently been made which explain the high nutritive value of eggs and milk. No longer will there be any doubt as to the superiority of these foods.

In experiments at the Wisconsin station by Hart and Steenbock it was found that proteins had different values, depending upon their source. Milk had an efficiency of about 65 per cent. That is, 65 per cent of the protein was retained by the animal and 35 per cent wasted. Wheat, oats and corn proteins showed an efficiency of about 25 per cent, a waste of 75 per cent. The protein content therefore was not a very good measure of value of those foods.

But the results were startling when a little milk was added to the corn. The addition of the milk raised the efficiency of the protein of the corn to practically the same percentage as for milk. That is, the combined protein of corn and milk in the ration practically equaled the efficiency of milk alone. There is a good protein and poor protein, and a little of the good mixed with the poor leavens the whole, makes it all good.

These experiments were made with pigs, but the experimenters say that "most of our medical knowledge has been obtained from experiments with animals. Most of the principles have first been established by carefully controlled experiments with animals." Illustrations are given of pigs that refused to grow on a ration of corn meal, oats, middlings and oil meal. Both received the same ration, but one of them received in addition a small quantity of milk. The one without milk weighed 100 pounds; the one with milk 200 pounds. This difference was made with one per cent of milk solids added to the ration. Another experiment was made with whey, fed at the rate of only four pounds a day with corn meal and gluten feed. With this small amount of whey the protein of the mixed feed was raised in efficiency from 30 per cent to 47 per cent.

What is the explanation of these marvelous results? There seem to be two reasons. First, the abundance of mineral constitutents in milk make rapid bone growth; and second, the vitamines in the milk. What are vitamines? The experimenters say that they "are as yet unidentified chemical substances in food, and are aboslutely necessary for growth and reproduction. They are abundant in milk and eggs and in the leafy portion of plants. One class which can be dissolved in water is abundant in seeds, while another class dissolved in fat is apparently not so abundant in seeds. Both classes are abundant in whole milk."

These experiments were made primarily in the interest of dairy husbandry, but the experimenters declare that eggs are the only substitute for milk when it comes to vitamines.

The discovery of vitamines in milk was made by Dr. Hopkins of Cambridge, England. Dr. McCollum of the Wisconsin station separated the vitamines into two classes. Hopkins fed young animals on a ration of highly purified proteins, fats, carbohydrates and minerals, and the animals not only did not grow, but did not live over two months. When into such a ration a small quantity of egg yolk was mixed, say an ounce of egg yolk to a pound of the ration, growth was induced. The same result was obtained with an ounce of evaporated milk instead of egg yolk.

Let us quote Hart and Steenbock further: "Suppose next we take all the fat out of this satisfactory ration by extracting it with something that dissolves fats. It will be found that though the ration will be able to maintain young rats without any increase in weight for a month it will not longer be able to induce growth. Only on restoring the extracted fats to the ration will growth be made. A similar result could have been obtained by adding butterfat or fats obtained from certain animal organs; but other fats, such as lard, almond oil and cottonseed oil would not have brought about the same result." Again they say: "Milk, eggs and alfalfa leaves are a very good source of this unknown constituent, although there is every reason to suppose that forage plants in general are a better source of this class of vitamines than the grains." Some of these vitamines are apparently present in skim milk and whey as well as in fat.

The second class of vitamines are called water soluble vitamines. If the fat in the egg yolk has been removed, and with it the fat soluble vitamines, and then a water extract of the remaining egg yolk is made the water soluble vitamines will be obtained. Both are necessary to satisfactory growth, and both are found in sufficient abundance only in eggs and milk.

These substances, it is stated, are concentrated from the feed by the cow and placed in the milk, and by the hen and placed in the egg. And why? That the young of both may be properly nourished. It is not placed in any quantity in the meat of the cow or the hen; it is conserved only for the calf and the chick or for purposes of reproduction. Growing children, therefore, to obtain these necessary vitamines for growth and development must use milk or eggs or both.

These are the facts that we have been looking for to back up argument for a greater use of eggs. Away with calories and talk more vitamines.

All this means a greater use of eggs and a greater poultry industry, and, above all, it means better children and a better race of men and women.

## Death of Otto Spannagel.

With the recent death of Otto Spannagel, Spokane manager of the Yuba Manufacturing company, after only 10 days' illness from tonsilitis, the farm machinery fraternity of the Pacific northwest lost one of its most esteemed and active members.

Among his business associates as well as among hosts of farmers throughout Washington, Oregon and Idaho, Mr. Spannagel will long be remembered for his buoyant and abundant enthusiasm and his generous, manly likableness.

Mr. Spannagel was born, apparently, with a love for machinery. It is hard to conceive of his ever being satisfied with any line of work in which machinery did not play the prominent part; and knowing this it is easy to account for his success in his chosen calling.

When the Washington State college last spring decided to hold a tractor and power farming demonstration at Pullman, Mr. Spannagel was one of the first to give his enthusiastic cooperation and support. Much of the success in quickly organizing the Pacific Tractor and Power Farming association was due to his active interest and personal hard work. His loss will be keenly felt, not alone by his associates and acquaintances in the city, but by farmers throughout the northwest.

## Express Rules Hinder Shipment.

Fruit dealers say that the recent rules of the federal government consolidating several of the express companies has resulted in considerable delay in the loading and unloading of fruits.

## Store Water for Stock

During the present grazing season the flock masters are going to have brought to their attention in a more forcible way than ever before the need of stock water on the ranges. The failure of springs and small streams on the privately controlled range as well as the forest reserve will be very pronounced.

I wish, therefore, through the cooperation of the Washington Farmer, to call the attention of all stockmen and range officials to the absolute need of a thorough investigation of sources of water supply, looking to the storage of same for stock purposes. In many depressions inexpensive impounding dams may be constructed that will retain sufficient flood water to last during the grazing season for a range area which can not at this time be used because of the remoteness of stock water. Where streams go dry in the early season checks or cheap dams may be thrown across in a number of places which will retain sufficient water behind same or in the ground to materially prolong the flow in the streams.

This is a very important subject which has not as yet been taken up by stock interests of Washington, and is of vital importance to economical development of our range area.

MARVIN CHASE,
State Hydraulic Engineer.
Olympia, Wash.

## Probe Grange Case

### Defense Council to Investigate

Governor Ernest Lister of the state of Washington has announced that on Tuesday, July 23, the Washington state council of defense will take up the matter of the state grange convention at Walla Walla when the members of the grange were denied a meeting place to finish their session because of charges of disloyalty on the part of certain grange officials. The Walla Walla trouble arose over the activity at the grange convention of representatives of the nonpartizan league and of the support given the league by State Master William Bouck and other grange officials. The convention was refused the use of the high school building for the completion of its session the last night of the gathering and on the following morning was denied the privilege of meeting at a number of other points in the city. A resolution was adopted later by the executive committee and other officers of the grange urging the government to make an official investigation of the action of the grange leaders and the citizens of Walla Walla who refused them a meeting place. In response to the request President Wilson replied to Master Bouck: "I will certainly do what I can to look into the situation which the telegram presents."

The Agricultural Grange News, the official organ of the grange in this state, in its first issue following the convention, published the following statement to the granges:

To the Granges of Washington:

The following resolution was agreed upon by the advance guard of the grange, before the session convened. It was acted upon favorably by the committee on legislation, and had we been permitted to complete our session it would undoubtedly have been adopted by the grange.

As the executive committee are obliged to complete the work of the session, we adopted it as the sentiment of the grange.

Fraternally yours,
FRED W. LEWIS,
Sec. Washington State Grange.

**Resolution.**

Whereas, Various resolutions have been presented in regard to the national nonpartizan league, some of which falsely state that said league has been indorsed by the executive and legislative committees; now, therefore, be it

Resolved, by the Washington state grange, in regular session assembled at Walla Walla, Washington, this 7th day of June, 1918, that we stand firmly as ever for the principle of nonpartizanship as set forth in our original declaration of purposes over 50 years ago, but we have not in the past, by the act of the entire state grange or any of its executive or legislative committees, indorsed the national nonpartizan league, nor do we now, but we leave entirely to our members the right of choice of principles in regard to politics, religion or any other subject.

Recommended for adoption.
FRED J. CHAMBERLAIN,
Chairman Committee on Legislation.

Adopted by Washington state grange, by its executive committee.
FRED W. LEWIS, Sec.

The Grange News also contained the following:

"The following resolution was written by Earl G. Rice of Smamamish valley grange, and referred by him to the members of the resolutions committee, who were on the train leaving Walla Walla. It was adopted by them and referred to the executive committee, which also adopted it.

"Be it resolved, That we declare these to be grange principles, upon which we will stand:

"First—It is a personal right of every patron to belong to any other organization which we may elect, social, religious, educational, political or otherwise.

"Second—No other organization has the right to demand that the grange either approve or condemn any other organization, whatever the character may be.

Third—The grange will not tolerate interference or influence from outside the membership in determining any policy or choice of any officer in our order.

Signed by resolutions committee.
JACOB VERCLER,
Earl G. RICE,
ALICE YARNELL,
A. G. WEST,
A. H. WEEKS,
CHAS. S. LEWIS.

Approved by executive committee.
WM. BOUCK, Master.
HERMAN NELSEN,
J. T. COMPTON.
U. S. CASE.

**Teaching Disease Prevention.**

At a cost of about $90 a month the North Carolina state board of health spreads its propaganda on disease prevention throughout its country districts. The equipment consists of an auto truck, an extra gasoline engine for supplying current to a motion picture projector, and a camping outfit for two.

# Shorthorn Breeders Aid Red Cross

## *Fifty Purebred Bulls Bring $70,000 at Donation Sale at Birmingham, Alabama*

**Written especially for the Farmer By W. J. BOLES, Birmingham, Ala.**

Birmingham's first bull sale and the first sale of bulls for the benefit of the Red Cross ever held anywhere took place July 2, when 57 sales aggregated $70,000, an average of $1228. The sale was worked up by Frank I. Derby of Ward, Alabama, a successful breeder of Shorthorn cattle, and for 20 years one of the most successful and best known buyers and sellers of Shorthorns in the country.

The bulls were all donated by members of the American Shorthorn Breeders' association and the proceeds of the sale went to the American Red Cross, each purchaser, except of the grand champion, designating the chapter to which the money should be paid. The grand champion had been donated to the Birmingham chapter of the Red Cross and regardless of the residence of the purchaser this chapter was entitled to the money paid for him. As it happened a committee of Birmingham men bought him.

Prior to the sale, under an arrangement with the Red Cross bull sale committee, President Woodrow Wilson purchased the grand champion bull, paying therefore $1, and then donated the bull to the Birmingham Red Cross chapter. The check was forwarded to the committee two days before the sale, and auctioned off at the sale for $1000.

Frank I. Derby of Sumter county, Alabama, who originated the idea of the sale and secured all the bulls for it through donations, will take the grand champion to Washington in a few days with the hope that President Wilson will consent to have himself photographed with it on the White House lawn.

Prior to the sale Dr. C. F. Curtis, dean of the Iowa State college, located at Ames, Iowa, judged the bulls, selecting the best of the lot as grand champion and a junior champion. Lavender's Lord 500408, red, calved July 19, 1915, bred by Charles E. Leonard & Son, Bunceton, Mo., got by Wood Dale Stamp 354,220, was adjudged grand champion.

Royal Heir 593,875, roan, calved March 25, 1917, bred by C. T. Nelson, Blandinsville, Ill., got by Royal Memory 442,168, was awarded junior prize.

The National Live Stock Commission company of National Stock Yards, Ill., donated two bulls to the sale and bought another, Royal Heir. The total sum received from the three bulls amounted to $7350, all of which was turned over to the Birmingham chapter of the Red Cross.

On order of the National Live Stock Commission company, Royal Heir was put up at auction again on July 4, and sold to the Red Cross Bull Sale committee of Birmingham for $4500, just $3000 more than he brought at the sale two days previous.

Colonel P. M. Gross of Kansas City, Colonel Carey Jones of Chicago, Colonel H. G. Igleheart of Elizabethtown, Ky., and W. T. Parker of Birmingham were the auctioneers, with Frank I. Derby of Sumter county, Alabama, as sales manager.

A local committee of 20 representative business men was formed about six weeks ago to arrange local details of the sale. Erskine Ramsey was chairman, J. Merced Barnett, vice chairman; Miss Margaret M. Grogan, secretary, and Paschal G. Shook acting chairman the last two weeks.

About 8000 people gathered in Capitol park, where a pavilion and amphitheater, built for band concerts and community sings, gave them ample seating capacity.

Every bull except one sold at the auction was bid in by a citizen of Alabama, either an individual, a corporation or a committee formed for that specific purpose. The only animal going out of Alabama is the junior champion, bought by the National Live Stock Commission company. The fol-

(Continued on page twenty-four.)

### Indians Are Woodchoppers.

So keen has become the competition for wood choppers in Porterville, N. D., and so large the wages paid that the Tule Indians, who have a monopoly on this work at the present time, are waxing affluent.

## Southwest Washington Fair.

The Southwest Washington fair has issued its 10th annual premium list, which may be obtained, as far as the supply will permit, by addressing the secretary, G. R. Walker, Chehalis, Wash. This year the fair opens Monday morning, the 26th of August, and closes Friday night. There will be no Saturday fair. Heretofore the live stock exhibitors and others always wanted to get away on Saturday in order to be present at the next fair. This causes much discontent in trying to hold them. The management will make provision for farmers and stockmen who care to camp on the ground during the fair. There will be no charge for this privilege, provided such parties have stock entered for exhibition. The following are the superintendents of the departments:

General superintendent of live stock—H. W. A. Tramm, R. F. D. No. 1, Chehalis; assistant, A. B. Nystrom, county agriculturist.

Superintendent of fruit, vegetables and grain—F. A. Degeler, Centralia; assistant, A. P. Perry, state horticulturist.

Superintendent of culinary—Mrs. W. A. Waring-Smith, Centralia.

Superintendent of flowers and plants—Mrs. J. A. Long, Chehalis, Wash.

Superintendent of art—Mrs. Oscar Nelson, Centralia, Wash.

Superintendent of textiles and needlework—Miss Mary Lang, Centralia, Wash.

Superintendent educational department—Professor A. C. Canterbury, Chehalis, Wash.

Superintendent of bees, honey and apairy products—J. O. Wallace, R. F. D. No. 1, Chehalis, Wash.

Superintendent babies' department—Mrs. Dr. J. M. Sleicher, Chehalis, Wash.

## Aphids Attack Peas.

B. F. Brewer of Walla Walla is trying out both peas and sugar beets on his summer fallow land. It is too early to determine the outcome of the experiment, and the issue will be somewhat clouded in any case by the unusual activity of aphids, which are attacking field peas in some parts of the Walla Walla country in unheard of numbers.

TO the Editor of the Washington Farmer: Please find two order blanks and 10 cents to pay for a farm service war flag.

Crops in this neighborhood all looking fine; all small farms, but every one has planted a little more this spring than usual and are cultivating better and doing all they can to grow something to help feed the boys at the front. Every farmer has a bunch of cows and chickens and are raising lots of pigs.

Every farmer should read the Washington Farmer.

J. M. MOORE.

Rochester, Wash.

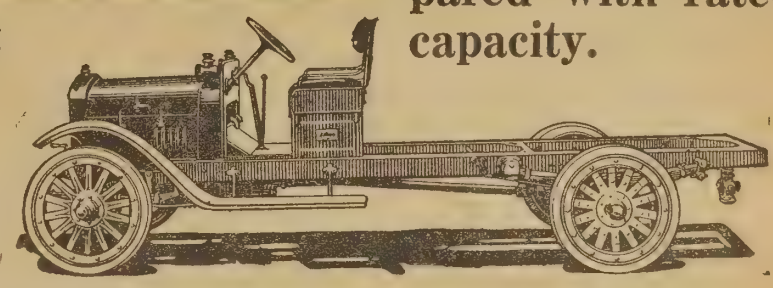
## Jerseys Make New State Record

Twenty Jersey cows have established new state records within the last few weeks, most conspicuous among these is that of "The Owl's Golden Queen," in the state of Washington, is the information sent by the American Jersey Cattle club.

The Owl's Golden Queen 275736.

Washington can be proud of three new records, one of which was broken twice within two months. The name of Genesta's Duchess is also added to the list to give deserved prominence to the great quintette of cows that have just finished yearly records for a total production of 4164 pounds of fat, or an average of 832 pounds of fat. This average for five cows is credited with exceeding anything that has ever been recorded from one state within a similar period of time.

Included in the list of 20 Jerseys are Eminent's Foxy Bell, 304982, owned by J. P. Graves, producing 14,920.6 pounds of milk and 816.65 pounds of fat, aged 3 years 11 months; Brooketta 294025, owned by Glendale Creamery company, producing 14,139.5 pounds of milk and 705.01 pounds fat, aged 4 years three months; Meysie's Fern Lassie, 290819, owned by J. P. Graves, producing 15,606.3 pounds of milk and 803.06 pounds fat, aged 4 years 5 months. Montana has two cows in the list—Maud's Fairy Princess 362083, owned by R. E. Logan, producing 5737.4 pounds milk and 355.06 pounds fat, age 1 year 8 months, and Mona's Lina 364597, owned by R E. Logan, producing 4614.1 pounds milk and 296.09 pounds fat, aged 2 years 6 months.



# MR. FARMER

**Either you need a truck now or will soon. You need only consider the automobile, the tractor and other power equipment to realize that the truck, if not already secured, is the next thing on the list. What you want is a**

JUMBO

**Not necessarily Jumbo in name but JUMBO in strength, compared with rated capacity.**

## JUMBO Trucks Meet Every Haulage Requirement

Every unit is selected for proven strength and quality. We haven't space here to give detailed specifications but just note these points:

MOTOR—"Buda" model H-U, four cycle cast en-bloc, bore 4 1-4, stroke 5 1-2.

While the Jumbo is rated 2 1-2 ton you will find this same motor used in other trucks of 3 1-2 ton rating. Thus we have mighty power for every emergency with sufficient surplus energy to avoid stress on motor and driving parts; over-strength in construction wherever severe strains are imposed; and highest possible quality throughout, three Jumbo characteristics that ensure long life, endurance and low operating cost.

In severe service under heavy loads Jumbo trucks give best evidence of the BRUTE STRENGTH that is an in-built quality. No truck of its size could possibly be better built, regardless of price. It is a truck that will stand up under conditions that would quickly wear out a weaker assembly. A full year guaranteed is evidence of our confidence in Jumbo strength and quality.

$2500.00 for Chassis and Seat.
$2550.00 with Cab.
$2700.00 with Cab and Stake Bed.

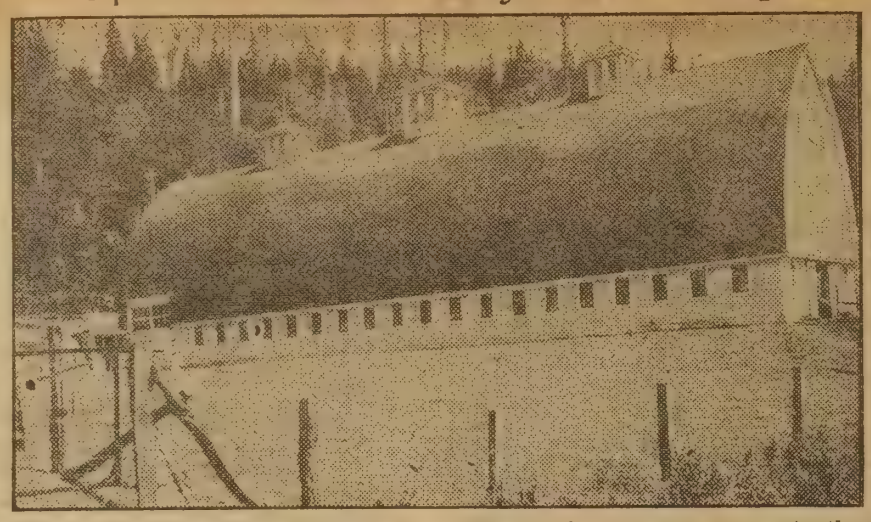
# Educate Consumers

## Give Milk Systematic Publicity

By A. B. NYSTROM

Pure milk is the best food that nature has given to us. It contains all the elements necessary for the maintenance of life. The various products made from milk are of the highest value as food. The three important food nutrients, namely, protein, carbohydrates and fats, can be purchased in dairy products at less than in almost any other food. Recently, investigators have found milk and its products to contain an additional substance most vital to growth and life, which very few foods contain.

All of these facts, if made known to the public, would increase the consumption of dairy products. To be sure, the public will say that if you decrease the cost of the product consumption will increase. That may be true, but recent investigations show that now, especially on the coast, milk is being produced at a loss. It probably has been produced at a loss for the last 50 years. And the cost seems to be going up. Certainly, dairymen can not long do business at a loss. The inevitable must be that the consumer must pay more for it.



The thing for the dairymen to do is to advertise. We can see advertisements of all kinds of soft drinks, teas, coffees and their substitutes in any magazine we pick up, but how many advertisements of dairy products do we see? Only a very few.

It is estimated that we have 25,000,000 dairy cows in the United States, worth approximately $1,500,000,000. Even without including the value of dairy equipment, and of creameries, cheese factories, and condenseries, which must surely equal the above figure, we have a business able to pay a good sized advertising bill. At the rate of one cent per cow per year we would have $250,000 a year for advertising purposes and this would go a long way toward increasing the consumption.

When a business representing probably only one-tenth of the investments of the dairy industry can advertise a commodity which has little or no food value, such as our soft drinks, until the consumers beg for it, does it not seem reasonable to expect that by proper advertising, the public would consume twice the amount of milk and other dairy products it now consumes, when the products to begin with are recognized as a necessity and not a luxury?

The dairymen must cooperate to do advertising if for nothing else. If proper and continued publicity were given all our dairy products the consumption would be sure to increase, and even in spite of the increasing cost.

# Up-to-Date Barn in Gray's River Valley

The barn shown herewith is that of W. N. Meserve, Gray's River, Wash. Mr. Meserve is the merchant of the "city," which is in the heart of one of the greatest little dairy valleys in the west—a community of good, progressive dairymen. There are a number of fine barns, but Mr. Meserve's barn has few equals anywhere. It is 150x38 feet. The perfectly tight ceiling is about eight and a half feet high and the loft 32 feet, with arched roof and no supports, and holding 150 tons or more of hay. The floor is of concrete and the barn is fitted with stanchions and automatic drinking fountains. There are 66 cow stalls and a wide driveway across the barn with conveniences for drawing hay up to the loft. Across the driveway is the concrete root house and alongside that the milk house discernible at the far end of the barn. It has running hot and cold water and steam. Electric lights are used throughout. A liquid manure tank, 28x12 feet and 10 feet deep, on the far side of the barn, receives the liquid manure and washings. It holds 1500 gallons. This can be drawn by gravity into a wagon bed on the road, less than 200 feet from the tank, as the barn stands on an elevation well above the road. Mr. Meserve's herd is of high grade Jerseys, with a good purebred sire, and he contemplates buying purebred Jersey females soon. H. A.

## Provide Farm Bins for Wheat.

Farmers in sections where the acreage of wheat is unusually large are urged by the department of agriculture to provide enough bins on the farm to take care of their wheat when threshed. This is said to be necessary to save the wheat that will probably be piled up in certain localities, because the large crop is likely to put a heavy strain on storage elevators and transportation systems. The wheat should be stored in bins on the farm, according to the bureau of markets, which has issued a circular containing plans and drawings for a portable bin that can be quickly built. Copies of this circular have been distributed to county agents throughout the large wheat-producing sections.

### Great Junker Leader Dies.

Germans newspapers announce the death of Dr. Diedrich Hahn of Hamburg. Dr. Hahn was one of the leaders of the junker party in the reichtag and a violent militarist. For many years he wielded great political influence as the head of the so-called farmers' alliance.

### Farm Girls Are Blacksmiths.

The English farm girl is now working as farrier and blacksmith. A Herefordshire farmer applied recently for some one to shoe horses and make and repair farm implements, and the women's organization was equal to the occasion.

## Jersey Prizes Awarded.

According to an announcement recently made by the American Jersey Cattle club, the cash prizes of $50 and $25 offered by McArthur & Stuff of Rickreall, Ore., for the best and second best Register of Merit records made by daughters of their Jersey bull, Holger, before April 1, 1918, have both been won by Thomas Williams of Forest Grove, Ore. First prize is awarded on the performance of the junior 3-year-old Olalla, whose record of 654 pounds fat exceeds the minimum requirement for her age by 350.60 pounds. Second prize is awarded on the record of the senior 3-year-old Jersey Style, she having produced 574.61 pounds of fat, or 261.31 pounds over her minimum requirement. The junior 3-year-old Dina Dorf, also owned by Mr. Williams, scored third place, for which no prize was offered. She made 528.80 pounds fat. Fawn of Cedar Hill, a senior yearling in the herd of N. H. Smith of Oregon City, Ore., made a remarkable showing, with 456.81 pounds fat to her credit. The average of the six head which figures in the awards was as follows: Milk, 9094.53 pounds; fat, 490.36 pounds; test, 5.40 per cent; age, 2 years 8 months. Four out of the six head qualified for Class AA.

## Men Teach Home Canning.

In addition to the 600 men leaders of boys' and girls' club work in the north and west, there are as many county agricultural agents who have learned to demonstrate canning effectively throughout their counties. Many of these have become expert canners. In several instances county agents have been offered positions in commercial food concerns to supervise and direct the work of food conservation.

### White Miners Scarce in Africa.

Of 317,000 miners in the mines of South Africa only 32,000 are white.

Correct Lubrication for the "L"-Head Type Engine

This, the "L"-Head type of automobile engine, like all *internal combustion engines*, requires an oil that holds its lubricating qualities at cylinder heat, burns clean in the combustion chambers and goes out with exhaust. ZEROLENE fills these requirements perfectly, *because it is correctly refined from selected California asphalt-base crude*

"Proven Entirely Satifactory"

Only perfect satisfaction can account for the use of ZEROLENE by the majority of automobile owners.

Leading coast distributors also testify that it is "a most satisfactory motor oil."

They know from the records of their service departments—and we know from exhaustive tests—that Zerolene, correctly refined from selected California asphalt-base crude, gives perfect lubrication with least carbon deposit. Get our lubrication chart showing the correct consistency for your car.

# Measure Hay in Stack

To the Editor: I should like to know how to measure hay in the hay stack that has been loaded and tramped—that is, hay that has not had the ordinary 30 days to settle. JOHN CACKA.

The above question was answered as follows by E. G. Schafer, agronomist at the Washington State college:

**The Answer.**

Estimating the number of tons of hay in a stack by measuring is sometimes resorted to when it is impractical to weigh it. I believe, however, that a person should not rely upon any such rule, wholly. The stacks vary greatly in shape, and also in size. Both of these factors have a direct bearing upon the weight of the hay in a certain volume. Perhaps the reason for greater variance, however, would be due to the length of time that the hay would have to settle.

Another factor of importance would be the stage of maturity and amount of moisture the hay contained when stacked. It seems as though alfalfa cut at a later stage of maturity would not settle quite as firmly as alfalfa cut at a slightly earlier stage. The proportion of leaves might have some influence.

The following rule is commonly used: "Width plus over, divided by four and squared, then multiplied by the length and divided by 512." You should consider this only approximately correct.

## Veterinary

Dr. S. B. Nelson

**Mare Has Skin Disease**—I have a young mare which I purchased a year ago last fall and which had a skin disease at the time and has been bothered ever since. It seems to bother her more in summer. She rubs the hide off her body in large spots. Can you tell me what to do for her?—V. D., Tillamook, Ore.

Try applying daily a one-fourth of 1 per cent of picric acid in water. This is a quite poisonous drug and you must keep it away from children.

**Blood in Bowel Movements.**—I would appreciate it very much if you could tell me what is the trouble with my cow. She is coming 2 years old this summer and due to freshen in August. For about two weeks I have noticed considerable blood in the bowel movements generally immediately after drinking. The cow is a Jersey, fat and in fine shape, eats well and jumps and plays and seems to feel fine. Is the trouble anything to be alarmed about? C. W. K., Prosser, Wash.

Considering that your Jersey cow is in fine shape and fat, eats well and jumps and plays and seems to feel fine, I would hardly think that there is anything to worry about in the condition in which she is in. It may, of course, be some slight local trouble in the posterior part of the bowels. Just what that might be I do not know. I would hardly think it advisable to do anything to her while she is so heavy with calf.

**Filley Is Stifled**—Have a three-year-old filley which is stifled in both stifles. This was first noticed in January. Do not know how it happened. She weighs 1300 pounds, has good appetite and is in good shape. The lameness bothers most when she goes down hill. Her eyes look glassy. What can be done for her and would it be safe to breed her?—M. B. W., Neppel, Wash.

When you say the filley is stifled in both stifles, I wonder if the papella or stifle bone slips out of place. If it does this, it indicates that the ligaments are not sufficiently strong to hold the bone in place and if this should be the case, frequently the applying of a blister to the stifle causes the strengthening of the ligaments so that they will hold. The blister should be applied on one leg one week and to the other stifle the next week. The best blister to use is red iodide of mercury, one part; cantharides, one part; lard, seven parts, and beeswax, one part. Have your druggist mix it well and rub it over the stifle thoroughly. Then spread it on in sufficient quantity, about as thick as the depth of your knife blade. Tie the mare up so that she can not get at it with her mouth. When the mare gets older she will probably get over this trouble to a certain extent, but the slipping out of the bones constantly will cause an irritation of the cartilege which may cause trouble later on. Therefore, she should be treated.

**Operate Upon Teat**—We have a cow which had one teat nearly half cut off while she was dry. When we milk her since freshening the milk comes out of the side of the teat as much as it does through the end. When she is dry again could the teat be sewed up and thus restore the teat?—T. S. J., Wash.

When the cow is dry again, you can have her operated upon and the teat can be restored to usefulness again.

**As to Feed for Cows.**—We feed each one of our cows three quarts of bran and one quart of shorts and was advised to get some oil meal, as that was good to make the milk more rich, as it tested higher after feeding the oil meal. Is that right, and how much oil meal should one feed to each cow with the above amount of feed per cow? They have good pasture to graze on, so we feed no hay now. A Reader, Elma, Wash.

Regarding the feeding of your cows, the general rule is to feed one pound of concentrate or grains for every three or four pounds of milk given per day. You will find linseed cakes quite highly nitrogenous food. They also contain a little fat and it is fed in half-pound quantities or less per day, depending upon the other grain feeds. Each cow should be fed according to her milk production.

**Is Hard to Milk.**—We have a heifer that has been fresh about four weeks. She is very hard to milk. The milk comes down all right, only the opening in the teat seems to be too small. V. R., Lacrosse, Wash.

I would suggest that you go to your musical instrument house and purchase the largest catgut string that they carry. Tie a knot in one end of it and cut off about two inches above the knot. Place this in a 10 per cent solution of carbolic acid, leave it there for a few minutes. In the meantime dip the end of the eat that is so hard to milk in tincture of iodine, then take the catgut out of the carbolic acide solution and swish it so as to rinze it in boiled water. Now insert this into the teat and leave it until the next milking. Naturally, you must do this immeditaely after you have finished milking her. Repeat for some time and see if that will be of value.

**Cow Lame in Leg.**—I have a cow 4 years old in good health every way except for a lameness in left hind leg. Noticed it in November last, just a little. There was not any cut or wound that I could see. She got gradually worse and about the first of January there was a lump formed on the leg about four inches below the stifel joint. This lump is now the size of a saucer.—B. J. L., Elk, Wash.

I can not make a positive diagnosis of the trouble causing the lameness of your cow. As an alleviative measure I would suggest that you apply a blister over the affected part. Use: Red iodide of mercury, one part; cantharides, one part; lard, seven parts; beeswax, one part. Rub in well for a few minutes and then apply a layer about a sixteenth to an eighth of an inch thick. Wash off in two or three days when the blistering has been completed.

Uncle Sam Wants an Army of Calves

To make into beef, fats, hides.

Raise calves on Lilly Calf Meal. It takes the place of milk because it has all the necessary elements for calf nutrition.

It is not only a scientific, but it is common-sense food, endorsed by Pacific Northwest dairymen everywhere. Dealers sell it.

# Counteract Heat

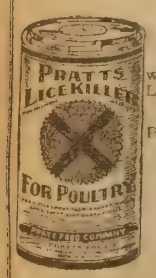
## Poultry Suffers From Heat

The summer months are hard ones on poultry. The hen can stand lots of cold weather, though too much of anything is too much, but the hot days of summer cause her not only physical suffering, but actual physical depreciation.

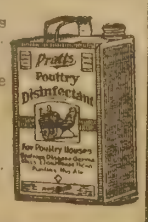
Great care should be taken to keep the fowls as comfortable as possible. Plenty of shade should be provided, and above all, plenty of fresh water. To set out a pan or trough of water in the morning of a hot day and count it enough for the day is a serious blunder. Even though there is more of it than the chickens will drink, it should be replaced by cool water frequently. A cool drink cools the hen and fortifies her against the next hour of heat.

Another way to assist her ladyship to get through the summer is not to let her get too fat. Fat is a great heat producer and acts also like a cooling jacket on an engine. The engine boiler is equipped with a covering of wood or paper or some other material to prevent the radiation of heat. A thick layer of fat like some hens of the heavy breeds carry when given fat and heat producing foods, acts in the same way.

Hot nights are sometimes as hard on the flock as the days. They should be provided with a roosting place where plenty of air can pass through, and sprinkling or any other artificial means of reducing the temperature of summer evenings or days will pay well.



## Washington Pen Wins First Place During Week at Storrs



In the thirty-fourth week of the laying contest at Storrs the total production of all pens amounted to 3994 eggs, or a yield of 57 per cent. First place for the week was won by a pen of White Leghorns from Hollywood, Wash., with a production of 59 eggs. J. O. LeFevre's White Leghorns, from Paltz, N. Y., were second with 55 eggs, and Archis R. Colburn's Rhode Island Reds from Hollis, N. H., were third with 54 eggs. Fourth place was hotly contested, there being five pens that each laid 53 eggs for the week. These comprised Barred Rocks from New York, White Leghorns from New York, New Jersey and Pennsylvania, and Oregons from the agricultural college, at Corvallis, Ore.

In reporting the thirty-second week of the contest attention was called to the fact that the Oregons just mentioned were giving the leading pen a run for its money. During the last three weeks this pen has gained a total of 22 eggs on the leaders, which is practically an egg a day.

## Performed Operation.

A little bit of poultry surgery came under the notice of the writer recently. A woman in the city with a backyard chicken lot discovered one of her little chicks, about 3 weeks old, drooping. It continued to grow worse. After a day or so she examined it and found what she believed to be something in the nature of indigestion. The crop was full, still containing grain feed that had been given a day or two previously. She took the chick to the porch, got the scissors, opened the crop and removed the offending food. She then inserted a little dose of castor oil, sewed up the cut and turned little Mr. Rooster loose to make the struggle for life alone. He won. He is doing as well now as the others of the brood. He is a little smaller, but otherwise apparently none the worse for his experience.

## Government Wants More Poultry.

With a view to stimulating the production of poultry in the United States to supplement the country's food production, the United States department of agriculture is sending out a number of poultry specialists. These specialists are taking up with poultrymen and farmers the possibility of increased production. Their recommendations summarized are as follows:

Keep better poultry; select healthy, vigorous breeders, hatch early, preserve eggs, except for hatching; cull the flocks; keep small flocks to supply the family table; grow as much poultry feed as possible; eat more poultry and eggs and thus conserve the meat supply.

## Bought the Boy, Not the Calf.

The news of the sale of the $106,000 bull calf at Milwaukee, Wis., has already been given in the Farmer. Now comes a story in the Kansas City Star of the 15-year-old Canadian boy, Arthur Hay, who raised the calf:

Tears trickling down the cheeks of a 15-year-old Canadian boy helped to sell a 6-months-old Holstein bull calf for $106,000—the highest price ever paid in the world's history for a member of the bovine family. It is now disclosed that the boy who raised this prize calf will be given a chance to go to college and secure an education. His tears for the pet calf touched a woman's heart. Hence the open sesame for his ambition to be realized.

The bidding started at $5000. Arthur Hay was the farm boy who had raised the calf for its owner, A. C. Hardy, a lawyer, who has a farm as a side line at Brockville, Ontario, Canada. As the bidding became spirited, Arthur cried as he stood holding the animal. The frenzied bidders surged about the boy and the calf. Arthur's tears were "catching." Before the sale was completed one of the woman clerks was in tears, and one of the auctioneers sobbed aloud. Hysteria seemed to grip the crowd. Men and women threw hats and handkerchiefs in the air and shouted with pitched voices. Those present declared it the most remarkable spectacle they had ever witnessed at an auction.

The Hay boy and his tears had something to do with the big price realized for Champion, it is said. The love of the lad for the pretty black and white spotted calf seemed to affect the bidders. E. A. Stuart, the buyer, said: "I didn't buy the bull; I bought the boy, and they threw the bull in."

A woman, touched by the Hay boy's tears, made a plea to Mr. Hardy in his behalf, and the boy will be sent to college.

## Three-fourths Acre Garden.

Robert Locke of Quinault, Wash., reports that his garden of three-fourths of an acre is just about the same in size as last year. They raise the year's supply of potatoes and other vegetables, consisting mostly of corn, beans, onions, carrots, peas, lettuce, beets, cabbage, celery, tomatoes, parsnips, turnips and rutabagas.

## Artesian Well Floods Ranch.

While boring in an old well for a bigger supply of water on his farm three miles east of Harrington, Wash., J. E. Russell suddenly struck an artesian well. Before the sudden rush of water could be stopped it had flooded 100 acres. The well is a five-foot hole 110 feet deep, has a pressure of three to five pounds and supplies 4000 gallons of water an hour.

# Freight Rates

## As They Affect the Fruit Grower

Personally I would rather pay the freight rates on fruits proposed by the government in the general schedule, in order that it may meet its running expenses in the management of the roads, than to feel that we were asking, as fruit growers, for special privileges. The only difficulty is "Can we do it and live?" Last year we could not have done it, considering the prices we received. This year, the outlook for prices is better, but the question is still speculative and uncertain.

If we could fix the prices on our products, as do most manufacturers of the materials we buy, we could pay any price they asked us and still make money. The manufacturers of box materials do not ask us what we will pay for boxes, they tell us what they will take and we pay it. I am not charging that they ask too much, but they, and not the buyers of boxes, fix the prices. We do not fix the price of paper, the paper manufacturers fix it and we pay it. I am of the opinion that their prices to us are extortionate, because it has been a matter of news that they have agreed with the publishers of magazines, newspapers, etc., to furnish them paper for three cents per pound. The paper used in wrapping fruit is not a more expensive quality, and we pay eight cents in carload lots. The retail price is higher, and the average orchardist will buy in retail lots. At this point I think there are extortionate charges and excessive profiteering.

The prices of spray materials have advanced to almost double what they were formerly, yet in the United States there is an inexhaustible supply of raw materials. Take sulphur as an illustration. There is a mountain of sulphur in Louisiana, a deposit so nearly pure as to require very little refining to make it a marketable commodity. In fact it has been claimed, and I believe it to be true, that they put it on the market without any refining whatever, because it is a matter of record that the deposit, at "Sulphur," near Lake Charles, Louisiana, is 99 per cent pure. This particular deposit is several hundred feet below the surface, and is dissolved and brought to the surface by hydraulic pressure. The Standard Oil company owns this deposit, and since no company on earth can compete with them, they can put prices where they please. Two years ago the excuses for the high prices of spray materials, were that we had to ship from Japan. This may be true, but I do not believe it. I am presuming that if I owned the Louisiana deposit, I would meet the Japanese with prices that would keep their supply out of the country. I think the prices paid by fruit men for lime and sulphur are results of excessive profiteering. No matter about that, they can fix the prices and we must pay what they ask.

Ever since the government fixed the prices of certain food commodities, I have seen that to be either logical or equitable, the prices of all commodities related, or that could be used as substitutes, would have to be fixed. It seems like a big program, and it is; but if we have to pay higher freight rates, higher for all materials, and higher for labor there should be some assurance of higher prices for fruits. G. L.

# June Report on Apples

The government apple report is at hand. It shows that the following states are above the 10-year average in apple production: New York, New Jersey, Pennsylvania, Delaware, South Carolina, Georgia, Ohio, Michigan, Wisconsin, South Dakota, Kansas, Tennessee, Alabama, Mississippi, Louisiana, Texas, Oklahoma, Wyoming, Colorado, Arizona, Utah, Nevada.

The states of Washington and West Virginia are equal to the 10-year average.

The following states are below the 10-year average: Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, Maryland, Virginia, North Carolina, Indiana, Illinois, Minnesota, Iowa, Missouri, North Dakota, Nebraska, Kentucky, Arkansas, Montana, New Mexico, Idaho, Oregon and California.

The total is 69.8 as compared with 68.2 for the 10-year average.

The prospective peach crop, according to that report, is 52 as compared with 61.4, the 10-year average.

The pear crop is 62.7 as compared with 67.3 for the 10-year average.

Blackberries are 80.5 as compared with 87.4, 10-year average.

It must be noted that this report does not include the period in which occurs the "June drop," and which so greatly affects the final output as to render these figures somewhat unreliable; but they are nevertheless a basis for guessing.

Observation leads to the conclusion, that except in those sections with a large percentage of young trees coming into bearing, the crop in the northwest will be less than last year. G. L.

## TO KILL ANTS.

### Found Tartar Emetic Effective.

There has been considerable inquiry lately and discussion as to how to kill ants.

I have a letter from a lady who says she has succeeded, who is too modest to have her name published, but who wants to "help some one." She says: "Six years ago, we moved into this house, an old one, and the ants were here, black ones, that seemed to live under the house in the underpinning. I tried everything I could think of or hear of, and sent to the department of agriculture at Washington, D. C., for literature; yet nothing proved to be of any benefit. The ants increased, went everywhere, and meddled with everything not securely protected. I put a little sugar syrup in individual butter plates, add added a little tartar emetic, placing it where they could get it. They feasted and went away. The next morning, two or three came, but seemed to avoid the bait. I caught them and put them in it and they scampered away—without eating of it. For about a week I saw one, occasionally, then no more until the next year. As soon as they began coming I used the same remedy. Since then I probably see one or two during the season.

**Tartar emetic is a poison, and great care should be used to prevent children getting it."**

The practical thing in this letter is, that the writer got rid of the ants. What the scientist would like to know is, how the ants communicated with one another so as to prevent those that did not eat from eating as the others had done. Other animals often do the same thing. G. L.

## Yellow Newtown Apples.

The commercial production of Yellow Newtown or Albermarle pippin is located almost exclusively in four states. California leads with a production of about 1,000,000 boxes of one bushel each. Oregon is second, with Newtown the leading variety for the state, and produced in Hood and Rogue River valleys. Washington is third with 537 cars of Newtowns from Yakima valley alone in 1917. Virginia is fourth with the production centering in the Piedmont district. A full crop of Albemarle pippins for Virginia is about 170,000 barrels.

## New York Apple Crop.

The normal commercial production of the New England Baldwin belt, comprising the states of Maine, New Hampshire, and Massachusetts, is 1,630,000 barrels. In 1917 with a 46 per cent crop this district produced 745,000 barrels or 402,000 barrels of Baldwin, which makes up 45 per cent of the Maine crop, 71 per cent of the New Hampshire crop, and 60 per cent of the Massachusetts crop. Fifty-four per cent of the production of these three states is Baldwin.

# Why Is It?

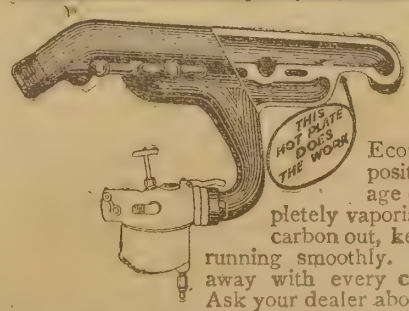
That practically every tractor manufacturer (and there are 40) using K-W magnetos as standard equipment, include them in their specifications or catalogue?

They do so because the record which the K-W magneto has made for itself—by actual field operation—during the last ten years—has given it a reputation that *tractors built for quality* demand.

These 40 manufacturers pay more for K-W Magnetos but it is their assurance to the tractor buyer that he is being provided with the most reliable ignition system, guaranteeing to him a "No Trouble" service day in and day out.

Write for a list of K-W Equipped Tractors

## K-W High Tension MAGNETOS



are *true* High Tension types. No Batteries and *no* Starting Coils are needed. The K-W Magneto starts any size motor *easily* and *quickly*. It gives the hottest known spark—fires any kind of fuel equally well—is timed accurately; and last but not least, its construction protects it against dirt, water and oil.

If you are not using K-W Ignition now, write us. Let us show you how a K-W Magneto will be a time, money and fuel saver for you.

Insist that your new tractor be K-W equipped. Look for the K-W Trade Mark.

THE K-W IGNITION Co.

# Peacetime Use of Devilish War Contrivances

## We kill weevil in the grain bin by the use of carbon disulphide gas. Why not discover the death sentence for a plague of grasshoppers or crickets and catch them without their masks on?

By E. E. ELLIOTT.

One of the results that will come out of the war will be the peacetime use of many of the devilish contrivances and inventions which have been brought into service by both sides engaged in the great conflict. Just as many of the developments of the industries and arts have been taken over and improved to the highest degree for military purposes, passing in their capacity for evil the utmost beneficient dreams of their originator, so we may confidently expect that in time we may see a reversal of the conditions.

One of the things we may look for in the future is the adaptation of gas toward the destruction of undesirable and injurious forms of life. One can not read the many articles descriptive of the use and action of these different gases which have been concocted with such debased scientific ingenuity, nor of the wealth of treasure poured out in their manufacture, without facing the inevitable question—why might not such a terrible weapon have long ago been placed in the hand of man for his benefit instead of his injury.

The use of poisonous gases for the destruction of certain forms of life is not a new or novel application of science. Especially is this true of the contest waged on the lower microscopic forms, which prey on the human race and other animals. Poison is always poison, whether as a solid substance of mineral or vegetable origin, as a liquid derivative or as a volatile gas. In all of these forms it has in a limited way been used to combat disease, to subdue insect pests and otherwise hold in check those forces of nature which are constantly contending to limit man's happiness and experience. At no time, however, has there been attempted a widespread and extended application of poisons especially adapted and designed to root out and destroy some particular foe of mankind.

In a recent magazine article a writer describes the differing effects of some combinations which have been used by the Germans. Certain gases affected the mucous surfaces of the body, particularly the throat and lungs. Others attacked the eyes, causing a profusion of tears, as a raw onion would do. There was a gas causing intense itching and still another producing nausea. The effect upon the minor animals, rodents, birds, insects, as well as that upon vegetation was particularly described and it was remarkable that certain animals and plants showed immunity while at the same time others were totally destroyed. As an illustration, one gas attack was noted which absolutely destroyed all garden growth, even to root crops like turnips and potatoes, while the cereals and certain trees were exempt. One of the beneficial results was the slaughter of the trench rats. It will be understood that these attacks are often made over a wide area and the effect often penetrates to a distance of nine or 10 miles.

In face of these facts it would not be impossible to imagine the development of compounds which would have a deadly effect on certain plant diseases or insect pests while at the same time causing no injury to the vegetation they may be preying upon. The spores of wheat smut are well known to be easily destroyed by certain chemicals, while the grain of the wheat is uninjured by the treatment.

Is it visionary to suggest the concoction of a gas deadly to the fungus in its active growing stage and at the same time leave the grain uninjured. We kill weevil in the grain bin by the use of carbon disulphide gas, why not discover the death sentence for a plague of grasshoppers or crickets, and catch them without their masks on. Our only way to kill the aphis is to spray him with some poisonous substance on his tender skin; why not gas him and get him in the hiding places where the spray can not reach?

The greenhouse man closes up his propagating plant, fires some tobacco or other poison in a pan and destroys myriads of his enemies, and some years ago experimentation was carried out with a tent apparatus dropped over fruit trees to hold the gasses generated for a similar purpose.

The Germans have demonstrated that it would be possible to do this on an extensive scale and it is certainly applicable to large areas of orchard. If it can be done under the cloud of war at a countless expenditure of scientific ingenuity and treasure in order to destroy human life or make it unbearable why can it not be done under the sunshine of peace for the purpose of making life better provided for and happier. It would cost a lot, but it would be repaid many fold and in many ways.

## Motor on the Farm

Some of the reasons why there should be an automobile on the farm are given in the following letters which were entered in a recent contest of the Farmer:

### Firmer Grip on Life.

To the Editor: I am a farmer's wife and the mother of four small children. A couple of years ago we had to decide between a hack and an automobile. We chose the latter and we have never been sorry, for when there were supplies needed or errands to run in a hurry, the car was always ready and quick to do the work. Then think of the pleasure for us all, when at the close of a hard trialsome day, we go for a spin and our troubles are entirely forgotten when riding over God's beautiful country; and isn't it wonderful how soon we can be so far away. We see many, many things that we never dreamed of being able to see. It gives us a new, firmer grip on life in this world of trouble. I, for one, would never get a chance to go anywhere were it not for our car. It sure is a blessing to the farmer, his wife, and family. MRS. B. B. JAYNE.

R. No. 2, Davenport, Wash.

### As a Time Saver.

To the Editor: I would not be without an automobile on a farm for anything. It comes in so handy so many times. Suppose one of the family should become seriously ill in a short time, or should meet with some misfortune, we would not have to wait so long for a doctor or any other kind of help. Also, it is good to use the exhaust to rid the gophers in the field which destroy so many of our crops. Then, too, we have a very easy and convenient way of hauling the milk to the factory. You can do it in half the time you can with a team. The automobile is also used for plowing the ground or hauling the plow for the farmer. Then, most of all, we have the car for pleasure. We can go twice as far in a day as we used to, and have a nice visit with our friends. When you want any provisions from the store, there in the garage is your automobile, ready for travel and you only need a half of a day for the trip to the store and back, whereas it used to take a whole day of long, hard driving. LUCY DANIEL.

Mohler, Ore.

### Three Good Reasons.

To the Editor: We are farmers and have an automobile and I wish to give the reasons we wouldn't be without a car.

When my husband had an accident we were able to summon the doctor fully twice as quick and thus save him pain. (In an emergency.)

We can make a trip to town and back in two or three hours where formerly it took us all day. (As a time saver.)

When we go to town with the car it leaves us and the horse rested and we can put the rest of the day in on the farm. (More labor on the farm.)

And last, when we want a vacation it only takes us a day to go to the mountains and we aren't tired when we get through. (For pleasure.)

MRS. G. O. CLEVELAND.

Gooding, Idaho.

### Grain Acreage Increased.

Director W. S. Thornber of the extension department of the state college issued figures recently to show that the wheat acreage in this state is 1,800,000 acres, against 1,400,000 acres last year; that the barley acreage is 119,000 acres as against 102,000 last year, and that the oat acreage is 356,000 acres against 293,000 last year.

**Footlights for Japan.**

Before the advent of footlights in Japan it was customary for each actor to have a boy with a candle illuminate his face during the whole performance.

The Real Test

—of gasoline is in its boiling points. In "Red Crown" they form a continuous, uniform chain,—giving easy starting, quick acceleration, power and mileage. Look for the Red Crown sign.

CHICAGO, ILL. Manufacturers

The Fitch 4-Drive Tractor Drives and Pulls on All Four Wheels Instead of Two

This positively eliminates every trouble in turning corners on soft or plowed ground.

In addition every wearing and working part runs in a dust-proof oil-tight housing which insures longer life and minimum of upkeep expense.

The 4-drive is equipped throughout with Timkin bearings, David Brown Timkin worm drive and Brown Lipe differentials and gears and Waukesha heavy-duty motor—equipment found only in the more expensive high-grade motor trucks.

The 4-drive pulled a three 14-inch bottom gang throughout the entire Pullman demonstration, negotiating grades as high as 35 per cent, plowing seven inches deep.

Considering the high grade units and performance of the Fitch 4-drive at **$2250 f. o. b. Spokane,** will it not pay you, Mr. Farmer, to carefully investigate every detail of this machine before purchasing a tractor? We can make immediate deliveries.

If unable to come to Spokane write us for descriptive literature.

# More Than 10,000 Tractors

## *Great Britain May Yet Produce Its Own Foodstuffs*

As the result of U-boat destructiveness, Great Britain may be producing enough breadstuffs in 1919 to feed its people. More than 4,000,000 acres of grass lands have been plowed under and cropped to grain in England, Wales, Scotland and Ireland, and American-made tractors are being imported by the thousands. Eighty-one hundred motor tractors have so far been imported and orders are outstanding for 5500 more.

Before the war Great Britain produced only about one-third of the breadstuffs needed to feed its people, but present indications are that this year's harvest will supply breadstuffs sufficient for 40 weeks.

This remarkable increase is made in the face of the fact, as stated by the British ministry of food census, that in England and Wales alone there are more than 200,000 fewer male laborers on the land today than in the year before the war, after crediting all military and prisoner labor furnished by the government.

"Reckoned in tonnage, the net saving in shipping resulting from the increased production of grain and potatoes in England and Wales alone should amount in the coming year to 1,500,000 tons.

"The foregoing figures relate only to holdings of one acre and upward; and take no account of the increased produce from allotments and gardens. These, however, contribute very largely to the supply of home-grown food. The increase in the number of allotments alone since 1916 is not less than 800,000 in England and Wales, or 140 per cent. The additional weight of foodstuffs produced by this expansion may be reckoned at not less than 800,000 tons above the normal.

It is a question of interest and importance to the American farmer whether this increased British production of breadstuffs will continue after the war, and the question particularly concerns the wheat growers of the Pacific northwest, who have long turned to the British isles as their chief export market.

### Boys and Girls Specialize.

It is reported that there are approximately 10,000 boys and girls doing specialized agricultural work in the state this year, principally under the leadership of the boys' and girls' clubs. Of these, something like 800 are specializing in pig raising, with possibly something like 4000 animals, including the pigs and their mothers; 700, or thereabouts, are specializing in poultry, 200 in sheep, and at least 300 in rabbits.

### It Is a Pretty Spot.

C. S. Rood, who attended the state grange meeting at Walla Walla as a delegate from Clark county, says that the Garden City has changed somewhat since his last visit, in 1881.

"It's a wonderful town," comments Mr. Rood. "I don't think there is a prettier spot in the entire northwest—and I thought just the same thing back there in '81, when I landed from a long trip across the country to find everything green and beautiful. My interest in the scenery, in fact, almost cost me my life, for I stood in the middle of the street staring around me till I heard some one yell, and I just jumped in time to keep from being run over by a milk wagon. I sometimes wish," he concluded, "that I had staid right in Walla Walla. It's a wonderful town."

### Would Reclaim Overflow Lands.

With a view to reclaiming large areas of bottom lands along the Columbia river a new diking district has been formed in Cowlitz county. Henry Lamb and A. L. Lewes have been elected commissioners for the district. It is the purpose of those back of the movement to construct the dike as early as possible to prevent the overflow of the lands by the river next season.

### DORSETT FARM.

### Raises Fruit, Alfalfa and Hops.

The O. J. Dorsett farm of Yakima is a good example of both intensive and diversified farming. Mr. Dorsett has seven acres in orchard, nearly five acres in alfalfa, and 12 acres in hops. Alfalfa is raised also between the rows of fruit trees, this crop usually yielding about one and one-half tons to the acre; in addition to furnishing pasture for a few hogs. Alfalfa is chosen for this orchard land rather than clover or some of the forage grasses because of its deep rooting qualities, which enable it to break up the subsoil and add organic matter far below the surface.

Speaking of various tracts of alkali land near his farm, Mr. Dorsett was reminded of the condition of these same partially useless tracts some 27 years ago, when he first came to Yakima.

"They were just as free from alkali then as any land," he states.

"It is the seepage from irrigation on higher tracts that has brought the alkali to the surface here. Sometimes it can be washed out of the soil by flooding, and then of course there are some crops which do fairly well on alkali land."

#### Hair Ribbons for Shoe Laces.

Girl workers in the danger buildings at Woolwich arsenal, London, are not allowed to wear jewelry, so they indulge their love of personal adornment by wearing bright-colored ribbons as shoe laces.

Today the whole northwest is talking about GMC trucks. No farmer doubts the ability of the GMC to deliver the goods.

**GMC TRUCK——Hauls 15 TONS Wheat--522 Bushels--**

**in 13 HOURS, Over Country Roads, Used 20 Gallons of Gasoline and 3 Quarts of Oil. We Call That Economy.**

A horse eats 12,000 pounds of feed a year; he eats the whole output of five acres; yet his efficiency is only 2 per cent. He must be taken care of 365 days of the year, yet he averages only three and one-half hours' work per day, and tires in six

Land and labor are both too high to stand this expense.

With a GMC truck one man can haul in ten hours from your setting in the field 1000 bushels of wheat a distance of ten miles, loading and unloading same, at a total cost of less than 1-2c per sack per mile.

Remember, GMC TRUCKS do not eat when they do not work.

Mail attached coupon for information of GMC performance last summer on the farms of the northwest. Let us tell you what they will do for you.

# MUGGSY HELPS ALONG THE SUNDAY CLOSING LAW

# SAMMY STAHL MAKES A BREAK INTO SOCIETY

# Poisoning by Water Hemlock

To the Editor: The poison Hemlock is getting bad around this valley and I have mentioned the danger of same to quite a number on whose place it grows, and they did not even know what it was, to say less of the danger of same, so I would ask you to print an article in regard to it in The Farmer, stating the danger of same and the urging people on whose place it grows to get rid of same. There has been considerable stock poisoned by it. W. E. SMUCKAL.
Freewater, Ore.

Many deaths, both of human beings and domestic animals, are caused every year by cicuta, or water hemlock, a poisonous plant. It is the most violently poisonous of temperate region plants, yet it is not generally recognized. Learn to know it and look out for it, is the warning contained in a bulletin issued by the U. S. department of agriculture.

Cicuta is widely distributed. Unfortunately, it resembles a number of harmless plants and is not easily recognizable. It belongs to the same family as carrots and parsnips. It has a number of popular names, of which the most common is "cowbane," or "water hemlock." In the mountain regions of the west it is frequently called "parsnip" or "wild parsnip." Other names, less common, are "snakeroot," "snakeweed," "beaver poison," "muskrat weed," "spotted hemlock" and "spotted parsley."

Regarding poisoning by water hemlock Dr. S. B. Nelson, head of the veterinary science department, State College of Washington, says:

When green feed is scarce as it is now, the bright green leaves and stocks become quite attractive to grazing stock and they eat them freely. They even eat into the crown of the root of the plant, which contains the larger quantity of the poison cicutoxin, and when the animal obtains this plant it nearly always proves fatal, because the plant material has an opportunity of being absorbed and causing the poisoning before the owner knows anything about it.

**Beaver poison, water hemlock, musquash root—a rather slender, stiff, open-topped perennial, having fleshy roots; leaves compound, the segments serrate; flowers white, fruit borne in compound umbels. A native; abundant on low, moist land. Very poisonous.**

The owner only finds out about it by noticing the sickness of the animal and then, as before stated, results of treatment are not always satisfactory.

The symptors are a severe pain, a peculiar trembling across the shouldlers and in the tissues back of the shouldlers. These tremblings later develop into more or less severe muscular spasms. The eyes have a staring look, increased by the dilation of the pupils. The pulse is weak, wiry and sometimes intermittent; that is, it misses a beat. The breathing is irregular, sometimes heaving and at other times regular, being influenced to a considerable degree by the muscular spasms. There are no regular symptoms regarding the bowels, though at times there will be small passages of manure at short, irregular intervals.

Remedial measures are not of much value, unless they can be administered very soon after the animal has partaken of the plant. Probably one of the best remedies to use is potassium, permanganate, the dose of which is from 10 to 50 grains for cattle, depending upon the age and size of the animal. The drug should be dissolved in from two to four quarts of water. The more mater used within reason, the more apt the liquid is to come into contact with the poisonous plant material. Be sure that the drug is completely dissolved before the solution is given to the sick animal.

Water hemlock frequently grows in smaller or larger groups, so that as a preventive measure, it may be either fenced away from the pasture land or removed by digging.

In many cases the plant could be entirely exterminated at a small cost for the labor necessary. It is to be remembered that every time a plant is dug up and destroyed the chances for the poisoning of stock are lessened.

In the later spring and summer months, hemlock grows two to five feet high. The stem is hollow and carries an umbrella cluster of small white flowers. At this time of year it is much more readily recognized, so that it may be dug out.

# Washington Boys in War Service

From The Twice-a-Week Spokesman-Review.

**ALLEN SUTHERLAND, Wenatchee, Wash. — Enlisted in the quartermaster corps December, 1917, and is at present driving a truck for the United States between Detroit and Baltimore. His parents are Mr. and Mrs. J. B. Sutherland of Wenatchee Heights, Wash.**

# Milk Goats Produce From Three Pints to Three Quarts Per Day

With the department of agriculture trying to foster backyard gardening and backyard poultry raising, it would not be surprising if it did not come out in favor of backyard goat raising, except for the fact that the ordinary city yard is not quite large enough in which to keep a goat.

Over in Europe milk goats are largely used by families unable to keep a cow. In Switzerland, according to F. S. Peer, a well-known American importer of live stock, the goat is the Swiss peasant's cow and Swiss baby's foster mother, a blessing to the sanitariums for invalids and a godsend to the poor.

Section of goat dairy, department of agriculture.

In England and in many other parts of Europe people who leave the cities during the summer months, either for their country homes or for travel, often take a milk goat with them, so that the infant or other members of the family may have a good supply of milk of uniform quality. Similar instances have been recorded in this country. No other animal is so well adapted for such a purpose, and there is probably no other country where goats are so much needed for such a purpose as in the United States.

The industry in the past, says Edward L. Shaw, a specialist of the department of agriculture, has been greatly handicapped, owing to the scarcity of good goats for foundation herds. Only a few goats have been imported, and importations can not be made at the present time from most of the countries where desirable goats are produced. But the goats that have been imported have been quite widely distributed and most of them seem to have done well under their new environment.

The milk goat is adapted to this country, and the industry is likely to become of greater importance every year. The goat is especially useful to those who desire a small quantity of milk and do not have the room, or can not afford to keep a cow. In fact, a goat can be kept where it would be impossible to keep a cow, and it will consume considerable feed that otherwise would be wasted. The fact that goats are rarely affected with tuberculosis is another point in their favor. The demand for good goats appears to be far greater than the supply.

About the first question that most people ask concerning goats is, "How much milk will they produce?" This is, of course, a very important consideration, as the value of a doe is estimated largely by her milk production. Even if a doe is pure bred she is of little value from the utility standpoint unless she is capable of giving a good quantity of milk. Many persons in purchasing pure-bred or even grade goats have been disappointed to find that the milk could be measured in pints and not quarts or gallons as expected.

A doe that produces three pints a day is considered only a fair milker, while the production of two quarts is good and the production of three quarts is considered excellent, provided the lactation is maintained from seven to nine months. There is probably no better way to treat this matter than to state that good does should produce from eight to 15 times their weight in milk in a lactation period. It is stated by German writers that many goats yield 10 times their body weight of milk annually, and exceptional animals as much as 18 times their weight

The price to be obtained for goats' milk depends upon a number of conditions. In the past the price has ranged from 10 to 50 cents a quart, and the highest prices have been obtained when the milk has been supplied for the use of infants and invalids.

Owing to the excellent demand and limited supply of milk goats, breeders are naturally asking good prices for stock. Pure-bred bucks of any of the leading breeds cost from $25 to $100, depending, of course, upon breed, age, conformation and breeding. The prices for does range from $25 to $150 for purebreds, while grade or crossbreds range from $5 to $50. Persons who wish to procure a milking doe to furnish milk for an infant or an invalid are only too glad, as a rule, to pay a fair price, and do not care so much about the breeding of the goat. It is largely milk production in the doe that establishes her value. In some herds, where breeders do not care to raise all the kids and desire to dispose of them as soon as possible after birth, the prices range from a few dollars up to $10 a head.

# A Big Problem

## That of Education on Frontier

By Ida C. Young.

The educational problem, so serious and complex in all frontier communities, was one which mother attacked during the first long winter in our new log house. Every day Brother Ed and I had our sums to do. We progressed with more or less backsliding through multiplication, struggled on through short division, and finished up toward spring with easy fractions. Our reading, as I have stated before, took care of itself, and mother wisely reasoned that he who could read would absorb more or less of other subjects. Sister Frances was still too young for this line of activity, but we older ones kept at it for several years, in this way managing to splice out the three or four months school each year which we would otherwise have been limited to.

We also received much encouragement in our school work from Miss Kate Williams, whose ability to pass along lofty ideals gave her a wonderful influence over her classes. I count the fervent eloquence of Miss Williams as a distinct factor in helping us forward along the road which stretched into the future, toward the fulfilment of our desires.

It was at some point in this period that the first definite steps were taken toward new pastures in learning. At one time, for instance, preparations were all made to send Ed and me to Spokane, where we were to do light housekeeping and attend school. Because of our youth and inexperience this plan was not carried out. Then, the following spring came a report that a Presbyterian academy had been established and was in successful operation within 30 miles of us. Father mounted Queen, our black mule, and loped off over the hills toward Sherman postoffice, 10 miles north of Wilbur and 30 miles east of us. He came back the next day full of enthusiasm. He reported that he had found A. B. Cort, a Presbyterian minister, at the head of the institution, in which all the grammar grades and some higher subjects were taught.

With the coming of fall we loaded up our wagon with all the housekeeping articles mother could spare, and early one sunny morning in September Ed and I kissed mother and Frances "goodby," climbed up beside father on the load, and next moment were off on our road into the big, friendly world. I am glad to add that I have never had occasion to change my opinion of its character.

I have always considered that that log cabin school, with the two devoted people in charge of it, was sent at this time in our lives as an especial dispensation from the source of the all-wise to help us. There were two instructors that winter beside Mr. Cort—his sister, Miss Maggie Cort, and E. M. Bogart, the latter in charge of mathematics and the business department. The students came from the surrounding territory of Lincoln and Douglas counties. There were the Brownfields, Joel, Robert and Mary; also Fred Teter, from near Waterville, and the Hardenbrooks from our own community; Frank Reed, from near where Wilson Creek now stands, and Minnie Sandford and George Peterson, from our part of Douglas county. I suppose there were 60 or 70 pupils altogether.

Father proceeded immediately upon our arrival to haul rough lumber and in a week Ed and I were installed in a two-room shack, which was our home during the portions of the following two years which we spent at school. It was during our second year that we had our first and last Indian scare. Reports of excitement among the Indians across the Columbia river kept drifting in, but it was impossible to find out anything definite. Then one evening about 9 o'clock, after I had just fallen asleep, Ed came quietly in.

"I guess they've come, Ida," he announced in a matter of fact voice.

I was almost too sleepy to answer, but finally I forced myself to do so. "Who's come?" I asked.

"The Indians," he replied, without about as much apparent excitement as if he had been talking about the cows coming home. "They've got a big fire up on the hill back of us, and they're shooting up the whole country," he went on. "You'd better get up and go down to Beardens."

I immediately got up and took my best dress from its hooks and put it on. I intended to save my clothes, come what might. Then I slipped my bare feet into my shoes, gathered up the rest of my clothing, and made my way into the night, bringing up at Bearden's house soon after. The house was crowded and the night which followed was a confused one, but the following morning the excitement subsided. The "Indians" had been merely a party of mischievous young fellows on their way home from Wilbur.

After that period at Cortland Ed finished his education at Pullman, while Frances and I polished off at the Ellensburg normal. So far none of us has his name in variegated streaks across the sky of fame, but who knows what time may yet bring forth?

## WASHINGTON FRUIT.

### Weather and Crop Prospects.

The weather conditions for the months of May and June were not favorable for the best growth and development of the fruit crops. The frequent spring frosts followed by unusually dry weather have decreased the output; yet at the present time, where sufficient moisture was available from irrigation or other sources, apples and pears are of much better size than they were at this time in 1917, says M. L. Dean, chief division of horticulture for Washington, in a recent report.

The June drop was very heavy and some of the fruit that did not drop shows severe frost markings.

Both the green and rosy aphis have been very active this spring and where thorough spraying for their control has been neglected, serious damage will be manifest in the form of dwarfed and illshapen fruits.

The apple powdery mildew infection has been very prevalent and many apples will be lowered in grade because of the russeting of the fruit. More thorough spraying should be done to prevent this injury, because it not only injures the fruit of the present crop, but prevents the setting of buds for the next year's crop.

Growers are endeavoring to hold the wormies down to the minimum, but the weather conditions in the early part of the season were such that the moths came out exceptionally early, thereby prolonging their active periods. The lack of help, together with the high cost of materials, tended to discourage some growers in their spraying activities: yet most growers are putting up an active fight against them.

The spring frosts, followed by prolonged dry, hot weather, curtailed the strawberry crop at least 50 per cent.

The crop of bush fruits, based upon present indications, will far exceed that of last season.

The probable yield of the Yakima valley district, including Yakima, Kittitas and Benton counties, will fall some short of the 1917 output. There has been a steady shrinkage of the probable crop since the blooming period due to the June drop and weather conditions.

Mr. Dean makes an estimate of the crop as it now appears, as follows, the figures representing carload shipments:

In Yakima and Kittitas counties: Apples, 670; peaches, eight; pears, 119; prunes and plums, 16; sweet cherries, nine; sour cherries, three; grapes, 40; gooseberries, one; black raspberries, one; strawberries, 69.

The Wenatchee district comprises Chelan, Okanogan, Douglas and Grant counties. The carload estimates are as follows:

Chelan county: Apples, 6216; Okanogan county, apples, 550; Douglas and Grant counties, apples, 525. The other fruits in Wenatchee district, including 590 carloads, are divided as follows: Peaches, 71; pears, 361; apricots, 53; plums and prunes, 27; sweet cherries, 70; sour cherries, five; grapes, three.

Spokane district reports a large increase over last season's crop, the present carload estimates for apples being 1067.

The Walla Walla district was visited by severe frosts and the present indications are that the shipments of apples will amount to 205 carloads. The outlook in the Clarkston district is much brighter than in 1917. The cherry crop was good and prospects of average peach, prune and apple crops are noted.

Clarke county has a prospect for the largest prune crop in the history of the county. If the dry weather does not cause an abnormal drop of the fruit, the output should be at least 6000 tons of dried fruit. A shortage of evaporators is now facing the growers, and many are constructing new ones, while others are enlarging the old plants.

Pacific and Grays Harbor counties will probably produce about 7000 barrels of cranberries this season.

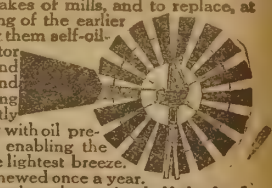
The berry crop in the other western counties is very promising and should produce at least 1000 carloads of fruit, providing seasonable rains occur, but if the present drouth continues the crop will be reduced one-half. The tree fruits promise about a normal crop, cherries and pears taking the lead.

**Free Information for All.**

The Washington Farmer pays for this splendid service in order that every one of its readers may take free advantage of it.

This service bureau is located in the national capital, where it is in immediate touch with all the great resouces of the United States government.

It can answer practically any question you want to ask, but—it can not give advice, nor make exhaustive research.



Write your request briefly, sign your name and address plainly, enclose a 3-cent stamp for return postage, and address.

Each reader of The Washington Farmer is offered the free and unlimited use of the largest information bureau in the world.

THE WASHINGTON FARMER INFORMATION BUREAU, Washington, D. C.

**THE SELF-OILING WINDMILL**

has become so popular in its first three years that thousands have been called for to replace, on their old towers, other makes of mills, and to replace, at small cost, the gearing of the earlier Aermotors, making them self-oiling. Its enclosed motor keeps in the oil and keeps out dust and rain. The Splash Oiling System constantly floods every bearing with oil preventing wear and enabling the mill to pump in the lightest breeze. The oil supply is renewed once a year. Double Gears are used, each carrying half the load. We make Gasoline Engines, Pumps, Tanks, Water Supply Goods and Steel Frame Saws.

Write AERMOTOR CO., 2500 Twelfth St., Chicago

**The Farmers Record and Account Book**

Viewed from the most immediately pressing angle, The Farmers Record and Account Book furnishes an adequate and accurate basis for making complete income tax return to the government. Get one of these useful record and account books and keep the information and figures that you will need at the end of the year.

The Farmers Record and Account Book is sent postpaid for TWO subscriptions to your State Family Farm Paper,

**The Washington Farmer**

Subscriptions may be for one year at 25c; three years at 50c, or five years at $1.

# From Yakima City to the Columbia

By PAUL E. TRIEM.

When the Longmire party passed through Yakima valley in 1853, its members purchased potatoes from the Indians. Six years later William Murphy, John Nelson and Fred Allen drove their cattle upon the Yakima range and the following year F. Mortimer Thorp became the first permanent settler. Mr. Thorp brought with him a herd of 250 fine Durhams, which he turned out upon the bottom lands, covered in those early days with a growth of bunch grass and rye grass, the latter often standing 12 feet high. One of the first orchards was set out by Alfred Henson in 1866, while N. T. Goodwin extended the agricultural experiments of the white men by harvesting a wheat crop which averaged 40 bushels to the acre. Encouraged by these successful beginnings, work was begun on an irrigating ditch in 1868.

Consider now the result of this pioneering: Last year's fruit crop totaled nearly 14,000 cars, and brought in over eleven and one-half million dollars. Fifteen hundred and fifty-one cars of live stock were sold, for $4,000,000 plus. Other little items are beet sugar and beet pulp, fruit and vegetable products, grain, dairy products, wool and hay, each of which brought in $1,000,000 or more.

Such developments, very naturally, have not come without many a day and month and year of strenuous effort on the part of pioneers and home-builders of the valley. Delays seemingly interminable halted development. In 1870 the Northern Pacific railway filed a map of preliminary location which showed Yakima adjoining its proposed right of way, but the railroad itself did not come until 1884. Misunderstandings between the railroad people and the town people arose, and the little city in the sage brush found itself four miles from those glistening rails which spelled the magic word, transportation. The remedy was obvious: The mountain had not come to Mahomet—not quite; so Mahomet must go to the mountain. Fifty or 60 buildings, including the courthouse, First National bank, and several hotels were moved down the road to a site beside the railroad, and the foundations of the present city of Yakima, at that time called North Yakima to distinguish it from the shell it had left behind, were laid.

Whatever may have been the rights and the wrongs of that early misunderstanding, the entire Yakima valley owes much to the Northern Pacific railway. It was this company which stood back of the first big irrigation canal, the Sunnyside ditch, which was begun in 1890. There had been other smaller ventures—a ditch 18 feet wide, having a fall of one-fourth inch to the rod, and carrying water 18 inches deep, was completed in 1875. There had been several other small projects. But the big ditch backed by the Northern Pacific, which with its branches and laterals was capable of watering 40,000 acres, was the first real step toward the irrigation systems of today. In 1905 the Sunnyside canal and all the important water rights affiliated with it were purchased by the reclamation service, which in this way was enabled to administer the entire system to the best advantage of the community as a whole. Since the consummation of this purchase, development work by the reclamation service has gone steadily forward. At the present time it is estimated that there are 240,000 acres of land under irrigation and intensive farming between the city of Yakima and the Columbia river, while probably 550,000 acres can eventually be irrigated within the county limits.

## Pastes for Wall Paper

To the Editor: I want to hang some felt paper, also some wallpaper, but owing to the scarcity of flour do not like to use it. Could a satisfactory paste be made without white flour? If so, how?

Also, please give a recipe for making paste with wheat flour. F. W. Dalkena, Wash.

**The Answer.**

George A. Olson, chemist at the Washington State experiment stations, answers the above question as follows:

Use a cheap grade of rye flour, mix thoroughly with cold water to about the consistency of dough, being careful to remove all lumps. Stir in a tablespoonful of powdered alum to a quart of flour, then pour in boiling water, stirring rapidly until the flour is thoroughly cooked. Let this cool before using, and thin it with cold water.

**Strong Adhesive Paste**—Four pounds of rye flour, one-half gallon of cold water, one gallon of boiling water, two ounces of pulverized rosin. Make the rye flour and the half gallon of cold water into a batter free from lumps. Then pour this into the gallon of boiling water. Boil, if necessary, and, while hot, stir in the pulverized rosin a little at a time. This paste is exceedingly strong and will stick heavy wall paper or thin leather. If the paste is too thick, thin with a little hot water.

**Wheat Flour Paste**—Two pounds wheat flour, one quart of cold water, one ounce of alum, one quart of hot water, one-half gallon of boiling water.

Make the wheat flour into a batter free from lumps with the quart of cold water. Dissolve the alum. Stir the wheat flour and cold water mixture into half a gallon of boiling water, and, if necessary, continue boiling until the paste thickens into a semi-transparent mucilage. Then stir in the alum solution. This makes a very fine paste, but, of course, should not be used so long as economies in the use of wheat flour are so absolutely necessary.

In the formulae that call for rye flour I believe barley flour could be used.

**FLAG WITH FOUR STARS.**

To the Editor of the Washington Farmer: Enclosed please find 30 cents in stamps for The Washington Farmer for one year, also one farm service flag, with six stars. The new subscription will entitle me to one flag with four stars. GUY ARMSTRONG.
Mt. Vernon, Wash.

## Plan Big Honey Production.

A report from San Francisco tells of an organization in California whose purpose will be the building up of a string of bee farms along the California coast from San Diego to Santa Cruz. It is stated that contracts have already been let for 15,000 hives of bees. Most of the stockholders in the new company are experienced bee men and are making the enlarged venture with a view to supplying more honey during the war period when its use as a sugar substitute is most necessary.

**Invent Typewriter Attachment**

An eraser that is operated by a key is a new typewriter attachment

## Sugar Beets for Stock

To the Editor: I would like to know how to plant and care for the half sugar mangel for stock on nonirrigated soil. State what soil it should be and whether it should be in low, moist soil, or in upper well drained soil.

CARROLL S. JONES.

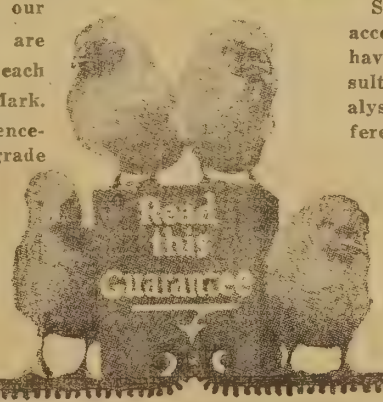
E. G. Schaffer, agronomist at the Washington State college, answers the above question as follows:

The sugar beet for its best development requires an abundant supply of moisture, and a very rich soil. The soil used for the production of this crop should be well drained. If irrigation is not possible it may be that a soil located in a valley will give better results than a place higher on the hillside. Land somewhat lower is likely to be richer in plant food and may furnish a better supply of moisture in the season.

**Sells Thrift Stamps.**

Frank L. (Lucky 13) Wright, Springfield (Ill.), carrier on city mail route No. 13, recently announced he had completed his campaign to sell war thrift stamps to every one of the 2300 persons on his route. Among the number were 800 pupils in a junior high school.

# Feeding for Eggs, and Profit



## with Silver Quill Poultry Feeds

The poultry feeds described in our Poultry and Stock Feed Catalog are sold only in original packages, each bearing our SILVER QUILL Trade Mark.

Under this brand you will henceforth be able to secure extra high grade poultry feeds, each one backed by our broad satisfaction guarantee. These feeds are manufactured for us by several different feed makers of national reputation, for we will not put our Silver Quill brand on any feed except that which we consider to be the very finest in each class, and we often find that the manufacturer who makes the high-grade Chick Feed, for instance, does not necessarily make the highest grade Egg Mash.

This is the reason, then, why we have certain of our poultry feeds made by one manufacturer and others by one of his competitors. By this policy we can always be sure of getting goods of the highest quality.

Silver Quill Poultry Feeds are made according to scientific formulas that have been found to give very best results. They do not vary from their analyses and they always contain the different ingredients mentioned.

If you were to investigate every one of the poultry feeds on the market as carefully as we have, we know that you would select these very same feeds. Perhaps you already use them under their makers' own brands. At any rate we promise that they will give as good results as any other mixtures — and our prices need no recommendation.

Order a supply with your next shipment of goods and try these feeds at our risk.

Read our broad guarantee—we take all the risk. Can you afford NOT to try Silver Quill Poultry Feeds?

### This Guarantee Protects You

Silver Quill Poultry Feeds are guaranteed to be equal in nutritive feeding value and quality of ingredients to the very best poultry feeds, regardless of price.

They are guaranteed to be true to analyses and to contain at all times each ingredient mentioned. They are also guaranteed to contain only sweet, clean food products and to be truthfully and accurately described in this catalog.

Send in a trial order today. Feed one-third of the amount ordered. If not entirely satisfactory you may send back the remaining two-thirds of the feed at our expense and we will return your money in full and repay any freight you paid.

# What Little Wires Do

## *Farm Woman's Work Is Lightened by Electricity*

By MRS. ISAAC MOATS

I would like for every woman whose lot it is to live and work on a farm this summer to have electricity to help her out as it is helping me.

It seems strange to think that a few little wires strung around the place, all leading from the electric plant in the basement, could make such a difference in one's life, but you don't wonder about it once you have electricity to use. You just go ahead and enjoy it.

There must be 60 or more electric lights altogether around here, in the house, on the porches, in the barnyard and the barn. Of course, we don't have them all turned on at once, but they are placed just so they will throw the light where it will be needed, and it is a big satisfaction to light up any place in an instant without striking a match or carrying a lamp or lantern.

We feel that these lights are perfectly safe, and it is fine to be free from all the cleaning and messing around with the coaloil lamps as we used to do.

But there are other advantages that electricity brings us which are greatly worth while. One of the features we enjoy is the pressure water system which is run automatically by means of a little electric motor. This system stores the water in a tank at about 50 pounds pressure. The water is forced from a faucet or hose whenever we want to turn it on, and when the pressure gets below a certain point the pump is started automatically.

We have hot and cold water for bathroom, kitchen and laundry, and water for the stock at the barn, all without any pumping or hard work of carrying it in buckets.

It is likely that our water system saves us two hours a day when we consider the watering of the stock, the water carried on washday the way we used to do, and all the rest of the work that calls for water about the farm home.

We are great for flowers here and it is a satisfaction to be able to sprinkle the flower beds with a hose instead of lugging around a bucket and sprinkling can. It takes less work to have all the flowers we want and to keep the kitchen garden growing, for we can turn the hose on it, too.

My washing machine is run with an electric motor, and do you know, with electric power to do the washing and with running water handy, so that I don't have to carry it, I feel that I have finally got the best of washday.

There are other ways in which electricity helps out about our home and every one is worth while. We can run an electric fan in the kitchen, dining room or bedroom when the weather is hot; I can use an electric iron on ironing day, without heating up the kitchen.

In fact it seems that we find some new way every little while in which we can make electricity help out, saving time and work for somebody, and, as I said before, I wish that every woman who lives on a farm could have electricity to help her out as it is helping me.

## Like Geese

### When Perplexing Problems Arise

I would feel insulted if any one should call me a goose, yet I do things habitually that are done so much like geese would do when they are confronted with circumstances that perplex them, that I wonder if I have traveled the long, long path of evolution from the lower forms of life, or if it just happens that I do that way.

Every one who has raised geese knows that they are social animals; that they go in flocks and follow a leader. They know, too, that a goose is a biped and that what brains it has, is supposed to be located in its head. In these respects they are somewhat like men. Put a flock of geese into a pasture, and before long they will want to get out. The gate is open, but the leader will start along the fence in the direction in which he wants to go, and will stick his head in the first hole in the fence that is large enough to receive it, and then pass on to another, another and still another until he has tried every hole in the fence, unless he finds one big enough or comes to the gate. In the meantime every goose has been following the leader, and every particular goose has stuck its head into every particular crack in that fence until they find one through which they can pass.

In monarchies, the people follow their kings everywhere and anywhere. In aristocracies, every one tries to imitate the aristocrat. Even in democracies we are so engaged with local and private matters that we have not time to keep informed on the larger problems that affect the whole people. We must in the nature of things submit to leadership. But just why in reform movements like the abolition of the liquor business, for instance, we must try every inadequate, incompetent and insufficient thing, before we try the right one, national prohibition, is incomprehensible unless it be that we have not sufficiently evolved from the goose period.

The idea that working men can not or will not turn out as many ships or aeroplanes or as much of anything else unless tanked up with whisky and beer, is goose feed, and the "statesmen" who are lending themselves to this sentiment are sticking their heads in the fence cracks where any one with more than goose sense would know they could not get through. G. L.

## SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

## You May Be Sure You're "Fit" If Marines Take You

Dr. Hirshberg.

Most of us remember the comic ditty of too many years back about Captain Jinks of the horse marines. Well, that ballad is no longer a joke. Our marines, considered all the world over as perhaps the finest organization of fighting men in the world, fight on land as well as on sea and actually have horses for some of the officers and men.

Nor are they any more the gullible, innocent, unsophisticated sailor-soldiers they were once supposed to be. You can not "tell it to the marines" any more and "get away with it." They are now usually the brightest, healthiest, "niftiest" lot of brave, patriotic, virile men you can possibly meet in any walk in life.

Any man or boy who applies for enlistment in the United States marine corps and succeeds in passing the physical tests—he must be at least 5 feet 4 in his skin—may well be proud of the success. It is a testimonial to his fitness and a certificate of first-class health.

One of the camps to which marines in the making are dispatched, in order to make them superior even to the supreme excellence of their present condition, offers the men, who acquire slight disorders after their enlistment, the chance "to be made over," so to speak. There has been established a "rehabilitation unit" for the physical reclamation of as many men as can be saved.

**What Is Done.**

The surgeons of this new unit correct the foot troubles of a great number of men, fix the teeth of others, perform necessary operations, and by every means try to improve as many as possible. Men for service receive especial attention, and are put in a class by themselves. Men who have impediments, such as flat feet, also are given separate attention. Then come men classed as fit for domestic service only, aliens and illiterates, and finally men listed for absolute rejection.

The officers and non-commissioned officers who are members of the staff are selected because of special qualifications. They are required to be sympathetic, of sunny disposition and thoroughly understand the importance of their work. The doctors are selected from the highly capable corps attached to a base hospital, and from a group of surgeons assigned to independent units. The course of treatment lasts about 31 days. By that time the men who are being aided are expected to respond to the expert attention. Already 400 men are assigned to the unit for reclamation physically.

**No Time Lost.**

Every command in camp now knows about the operation of the rehabilitation unit, and officials of all organizations are invited to send men for treatment who appear to have a chance of being made over. Special diagnosis is given in every case that comes to the attention of the surgeons. Where foot troubles are to be treated, special shoes are given, and also orthopedic treatment. While the men are being given surgical attention they still pursue military drill and study in a measure, so that when they are discharged from the unit as fit for service they will have lost no knowledge or practice.

It has been found that by proper and separate attention many men can be made fit for duty at home or "over there." With this end in view all commands are on the lookout for subjects of this special treatment.

## Sidelights

**Like a Ball Costume.**

The 6-year-old was very observing and had frequently seen her mother dressed for fashionable functions. One day she was watching the maid preparing a chicken for the oven.

"Oh, mama!" the little one exclaimed, "Norah is takin' all the feathers off the chicken!"

"Yes, dear," replied the parent. "She is dressing it."

"Why, mama, the chicken isn't goin' to a ball, is it?"—Pittsburg Chronicle-Telegraph.

**He Wanted Help.**

Danny and Bobbie had been left in the care of their big sister while their mother went out. At bedtime they wanted to "stay up for mother," but their sister relentlessly put them to bed. Danny maintained a stolid indifference, but Bobbie cried lustily. Their sister listened at the foot of the stairs, hoping they would soon be quiet. At last Bobbie stopped and the listener heard him say:

"You cry a bit, Danny; I'm tired."—Tit-Bits.

**Breaking It Gently.**

He had been on the western front and received a wound which necessitated the amputation of one of his legs. Writing home to his family he very naturally wished to break the news of his loss to them as gently as possible before they saw him. After fully describing the battle, and the injuries to his limb, he finished by saying:

"On arrival at the hospital I interviewed the surgeon. Henceforward I shall require only one boot."—Exchange.

**Nourishment.**

An old South Carolina darkey was sent to the hospital of St. Xavier in Charleston. One of the gentle, black-robed sisters put a thermometer in his mouth to take his temperature. Presently, when the doctor made his rounds, he said:

"Well, Nathan, how do you feel?"

"I feel right tol-ble, boss."

"Have you had any nourishment?"

"Yassir."

"What did you have?"

"A lady done gimme a piece of glass ter suck, boss."—Lippincott's.

**Why She Couldn't Spell.**

Old Mrs. Donahoe managed to get along in the world in spite of her educational deficiencies. One day she was called upon by a lawyer to sign a rather important paper.

"You sign it yourself, young man, an' I'll make me mark," said the old woman. "Since me eyes gave out I'm not able to write a wurrd."

"How do you spell it?" he asked, his pen poised above the proper place.

"Spell it whativer way ye plaze," said Mrs. Donahoe promptly. "Since I lost me teeth there's not a wurrd I can spell."—Boston Transcript.

## CHAPTER XXV.

### Pottawatomies and Osages.

Mingled with the war-whoops, just outside the cave's mouth could be heard the cracking and roaring of fire-arms. Soon the startled white men saw an Indian dash by the mouth of the cave, while another Indian pursued with a tomahawk in his hand.

"The Osages have come! The Osages are attacking the Pottawatomies!" exclaimed Ben, though very cautiously.

"That must be what it is!"

But the yelling and the shouts and the wild tumult outside quickly ceased. All the Pottawatomies not killed had doubtless escaped into the surrounding darkness.

Long Jodo and Ben stood there in the dark waiting and listening. At last they stole toward the mouth of the cave to see what they could learn.

If they had hoped to find the valley deserted, they were disappointed. The burning cabin was still surrounded by Indians—40 or 50 of them. Among them the white men could recognize several faces, the most noticeable being that of their old-time fat enemy, Snapping Turtle.

"Is it a change for the worse or a change for the better?" whispered Jodo.

"Not much difference, I'd say, so far as the redskins themselves are concerned. There's one advantage to us, though. The Pottawatomies knew we are in here, and they were hanging around to capture us. But the Osages are supposed to be still thinking that we're dead—that we were burnt to death in the hunters' block-house. If they don't find out better, they'll be likely to go away pretty soon."

"Let's hope so. They're all bad people for us."

The Osages, it was noticed, were engaged in eating. Perhaps they had been on a hard march and had not had time to eat. Ben and Jodo withdrew a hundred yards or so, as a matter of prudence.

When the red firelight outside had begun to give place to the gray light of day, Indians could be seen passing till a long string of them had filed by. When the last one had disappeared, the two watchers stood for a good while, speculating as to what it meant.

At length they got up courage to approach the cave's mouth and peep out. Not an Indian was to be seen anywhere.

"I wonder if they've gone back to their village."

"More likely they've gone in pursuit of the Pottawatomies, Jodo. But there may be some left behind. We shall not dare show ourselves till we can make sure."

The pair soon returned to their canoe, and there they remained for a few hours. Then they stole out again for another look. They saw nobody, but they went back and waited till late in the day before venturing outside.

The ruins of their cabin were still smoldering, and the cliff that had roofed it was black from the flames and smoke. Since the trappers had entered the cave the weather had turned raw, till there were now indications that the night would bring frost. They remained out of hiding only a few minutes. But after nightfall, being weary of the damp and gloom of the cavern, they took their blankets and buffalo-robes and went down the valley toward the creek, where they slept in a thicket. They were up at the first signs of day, and hiding in the mouth of the cave again. But no Indians appeared, and the two decided that it would be safe to take it for granted that all of them had gone for good.

Now Ben and Jodo went out and took a good look around. Many signs they saw that Indians had been here, the most striking being the bodies of several Pottawatomie warriors whom the Osages had killed and scalped. The bodies were all out in the valley, the victims having run for their lives before being struck down.

"Grewsome sight!" remarked Ben. "But I'd rather it was they than I. If we had time and something to dig with, we'd bury them. But I don't see how we can. Our first business is to load our canoes and get out of such a dangerous neighborhood before we're in the same fix."

After climbing the hill behind the cliff for a look around, they came back and began to get ready.

The canoe in the creek, they were glad to find, was still under the bank where they had concealed it. They got it out, wiped all the dust out of it, and tied it to the bank at a place most convenient for loading. Then they hung their rope ladder across the little cave, and Jodo climbed up and began to let salt down in bags. Ben shouldered a bag, which contained two bushels or more, carried it down to the creek and emptied it into the canoe. They worked fast and soon had all the salt loaded. There was not enough to fill the canoe, but as much as they could safely put in. Afterwards, to keep rain out, they covered the canoe with elk-skins, tacking them to the sides with the little nails used in tacking furs up to dry.

Then Jodo came down the rope ladder, and the two lighted a torch, went into the big cave and brought out their canoes, towing them along the shallow stream and down to the creek. Now Jodo went up to the little cave again, and let down all the furs and their two bags of powder; also their tools, their flour and meal, their cured meat and other things.

While the younger trapper was still up in the cliff, Ben found their big pots and had them drawn up. He, too, now went up the ladder and, the weather being too cool for the bees to offer much resistance, they took honey enough out of the hole in the rock to fill both pots. Then Ben climbed down, and Jodo attached the rope to the pots, one at a time, and let them down. While Jodo was climbing to the ground Ben was tying deer-skins over the pots. And while Jodo was gone round and up to the top of the cliff to drop the rope-ladder, Ben was carrying furs down to the creek.

When Jodo came back they ate a dinner of buffalo-meat, broiled over the ruins of their cabin, with honey in the comb for bread.

After eating, they carried the rest of their furs down; and they soon had one canoe full and piled up with furs. This, too, was covered with elk-hides and a buffalo-hide, to keep the furs dry in rainy weather.

Some of their meat they put on top of the salt. But the rest of it, together with their pots of honey and all their other things, they placed in the middle of the third canoe—the one that they themselves expected to ride in. This was the longest canoe, and they left a vacant space at each end to sit or stand in while paddling, and also long enough to lie down in when they wanted to sleep. The two parts of their tent, pieced out with a buffalo-robe in the middle, would cover this canoe in bad weather.

By this time it was past the middle of the afternoon. "Now we're ready to travel! And the sooner we get started the better," Ben said. "Those Osages may come back by here when they get through chasing the Pottawatomies. And we don't want to be here when they come."

"And I'd rather not spend another night in the vicinity of these unburied Pottawatomies. Hard as they tried to kill us, I wish we could bury them."

"We could somehow, I suppose, but we don't dare take the time."

They now fastened the two freight-canoes to the stern of the canoe they were to ride in. Then they went up on the bank for a last look around.

"Well, little valley," Ben said, "we've had some pretty good times here, and some pretty exciting times. It'll be many a long day, I'm thinking, before we see you again. Goodby!"

They now went down, untied their canoe, stepped in and took up their paddles. Soon they had the three canoes moving down stream.

There were numerous shoal places in the creek; and at a few of those they had some trouble. More than once they had to pull off their boots, roll up their pantaloons, and step out into the cold water to lift up on the canoes.

The sun was setting when they arrived at the Niangua river. There they stopped to eat their supper, and they waited in the mouth of the creek till night had come on. Then they paddled out into the larger stream. At last they were on their way home.

The river seemed to be somewhat swollen, and the current swept them along at a lively rate. There was a few-days-old moon, which gave them some light—more than the voyagers wanted. Silently the three canoes glided on, keeping in mid-river. The two paddlers worked cautiously, and it was seldom that a stroke of their paddles could be heard.

"With war-bands from two Indian tribes in the country, both unfriendly to white people, it stands us in hand to be cautious, especially till moondown," Ben said, scarcely above a whisper.

About midnight, being a little weary, both ceased paddling and allowed the canoes to drift with the current while they ate some dried buffalo-meat. But soon they had rested and were using their paddles again.

Hour after hour passed, and still the two paddles were going. But when at last a brighter light than that of the stars began to break the east, the canoemen watched the river-bank for a hiding-place. Soon, discovering a small creek, they turned and paddled into it.

A hundred yards up the creek they could not be seen from the river and they were also well shut in by thick woods and brush along the banks. Here they tied up and ate their breakfast. And here, feeling safe, they lay down, each in his end of the canoe, and fell asleep.

Most of the day they slept. But by sunset they were up, had eaten another meal, and were ready to travel. While waiting for night, Ben climbed the creek-bank and went scouting. From the top of a near-by hill he swept the country for camp-fires. But no smoke could he discover. He returned, and the two paddled back into the Niangua and on down stream. The moon, which would have been brighter tonight, was concealed by some clouds, and they felt safer.

All night long, with only a brief rest about midnight, they kept paddling, paddling, paddling to aid the current. An hour before dawn they entered another creek for a hiding-place. On a lower bank they kindled a fire; and by the fire they baked the last of their meal, boiled some beans in their little pot, and broiled some meat. By daylight they had finished their cooking and drowned out the fire. But it was broad day when they sat down to eat their breakfast. Again they spent the day sleeping.

Late in the afternoon the two awoke, and after walking about through the woods a little, they made another hearty meal of what they had cooked for breakfast. Soon after nightfall they were paddling down the river again. And an hour after commencing the night's voyage they discovered a camp-fire on the river-bank, some distance ahead.

At once they ceased to paddle. For they had a strong suspicion that the camp-fire had been kindled by Indians. And as they drifted nearer they could actually make out Indian warriors squatting around it. Now the canoemen put their paddles against the bottom and came to a sudden stop. The moon was shining, and they pushed over into the shadow of some trees on the west bank.

"My, but there's a big gang of 'em!" whispered Jodo.

"I'm guessing they're Osages—the same band that went in pursuit of the Pottawatomies. If it is, they must be on the way back to their village."

"Can we ever get by? Won't we have to hide somewhere till they're gone?"

"We can drift by after moondown, I think, and after they're all asleep. Too much light on the water now."

"Yes. We don't want to get old Snappy Turkle on our trail again. He's too infernally hard to shake off."

The travelers held their canoes, and watched the moon and the camp-fire. The Indians must have camped late, for the moon had set before they had finished their supper and lain down to sleep. The canoemen were afraid that at least one warrior would remain awake, on sentinel-duty. But the Osages seemed to have no fear of attack, and the last one of them was soon lying asleep near their camp-fire.

Thinking it well to be on the safe side, the voyagers waited another half-hour. Then they pushed out to midstream and allowed their canoes to drift on. But not till they had thrown themselves down so low that only with one eye could they peep over the side of the canoe.

As the river was rather narrow here, and they must drift by not far from the camp, both were very anxious. There was still light enough on the water for the canoes to be detected if any of the Osages chanced to look in that direction.

While the canoes were nearest, one of the Indians—and they were almost sure it was Snapping Turtle—sat up and gazed about. But he looked only toward the land-side of their camp. Soon he lay down again, without having glanced toward the river. It was no small relief to the canoemen when they had drifted by the savage camp. Not till the camp-fire was out of sight did the two dare use their paddles again.

"I'm wondering if they overtook the Pottawatomies."

"No telling, Jodo. And we neglected to ask them as we came by. But even if they didn't they probably gave them such a scare that the Pots won't stop running till they get back home."

"Well, I hope they've run so far that they won't bother us as we drift along down. Will it be safe for us to travel in the daytime hereafter?"

"I'm a little afraid to risk it yet. Don't know what we may do after we get down into the Osage. For the present this is both safer and more comfortable. It would make a fellow feel creepy to be paddling along in daylight and not know at what minute a bullet from some cliff might take him straight through the heart.

"That wouldn't be nice. But the Pottawatomies on the run, and the Osages traveling toward their village, there oughtn't to be much danger of a bullet."

"No. But you recollect what those canoemen on the Gasconade told us—Robinson and the Frenchman? It may be even worse by this time. If the redskins are all sulking at the whites, we may have to be on our guard all the way down. When we reach Cote sans Dessein, at the mouth of the Osage, we can find out from the settlers what the situation is. If the tribes have actually taken the war-path, we shall have to do all our traveling by night. But I certainly hope that won't be necessary on the Missouri. That's a dangerous stream to navigate, even when you can see."

"There'll be one advantage on the Missouri, Ben."

"What's that?"

"Why, we can track the middle and keep out of bow-shot or rifle-shot of either bank."

"Yes. That will be an important advantage. Then the only Indians we shall need to fear will be those with canoes. And we'll hope that not many of them will have canoes."

Some time during the night the voyagers passed out of the Niangua into the wider Osage. The weather was pleasant by this time, the air being so mild that the leaves were coming out fast. Elms and other early trees were already green.

The scenery, too, was very fine, limestone cliffs and bluffs and wooded hills rising hundreds of feet above the water. But for the danger, the canoemen would have enjoyed traveling in the daytime far better.

And so they drifted on down the crooked Osage. One morning, between dark and daylight, they hid themselves and remained there till late in the day. A little before sunset Ben took Jodo up a high hill from their camp and across half a mile or so of rough country, to where they could look down upon the river again.

"Where you see the Osage now is 50 miles below our camp."

"Fifty miles below!"

"That's what I said—about 50 miles. From here on we have to swing round a circle. By hard paddling we may be able to reach this point here by daylight tomorrow morning. Fifty miles of traveling to get half a mile nearer home!"

"Oh yes! I recollect now. This is the place you told me about. Pity we can't carry everything across."

"But we can't—not over this hill. Nothing for us but to ride around."

They returned to camp and were soon on the river. Daylight came and found them still not where they had hoped to be. So they took the risk and kept paddling. When the sun was an hour high, they hid their canoes and campel. And after sleeping most of the day, they walked across to where they had camped the night before.

While returning to their latest camp, they stopped on the hill-top and swept all the surrounding country for camp-fires. Smoke could be seen rising from various points—all many miles away, however. And while there seemed no immediate danger, prudence, they soon decided, required that they keep on traveling by night and resting and sleeping in daylight. And so they did, day after day.

One night, just as they were about to push out of a creek into the river, they were startled to see three canoes coming up stream, each with several Indians in it. The moon was shining, and had the whites started out a few seconds earlier, the red canoemen must have discovered them. Such a narrow escape gave them a fright; and it was not till a good while later that they felt brave enough to proceed on their way.

"Who were they, Ben, do you think—of what tribe?"

"That's what I'm wondering. Robinson told us, you recollect, that several hundred Sacs and Foxes had their camp near the Osage, a good distance above its mouth. Those canoemen may be from that village. It's likely that they're on their way up to visit the Osages."

"Have they ever been on the war-path against the settlements—the Sacs and Foxes?"

"Not that I've heard of. But you know what Robinson told us. The British agents may have them armed and ammunitioned by this time, and egged on to the fighting-point. At any rate, we'd better take it for granted that they have."

The two travelers had been on the river an hour, and were still moving down stream as noiselessly as possible, when something very unexpected happened.

# Red Cross Labels

## How to Place Them on Garments

The French commission advises that it is essential that all garments produced by chapters be distinctly and permanently marked as donated by the American Red Cross. Restrictions imposed by the Geneva convention permit the use of the Red Cross emblem only on articles intended for use of military sick and wounded and those actually engaged in the care of such persons.

The Red Cross has therefore decided on a standard form of label for use on all garments. These are now on order and may be procured from the division bureau of supplies by chapters that do not already have them.

The label provides a blank space in which each chapter may stamp its name with indelible ink. Rubber stamps for this purpose can, of course, be secured locally by the chapter without difficulty. Instructions for the placing of these chapter labels on garments and other articles are as follows:

**Hospital Garments and Supplies.**

Bandaged foot sock—On hem around top—Inside center back.
Bed jacket A.—Inside collar band.
Bed jacket B.—Inside pocket at top center.
Bed sock—Inside on hem around top of leg, center back.
Comfort bags—On hem inside edge of bag.
Convalescent robes—Inside collar band.
Convalescent suits, American (factory made)—Inside collar band.
Convalescent suits, French—Inside, back of collar band.
Handkerchiefs—On the hem—In one corner.
Helpless case shirt A.—Inside pocket at top center.
Helpless case shirt B.—Inside pocket at top center.
Hospital bed shirt—Inside back of neck, either side.
Hot water bottle covers—On hem, inside.
Operating caps—Inside band.
Operating gowns—Collar band.
Operating leggins—On hem around top of leg—Inside, back.
Operating masks—Along edge, or on corner.
Pajama—Inside collar band of coat.
Trousers—Waistband, center back.
Shirts—Inside of collar band, back.
Slippers—Inside on edge.
Trench foot slipper—Anywhere on inside edge.
Underdrawers—Inside on "waist band" in front.
Undershirt—Inside back of neck.

**Bedding and Towels.**

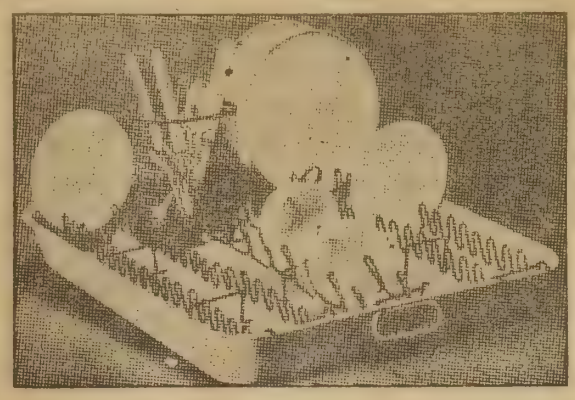
Bedspreads—Upper left-hand corner, on hem.
Blankets—Upper left-hand corner, on hem.
Pillow slips—Inside hem in one corner.
Sheets—Upper left-hand corner, on hem.
Towels—All sorts—In one corner.
Wash cloths—In one corner.

**Refugee Garments.**

Apron for women—Inside waistband, center front.
Blouse suit, boys'—Inside collar band.
Capes, children's and adults'—Inside collar band.
Chemise, women's and girls'—Inside back of neck.
Drawers, women's and girls'—Inside waistband, center front.
Dress, girls' and children's—Inside collar band or neck; center, front or back.
House gown, women's —Inside back of collar band.
Jersey suits, children—Inside neckband, center back.
Kerchief, women's—One corner, on hem.
Morning blouse, women's and girls' —Inside neckband, center back.
Nightgowns—Inside neckband, center back.
Petticoat, women's and girls'—Inside waistband, center front.
Petticoat with waist—Inside neck, center front.
Pinafore, boys' and girls'—Inside neck, center front.
Shirt, men's and boys'—Inside collar band, back.
Shoulder shawl, women's—Anywhere on inside edge.
Skirt, women's and girls'—Inside waistband, center front.
Stocking and socks—Inside on upper edge, center back.
Suits, men's and boys' (factory made) —Inside collar band.
Trousers, men's and boys'—Inside waistband, center back.
Vests and undershirts, children's—Inside neckband, center back.

**Layettes.**

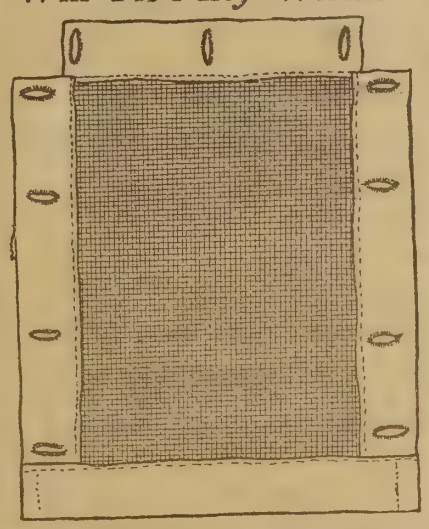
Bag of sundries—Inside hem.
Bonnet—Inside lower edge, center back.
Cape—Inside collar band, center back.
Dresses—Center of hem at back opening.
Swaddling cloth—One corner.
Diaper—Corner of the diaper in which the bundle is wrapped, and which will be visible when package is complete.



**Knitted Articles.**

Helmets—Anywhere on an inside edge.
Mufflers—One corner.
Socks—Upper edge, center back. May be put on as standing loop, one end inside the other out.
Wristlets—Upper edge, inside.
Sweaters—Inside back of neck.
Comfort kits—Inside of bag below hem.

# Saves Time and Is More Sanitary



Perhaps no time spent in housework is more begrudged by the housekeeper than that spent in washing and wiping dishes. A dish drainer not only saves time and labor, but it does away with the too-often unsanitary dish towel, says Madge J. Reese in a bulletin of the department of agriculture.

A most satisfactory dish drainer, as shown in the illustration, can be made by using an ordinary bread or biscuit pan and racks made of soft No. 12 or 14 wire. By using a pair of pliers the wire can be bent into the proper shape for forming racks. The racks fit into the pan and hold the dishes out of the water. The compartment for silver is made of poultry netting. This compartment could be made of screen wire or a tin can with holes in the bottom might be used.

After the dishes are washed they are stacked in the racks and scalded with hot rinsing water. The pan catches the drip, and the dishes upon standing dry clean and lintless. If the drainer is used on the drain board of a sink a small hole can be made in the pan and the drip drained immediately into the sink. The wire racks can easily be removed so that the pan can be used for other purposes.

# Will Fit Any Window

All outside doors and windows should be screened. It will be economy to buy the screen doors. For both doors and windows use nonrustable screen wire, says Madege J. Reese in a bulletin.

A cheap, convenient and easily made window screen is shown here. Any woman can make this screen fit any window. Often in old houses window frames have warped and it is hard to make screen frames fit the windows.

Heavy denim or jeans, or any other heavy material of dark color is cut into strips four inches wide. This is sewed around the edge for the screen, leaving about two inches of the doubled material as stripes for eyelets. Eyelets are worked across the top and down the side strips. Small tacks are driven in the lower casing of the top window and down the sides of the window frames. The eyelets in the window screen are fastened over the heads of the tacks and thus the screen is held in place. This screen can only be used when upper windows can not be lowered and it can be removed easily when not needed.

## Hooverizing Sweet Corn.

To the Editor: Here is how I Hooverize sweet corn. I cut stalks for fodder as soon as blooming season is past. All corn that we do not need for table use is dried or canned. Cobs are boiled, using the same water for several boilings of cobs in succession, then boiled to a syrup with but little sugar and it is very rich with a flavor all its own. Husks are dried and used to fill some home-made ticks for beds.

MRS. G. W. DOUGLAS.

South Prairie, Wash.

**Whipped Cream Substitute.**

Add a sliced banana to the white of one egg and beat until very stiff. This is a delicious substitute. The banama will entirely dissolve.

## Chocolate Cake Without Wheat.

The following recipe for a chocolate cake requires no wheat flour and is recommended by the United States food administration:

1-2 cup fat.
2-3 cup sugar (4 3-4 ounces).
1 cup sirup (11 1-2 ounces).
3 eggs.
3-4 cup milk.
1 teaspoon salt.
1 2-3 cups buckwheat flour (8 ounces).
1-2 cup ground rolled oats (2 ounces).
6 teaspoons baking powder.
1 teaspoon cinnamon.
2 squares chocolate.
1 teaspoon vanilla.

Cream the fat, sugar and egg yolk. Add the sirup and mix well. Add alternately the liquid and the dry ingredients sifted together. Add flavoring and melted chocolate. Fold in well-beaten egg whites. Bake about one hour starting in a moderate oven (350 F—177 C.) After 20 minutes raise to (400 F—205 C.

**Indian Society in Berlin.**

A German Indian society has been organized in Berlin, according to the Cologne Gazette. A dispatch says Germany's relations with the east after the war will be greatly expanded for political as well as commercial reasons.

SANITARY CANNING OUTFITS

Home canning is more necessary and more profitable this year than ever before.

Steam pressure canning is the safe, quick and easy way. Our complete outfit saves time, labor and fuel, hermetically seals the cans and sterilizes the contents.

We include instructions and a $2 book of recipes.

Write for free literature.

Seattle Can Company. Home Canning Department.

8th Ave. So., and Adams St., Seattle.

STEAM PRESSURE CANNING SAFE AND SURE!

RECORDS FOR ALL MACHINES

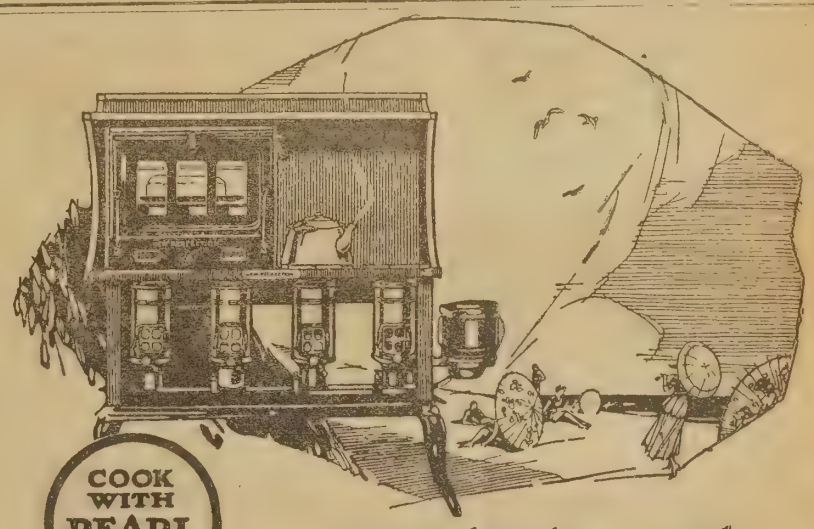
We carry all makes. Victors, Columbias, Edison and Blue Amerolas. RECORDS SENT TO YOUR HOME ON APPROVAL. Pay for only those you wish to keep.

Records sent parcel post prepaid to any address.

Write for our monthly supplement, which carries all the new music. Sent FREE.

Hopper-Kelly Co.
SEATTLE-WASHINGTON.

DAISY FLY KILLER



placed anywhere, attracts and kills allflies. Neat, clean, ornamental, convenient, cheap. Lasts all season. Made of metal, can't spill or tip over; will not soil or injure anything. Guaranteed effective. Sold by dealers, or 6 sent by express prepaid for $1.

COOK WITH PEARL OIL

A new Perfection Oil Cook Stove means kitchen comfort and convenience. Ask your friend who has one. Used in 3,000,000 homes. Inexpensive, easy to operate. See them at your dealer's today.

Your kitchen cool as the seashore

Even on the hot summer days you can keep your kitchen comfortably cool by using a New Perfection Oil Cook Stove. No dirt or dust; no smoke or odor. Economical.

Lights at the touch of a match and heats in a jiffy. Easy to operate and more convenient than coal or wood. Bakes, broils, roasts, toasts,—all the year round.

In 1, 2, 3 and 4 burner sizes, with or without ovens or cabinets. Ask your dealer.

STANDARD OIL COMPANY
(California)

NEW PERFECTION OIL COOK STOVE

# Patterns

2528—Lady's dress. Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 6 yards of 36-inch material. The skirt measures about 2 yards at the foot. Price, 10 cents.

2518—Boy's suit. Cut in 4 sizes: 3, 4, 5 and 6 years. Size 4 requires 3 yards of 36-inch material. Price, 10 cents.

2398—Girl's dress. Cut in 4 sizes: 2, 4, 6 and 8 years. Size 4 requires 2 1-2 yards of 36-inch material. Price, 10 cents.

2256—Lady's dress. Cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Size 36 requires 7 1-4 yards of 36-inch material. The dress measures about 2 1-2 yards at the foot. Price, 10 cents.

2538—Girl's dress. Cut in 5 sizes: 6, 8, 10, 12 and 14 years. Size 12 requires 4 7-8 yards of 36-inch material. Price, 10 cents.

2542—Girl's dress. Cut in 4 sizes: 6, 8, 10 and 12 years. Size 10 requires 3 7-8 yards of 44-inch material. Price, 10 cents.

2325—Lady's shirt waist. Cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Size 38 requires 3 1-4 yards of 36-inch material. Price, 10 cents.

2279—Ladies' apron. Cut in four sizes: Small, 32-34; medium, 36-38; large, 40-42; and extra large, 44-46 inches bust measure. Size medium will require 2½ yards of 36-inch material. Price, 10 cents.

2521-2520—A good combination business or home. Waist 2521 cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires three yards of 27-inch material. The skirt 2520 cut in seven sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. Size 24 requires 3 7-8 yards of 44-inch material. The skirt measures about 2 3-8 yards at the foot, with plaits drawn out. Two separate patterns, 10 cents for each pattern.

2221—An ideal under garment. Cut in four sizes: Small, 32-34 iniches bust measure; medium, 36-38; large, 40-42, and extra large, 44-46. Size medium requires 3 3-8 yards of 36-inch material. Price, 10 cents.

2547—Girls' drawers. Cut in five sizes: 4, 6, 8, 10 and 12 years. Size 10 will require 1 1-8 yard of 36-inch material, for either style. Price, 10 cents.

2517—Ladies' house dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 5½ yards of 36-inch material. The dress measures about 2½ yards at the foot. Price, 10 cents.

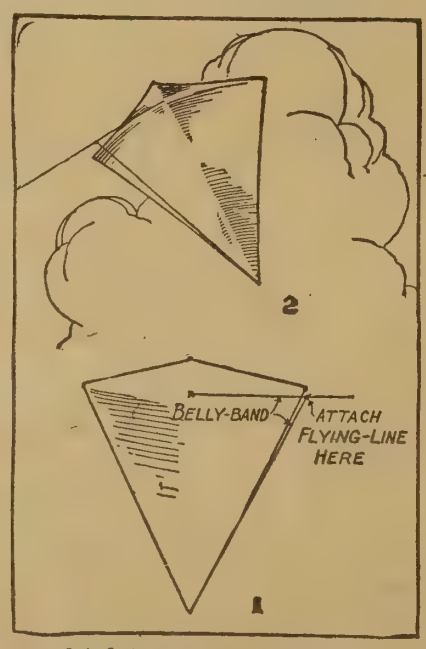
# Handicraft For Boys



## By A. Neely Hall

(Copyright by A. Neely Hall.)

### A Malay or Tailless Kite.

The Malay is probably the most practical boys' kite ever invented. It will fly in a wind that the tail variety of kite could not withstand, and it will fly in a breeze too light to carry up most other forms of kites. It is also a strong pulling kite, and may be used for sending aloft lanterns and flags on the string. For the purpose of lifting, the pulling strength may be increased two-fold by flying two Malays in tandem.

Figure 1 shows the completed Malay, figure 2 the kite in flight, figure 3 its

completed framework, and figures 4, 5 and 6 the details for preparing the frame sticks.

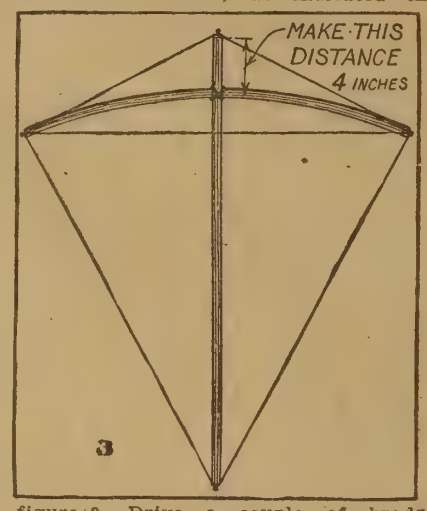
The kite has a vertical stick and a bow-stick, each of which should be 40 inches in length, about three-quarters inch wide and three-eighths of an inch thick, for a medium-sized kite.

In the cutting of the sticks lays half the secret of making a kite that will fly successfully. If you live anywhere near a mill it will cost but a few cents to have sticks cut to the sizes wanted; if not, you will find that the best way of preparing them yourself is to cut them out roughly with your knife first and then dress them down to the right dimensions with a plane.

Drive a small nail or large tack into each end of the two sticks, to fasten the framing-string to (figures 4 and 5), and notch the side edges of the bow-stick near each end for the attachment of the bow-string (figure 6).

The amount to bend the bow-stick is important. For a kite with a bow 40 inches long the distance between the string and stick should be 6 inches (figure 5). Use a strong twine for the bow-string, and tie it securely to the notched ends.

Fasten the bow-stick at its exact center to the vertical stick, placing it exactly 4 inches down from the top of the vertical stick, as indicated in



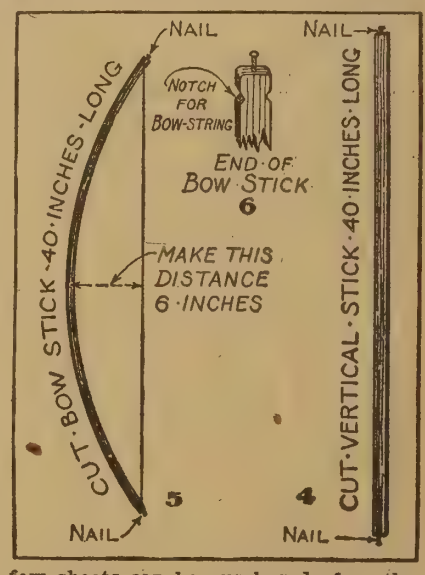


figure 3. Drive a couple of brads through the two sticks, to hold them together, and then reenforce the connection by wrapping the joint with strong linen thread, crossing it in the manner shown.

With the two sticks properly joined, connect their ends with the framing string, stretching it tightly between the sticks and tying to the end nails.

The strong light-weight brown paper now so generally used for wrapping paper makes an excellent covering. A

few sheets can be purchased for the purpose at a near-by store. You will likely have to paste together two or more sheets to make one large enough for your kite framework.

Attach a belly-band at the intersection of the bow-stick and vertical stick (figure 1), and make it of the right length so when held to one side it will reach to the end of the bow, as indicated in figure 1. Tie the flying line securely at this point, and the kite will be ready for its maiden flight.

**Conquering Villa.**

Dear Aunt Nellie: I am 12 years old and am in the eighth grade. My brother, George, is 10 years old. We are living with Mr. and Mrs. Roberts. I want to tell you how I helped to conquer Villa last summer. He had given us a lot of trouble, destroying our crops and breaking our fences. One day Mr. Roberts caught him and put a rope around his neck, then we tied his feet and Mr. Roberts strapped him up to a post and put a rope on his jaw, and Mrs. Roberts pulled back on the rope and I took a board and put his head between the board as a pry and brother George held back the rope on his legs. Mr. Roberts took some heavy wire and pincers and put the wire through his nose and twisted it into a ring. I tell you he kicked and squealed, but we had him fast. After Mr. Roberts got him fixed we turned him loose. He ran for the woods and hid away and sulked for several days. He kept his nose out of our business for some time afterward. I suppose it will be hard for you to believe that Villa was captured; you will believe me when I tell you that Villa was Mr. Roberts' Duroc boar hog. I think he was properly named because he was always causing trouble. I enjoy reading the children's letters and Joe Ashlock's stories. Mrs. Roberts says she can tell some bigger stories of frontier life that he can. She and her brothers took a homestead on the Nezperce Indian reservation in Idaho. Her name was Mary Finney before she was married. She said if I would send this to the Farmer there would likely be lots of people read it who know her. Give my love to Joe Ashlock.—Herbert E. Nye, Westport, Wash.

**Takes Gymnastum and Swimming.**

Dear Aunt Nellie: May I be admitted as one of the cousins? I enjoy reading the letters very much. I am 12 years old and my birthday is July 12. Have I a twin? If I have please write to me. I live where the Cheney State Normal school is and I go to the training school, which is where the students teach and some have their first tryouts as teachers. We take gymnasium and swimming in the Normal. I have two sisters who have gone to this Normal. I have three sisters and no brothers. My sisters' names are Georgia, Oleita and Effie. I am not a farm girl, although I like the farm better than I do the city. We have one dog whose name is Tiny, and he is 11 years old. He is not much bigger than a cat. He can play ball and he eats candy, ice cream and peanuts. I am knitting a quilt. It is made out of six-inch blocks and it takes 54 blocks to make it. I have 13 blocks done. My teacher's name is Miss Sadie Garrett. She is the supervisor. I am in the 7A grade and I have passed in the state examination of physiology. I got 90 in it. I have bought $7.25 worth of thrift stamps and I intend to buy more. We have one cow and one calf. Their names are Bossy and Bessie. I can not write a very interesting letter, but I am doing the best I can. —Hazel Agnes Land, Cheney, Wash. (Your letter was very well written, Agnes. We are going to watch for another one from you.—Aunt Nellie.)

**Helps Father With the Garden.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner, and I hope it will not be the last. I am 9 years old. My birthday is June 13. Have I a twin? I have one sister and one brother. My sister's name is Vivian and my brother's name is Woodrow. We have just one cow. Her name is Daisy. She is a Jersey. We do not live in the country, but my father takes the Farmer. I like the Children's Corner very much. I have joined the Junior Red Cross. My father bought me a Liberty bond. I have joined the Garden club, too. My garden is up. I am going to help my father with the garden all I can this year in order to help win the war. I think it is dreadful. I go to Sunday school most every Sunday. I have been sick for the last few Sundays. I like to go to Sunday school. Most every child in our school joined the Garden club. Very few joined the Rabbit club.—Letha Button, Box 111, La Center, Wash.

**Glad When She Can Go Wading.**

Dear Aunt Nellie: It has been a long time since I wrote last. I hope the cousins are all fine. We have a big garden this year. I like to take care of a garden. I have one of my own. I weed lots in it. We have lots of berries in the summer, we have blackberries, loganberries, raspberries, gooseberries and strawberries. I like strawberries the best. We just have a little patch, but we get lots of berries off it. Our flowers are coming out nice. Mama is making a nice yoke. It is very pretty; I think so anyway. School is out. I am glad. We had a picnic the last day of school. We had lots to eat and we had a good time. Papa has gone to Alaska. I think he will be back this week, and I hope so anyway. Our cow has a little calf. Its name is Virgie. It is red and cute. I fed him the other day. He can drink out of a bucket pretty good. I have been having the headache badly the last two weeks. I hope none of the other girls get it. It is a bad thing to have. My little brother, Edward, has been sick all day long. He had a bad fever. I guess Verna is looking for a letter from me. I haven't answered her letter yet. My birthday is June 13. I am 11 years old. I am glad when summer comes so I can go in wading. With love to Aunt Nellie and all the cousins.—Pearl Droullard, Prevost, Wash.

**Let Cuticura Be Your Beauty Doctor**

All druggists; Soap 25, Ointment 25 & 50, Talcum 25. Sample each free of "Cuticura, Dept. F, Boston."

**Red Cross Helps Our Soldiers.**

Dear Aunt Nellie: It has been such a long time since I wrote to you. My subject is the Red Cross. I think the Red Cross is all right. If it were not for the Red Cross our soldier boys would die. We have a Red Cross meeting at our school every Friday afternoon. April 5 we made 1300 gun wipes, April 19 we made 900 gunwipes. We make ambulance pillows, quilt blocks, washrags and aprons for the Belgian children. We have 20 scholars. Their names are: Eva Martin, age 6; Nellie Hayden, aged 6; Ruth Miller, aged 7; Pearl Martin, aged 7; John Hayden, aged 8; Leola Helmer, aged 8; Bessie Martin, aged 9; Lester Hayden, aged 9; Kathleen McClain, aged 8; Gwendoline McClain, aged 11; Ora Hayden, aged 11; Gleneve McClain, aged 12; Mabel Harms, aged 12; Maggie Martin, aged 13; Gladys Harms, aged 14; Cecil Helmer, aged 9; Audra Miller, aged 8; Bruce Beaton, aged 10; Everett Miller, aged 10; Thomas Martin, aged 12; Virl Helmer, aged 11; Angus Beaton, aged 15. That is all of the school children. We have four pups. We have 28 little chickens. It is very warm today. We used to go horseback to school. We rode two ponies named Fly and May, but now we go in the single buggy and drive a horse named Dan. —Ora Hayden, age 11, Mold, Wash.

**Brother Is a Sailor Boy.**

Dear Aunt Nellie: Please may I be a member of the Children's Corner? I am a member of the Red Cross. I am going to join the Achievement club. Our school's society's name is The Philidorian Literary society. I am the secretary-treasurer. I am going to ask some riddles. Why is a school room like an automobile? Why is an egg like a colt? If you saw somebody riding on a donkey what pear would you think of? I live on an 80-acre farm. I have five brothers and five sisters. Their names are Dosie, Lilly, Mary, Frances and Alice. My brothers are Bill, Fred, Ed, Bob and Arthur. My brother Fred enlisted in the navy and is in Norfolk, Va. He is only 18 years old. I am 13 years old and my birthday is February 20. Have I a twin? I have looked through every paper to see if I have a twin. Well, good-bye and a kiss and good luck to all my cousins.—May Sargant, Nahcotta, Wash.

**A Dog Named Fritz.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner and I hope it will not be the last. I have two sisters and one brother. My sisters' names are Gertrude and Inez. My brother's name is Edgar. We have one cow and one calf. We had two cows, but we sold one. We have one dog. His name is Fritz. We have a cat. Her name is Pussy. We have only four acres and a half of land. I have a little garden. I'm going to raise peas, lettuce, onions, turnips and rhubarb. I go to school and I am in the fifth grade. My teacher's name is Miss Teresa Gordon. The name of my school is South Side school. I am 10 years old and will be 11 July 25, 1918. Have I a twin? If I have, I wish she would write to me.—Fanny Osterberg, Box 14, Route 1, Shelton, Wash.

**Champion Spellers of the District.**

Dear Aunt Nellie: I have not written for a long time and as I had a little spare time I thought I would write now. We are the champion spellers of our district and we have to spell with one more school and then we are the champions of the county. We have one pennant of last year and we hope to win it again this year. If I get my diploma this year I will go to the Nooksack high schol, if we still live in Everson.—Emma Brune, age 15, Everson, Wash.

**Wants Her Twin to Write.**

Dear Aunt Nellie: I am 9 years old. My birthday is August 24. I live on a farm and we have 11 horses, three colts, five cows, four calves, six hogs, 37 chickens and two ducks. Have I a twin? If so, I would like to hear from her. I like to read the letters of the Children's Corner very much. My teacher's name is Maud Wilson and I am in the third grade.—Eula Weagant, Mansfield, Wash.

**Annabell Has a Real Twin.**

Dear Aunt Nellie: I like to write to the Children's Corner. I go to school one mile. I am in the fourth grade. My teachers' name is Miss Bankie. I like her very well. I am 9 years old and my birthday is November 8. Our school is named Bethany. My sister is a twin to me. I have dark brown hair and dark brown eyes. I have a brother in the navy. I have three brothers. Their names are Teddie, Hamilton and William. I have three sisters. Their names are Velinda, Myrtle and Maybell. We live on a 20-acre farm. We have two kittens. Their names are Nig and Tige. I can cook cookies and some other things. I hope the war will end soon and the Yankee kids can kill the kaiser. I have read "Trappers of the Ozarks" in the Farmer.—Annabell Van Hoy, R. F. D. 1, Box 139, Grandview, Wash.

**Found the Little Lost Lamb.**

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I like to read the letters very much. I live on a 160-acre farm. We have nine horses. Their names are Molly, Queen, Prince, Babe, Billy, Bill, Fannie, Paul and Ned. We have one dog and seven cats. The dog's name is Fannie. One of the cats is mine. Its name is Daisy. It is black and white. We have four little lambs. One of my little lambs was lost and I found it. We have a little canary bird. The wind has been blowing for a long time.—Edith Christensen, age 10, Cottonwood Farm, R. F. D. 3, Box 143, Ellensburg, Wash.

**Cecil Writes for the First Time.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 11 years old. My birthday is November 13. I have three sisters. Their names are Dora, May and Letha. I have five brothers, Lloyd, Floyd, Martin, Orvil and Freddie. Papa has three cows and one calf. We have five working horses, and one saddle horse. His name is Dick. My brother has a car and a buggy team. Mama has 100 chickens. Papa has been and Lloyd and Floyd are working out. I go to school and am in the fourth and fifth grades. We live on a 160-acre farm. Have I a twin?—Cecil Barnett, Penawawa, Wash.

**Will Start a Sweater Soon.**

Dear Aunt Nellie: This is my first letter to the Corner. I am going to tell you what I look like. I have dark brown curly hair, gray eyes and a clear complexion, and am about five feet nine inches tall. So now you know what I look like. My teachers' names are Miss Lila Runner and Miss Mary Martin. I am in the eighth grade. I can knit. I have knitted a pair of wristlets and am going to start a sweater soon. My birthday is December 23. I am 14 years old. Have I a twin? I would like to join the cousins. I would be glad to hear from any of the cousins.—Marie Kilgore, Deep Creek, Wash.

**Has a Twin in Her Neighborhood.**

Dear Aunt Nellie: Will you admit another one to the Children's Corner? This is the first time I have written to the Corner. Well, as everybody is asking if they have a twin, I am lucky enough to have one. She lives in the same neighborhood that I do. Have I a triplet? If I have please write? I was 15 June 6, and have blue eyes and brown hair. I am in the freshman class at school. I have five teachers. I have made an apron at school and now I am making a dress. I got a wrist watch for Christmas.—Ollie Cummins, Touchet, Wash.

**Have Water Pumped in Their House.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 11 years old and in the fifth grade. Have I a twin? If so, I wish they would write to me. Papa gets the Farmer. We have water in the house. It run in March 21, 1918. We pump it in with a pump. We live with our Uncle John. I have four sisters and two brothers. Their names are Mary, Ruth, Willie, John, Elma and Bertha. Bertha is the baby. I had two teachers this year.—Clara Bacon, Wawawai, Wash.

**Lois Likes Chrysanthemums, Too.**

Dear Aunt Nellie: I am 7 years old and in the fourth grade. My teacher's name is Mrs. Shaw. My big sister is 11 years old. My big brother has two cats and one dog. I have two brothers and five sisters. Their names are Neah, Edna, Stella, Edith, Mary and Fred and John. I like to read the Children's Corner. I like chrysanthemums, too. I will give you a riddle: Why is it dangerous to put a clock at the head of the stairs? I belong to the Red Cross.—Lois Peck, age 7, Box 457, Lind, Wash.

**Has Cousin James a Twin?**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. My father takes the Farmer. I always read the girls' and boys' letters. I am 11 years old and will be 12 November 21, 1918. I am in the fifth grade in school. There are four pupils in our class. We live on a 40-acre farm. I have two sisters and one brother. Their names are Mabel, Avaline and Clarence. We have two horses, two cows and one calf. Have I a twin? If I have I wish he would write to me. —James Barr, Eatonville, Wash.

**Gladys' First Corner Letter.**

Dear Aunt Nellie. I was 12 on May 26. I am in the sixth grade. I am staying with my grandmother and grandfather. They take the Farmer. I read the Children's Corner and like it very much. This is my first letter to the Corner.—Gladys Geer, South Bend, Wash.

**Father Manages a Store.**

Dear Aunt Nellie: My father is manager of a store. We live over the store. I am 9 years old May 9. I am in the third grade. Have I a twin? This is the first time I have written to the Children's Corner. I hope to see my letter in print.—Theodosia Heckel, Hobart, Wash.

**Teacher Has Gone to War.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I live an a 320-acre farm. I have four horses. Their names are Rouday, Dolly, Babe and Boss. We have two cows and one calf. The cows' names are Nellie and Jersey; the calf's name is Daisy. We have 36 chickens and one pig. The squirrels are thick here. I have one brother named Orlie. I am 10 years old June 1. Have I a twin? If I have I hope he or she will write to me. We have no school now because the teacher had to go to war. I like him very much. His name is Mr. Leach.—Clyde Decker, Leahy, Wash.

**Two Cousins Are Serving Uncle Sam.**

Dear Aunt Nellie: This is my first letter to the Corner. I hope to see my letter in print. My father takes the Farmer and I read the letters every time it comes. I am 10 years old and in the fifth grade. My birthday is March 20. I have dark brown hair and brown eyes. Have I a twin? If I have I wish they would write to me. I have two cousins serving Uncle Sam. I have learned how to knit. I am going to knit for the soldiers soon.—Lucille Snodgrass, Waverly, Wash.

# News for Breeders

Ed Schoel, the Chester White breeder of Suver, Ore., has a sow that has farrowed 88 pigs in five litters. Her last litter consisted of 24 pigs. Mr. Schoel announces that he will not make the fair circuit this fall. As he has been exhibiting for many years and always makes an attractive display, he will be much missed by both fair managers and public. He may possibly decide to show a few young stock at the Oregon State fair, as he has a very fine lot of pigs coming on.

Two of the cows in the O. W. Tarr Jersey sale at Gresham, Ore., June 28, brought $300 each; the nine head of mature cows and heifers brought a total of $1615, and the three baby calves $100, so the average, with baby calves included, was $142.92, and for the 12 older animals $179.44. Joseph Pfister of Oregon City, Ore., secured the beautiful little show cow, Togo Lad's Blanche, at top price and three others, for a total of $720. M. F. Henderson of Portand was the high bidder on Jane Irene of St. Lambert, the other $300 cow.

# Shorthorn Breeders Aid the Red Cross

(Continued from page seven.)

lowing list of sales indicate each animal's breeding:

Lavender's Lord, 500408, red, calved July 19, 1915, bred by Charles E. Leonard & Son, Bunceton, Mo., got by Wood Dale Stamp 354220, donated by Albert Marty estate, Kansas City, Mo. (grand champion) ..... $10,000

Red bull (name, pedigree and donor not given)..... 2,600

# Prevent Fires

## Unusual Care Required This Year

With the approach of the harvest season the attention of people everywhere is being called to the necessity of great care in the prevention of fires. In normal times when a wheat field or a grain stack burns the individual farmer is felt to be the only loser. This is not the case this year, however, as the entire civilized world is asking for the maximum possible production of wheat. Carelessness anywhere that may result in the loss of grain this harvest is nothing short of criminal.

So vital do some consider the prevention of fires that one county organization of farmers in the northwest is advocating the use of a chemical fire extinguisher by all threshing crews. "An expenditure of $100 for a chemical outfit might easily save $1000 worth of wheat in one fire," says a representative of the organization.

Whether the idea of a chemical fire extinguisher for threshers is practical or not, the fact remains that there are many practical devices that should be at all times ready during the harvest season. No threshing crew, especially the one where a steam engine is used, should be without thorough preparation for combating fires. Every threshing outfit should have a vehicle of some kind, preferably, perhaps, an automobile, in which a small quantity of water and a large number of wet sacks could always be ready upon a moment's notice.

In addition to equipment for extinguishing fires, every member of a threshing crew should feel inspired to use the utmost precaution against setting fires and be always alert to extinguish any blaze or possible source of a blaze the instant it is discovered.

## DOGS KILL SHEEP.

### May Put Useless Dogs Under Ban.

Sheep killing dogs have again invaded the University of Idaho experiment farm at Moscow, Idaho, five more valuable purebred animals having been lost and others injured. A few months ago a dozen or more of the purebred sheep at the university were lost in a like manner. Dean E. J. Iddings of the university college of agriculture estimates the total loss from dogs during the last year at $1200.

The depredations of dogs has put sheepmen on the warpath, especially in the vicinity of Idaho, and is proving a stimulous in the movement to do away with the useless dog. Dean Iddings has taken the matter up with the chamber of commerce of Moscow, urging upon them some action to rid the community of dogs that serve no useful purpose.

Warranted to Give Satisfaction.

Gombault's

**WM. NEUENSCHWANDER,** Gaston, Ore.

## JERSEY CATTLE

### WORLD'S RECORD BULL CALF

**Dropped May 19, 1918.**

Dam Zamolia Nutwood, who at 13 years 9 months, made official record of 484 lbs. fat, 8788 lbs. milk; at 15 years 48 days, 577 lbs. fat (678.82 lbs. 85% butter) and 10,212 lbs. milk, a world's record for milk and second for fat for cows over 15 years and she was handicapped by being seriously stifled.

After two weeks rest she is again on test at 16 years 3 months, milking 37 to 41 lbs., and promises to break her last record.

Calf's sire, **Gertie's Poppy's St. Mawes,** has so far sired 20 calves and not one broken colored. He is 25% blood of St. Mawes Poppy, 1120 lbs. butter; 25% Gertie's Fern Princess, 711 lbs. (sold at auction for $820), and 50% Rosaire Olga Lad.

The calf we recently advertised has been sold, making five at $250 each. We have just the one left. For further information write

**DOERFLER FARMS, Silverton, Ore.**
F. A. DOERFLER, Proprietor.

**EARL WOOD.** Silverton, Oregon.

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, July 15.—Assertions that the number of cars in many sections was not plentiful had a bullish effect today on corn and so, too, did a good-sized reduction of the visible supply total. The finish was unsettled, 2 3-8 to 3 1-8c net higher, with August $1.63 1-2 to 5-8 and September, $1.63 1-4 to 1-2. Oats gained 5-8c to 1 3-4c. Provisions closed unchanged to 30c higher.

Upturns in the value of corn followed an early decline due to favorable weather and big receipts. It soon became apparent, however, that the market was in a heavily oversold condition. Aggressive buying on the part of strong commission houses ensued, and during the last half of the session bears were fighting among themselves to get grain back.

Oats paralleled the action of corn. Exporters were asking for offers and it was said that 500,000 bushels was loaded here today for Georgian bay. Strength of hogs and grain imparted firmness to provisions. Besides, weekly exports were large

## Portland Market.

PORTLAND, Ore., July 15.—New flour prices were announced by millers at the close of the week, based on the assumption that the $2.20 wheat price will be definite and that the president's veto of the $2.40 wheat bill will be sustained by congress.

The new flour quotation is put at $10.75 for 100 per cent straights. Grahams will sell at $9.90 and whole wheat flour at $10.30.

While the government wheat price of $2.20 will apply in general only to 1918 wheat the food administration grain corporation has invoiced to the mills at this price a limited amount of old wheat that was taken in at $2.05. This is the stock that was on hand in mills and elevators when the last cereal year ended. The only method feasible for handling this small surplus was found to be to invoice it at the new base price and allow the grain corporation to absorb the difference. With this stock available for grinding, the mills therefore, put out the new flour quotations. There may be a little old flour still on hand made from wheat that cost $2.05, and if so it must be sold at the old price of $10 to $10.05.

The mills have not yet made new mill feed prices, but it is likely bran will sell at $31 and shorts and middlings at $33, sacked f. o. b. mills.

It is pointed out by millers that unless the government steps in and buys a very large quantity of flour this year, so the northwestern mills can run full time, there will be a shortage of mill feed for stockmen's use, and oats and barley prices will be prohibitive. The northern mills will be shut out of the California market, owing to the presence of Australian wheat there, and the flour rationing to domestic users will mean a very small grind, and consequently a mill feed shortage, unless the government comes to the rescue and buys as much or more flour than last year.

The butter market is strong, with prospects of an advance of 1 or 2 cents in print prices within the next day or so. Cubes are holding steady at 45 cents.

Cheese prices were advaced 1½ cents by Tillamook and Coos bay factories in the latter part of the week.

Eggs are gradually advancing as receipts of Oregons diminish. The poultry and dressed meat markets continue firm.

Eastern Oregon peaches are in liberal supply and selling fairly well at 75c@$1 a box.

Butter—Cubes, extra, 45 cents; prime firsts, 44c; prints, extras, 48c; cartons, 1@2c extra; butterfat, No. 1, 51c delivered.

Cheese—Jobbers' buying prices, f. o. b. dock, Portland: Tillamook, triplets, 25c; Young Americas, 26c per pound; Coos and Curry, f. o. b. Myrtle Point; triplets, 24½c; longhorns, 25½c per pound; ¼c discount to Portland trade.

Poultry—Hens, 26@27c; broilers, 30@32c; ducks, young, 30c; geese, nominal; turkeys, nominal.

Veal—Fancy, 19c per pound.

Potatoes—Oregon, Burbank, $1.50@1.85 per hundred; new California, 3¼@3½c per pound.

Hay—Buying prices, f. o. b. Portland; eastern Oregon timothy, $31 per ton; valley timothy, $29; alfalfa, $25@25.50; valley, grain hay, $24@26; clover, $24; straw, $9@10.

## Seattle Market.

SEATTLE, Wash., July 14,—Butter and eggs were firm yesterday. During the week butter went up 1 cent per pound and eggs 1 cent per dozen. Unless the prediction of market men is based upon guesses, butter and eggs will see another jump by the end of next week.

Cream has also been hard to get. While the price has advanced a trifle, owing to the advance of butter, the supply has not increased. Although creamery men feel that they will always be able to get cream, they would like to see a larger supply and a more steady market.

The egg problem is the same. In the war kitchen and in the literature of the food administration, housewives and cooks in hotels and camps are told how to bake eggless cake and other eggless food, yet there is no surplus of fresh eggs. Many people, on the other hand, are using eggs instead of meat, it is said, as they can get the same nourishment at a little less cost.

Green corn arrived in the markets yesterday from the Yakima valley. The run is good, according to produce dealers, and it is selling at 75 cents per dozen ears. While it is small, most of the ears are well filled out. There was a steady sale of corn during the day. Larger shipments are expected the first of the week.

Local celery can now be found along commission row. That shipped in is of the White Plume variety and is said to be of good quality. It is bringing $1.25@1.50 per dozen bunches. Onions are also arriving in large shipments from eastern Washington farms and the market yesterday was firm, with the prices at $2.25@2.50 per cwt.

Better grades of the new potatoes have been received. During the week a carload was condemned, owing to the presence of tuber moth, but the late shipments have been inspected and found to be in good condition. The demand has been good.

Strawberries and cherries are practically gone. There are a few to be had, but many of them are soft and of poor quality. California plums continue to bring good prices, and the expected crop of this state will command a strong market, it is said.

## Butter and Eggs.

PORTLAND, Ore., July 15.—Butter prints, extras, 48@50c; cubes, extras, 45c; prime firsts, 44c; dairy 34c. Butterfat, Portland delivery, No. 1 sour cream, 51c.

CHICAGO, July 15.—Butter higher, creamery, 38@43½c. Eggs steady; receipts, 19,373 cases; firsts, 37½@39c; ordinary firsts, 35@37c; at mark, cases included, 35@38c.

SAN FRANCISCO, July 15.—Butter, 47@52½c. Eggs, fresh extras, 47½c; fresh extra pullets, 44c. Cheese, Young Americas, not quoted; new firsts, 24½c.

We are now allowed to buy wool from growers. Returns will be made subject to government price, less our profit of 1½ cents per pound.

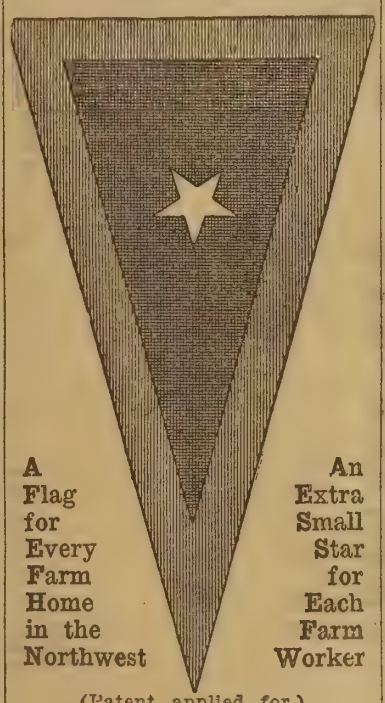
Market price paid for hides, metal and rubber. Write for prices if interested. Prompt returns guaranteed.

**PACIFIC HIDE & FUR DEPOT.**

Joseph Thiebes and C. T. Symmes.
1101-09 Railroad Ave., Spokane, Wash.

## Can't Get Rid of Pests

To the Editor of the Washington Farmer: Seeing several talks in the Farmer on the squirrel question, would like to say a few words. We live on the edge of the farm lands of the Palouse and near the timber and lived here nearly 11 years. The first three or four years we had fine crops of grain, but the squirrels are so bad now that we have given up planting grain at all. We are surrounded by pasture land and the wheat farmers do not pretend to fight the squirrels there at all. We spend our time and money and kill them all out on our place and in a few days they are as thick as ever, coming in from all around us. You say they average five squirrels to the acre. If you said 50 to the acre in the wheat land and 500 in the pastures you would get nearer the truth. Other states have passed a law compelling all land owners to fight them on all the land they own and if the owners do not do this some one is appointed to do it and the owner has to pay the charges. If that was done here early in the spring we would soon get rid of them. Why should our good state of Washington be behind other states in this matter? All of us who live near the timber are in the same boat. We need the grain and hay, but all we can raise is rye and red top for hay, as the squirrels do not bother that so badly. Won't you try and help us out on this question?



MRS. E. H. DICKENS.

Cheney, Wash.

**Underground Summer Homes.**

Not far from Fresno, Cal., a summer home has been constructed underground.

## FARM SERVICE WAR FLAG

A Flag for Every Farm Home in the Northwest

An Extra Small Star for Each Farm Worker

(Patent applied for.)

**Designed by the Washington Farmer in connection with The Oregon Farmer and The Idaho Farmer for the farm and farm home that is increasing food production in helping to win the war.**

**OFFER NO. 2.**

A farm service war flag, 9x22 inches, made of cotton felt (just the thing for the auto, front porch or the flag pole), will be mailed postpaid to any one sending us TWO SUBSCRIPTIONS TO THIS PAPER. Secure two of your neighbors under our special bargain rates and receive a bunting "Farm Service War Flag."

Send your subscriptions to

**The Washington Farmer**

Seattle, Wash.
Review Bldg.,
Spokane, Wash.

### Manufacturers Use Much Wool.

More wool was used by manufacturers in May than in any other month of this year, according to the monthly wool consumption report just issued by the bureau of markets. May consumption was 74,600,000 pounds, grease equivalent, compared to 70,700,000 pounds in April, 71,900,000 in March, 62,700,000 in February, and 65,100,000 pounds in January.

Stock of wool consumed in May by classes, in pounds, were: Grease wool, 43,597,175; scoured, 13,557,733, and pulled, 2,969,638.

### Storage for Future Need.

It will be remembered that famine in ancient Egypt was prevented by a little governmental foresight, and it does not require any illuminating dream to anticipate that so long as the war lasts, with its increasing drafts of soldiers or ammunition workers, the world will steadily produce less and less food. If this year's harvests prove abundant, it will be the first duty of American people to place every grain they can save into storage for future need.

### Should Cease Unnecessary Work.

J. R. Shinn, county agent for Spokane county, says that he has been getting in touch with employers of labor throughout his territory urging them to release all of the men possible at harvest time. He urges that all public work that can be postponed be allowed to go until the crops are harvested. He reports a general sentiment in favor of this move among all classes of industry.

### Michigan Hit by Frost.

Dispatches from the state of Michigan tell of serious damage to crops in various parts of that state during the latter part of June. The lowest temperature in 20 years for this time of year was reported from Grand Rapids. Such crops as potatoes, corn, beans, tomatoes, cucumbers, berries, melons, hemp and the like are reported to have been heavily damaged.

## Trappers of the Ozarks

(Continued from page twenty.)

They allowed their canoes to drift with the main current, and that had carried them into the shadow of some lofty forest-trees along the right bank, which at their particular place happened to be the west bank. The travelers had been drifting in the shadow for a few minutes, when a figure appeared on the moonlight cliff that rose 50 or 75 feet from the east bank The moonlight was not very bright, but bright enough to reveal that the figure was a white man. The astonished canoemen stopped paddling and watched him.

The man halted on the very brink of the cliff, and looked down at the water. Then he turned and gazed backward, fearfully as it seemed to the two watchers. Again he looked at the water below, as if trying to measure the distance to it, or its depth. When he glanced barkward again, he saw something that frightened him; and he turned and fled swiftly along the edge of the cliff. Suddenly two Indian warriors emerged into view, in swift pursuit of him.

On the fugitive dashed, with the Indians close behind. When almost opposite the drifting canoes, the man, seeing that the warriors must soon overtake him, suddenly turned and leaped from the cliff, as far as he could out over the river, many feet below!

(to be continued.)

## Want Ads

### AGENTS—WANTED 9

FARMERS, FRUIT GROWERS, AND OTHers seeking profitable employment as local agents to sell our high-grade nursery stock, will please write for terms to agents. Good pay, exclusive territory and steady employment to honest, reliable men. Albany Nurseries, Albany, Ore.

### EDUCATIONAL 45

EARN MORE. ENROLL ANY TIME, AT Behnke-Walker, Portland, northwest's biggest business college, because best. Graduates assured positions. Write for catalogue.

### TEACHERS' AGENCIES 46

TEACHERS REGISTER WITH B. F. WESTmore, Mgr. Hazard Teachers' Agcy. $1 registers you at three offices. 911 Old Nat'l Bank bldg., Spokane, Washington.

ALBERT TEACHERS' AGENCY, PEYTON bldg., Spokane. We need more teachers.

### FARM LANDS—FOR SALE 651

ATTENTION, LANDBUYERS!

Here's an excellent proposition:

40-acre farms, selling for $25 to $25 per acre; long-time payments, 6 per cent interest; in the best agricultural part of Snohomish county, where you have all the modern conveniences—paved roads, railways, schools, churches, mills and factories. This district has proven its worth by the many successful farmers now located there.

We also have some beautiful 10-acre water-front tracts.

OPPORTUNITY knocks at every man's door ONCE, but, believe me, it does not continue to knock forever, nor does it pound the door down. For further information address the owners, BROWNELL LAND CO., 904 Third ave., Seattle, Wash.

EASY TO PAY FOR GOOD LAND AT $40, ON TERMS OF
$1 CASH PER ACRE.
50C PER ACRE MONTHLY.

Interest on deferred payments 6 per cent. BUY 20 acres or more at $40 an acre on the above terms, in LEWIS COUNTY, south of CHEHALIS, on the main double track line between Seattle and Portland, the N. P., the G. N. and the O.-W., the best transportation in the state.

FINE, LEVEL LAND, SILTY CLAY SOIL, NO ROCK, NO GRAVEL, CLOSE TO RAILROAD AND PACIFIC HIGHWAY, LEWIS COUNTY, SOUTHWEST WASHINGTON. FREE CIRCULAR. Write to
DAVID P. EASTMAN,
1024 THIRD AVE., SEATTLE.

9 MILES FROM CENTER OF SPOKANE, 70 acres; on paved Appleway, Spokane valley; 30 minutes' ride on electric R. R.; station on place; finest black loam soil; private well for irrigation; 50 acres cultivated, balance natural sod; road on all sides; no buildings. Price $12,000. Will take $5000, other real estate. Your own terms on balance, 6 per cent. Absolutely in choicest district. Best located tract in Spokane valley. If you see this, you will want it. Don't delay.

HOUSE AND LAND ASSOCIATION.
514 RIVERSIDE. MAIN 3079.
SPOKANE, WASH.

DESIRABLE DAIRY RANCH, 200 ACRES; 80 a. best river bottom; well improved; 28 well-graded dairy cows (has honor cow and honor herd in all cow-testing associations in Oregon in March); 18 yearlings and calves, good Jersey sire, 3 good horses, 20 shoats, 2 good brood sows, 60 hens, etc.; 12-room house, in good repair; outbuildings; good fences; income tax reports show $4000 gross income, 1917; $20,000; $8000 down, balance 10 years, 6 per cent. C. E. Ricker, Reedsport, Ore.

480 ACRES IN SHIELDS RIVER VALLEY, wheat and hay farm; good water right; 98 per cent tillable; 300 acres broken; running water; large barn, 3 granaries, chicken house, hoghouse, garage, frame house; schoolhouse on same section; telephone, mail route; 8 mi. from R. R. town. Price $50 per acre. Easy terms. Write owner, Guy T. McBane, Wilsall, Mont.

320-A. MONT. FARM CHEAP; FINE CHOColate loam; 30 a. in wheat; 6¼ mi. from live town; centralized school; good house, reservoir, stock well and bank barn. Price $7500; ½ cash, bal. easy terms. P. O. Box 167, Galata, Mont.

IDEAL SHEEP OR STOCK RANCH.

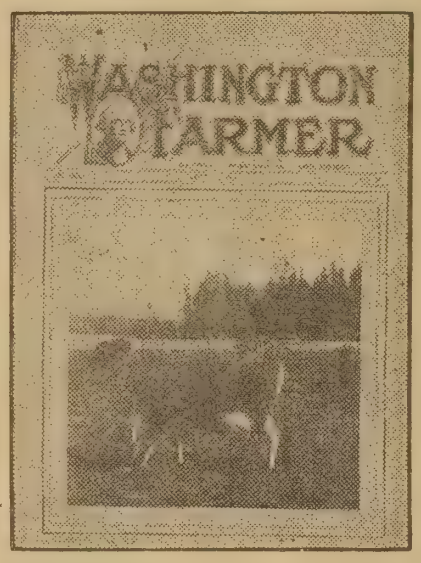
80 acres; in Nevada; with excellent outside range; fine location and good improvements; a bargain worth investigating. Address Dr. W. F. Boylan, owner, Amos, Nev.

FOR SALE—363-ACRE STOCK RANCH; 250 a. cultivated; 6-room plastered house and other buildings; ½ mile from school; $35 per acre. Write owner, J. A. Sipe, Midvale, Idaho.

ONE OF THE CHOICEST RANCHES ON Coquille river; 130 acres bottom; 375 acres of hill. Dairying or stock. Address the owners, Sweet Bros., Lampa, Ore.

FOR SALE—160-ACRE IMPROVED FARM; 35 acres tillable; bargain. Route 1, Box 19, Brewster, Wash.

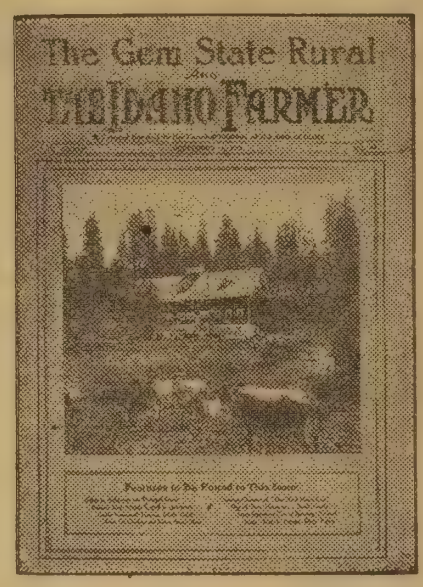
### FARM LANDS—WANTED 654



I WANT TO HEAR FROM OWNER OF farm or unimproved land for sale. Mrs. W. Booth, Pulaski, Iowa.

WANTED—TO HEAR FROM OWNER OF farm or unimproved land for sale. K. Hawley, Baldwin, Wis.

### FOR SALE OR EXCHANGE 702



FOR SALE—160 A. MONTANA WHEAT land. Would exchange for logged-off land of equal value near Spokane. A. B. Gaylord, owner, Roundup, Montana. No agents.

# "Want" Ads in These Papers Are Economical and Effective

## Take Advantage of the Low Combination Rate for Insertion of "Want" Ads in These State Farm Papers

The "want" ad is a method of communication which will prove helpful at various times to all of our farm folks.

Do you desire to get in touch with a reliable, experienced hired man? The "want" ad brings your need to the attention of competent workers throughout three states.

Do you wish to turn used machinery into cash? The "want" ad reaches farmers in other districts who have use for your discarded implements, and who will probably be glad to make the saving you will be able to offer them.

Have you farm products to sell, such as live stock, poultry, seeds or dried fruits? Once more, the "want" ad in the three state farm papers offers a solution for the difficulty. It reaches the very class of homes where there is a constant demand for these things.

Have you a piece of land for which you are eager to find a buyer? The "want" ad in The Washington Farmer, The Oregon Farmer and The Idaho Farmer affords a splendid method for making a sale; inasmuch as these three papers are read by tens of thousands of farm owners and farm renters, a goodly proportion of whom are considering the purchase of farms or orchards in other sections.

To sum up, our "want" ads enable you to reach the people who have what you want or who want what you have. They are easy to insert. They are low in cost. Even if there is nothing you care to advertise at this time, you will always find interesting, profitable reading in our "want" ad columns.

Rates are printed at the top of these columns in every issue. Don't miss the "want" ad page today!

**Send Orders and Inquiries Regarding "Want" Ads to The Washington Farmer, 617 Central Bldg., Seattle, Wash.**

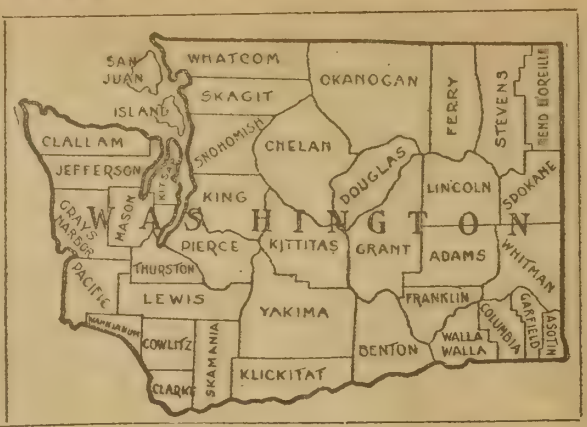
NOTICE TO READERS: When you finish reading this paper, place a U. S. 1-cent stamp on this notice, mail the paper and it will be placed in the hands of our soldiers or sailors destined to proceed overseas. NO WRAPPER, NO ADDRESS. A. S. Burleson, Postmaster General.

# THE WASHINGTON FARMER

SUCCESSOR TO
THE RANCH PACIFIC DAIRYMAN HORN AND HOOF

VOL. XLI. NO. 30 JULY 25, 1918. ** WEEKLY.

**"OUR YOUNG MEN HAVE GONE TO THE OTHER SIDE, very many of them to give up their joyous prime, all the glory and all the beauty of life, for the prize of death in battle for a lofty ideal. Now, while they are defending us, can't we men and women at home make up our minds to try to insist in public and private on a loftier idealism here at home? I am asking for an idealism which shall find expression beside the hearthstone and in the family and in the councils of state and nation.**



**"And I ask you to see that when those who have gone abroad to endure every species of hardship, to risk their lives, to give their lives—when those men who live come home that they shall come home to a nation which we by our actions have made a nation they can be proud to have fought for and to have died for."**

*—From an address by Theodore Roosevelt, at Saratoga Springs, N. Y., the day following the fall of his son Quentin in an airplane within the German lines.*

# Hay Harvest in Full Swing

## Nearly Normal Crop Where Meadows Were Not Pastured. Skagit County Oat Yield Is Light. Driest Season for Years.

MT. VERNON, Skagit County, Wash., July 15.—The hay harvest is just well started here now. The crop in general is short. Where meadows were not pastured, nearly a normal crop is being harvested, but the dry weather cut the pasture very short and the later hay and pasture was also short. We had a good rain on the 10th, but more is needed. The oat crop generally is light, probably two-thirds to three-fourths of a crop. We have had the driest season in many years. There seems to be a reasonable supply of help for haying and farmers are paying them $4 a day. Farm hands are getting $70 to $75 a month and board for ordinary farm work. There is a feeling among the dairymen that they would be as well off to sell their cows and their feed and save the labor of converting feed into milk; that they could make as much or more by selling the feed they raise, rather than producing the milk. Hay is selling at from $20 to $25 a ton in the field. Silos will be very largely used again. It is more and more apparent that wherever dairying is followed the silo is useful in preserving cheap feed.

C. S. PHILLIPS.

### All Crops Are Short.

RAINIER, Thurston County, Wash., July 13.—Principal crops are clover, grain hay and some grain. All these crops are short this year. This has been the dryest season on record, combined with the green aphis, which practically destroyed peas and greatly damaged vetch and oats, and from present prospects we will not have an overabundance of potatoes. Field corn is holding its own. If we can get good rains within the next two weeks, corn and late potatoes will make a fair crop. No complaint here about shortage of help. I would recommend more fall and early winter seeding of grain in this section. The day before Thanksgiving of November, 1917, I sowed some rye and vetch and it was extra good July 1, 1918, while spring sown grain was short and some pieces were not cut.

L. F. DAVIS.

# Houser Gives Grain Schedule

## *Prices Are Shown for Different Varieties and Grades*

M. H. Houser, northwestern representative of the federal grain buying corporation, has issued a statement showing the basis on which the grain corporation will purchase wheat of the 1918 crop in the northwest. The prices quoted are those that will apply at the terminal points on the Pacific northwest coast. The prices given in the Houser statement, together with other information on the wheat buying business, are as follows:

"Dark hard winter, $2.22; hard winter (basic), $2.20; yellow hard winter, $2.18; dark northern spring, $2.22; northern spring (basic), $2.20; red spring, $2.15; red winter (basic), $2.20; red Walla, $2.13; amber durum, $2.22; durum (basic), $2.20; red durum, $2.13; hard white (basic), $2.20; soft white, $2.18; white club, $2.16.

"No 2 white will be bought by the grain corporation at 3c under No. 1; No. 3 wheat at 7c under No. 1.

"Mixed wheat and wheat grading lower than No. 3 will be bought by sample at its value.

"We will issue a bulletin giving the approximate value of wheat grading lower than No. 3 on account of test weight, mixed wheat and smutty wheat.

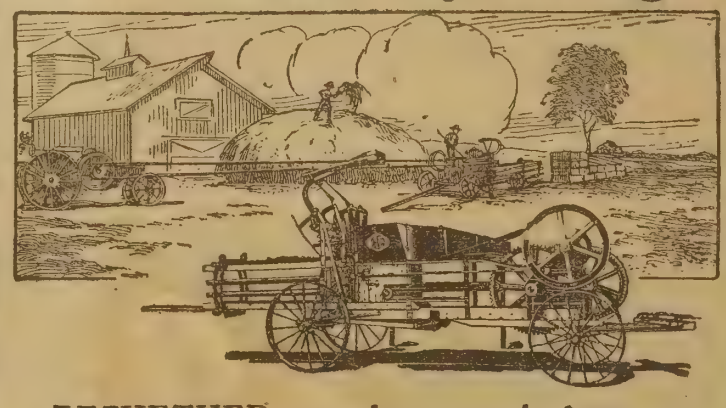
"The above prices are for bulk wheat. a premium of 9c per bushel will be paid for sacked wheat, basis good order sacks.

"We expect the grain trade to operate on a fair price basis as we do not wish to solicit consignments which we are prepared to handle on a 1 per cent commission basis.

"Under the new arrangement for the coming year the food administration grain corporation relinquishes definite direction of wheat shipments. We will therefore discontinue the car permit system, in order to return the trade to the widest range of individual opportunity possible. Nevertheless, we intend to keep in close touch with all shippers and assist them as much as possible in securing cars for the movement of wheat."

For the purpose of assisting the farmers to understand the application of the foregoing prices and the table of standards given below to the common varieties of wheat grown in the northwest, the following explanation has been prepared by this paper:

The wheat classed hard red spring is Marquis wheat; hard red winter is Turkey red; common white is blue stem, fortyfold, baart and gold corn; white club is little club, Jenkins club, Sonora, red chaff, early Wilbur, and the white hybrids; red winter is Jones' fife; red Walla is red Russian, red club, Coppei red and the red hybrids.



The following table shows the test weight per bushel of the different classes of wheat for any grade for No. 1 to No. 5, the amount of damaged kernels that any grade may contain, the foreign matter other than dockage that any grade may contain, and the percentage of wheat of another class which any grade of any variety may contain. Growers of any variety of wheat in the northwest should substitute the name of the variety or varieties that they grow in this table as indicated by the foregoing explanation:

| Grade No. | Minimum limits of—Test weight per bushel: Class Hard Red Spring | Minimum limits of—Test weight per bushel: Classes Durum, Hard Red Winter, Common White, and White Club, and subclass Red Winter | Minimum limits of—Test weight per bushel: Subclass Red Walla | Maximum limits of—Damaged kernels: Total | Maximum limits of—Damaged kernels: Heat damaged | Maximum limits of—Foreign material other than dockage: Total | Maximum limits of—Foreign material other than dockage: Matter other than cereal grains | Maximum limits of—Wheat of other classes: Total |
|---|---|---|---|---|---|---|---|---|
| | Pounds | Pounds | Pounds | Per Ct. | Per Ct. | Per Ct. | Per Ct. | Per Ct. |
| 1 | 58 | 60 | 58 | 2 | 0.1 | 1 | 0.5 | 5 |
| 2 | 57 | 58 | 56 | 4 | 0.2 | 2 | 1.0 | 10 |
| 3 | 55 | 56 | 54 | 7 | 0.5 | 3 | 2.0 | 10 |
| 4 | 53 | 54 | 52 | 10 | 1.0 | 5 | 3.0 | 10 |
| 5 | 50 | 51 | 49 | 15 | 3.0 | 7 | 5.0 | 10 |

Wheat of the appropriate subclass which does not come within the requirements of any of the grades from No. 1 to No. 5, inclusive, or which has any commercially objectionable foreign

## Successful Hay Baling

WHETHER your hay crop is large or small, it pays to bale it with an **International Hay Press.** That means profitable marketing, easy and rapid handling and saving in storage space. A one-horse press with a 14 x 18 bale chamber turns out a daily average of 6 to 10 tons of baled hay. A two-horse press gives you 8 to 15 tons in bales. The motor press averages up to 20 tons, and the belt power press up to 30 tons—smooth, well-tied, marketable bales. The bale chamber sizes are uniform and standard, 14 x 18, 16 x 18, and 17 x 22.

Some of the popular features of **International** hay presses—the low bale chamber that saves time and labor in the tying of bales, the spring roller tucker that makes the bales smooth, the block setters, the end delivery of bales, the low step-over of the horse presses, the power economy of all the **International** presses—these are features you should know about before you buy a hay press.

A card to us asking for **International** hay press information will bring you a complete illustrated description of every press in the line, and bring it promptly. Write us now while you think of it.

# Northwest Faces Feed Problem

## *Where to Get Grain Feed for Hogs Puzzles County Agricultural Agents*

How to get grain feed to tide the hogs of the Inland Empire over the season between pasture and the gleaning of the grain fields is a question that consumed much of the time of the conference between the county agents of eastern Washington and northern Idaho in Spokane last week. W. B. Kjosness, assistant county agent for northern Idaho, brought up the subject when he declared that the hog men of his territory believed themselves unable to secure the grain necessary to carry their hogs over in good growing condition until the pea fields and wheat fields of northern Idaho are ready for the hogs to be turned into. A general sentiment among the agricultural agents present seemed to be in agreement with his statement. There was also agreement among the agents that hogs must have a grain ration while on pasture in order to get the growth necessary for good finishing when the grain fields become availabue. Uniform complaint was also made relative to the mill feed that has been available, but which is now practically impossible to get in most of the agricultural sections of the west. It was stated a number of times and denied by no one that the mill feed was composed of so much trash and waste matter as to be almost valueless as hog feed, and it was repeatedly asserted that even this quality of feed could not be obtained.

This situation brought up the question of whether or not corn or barley was available, and if so at what figures. R. J. Stevens of Spokane a grain dealer and active in the agricultural interests of the northwest, was called upon to give what information he could. He stated that corn could be obtained but that it was "out of sight" in the matter of price. He cited the possibility of securing what he called a good grade of corn for hog feed at about $69 a ton at Inland Empire points. He referred to the purchasing of oats in bulk at from $60 to $62.50 a ton, and sacked barley at $58 to $60 a ton.

Mr. Stevens expressed the belief that there was a considerable amount of barley now being held at various points throughout the northwest—some in warehouses, other lots still on the farm. He told of the company which he represents having recently bought barley in the vicinity of Pullman, Wash., and another lot in the vicinity of Moscow, Idaho.

This brought from Mr. Kjosness the declaration that he believed some plan should be worked out whereby a definite record could be kept of the feed of any kind available in the northwest, just as last spring provision was made to handle seed grain. Among others who approved the idea of a central bureau was J. N. Price, county agent of Yakima county, Washington, who said he felt that every person having feed should be required to file a report of it with some central agency.

It was suggested that the county agents might well make their offices clearing house for this information, those having feed reporting it to them and they, in turn, reporting it to those desiring to purchase the feed. While definite action in the matter was not taken, it is expected that before long some practical method of bringing the feed and the farmer who wants it together will be devised and put into operation.

### Must Not Sacrifice Stock.

The philosophy that man can not live by bread alone was strongly approved by the county agents, who appeared practically unanimous in their opinion that to sacrifice live stock as a means of increasing wheat production and conservation was of doubtful wisdom. It is claimed that many farmers are tempted to curtail their live stock feeding with a view to producing the wheat that the national food administration has urged. Though loyally behind the administration in its move for a large wheat production, the agents went informally on record in favor of the production of some barley, oats, rye and the like for stock feed as a first essential in the production of the meat production of the meat supplies needed to go along with the wheat.

### A Sow on Every Farm.

It was the unanimous opinion of those attending the conference that it was a grave mistake for any farmer to undertake the growing of live stock without first knowing where the necessary feed was coming from. With the same idea it was agreed that the campaign for increased hog production, which was the main purpose back of the conference, should not take the form of a campaign to induce farmers to go into hogs on a large scale, but rather a campaign for hogs enough to utilize all the waste feed matter on the farms with whatever additional feed a farmer could be assured of having without jeopardizing the success of the undertaking.

The question of peas as hog feed occupied much attention of the conference. Agent J. R. Shinn of Spokane county was perhaps the strongest advocate of peas for hog feed, though he was ably backed in his contention by others present, among them being J. M. Van Kleek, manager of Armour & Co., of Spokane, who said that hogs finished on peas made first-class pork for packing. Mr. Shinn's principal argument was for hogs to glean the pea and wheat fields after harvest. He said that each three pounds of peas on the ground should produce one pound of pork, and that the average pea field would care for one pig to the acre.

Referring to the method that has been carried out in his county for the return of brood sows to the farms after they had been consigned to market, Mr. Shinn said that 800 sows had been returned to the farms in Spokane county during the last season. He said that he had made a special effort to get young men on the farms who have been placed in deferred classifications under the army draft to do their patriotic part by buying one brood sow and raising her pigs. He reported that he had received applications for 120 sows from these young men. Mr. Shinn emphasized the point that the taking of a sow from the stockyard by a farmer was not always a successful venture though in a majority of cases the reports that

(Continued on page twenty-four.)

## VOCATIONAL MONEY.

### State Gets Government Aid.

Announcement has been received from the national capital of the allotment of $27,614 for use in the state of Washington, out of the fund for vocational education in the United States. This amount is available for use during the fiscal year beginning July 1 and ending June 30, 1919. It is specified in the allotment that $8153 shall be expended in teaching agriculture; that $10,738 shall be used in teaching home economics, and useful trades, and that the balance of $8723 shall be used in training teachers in these subjects. The fund for agriculture will be apportioned between the state college at Pullman and several high schools. The amount available for home economics will go to the university at Seattle, the state college at Pullman and the high schools at Everett, Snohomish and Bellingham. The allotment for training teachers will go to the same institutions as that for home economics instruction.

# Would Prevent Smut Explosions

## *Static Electricity Probable Cause of Much Grain Loss*

**Just exactly as the battery in a gas engine explodes the gas, so does static electricity in a threshing machine explode smut dust.**

This is the belief of many who have been making investigations of the causes of harvest losses in the northwest during the last several years by threshing machine explosions. At the present time the government has men in the field cooperating with the State College of Washington and other institutions attempting to prevent losses this year by wiring separators so as to conduct the electricity that is generated into the ground, thereby freeing the machine of the danger of smut ignition.

W. J. Gilmore, representing the government in the work this season, is authority for the statement that the static electricity on any one of four or five of the principal belts of a threshing machine often amounts to as much as 50,000 to 70,000 volts. This has been determined by the use of electrometers.

To illustrate the possibility of explosion from this source the following facts may be taken into consideration: An electric charge of 50,000 volts is capable of throwing a spark between two conductors one and a half inches apart; the cylinder of a threshing machine and other metal parts of the machine, especially the beater immediately behind the cylinder, are so arranged that as the cylinder revolves the teeth pass within an inch and a half or less of some of these metal parts; immediately behind the cylinder is the point where the smut dust is probably most suitably mixed with the air for maximum explosiveness.

Just as the spark made by the battery in a gas engine is passed through the gas by means of the spark plugs, so the spark of static electricity from the threshing machine's cylinder may be passed through the smut dust or gas by means of metal parts that pass close together. Just as the explosion occurs in the gas engine, so may the explosion occur in the threshing machine.

It is for the purpose of preventing these explosions that practically all of the threshing machine companies are cooperating with the authorities in wiring their machines to conduct the electricity into the ground.

The method of wiring is simple. It may be successfully done by means of only one main wire, thoroughly grounded. The idea is to connect the wire to the cylinder, and run it back along the machine, with branch wires connecting each principal part of the machine, such as the grain pan, shaker or grain apron, the fan shaft, the grain belt and the blower shaft in cases where wind stackers are used. It is considered advisable also to have the connection include also the principal shaft operating the feeder. While a wire may be attached to a shaft in any manner so that connection is made for the electricity to run off along the wire, it is recommended that, especially on the cylinder shaft, the connection be made by something in the nature of a brush held onto the shaft by means of a spring. The idea of this is to prevent the possibility of an insulation by oil from the bearings that would prevent the electricity passing off on the wire.

After every part of the machine which is liable to generate or accumulate electricity has been connected to the main wire running from the front to the rear of the machine the main wire must then be well grounded. Moisture in the soil is one of the prime essentials in making the grounding, as the electricity is poorly conducted by dry soil.

One of the best methods of grounding tried by those who have experimented is as follows: Take a large pipe one and a half inches or more in diameter and two to four feet long. Hammer one end to a point, allowing sufficient opening at the bottom, either through the end or through holes especially made at the side of the point so that water may gradually run through and thoroughly moisten the soil. Use this pipe as a stake, drive it well into the ground, attach the end of the main wire and fill the pipe with water.

This is a general description of the plan being tried out and urged upon threshermen for use everywhere that smut is prevalent this year. Threshermen who have never before grounded their separators and wish more detailed information should get in touch at once with the company that handles their particular make of machine. Most of these companies are making an effort to get their machines wired everywhere, and are ready and anxious to cooperate with the owners in protecting them in this manner.

It is a well-known fact that threshing machines and practically all other machinery where belts are used, generate electricity. This is done not only through the slipping of belts, but through the constant separation of the belt from the pulley surface as the belt moves. Experiments are being made in the use of insulated pulleys to learn whether or not it would be possible to prevent the accumulation of static electricity in this way. One machine company is this season watching the operation of two machines, one of which is equipped with a modern cylinder pulley and the other with an iron pulley, to see whether or not there is any difference in the amount of electricity accumulated.

## Berries Are Money

### High Prices Assured This Year

Loganberries, blackberries and raspberries are going to cost real money this year if present conditions are any criterion. There has been a good average crop of logans in western Washington, with perhaps something of a shortage in Oregon. With the abundant rains of middle July the berries which still had some time to go to maturity after that time should fill out well and be of good quality. In fact, the whole small fruit shortage, with the exception of strawberries, which were short in quantity, is due to the unusual demand. The canneries are active bidders in the market, and this has insured a high level of prices. It may be well to call attention to the fact, however, that at least part of this cannery product will be sold direct to the government for use in France and at the American camps, and will not help out the supply for domestic consumption. The chances are that while fresh fruit is selling and will sell at unusually high prices, the canned product will be much higher in proportion.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

## Should Ship Cooperatively

Shipment of live stock or other farm produce cooperatively is the modern way for the small farmer or the stockman who has less than a carload. It helps him avoid the buyer who goes about the country purchasing at less than market value; it costs less than if he tries to ship alone without the full car. The local buyer who ships out does what the farmers themselves should do. He gathers together the stock of a few farmers, puts them into one shipment and sends them to market at carload rates where they will receive the consideration that large shipments take over the small shipment. The farmers who raise stock could do nothing better than organize for community shipping, thus securing these advantages for themselves.

## Keep Up the Milk Flow

As pastures get short the cows begin to drop in the milk flow unless some extra feed is given. A serious loss is certain to follow if the cows drop off now. No matter how good the winter feed may be you can never get the flow back up to where it would be if the drop had never come. It, therefore, makes it a necessity to see that the proper supplement is made to the scant pasture and thus keep up the flow. Those who have a summer silo have the problem solved. Others must rely on soiling crops such as green clover, alfalfa and the grass. Where corn is far enough along it makes an excellent pasture supplement. If green feed is not available some grain must be fed. Bran and shorts will do very well for this. Other concentrates are too expensive. Do not forget that a little grain fed now may not increase production at once, but it will do much toward keeping the production from falling off and will pay in the long run.

A. B. N.

## Profit and Loss of the War

This war will be worth all it will cost if it does three things:

1. If it abolishes the principal amount of the needless and unproductive toil, such as the manufacture and sale of intoxicating liquors as a beverage, and some other needless industries.

2. If it abolishes special privileges, so that land, water and other natural resources can only be held for beneficial use.

3. If it sets an army of parasites and idlers to work, so that they earn what they consume, instead of living on the product of the labor of others.

I doubt whether America's loss in man power will be equal to the loss sustained in civil life before the war by our indolent, luxurious and self-indulgent modes of living. I have visited several cantonments, and the boys are almost universally improved in health by exercise and better methods of living than they formerly observed.

I doubt whether the cost of the war in excess of its profits will be greater than the cost of the liquor business, and the cost of maintaining an army of nonworkers or parasites who believed that productive labor was dishonorable, and whose aim was to live without labor on the labor of others.

My reading of history leads me to conclude that in the long run of the evolution of human life nothing that is worth saving is ever permanently destroyed. In this, as in other forms of life, it is a law of the survival of the fit to live. Old systems, like encrustations of rocks and shells, have to be broken up by new energy and life.

G. L.

## Furloughs for Farmer Soldiers

The government has adopted the wise plan of granting furloughs to the farmer soldier boys who are in the training camps, and in other locations where such furloughs would be feasible. Already some of the boys are back on the farm, and are materially assisting in farm and orchard work. This will be a considerable help, and the soldiers, themselves, will, doubtless, be correspondingly benefited.

While the campaign to assist the farmers in the matter of securing help to plant and harvest their crops is to be commended, it is not to be expected that the new hands will be as capable as those trained on the farms, and, for that reason, the government should continue to grant furloughs, so far as possible, to those who are trained and skilled in the work of the farm. This is essential to the largest efficiency in crop production. It is now a question of service in the very real sense of the term.

## Drift Toward Public Ownership

Dr. Maffeo Pantaleoni, an Italian who is considered an authority on systems of government, thinks he sees impending trouble from the increased drift toward public ownership that has set in with the war. Government ownership of railroads, he says, "is only one of the many afflictions sure to be imposed upon this poor old Europe after the war. With the war the government has become almighty with us. The government now does everything and after the war its encroachments will be appalling and bring us near to ruin."

Dr. Pantaleoni advances a new objection to government ownership. One argument for it, he says, is that it would build up a large army of government employes who, having steady and assured incomes, would be a stabilizing factor in the national life, and he argues that such a condition would be particularly unjust to the farmers. The whole world, he says, is ruled by chance. "The greatest wealth of the world, its crops, depend on the weather. If you give a class of people in the nation a sure thing, remove their chances of money loss, you do so at the expense of the other people, of the farmers, for instance, who must take great chances. In other words, you increase the risks of the majority for the benefit of the minority."

The same authority thinks that there also will be a clamor for increased public ownership in America, but that after the war the United States will shake off such "parasitic ideas."

Some observers even now think they discern a reaction in the American public mind against control of the individual. Russia's hard lessons under the bolsheviki, they say, should be a profound warning against socialistic tendencies, and have not been lost upon the minds of the people of the United States. The American people, they say, are willing to curtail their individual freedom in order that Germany may be defeated, but the pendulum has swung far to that side of the clock and will swing back again with the war's ending.

Thomas Jefferson maintained that the best government was one that least interfered with the lives of its people, and the Italian authority just quoted says he is convinced that "the less government a nation has the better it is for the prosperity of its people."

In all probability this question after the war will be the paramount issue before the people of the United States, and we are almost certain to see a great realigning of parties upon it.

## Bacillus Botulinus

It is unfortunate that the American public did not become practically acquainted with bacillus botulinus before the extensive fruit and vegetable canning campaign of last season. Many householders, reading of deaths from botulism, and never having heard the word before, seem to have decided that canning has taken a new turn and has become a good deal such a gamble as fooling with dynamite or taking patent medicine. The truth is that B. Botulinus has always been in our midst, and that he has annually claimed his victims.

Botulinus toxin may be produced in meat, vegetables or fruit. It is a byproduct thrown off by the botulinus bacillus, and is far more deadly in its effects than in the toxin responsible for ptomain poisoning.

The remedy is prevention, and there need be no doubt as to whether or not this remedy has been successfully applied.

There are just two things to be considered in this matter of application: First, can your food strictly according to the directions issued by the federal government, or by any of the state colleges. When you are told that a certain vegetable must be sterilized 120 minutes by the hot water bath method, for instance, it is distinctly up to you to see that the water in the bath is boiling all that time. If the fire dies down part of the time and allows the contents of the cans to cool, you are not following directions.

The second preventive is to boil canned vegetables 10 minutes after removing them from the cans, and before serving. This will not hurt a perfectly innocent canned product, and although it will not remove the possibility of the lesser evil, ptomain poisoning, it will do away with the possibility of botulism.

By attending to these two details the likelihood of any trouble with home canned products is about as imminent as a war with Mars.

P. E. T.

## Let's Not Be Too Proud

The newspapers the other day carried a dispatch from England telling how David Lloyd George, British premier, reviewed a detachment of American troops en route for France and remarked to their commanding officer: "I am glad they are on our side and not on the other side."

So are all of us glad that they are on the side of England and France. We are several times prouder of this country's rapidly increasing soldiery than Lloyd George or any other citizen of Great Britain or of France. They are a organization worthy of pride. They have made good and will continue to make good. They are the stuff that victory is made of.

But let us distinguish between pride and egotism. Pride is a constructive element; egotism is destructive. When the American soldiers cross the German border line, as they will in due time, we must remember that for nearly four years the soldiers of France and England and Belgium stood as loyally and as fearlessly in front of the ruthless Huns as any American soldier can possibly do. Well may we be thrilled with pride when we look upon the work of General Pershing and his men, but let us look with equal pride and with genuine gratitude to the men who have stood so nobly under the Red, White and Blue of England and the Tri-Color of France.

# Allies Start Big Offensive

## *Some Military Critics Think Tide of War Has Been Turned*

After fighting a defensive war for three years, the allies have started an offensive against the Germans and Austrians that some critics look upon as the beginning of the end. At the outset it is well to say that it may be the beginning of the end, but that the end is yet a long way off. Since America began pouring men and materials into Europe there has been no doubt of the ultimate end of the war. The only question has been: "How long will it take to conquer Prussianism?"

The scene of the great struggle now is the V-shaped line between Soissons and Rheims. Roughly speaking, these cities are each about 75 miles from Paris and about 40 miles apart. The last great German drive advanced between these two points in a wedge that reached Chateau Thierry, a point southwest of Rheims and southeast of Soissons and about 45 miles from Paris. Chateau Thierry is on the Marne river, which runs southwesterly from the Rheims direction to Paris. The Germans reached the Marne and controlled it for a distance of some 10 miles. They built railroads from Soissons to the territory gained in the drive, to be used to carry men and supplies. That is the way things stood when Germany resumed the offensive 10 days ago. The drive was renewed along the entire line from Chateau Thierry to and a little east of Rheims, it being apparent that the ultimate objective was another great advance on Paris which would bring that city within range of the enemy siege guns.

### But the Effort Was a Failure.

Approximately three quarters of a million fighting men were thrown into the effort by Germany. A supreme effort was made to take Rheims. The attack along the Marne river near Chateau Thierry resulted in the crossing of that river and the occupation of its southern banks for a distance of about 10 miles. But the French and Americans on that sector held tenaciously and suddenly sprang a surprise on the enemy on the other side of the V. It was the greatest single success since General Byng of the British army drove the enemy back on the northern front two years ago.

Without a moment's warning the French and Americans sprang into a terrific offensive on the 25-mile front from Chateau Thierry to and beyond Soissons. Germany was not able to rush reserves into the fray fast enough to check the drive, and at this writing it has netted the allies a gain of an average of seven or eight miles over a front of 22 miles.

With the success of the allies on the western half of the V, their defensive operations on the eastern side was changed to one of offense, and successes are there being gained. The Germans have been compelled to retreat from the southern bank of the Marne. Latest reports show that the Americans and French have broken through the German lines northwest of Chateau Thierry, which further greatly menaces the Germans further south.

### Important Captures Already Made.

An official report from General Pershing says that up to Saturday morning the Americans alone had captured over 17,000 Germans and 560 big guns. Much of the heaviest fighting has been done since then, and this number is probably greatly increased. No official report of captures by the French has been received. It is considered not improbable that the Germans have lost, in killed and captured, 100,000 since they began their futile drive 10 days ago. Reports indicate that, as usual, the allies have been able to hold their losses down far below those of the enemy. It is officially reported that the total casualties to date of Americans including all battles in which Americans have participated were 12,716. Of this number, between 4000 and 5000 wer deaths and the balance wounded or captured.

### Germany Must Vacate or Be Captured.

If the allies continue to hold Rheims at the east end of the big V and if they can capture Soissons and the railroads leading from Soissons to supply the German troops down at the point of the V, the Germans must retreat from the entire V line or be captured. The probability of their being able to retreat successfully enough to escape capture anyway is problematic. It depends upon the speed with which the allies can keep up their advance. If the allied power of drive holds out only a few days it would seem almost certain that large numbers of the enemy, with their guns and supplies, would be captured. Before this reaches the readers the facts may be known. The Germans may have retreated; they may have been captured, or they may have been able to stop the allied advance and, for the present at least, stave off the disaster that is at this hour threatening them.

### The Americans Play a Big Part.

That the boys from this country have played a leading part in the great allied offensive is evidenced. Their dash and daring have been the inspiration of the French and British, who have so long stood up against such heavy odds. Their fearlessness and ability have put new courage into their comrades of the other allied nations, which has been in itself a great advantage. Further than this, their number is enough to turn the balance in favor of the allies on the particular front involved in the present struggle. It seems certain that the time for which General Foch, supreme allied commander, has been patiently waiting has arrived—the time when the number of the Americans has become great enough to turn the balance of power so that the allies would no longer be hopelessly outnumbered. The following from a statement made by General March, chief of staff, at Washington, D. C., shows the number of Americans engaged with the French in the offensive:

"At least 196,000 American fighting troops are in the battle, and probably the total force is nearer 300,000 than 200,000. Each division has a fighting strength of 27,000 men, and each of the two detached negro regiments a strength of 3600. The full strength of each division, with auxiliary units, is 45.000 men."

### Germans Slow to Admit Reverses.

That the German leaders are making a desperate effort to conceal from the German people the fact that they have been seriously reversed is indicated by published reports in German papers. Here is an example of the kind of reports being published in Germany: "As has happened on other occasions, for instance on the Somme, we must concede the loss of prisoners and of guns. But even so, the enemy's leading idea, a breach through, has not been attained, despite great exertions. We have been able to hold up the counter-offensive before it attained a strategic advantage worth mentioning. Continuous changes in position are logically the outcome of the open warfare now in progress."

Another German writer says: "False hopes were perhaps pinned at home to the launching of this new offensive. It can not be the aim of every single war operation to attain definite objectives in all circumstances."

### Conditions Favorable in Other Sections.

It is believed that Germany had planned another big drive for the northern part of the line, where the British troops under General Haig are defending the allied cause. The failure of the attempt on the south apparently has delayed it. It seems probable that no big offensive will be started on the north until the outcome of the battle before Paris is known for a certainty. It may be that the success of the allied armies before Paris will be great enough to draw German reenforcements from the north, in which case General Haig would probably be in a position to start a drive in the north.

Italy still controls things on her own front. Austria has been unable to recover her balance sufficiently to prevent further Italian advances. While nothing in the nature of a major offensive has been reported from the Italian front recently, the Italian army is active and is constantly bettering its positions of battle line. The situation on the French front would seem to guarantee that no important reenforcements for the Austrians could be sent to help withstand the fighting of the Italians.

### Where Is General von Hindenburg?

In one German report of war activities General Ludendorff is referred to as field marshal. This is the title belonging heretofore to Von Hindenburg. The question arises: Where is Hindenburg? Is he dead, as previously reported? Is he physically or mentally unable to continue in the leadership? Or has he been deposed by the kaiser? Something apparently has happened to Hindenburg, though reports still talk of battle plans as those of the great Prussian leader. It is significant that no denial of his death has come from any source.

### Quentin Roosevelt Killed in Air Battle.

At this writing it seems practically certain that Quentin Roosevelt, youngest son of Colonel Theodore Roosevelt, lost his life in an air battle behind the German lines last week. He is known to have been killed or to have been taken prisoner, as his machine is known to have fallen behind the German lines. He was a lieutenant in the air service.

### U. S. Cruiser Sunk by Unknown Cause.

The United States armored cruiser San Diego was sunk last week just off the New York coast. The cause of the sinking has not been definitely learned, but it is presumed to have been a German submarine torpedo or a mine laid by a submarine. There were 1255 men aboard, of which 1183 are known to have been rescued. No submarine was seen.

### American Army Is Going Over Speedily.

It is officially announced by the war department that there are now in France or on their way more than 1,200,000 Americans. The speed with which they are being transported is increasing with the increase of ships to carry them.

### Get a Farm Service Flag.

The man, woman, boy or girl who stays at home and works hard to produce necessaries for the soldiers in Europe are entitled to real war service recognition. That is the idea back of the Washington Farmer's farm service war flag. It is pennant, shaped, made of the good old red, white and blue, and has a star representing the producing farm home. Small stars are added to represent each worker of that home.

.....

**Convenient Order Blank.**

THE WASHINGTON FARMER, .....1918.

Review Building, Spokane, Wash.

Enclosed, find five cents (5c), for which please send me a Farm War Service Flag (printed on enamel paper) with ..... extra small stars for farm workers.

Name .....

R. F. D. ..... Postoffice .....

Box ..... State .....

## *Washington Gleanings*

E. A. Cooke has been appointed state fire warden for the Yelm district.

Westport, Grays Harbor county, had its first electrical storm in three years July 15.

The fifteenth annual picnic of the Whatcom County Grocers' association was held near Ferndale July 24.

Fifty-four allotments on the Yakima Indian reservation are to be sold August 12 to the highest bidder.

The first carload of apricots to be shipped from the Omak Warehouse and Storage company left Omak July 11.

A large pea warehouse and drier are to be built at Fairfield for the Everett B. Clark Seed company of Milford, Conn.

M. G. Morrison of Garfield has traded his ranch of 350 acres on Cedar creek, valued at $22,000, for 1440 acres near Roundup, Mont.

Work has commenced on a new cable ferry at Entiat, and it is expected that it will be ready for use by September 1. C. M. Dixon will operate the new ferry.

William Kludt, a well-known Newaukum valley farmer south of Chehalis, lost four fine heifers during a recent storm, the animals being struck by lightning.

In two days more than 50 Vancouver children under 16 years of age applied to the juvenile court for permission to be employed in the fruit cannery or other industries of the city.

The Snohomish County Fruit Growers' association has contracted for 1500 tons of Yakima hay at a flat price of $22 per ton f. o. b., Yakima. The hay is to be shipped as soon as baled.

J. H. Forrest has sold his place of 122 acres at Bremer, seven miles west of Morton, to F. E. Pierce for $5500. Forty acres of the place are cleared, 22 in pasture and 60 acres in timber.

In order to meet the increasing demands upon the current expense fund the Skagit county commissioners have decided to raise the assessed valuations for 1918 of all classes of property by 30 per cent.

To meet the need of camping places the Hoquiam Commercial Club has provided sites with water and wood conveniences at the beach resorts and at Lake Quinault, as well as in the vicinity of Hoquiam.

At a joint meeting of the Whitman County Tax league and Whitman County Good Roads association it was learned that contracts had been let for nearly $1,000,000 worth of new roads in the county.

Tacoma is to honor her soldiers who fall in battle with a living monument by planting a tree for each soldier from the city who dies in the service. Each tree will be appropriately marked with a brass plate.

O. P. Dosland of Grays River has the distinction of owning two Jersey cows, Eurybia's Zaza, No. 269170, and Mayflower's Pauline, No. 335685, that are entered in the Registry of Merit of the American Jersey Cattle club.

Mrs. J. W. Phillips of Chinook recently filled 3720 half-pound flat cans, containing 1860 pounds of salmon, in six hours. This is piece work, paid for at the rate of $1.50 per 1000 filled, and is a record for filling at the cannery.

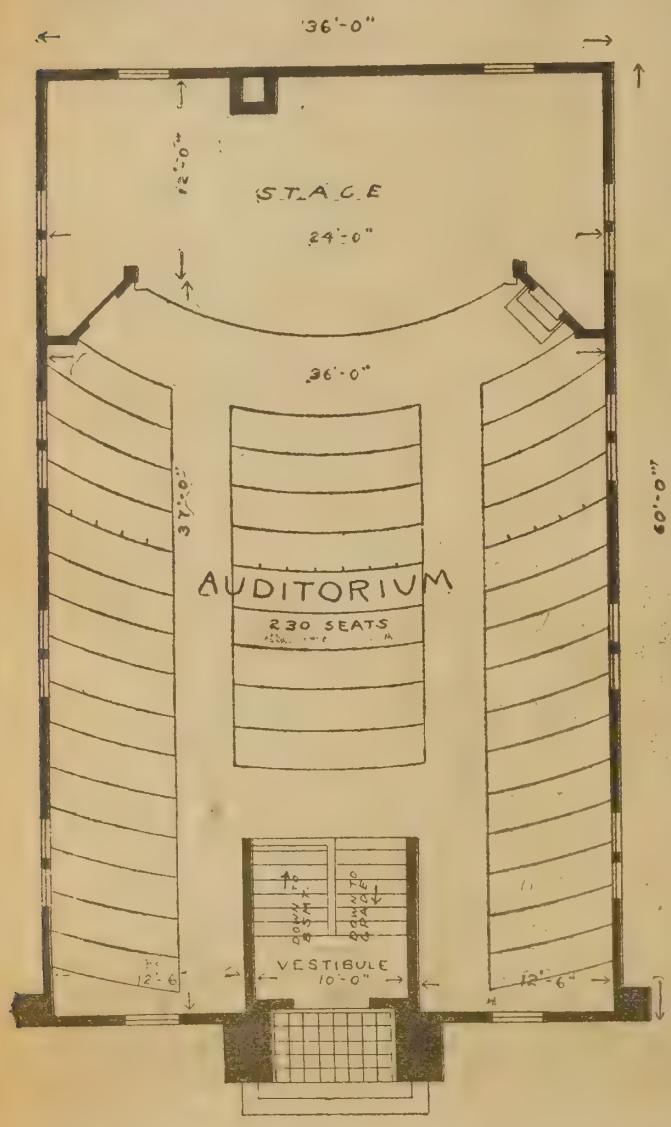
L. H. Palmer recently delivered a load of club wheat to the warehouse at Eltopia, Franklin county, that tested 55 pounds. This was the first wheat of the season, and the yield will probably be between five and ten bushels an acre.

The Silver Lake Railway and Logging company is building a combined dredge and pile-driver for use in deepening and improving the Cowlitz river channel for logging operations between the company's boom at Kelso and its rollway, two miles below Castle Rock.

The salvage department of the Seattle Red Cross chapter turned in $3500 for the month of June. This money has been realized from the sale of articles usually considered common waste and a large assortment of discards of absolutely no value to the donors.

Work has been started by the Lamb Machine company on construction of a steel manufacturing plant in Hoquiam, the first in southwest Washington. The new steel plant will employ about 150 men and will have a capacity of about 10 tons of manufactured steel per day.

A network of railroads is to cover the Olympic peninsula to exploit the spruce resources of the peninsula. The peninsula west of Lake Crescent is to be closed to traffic, except that necessary for the handling of spruce, and the highway between Joyce and Piedmont is also to be closed.



Government officials are making a survey of the homestead lands in the northwest for the purpose of having on hand available data as to the amount and quality of land still open to homestead entry. It is reported that detailed information is being compiled to show the character of each open tract.

It is said that one way to combat the aphis that are so damaging this year is to harrow them into a dust mulch wherever possible. This can be done somewhat successfully where the crop is hay. Immediately after cutting the stubble can be dragged with the result that many of the pests would be destroyed. The method is but a partial remedy at best, however, and could be applied only in a limited number of cases.

# Residents Get Together; Build $4500 Community Hall

A good example of what can be done when the people of a community are willing to cooperate for the good of that community is seen at Orchard Avenue, a rural district, several miles east of Spokane. The latest achievement of this community is the completion of a $4500 hall, which was dedicated July 17, at which time Dr. Sherman L. Divine of Spokane gave his well-known lecture, "Around the World in 80 Minutes." The hall will be used for all community purposes, and the plans will be of interest to other communities which are thinking of building a hall. The plans were made by Ellis & Wells of Spokane.

Orchard Avenue consists of about 105 families, and practically every family is represented in the membership of a club known as the Orchard Avenue Community club, it having over 100 members, limited to men. The club was organized in March, 1917, for the purpose of general community fellowship and industrial interest, and for community improvements, and a great improvement in the community spirit has been noted since the organization of the club. It has brought the people together in a way that seemed impossible before they were organized, and there has been a big increase in the number of home owners since the club was organized. The club meets every first and third Monday evening of the month. The officers are: O. E. Bosworth, president; A. H. Syverson, vice president; W. A. Brazeau, treasurer; C. O. Gordon, secretary, and A. P. Myers, corresponding secretary.

First floor plan—Will have a 14-foot ceiling. The entire floor will be devoted to an auditorium with a stage and dressing rooms. The seating capacity will be 300.

By ANNA BUCHANAN.

This spring the club set out 81 maple trees along the avenue, and since its organization other improvements include the grading of roads, enlargement of the high school at Millwood and the taking over by public purchase of the water and light plants, all of which has gone to attract home owners. Eighty per cent of the residents at Orchard Avenue now own their own homes.

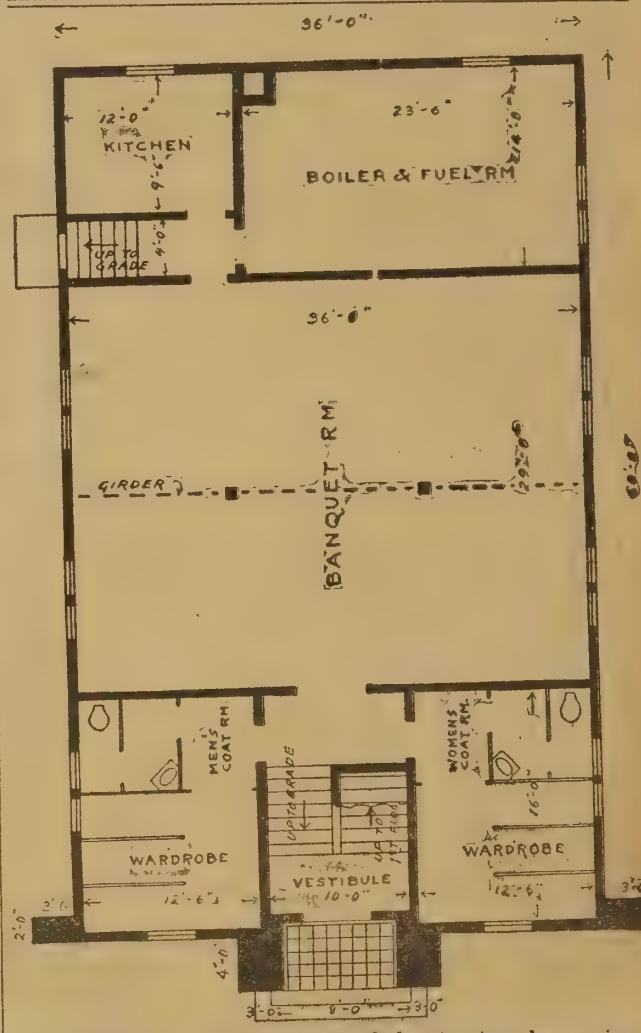
The need was felt for a community hall last fall, as all the public gatherings had to be held in the high school building at Millwood, which was too far away for some of the residents to attend. So the Community club got together, appointed a soliciting committee and in a short time raised $2000 in cash and pledges, for the people saw the need and everybody was glad to have a share in it. Two lots were given to the organization by the Orchard Avenue Irrigation company and the building was begun last November.

The work on the building, which has amounted to about $1000, was nearly all donated by the members, who, after their day's work was done, spent many evenings during the winter and spring at the hall with their hammers and saws. Sometimes as many as 25 men would be found working in the evening or on a holiday.

The grounds surrounding the building will be graded, set out to shrubbery and improved with cement walks.

In spite of the efforts put forth to build and pay for the hall, the community has oversubscribed its quota on each one of the war drives. The third Liberty loan went nearly four times its quota, the Y. M. C. A. drive went better than three times, the Red Cross, four times and $12,000 was subscribed for war saving stamps, the quota being $10,000.

Another factor that will add to the community spirit of the district is the organization recently of a community church at Millwood, with 50 members. The community Sunday school has an enrolment of 160.



Orchard Park district can also boast of an active Red Cross auxiliary, which was organized last November with 64 members. This branch includes the women of Millwood, Orchard Avenue and Subway. The officers are: Chairman, Mrs. Harry Wilson; vice chairman, Mrs. W. G. Smith; secretary, Mrs. A. D. Scammel; treasurer, Mrs. L. R. Newman.

There were no meetings during the month of July, the branch having finished its quota and having to wait for more supplies, but the work will again be taken up next month. Up till the 1st of July, all-day meetings were held every Thursday in the high school building, the domestic science room, containing seven sewing machines, having been turned over to the use of the Red Cross.

As some of the members have a mile or two to go to these meetings, the women who have automobiles always take a load with them, sometimes making several trips.

About 450 garments have been made by this branch since it was organized, besides a large amount of knitted garments which the women did at home. All the cutting is done by the Spokane chapter. The month of June was devoted to the making of clothes for the refugees. The Help Band of the Advent church recently turned in 50 refugee garments.

Between $50 and $70 was raised for the Red Cross during the winter by giving entertainments. Some of the members pay a certain sum regularly, perhaps a dollar a month, and the branch now has $100 in the treasury.

Basement plan—The basement of the structure has a nine-foot ceiling, and four feet of it is below ground. In the basement will be the heating plant, kitchen, and a 30x36-foot banquet hall.

## Convention Called

### Production Conference Is Coming

With the purpose of studying the great question of how best to promote the maximum production of foodstuffs next year, the federal board of farm organizations has called a nation-wide conference of farmers or their representatives for Washington, D. C., August 27, 28 and 29. The call is signed by officials of the various farm organizations of national character in addition to Charles A. Lyman, secretary of the federal board. Among them are C. S. Barrett, president of the national farmers' union; J. H. Kimble, president of the farmers' national congress; W. T. Creasy, president of the national dairy union; Milo D. Campbell, president of the national milk producers' federation; Gifford Pinchot, president of the Pennsylvania Rural Progress league, and others of state and national scope. The official call is as follows:

To the Farmers of America: Victory must come from the soil. Food and men will win the war. The soil supplies both.

The men who till the soil are wholeheartedly behind the government to win the war. None have shown themselves more ready to do their utmost. The volunteers they have supplied, the money they have given and the wonderful crops they have produced—crops greater in proportion to the number of farm workers than the world has ever seen before—prove that beyond dispute. None are more determined to leave nothing undone that will help to bring victory. With them the great question is how they can serve best. Without doubt their first duty is to supply the food without which victory is impossible.

With this fact in mind the federal board of farm organizations hereby calls upon the farmers of the United States to assemble in person or by their representatives in the city of Washington, August 27, 28 and 29, 1918, there to consider, decide upon and take such action as will best promote the production of farm crops in 1919: Sufficient, first, to supply our own people, our allies and the neutrals who depend upon us, and, second, to replenish our national reserves of grain, live stock and dairy products, now depleted to a point where a single short crop will threaten us with famine.

America's acres can and must win the war.

### Potato Shortage Is Felt.

Partially as a result of the manufacture of large quantities of potatoes into flour as a substitute for wheat and partially as a result of transportation difficulties, the city of Spokane reports a temporary shortage, approximating a famine. That the shortage is only temporary is the opinion of State Food Administrator Charles Hebberd, who issued the following statement relative to the present situation in Spokane and forecasts for the potato crop for the entire country this year:

"The public need not worry about the potato situation. A temporary delay of a few carloads may inconvenience the housewives, but it is only a minor dislocation of war-time and is putting no serious burdens on any one. Notwithstanding the bumper crop of last year, which gave the potato growers and the food administration much cause for worry, and which would ordinarily be followed by a light planting of the staple, the government forecast for the white potato crop of the country is 406,000,000 bushels as compared with a five-year period, when the average production was 362,000,000. The production forecast by the United States department of agriculture is less than 10 per cent below the bumper crop of last year."

### Coming Events.

August 19-25—Convention National G. A. R., Portland, Ore.

August 27-29—National Farmers' conference, Washington, D. C.

**Fairs, Shows, Exhibits.**

August 26-30—Southwest Washington fair, Centralia-Chehalis.

September 2-7—Spokane Interstate fair, Spokane, Wash.

September 16-21—Washington state fair, Yakima, Wash.

September 19-21—Roundup, Pendleton, Ore.

October 1-6—Western Washington fair, Puyallup, Wash.

November 7-13—Northwest live stock show, Lewiston, Idaho.

### Potato Evaporating Completed.

A report from Yakima says that the potato evaporators in the valley have closed their season owing to the exhaustion of the potato supply. It is estimated that 6000 tons of potatoes have been processed and it is estimated that the value to the producers has been about $75,000. It is stated that the 6000 tons of potatoes have made about 1000 tons of the dry material.

## Stockmen Organize

### Community Shipping Gets Impetus

At a meeting of more than 60 stockmen of Grant county recently the Grant County Cattle Raisers' association was organized. The organization is the result of the efforts of County Agent H. Vercler and Bruce Lampson, assistant county agent, who have worked in the interest of cooperative activity among the stockmen of that district. Among those attending the meeting at which the stockmen organized were J. H. Roberts of the Spokane union stockyards and C. M. McAllister of the Portland union stockyards.

One of the principal objects of the association is the development of the community shipping plan. Under this plan farmers and stockmen having less than a carload of stock may unite in making up a full car or more for shipment, thus securing the better rates to market and the better consideration which the larger shipment secures, as a rule, over the smaller shipment.

One of the serious handicaps that the small stockman has worked under throughout the northwest is the necessity of accepting the offer made him by local buyers representing packers or butchers elsewhere or of undertaking to ship his small number of animals himself. Instances are on record where local buyers have taken advantage of the situation and have bought stock for as little as half of their actual value on the market. Benefit is also derived from the cooperative shipping of salt by the stockmen, as well as of feed, where feed must be shipped into a community.

# Our Seattle Letter

## City's Call on Farms

*Crowded Streets and Crowded Houses*

When the Seattle of today gets out the family album and looks at its own photograph, taken a few short months ago, it is forced to shake its head incredulously and say, "Could I ever have looked like that? I can't believe that I ever was so under-nourished!"

The truth is that Seattle has grown amazingly with the changing demands and opportunities of war time, and this growth has come so swiftly that the city is almost as uncomfortable as a large boy in a small suit of clothes. How shall the incoming multitudes be housed? How shall they be fed? How shall they be moved from place to place—from hotel or apartment house to shipyard or boiler works? These are the questions the Seattle of today, looking at its photograph of yesterday in the family album, is asking.

There are other questions connected with this growth of Seattle and of the other northwestern seaboard cities which are of interest to every citizen of this part of the country, and particularly to the men and women on the farms. What effect will the rapid growth of this city, taken as a type, have upon the supply of labor available for farm work? What effect will it have in drawing into the constantly growing industrial maelstrom the farm boys and girls, and how will it safeguard these young people if they do respond to the lure of high wages in the city? These and other phases of Seattle's growth as a war time city will be considered in the following series of Seattle letters.

It is around the labor problem that many of these other problems cluster. Most of the city's increase in population consists of working men, laborers, skilled and unskilled, drawn to the Sound by the shipyards and allied industries. The first effect of this growth of population is the congestion in living accommodations already hinted at. The apartment houses are full, there are few private houses for rent, and houseboats and camps are at a premium.

A second effect is perhaps even more apparent to the man on the street and the man on the streetcar; transportation, the circulatory system of the city, is so congested during the rush hours that the efficiency of the city as a whole is being somewhat impaired. Again it is a case of the boy growing too rapidly for his clothing, for Seattle has outgrown her streetcar systems and is already forced to call upon her steam lines and ferry boats to help move the industrial army. Not only is the "rolling stock" and physical equipment of the electric railroads overburdened by the demands of today, but it is impossible to get men enough to man the cars. Like a great lodestone, the shipyards are drawing the very nails and bolts, the workmen and even the work women, out of the other industries in the same community.

The final effect on transportation of all these complicated influences may be summed up in the one word, "congestion." During the rush hours, morning and evening, there is standing room only, and none too much of that. The saving element of the whole situation is that the crowds, packed like sardines into electric cars and steam cars, are American crowds. Good humor leavens the mass of uncomfortable humanity, and grinning philosophers who habitually spend hours a day hanging to straps, on their way to and from work, exchange jests with each other, with the train crews, and with other citizens of the hive-like city. The car feels its way with clanging gong into a small army of ship workers, some of whom are still grimy with the soot and filings of a long shift. The men clamber aboard, surging up through both entrance and exit gates and even through the windows and end openings. A few of them find seats, while the big majority pack themselves in shoulder to shoulder to stand, half an hour, an hour, perhaps a couple of hours.

They are good Americans, these men of the forges and the lathes. Liberty loan buttons and Red Cross badges are pinned upon coats and caps, and the man who wishes to "roast the government" would do well to choose a different audience than these men who are fighting the sub 6000 miles from the front. And not only are they good Americans, but they are typical Americans—typical of the multitudinous interests and resources of this vast country. There are old-time ship workers in the crowd—many of them; but there are also clerks and salesmen, school teachers, professional men and farmers. The lodestone of the yards has drawn these and many others from the peaceful pursuits of a year or two back, and has mixed them into one vast, seething crowd of humanity. Probably the world has never seen a greater mixing of classes, creeds and conditions, and nowhere but in America, I heartily believe, could this mixing take place with so little froth or disturbance.

Almost as typical of war-time conditions as the ship workers are the other occupants of the crowded cars. On one of the long end seats a flaxen-haired, blue eyed matron of 35 or thereabouts sits knitting for the soldiers, while four diminutive reproductions of herself, ranging in age from 4 to perhaps 11 or 12, sit beside her, also knitting. It would require no expert in racial characteristics to decide that the ancestors of these industrious knitters came from the Scandinavian peninsula, but now they are 100 per cent Americans.

Ship workers, machinists, women and children knitting, and added to all these is a final component of the crowd; young men and women, with a scattering of the older ones, studying to fit themselves for various activities connected with the one business before all civilized nations. Some of the men are studying books on gas engines, airplanes and allied subjects. Many of the girls and women are studying stenography and office subjects, while still others are reading manuals on Red Cross work and nursing. "Easy reading," the lurid fiction magazines and armchair novels of yesterday, are certainly in the background for the time being. If the Seattle streetcar crowds are typical of other war time crowds, the best sellers of the immediate future will be practical books, dealing with some phase of the real world's activity.

As the writer rereads the somewhat vague statements of the foregoing letter, he is tempted to ask himself a question which most of his readers will already have asked: What is the meaning of it all? What bearing has the crowd in a Seattle streetcar upon the problems and upon the welfare of the farming communities of the northwest?

There is a direct connection, for the labor problem and the transportation problem and the food problem and all the other problems which the Seattle of today, Seattle on a war time basis, has to solve, are in reality community problems, toward whose solution every man, woman and child in the northwest will have to contribute something. And it is partially for this reason that this series of Seattle letters has been undertaken. In these letters the writer will endeavor to put before the readsrs of the Washington Farmer some of the changes which war is working in a typical city of the state of Washington, and will describe as far as may be the solutions which have already been worked out in dealing with these community problems.

Seattle, Wash.

## Potatoes That Came From England

The "Up-to-Date" potato, which is a favorite in many parts of western Washington, was introduced into this country from England a good many years ago. The Puyallup experiment station has been growing this variety 10 years or longer. It is a big yielder, having on at least one occasion far out-yielded all other varieties on the farm of that potato specialist, H. W. Sparks of Clark county. The eyes are few and shallow, and the potato is a good baker. For boiling, it should be left with the jackets on, to overcome a tendency to boil to pieces. In western Washington it is sometimes hard to get Up to Date to ripen, and with this end in view the vines are sometimes mowed in the fall.

Wetproof Steel Lined Shot Shells

A WET day is indeed a good day for ducks to the hunter who has the *right* shotshells in his pockets. Remington UMC Smokeless "Arrow" and "Nitro Club" Wetproof Shotshells do not require fair weather to keep in good condition and work *right* through the gun. They may be exposed to wet for hours but will not soak through—the water can not get in, can not swell them, soften the turned-over end or bulge the top wad. Mauling them around in the wettest coat pocket can not scuff them. Remington UMC makes them *right*.

This is something every farmer who loves duck hunting will learn with profit—it will make those idle wet days in the Fall welcome ones.

Remington UMC for Shooting Right

These are the first *completely* wetproof shotshells—an exclusive feature of the Remington UMC "Arrow" and "Nitro Club" brands for shooting *right*.

It took three years to perfect this waterproofing process. Special paper had to be produced for the shell bodies, a special formula discovered for compounding the *right* combinations of waxes and oils, new machinery developed for applying the waterproofing so as to work it *into* the shell as a part of it, positively sealing it against hours of wet, and new methods devised for giving the shell the same *right* finish as before.

The result is virtually a new type of shell, embodying the most important improvement in shotshell manufacture in over a decade.

You just buy the same old favorite Remington UMC "Arrow" or "Nitro Club" Steel Lined Speed Shells, at the regular price, and you get the new Wetproof feature thrown in besides. A shell that is sure fire, gives top speed, best pattern and most penetration, and has in addition the wonderful quality of staying dry as dust inside and hard and smooth as glass outside even when subjected to the wettest weather conditions.

In *black powder*, buy the old reliable "New Club," now Wetproof sealed at turnover and top wad.

WOOLWORTH BUILDING NEW YORK CITY

# Rich Clover and Mixed Pastures Are Supplemented With Silage

In Columbia county, Oregon, which is largely devoted to dairying, the Tarbell family have proved that beef cattle can be raised at a good profit. All the Tarbells are Shorthorn enthusiasts and are breeding at least a few purebred animals.

The picture shows a few of the good cows owned by Ray Tarbell at Yankton. Mr. Tarbell's foundation stock was from the Richard Scott herd of milking Shorthorns, and to that he attributes the fact that his cows are all excellent mothers. Mr. Tarbell's present herd bull was purchased from J. B. Cornett and is by Clifton King. One of the young heifers I noticed at pasture could show in the strongest competition this fall and be sure of a high place.

The second photo shows the great Shorthorn cow, Sweet As Ever, purchased by G. L. Tarbell Jr., from A. D. Dunn at the Pacific International last fall. She stood second in the show ring by an exceedingly close decision that kept her from first place. She is by Imperial Victor and the wonderfully classy calf by her side is by imported Cup Bearer. Mr. Tarbell's farm adjoins that of his brother, mentioned above, and his original foundation stock was from the same source. G. L. Tarbell Sr. is also interested in the herd.

One of the most richly bred young Shorthorn bulls ever brought west is Village Sultan 2d, shown in the lower picture. He was purchased by A. H. Tarbell of Warren, Ore., from Barber & Sons of Missouri. He is by Villager Jr., one of the great sons of Old Villager, and his dam, Roan Rose, is by Sultan and he by old Whitehall Sulton, thus combining two of the greatest Shorthorn strains. He is one of the smoothest young Shorthorn bulls, and about as near perfect type as I ever saw. Mr. Tarbell purchased Golden Peggy by Golden Goods, with calf at foot, from W. O. Minor, for $625. The calf has grown into a very sturdy young bull with much masculinity, and Mr. Tarbell feels that he got a bargain.

All these men pasture on the rich clover and mixed pastures so easily grown in that region, but all use silage and consider it essential. Columbia county's Shorthorns are in line to come to the front.

H. A.

## ONE WAY TO SAVE.
### Don't Let Milk Stand in Pails.

"Conservation" is our watchword these days. It will spell "victory" for our armies if we really save and use the savings to help win the war.

The extremely hot weather all over the northwest the last months has caused a large loss through sour milk, most of which could have been saved if proper methods had been employed. If all the sour milk that was dumped or sent back for hog feed from the milk depots and condenseries during the last two months, could have been sold for a war fund I have no doubt there would have been sufficient funds to buy supplies for a whole division of troops for a week or more. There is no way of ascertaining the exact amount that sours, but if the truth were known we would find appalling figures.

Milk sours because it has dirt in it. It sours faster if it is kept warm. If all the dirt were kept out it would never sour. But unfortunately it is not possible under average conditions to produce milk without some contamination. In view of this fact it becomes necessary to cool the milk as quickly as possible after milking and to keep it cold until it is used for food.

Milk that is to be used should not be allowed to stand in the milk pail or cans until after it is cooled to 55 degrees F. or lower. The practice of allowing the warm milk to stand in a can back of the cows until the can is full should be discarded. At the temperature that the milk comes from the cow the organisms grow most rapidly and in a very few minutes they get such a start that often subsequent cooling does not prevent the milk from souring. The milk should be cooled at once. The milk from each cow should be poured in the cooler just as soon as the milking is finished.

Setting cans in cold water will help in cooling the milk, but the water should be flowing and the milk stirred if quick cooling is to be effected by this means. A thermometer is practically a necessity in this connection, for without one we can only guess at what the temperature is and often one's guess is wrong.

Cows are usually very clean during the summer. There is no excuse for having much dirt in the milk. If proper cooling were practiced the loss from sour milk would be brought to the minimum and the saving would help us win the war.

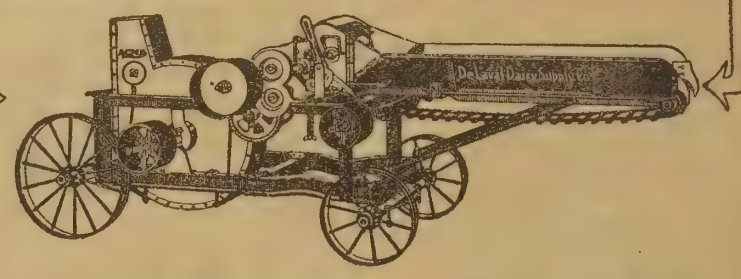
A. B. N.

## Range Cattle Move Earlier.

Cattle will move earlier to the markets this year on account of the drouth on the ranges, according to prominent cattle buyers of Klamath Falls. The range cattle are declared to be in good condition at this time, but the ranges will not keep them up until the customary market season. Some have already been sold, bringing unusually high prices. Luke Walker purchased 26 head of steers from W. C. Dalton, which averaged $135 per animal, and a similar number from W. E. Nicholson of Fort Klamath, which averaged $126. Walker shipped six carloads from Alturas.

### Burns Oyster Shells Instead of Coal.

Peter Klein, proprietor of a Reading (Pa.) hotel, won't stock up with coal even if the prices are dropping. "I will continue to burn oyster shells," he said. Klein says a 60-40 mixture of oyster shell and coal makes a fine fire and his bills are greatly reduced. The ashes make good fertilizer.



### "Rome—City of the Seven Hills."

The phrase "City of the Seven Hills" is generally understood as referring to ancient Rome, though it would fit Constantinople, which also stood on seven hills.

# Square of Live Stock Industry

## *Breeding, Rearing, Feedstuffs, Health Conservation*

By S. B. NELSON.

A few months ago the bureau of animal industry of the United States department of agriculture released thousands of acres of southern farm land from quarantine against the cattle tick.

The cattle tick is a small, inoffensive looking thing which has caused millions of dollars of loss to the live stock industry of the nation. Its ravages have set the live stock industry of the south back a century.

The live stock industry in certain parts of the south was practically ruined until the United States government, acting through the bureau of animal industry, took charge of a sweeping campaign to eradicate the tick. The first steps in this work were taken some 20 years ago. Since then, thousands of square miles of territory in the south have been freed from this destructive pest. It is only a matter of a few years, now, until the entire south should be tick-free, and the southern states will then have the place in the live stock industry of the country to which they are entitled.

This is only one of the many great, constructive pieces of work in the conservation of live stock which have been successfully carried forward by the veterinarians of the country. Many equally constructive pieces of work remain yet to be done—and all this constructive work is additional to the great work of saving the lives and alleviating the suffering, from disease or injury, of animals in the live stock herds of the country. Viewed from any angle, here is a field of service worthy of any young man who is competent to perform it.

Veterinary science is the fourth line of the square of the live stock industry The breeding is one, rearing, feeding and fattening is the second, raising the feedstuffs for animal consumption is the third—and the conservation of the animals from disease and injury after they have been bred and while being reared is the fourth. Without the fourth all the others may be of no avail, and it is with the fourth that the trained veterinarian is concerned.

Staring the live stock industry in the face at the present time is a rapidly approaching scarcity of trained veterinarians. This is a threatening condition, for if it comes upon us, it may mean a repetition of the animal plagues that have swept the country, fever tick and all.

My assertion that there will be a scarcity of veterinarians is based upon figures. There are, or were, approximately 4500 veterinarians in the United States. About a thousand of this number are employed in the bureau of animal industry. Other branches of the government have absorbed nearly 1500.

Last year, that is, 1917-18, there were 1200 less young men preparing themselves for this profession than in 1915-16, or two years ago. On top of this decline in the number of young men going into this profession, comes the war-time need for veterinarians, which has practically drained the country of every available man who is properly trained.

One may think that when the war is over the war-veterinarians will be released. Many will be released; but it must be borne in mind the live stock industry has suffered by this war in a way that has no precedent in previous history. Throughout Europe the live stock industry will have to be rejuvenated, built anew, after the war. There never has been a time in history when animal welfare has been so vital to human beings as will be true during reconstruction after the war. Reduced to practical terms, this means a need for trained veterinarians.

At this time, it behooves any man who has an interest in the future of the live stock industry to point out to young men the facts of the present situation, and encourage them to prepare for this service.

### New Insulator.

A Danish scientist has invented an electrical insulating material made from fish offal.

# A Skamokawa Dairy Barn

The picture here shown is the dairy barn of H. L. Weister of Skamokawa, Wash. For the month of May Mr. Weister had 19 cows in milk and their average was over 41 pounds of fat. Of these 12 were daughters of his bull Skamokawa Chief, purchased from J. C. Brown & Sons of Shedd, Ore., all with first calf. They averaged 39 pounds of fat, only two pounds less than the old cows. H. A.

## Walla Walla Cow Test.

According to the June report of J. S. Bixby, tester for the Walla Walla Cow Testing association, the number of cows in the association were 455; 45 of these cows are dry; the average pounds of milk per cow (including dry cows) were 635; the average test in the association was 4.1; the average pounds of butter fat per cow (including dry cows) was 25.8; the average cost of feed per cow amounted to $5.37; while the average profit above the feed cost amounted to $6.12. The following have cows which produced 50 pounds or over: Washington State penitentiary, Claude Markham, John Ankeny, V. E. Brown, and the Burbank company.

## Good Crop of Cherries.

Cherries are one crop that was benefited by the dry weather in western Oregon this spring and summer. Instead of being cracked by rain, as so often occurs, the crop has all been gathered in the best of condition and is large and of the highest quality. Prices received are generally higher than ever before.

### A Patriotic Store.

At noon every day all the patrons and employes in a big San Francisco store stand at attention for three minutes while the flag is unfurled from a balcony. The store's band of 36 pieces and a chorus of 60 voices lead in the "Star-Spangled Banner."

## Skimmed Milk

### Good Feed if Mixed With Grain

"I consider skimmed milk fed to hogs almost worthless unless combined with a little grain; then it becomes a very valuable feed," said C. C. Cannon, superintendent of the W. N. Jones farm on Tennes Illihee island. This island is in the Columbia river opposite Clifton, Ore., and on the Oregon side. The farm has a dairy of 100 cows, Holstein and Jersey grades, with a few good milkers that show Shorthorn blood. Much of the milk is sold to logging and mill camps, though most of the Jersey milk is separated and the cream sold. This is the milk the hogs receive and Mr. Cannon would hardly know how to "keep farm" without it.

Tennes Illihee island, like all the low lying islands in the lower Columbia, is subject to overflow and the entire farm as well as some other land on the island is dyked. The soil is mainly a rich loam and is very productive. The land is slashed in the spring, burned over and seeded in September and the next year furnishes great pasture. The mixture used is generally alsike, timothy, a little red top and some English rye grass. The latter grass does not grow tough like it does in some other places, but is always tender. Should there be a summer drouth, as is seldom the case, Mr. Cannon has the tide gates held partly open and the tide water sub-irrigates the entire place. This gives it a great advantage for both grass and other crops.

About 100 beef steers were on the place when I was there. Mr. Cannon assured me they had run out all winter and had kept in fair condition. They were rapidly fattening in June and would be ready to turn off in July. He expected to buy and pasture others during the summer. Hay made on the farm is not quite as good as Mr. Cannon would like, but he feeds a little hay to calves. He gives them skim milk, good pasture and a little grain. He prefers oats for calves, or any growing animal, but they are too high at present and he feeds bran, shorts and just a little oil meal, but always hay, and the calves eat it.

Last year 60 sows were bred and every one was allowed to go out and make her own nest for farrowing. He believes his success with pigs is as great as that of any one who goes to the extra labor of confining the sows. Mr. Cannon feeds the sows well while suckling their pigs, but the balance of the time they have absolutely nothing but good pasture. Hogs are kept on pasture at all times, except a very few weeks while fattening is being finished. The young hogs pick over the clover a little, but the old sows eat everything. Purebred sires are kept and the hogs yield good profit.

That all kinds of vegetables grow immense crops has been proved. Last year Leo Decondico, an Italian gardener, rented considerable land and this year still larger gardening operations are being carried on. The farm furnishes teams, seed and other equipment and gets half the income. Mr. Decondico, in turn, employs his laborers on a share basis and there are no labor troubles in the garden. Mr. Cannon wishes he could employ the same system in the dairy. All necessary fencing and ditching is done by the garden renters. Most of the products are already contracted. Rutabagas bring $14 a ton and yield 50 to 75 tons per acre; cabbage, $15 to $18 a ton, 25 tons per acre. Beans, cucumbers and celery are other crops that will be raised and all yield enormously.

The Jones farm consists of 1600 acres, 300 of which is in meadow. All the balance except the gardens, is seeded to tame grass and furnishes rich pasture.

H. A.

### Has Good Live Stock.

B. S. Thurston & Son of Jefferson, Ore., have several Poland China sows by Big A Price that combine size with quality, good feet and strong backs. The sows now have pigs by A. Price, a son of Big Smooth Price of the famous Peter Mouw stock.

Mr. Thurston's Holstein bull, a son of the great Johanna Ruth Fayne and out of a cow with an official record of 23.93 pounds of butter when 10 years old, is doing good service. His only heifer to freshen is a heavy milker. Mr. Thurston's hay crop is light, but he has a fine corn prospect, and is coming to look on the Willamette valley as a real corn country.

## Veterinary

Dr. S. B. Nelson

**Sow Gets Poor.**—I have a sow which seems to have a good appetite, but gets poorer all the time. She has good pasture, runs on wheat pasture and has clean water to drink. I feed her chopped wheat and raw potatoes. She has salt just the same as the rest. The rest of my hogs are fat. She is a young sow. I lost one just like this one. W. B. P.

Mayville, Ore.

You do not give very definite symptoms and the ration which you are feeding shoud keep your animal in good growing condition. I have just one suggestion to make to you and that is it might be possible that the sow is affected with tuberculosis. I can not make a definite diagnosis, however. I notice that you are feeding chopped wheat. Is it not possible, until at least after harvest, for you to replace the chopped wheat with rolled or chopped oats or barley or peas? Any one of these three would replace the wheat so that it might be used for flour for overseas.

---

**Cow Has Sick Spells.**—I have a cow that has sick spells every three to five weeks. She groans every three to five weeks. She groans and grunts and seems to be in great pain, gets stiff like founder and puffs up and gets very tender in right flank, just in front of hip bone. She passed the tuberculin test last fall and is to be fresh in a few days. We bought her with the understanding she would be fresh April 25. She was running with the bull so, of course, there is a chance for a miscount. Her udder seems to fill for a few days and then is not so full for a few days, also other indications of calving at times. What is the trouble and what is the cure?—H. L. B., Clayton, Wash.

I am not able to diagnose the trouble with your cow from the very limited description of the symptoms which you give.

---

**Cow Is Sick**—I am writing for information about a sick cow. She is a good milk cow with a two-months'-old calf which is still sucking her. She will eat hay and oats, but no grass. She lies around the barn and moans. Her flesh seems to be tender and is red, especially her bag. She has been sick about a week and seems slowly growing worse.—H. W. L., Coulee City, Wash.

Give your cow one-half pound of epsom salts and one tablespoonful of common salt, in two quarts of water, night and morning for two days. Then, if necessary, give her the same once a day or every other day for some days. After the second day, begin giving her one tablespoonful of compound tincture of gentian in a pint of water, night and morning.

---

**Pig Does Not Grow.**—What can I do for a little pig, weaned at five weeks and is now ten weeks, remaining about the same size. Have been feeding it boiled potatoes, mashed with bran and thinned with skim milk. It seems to be irritated and scratches a great deal; it also has three black teeth. S. C. L., North Yakima, Wash.

I would suggest that you add approximately three ounces or a very small handful of linseed meal to the ration that you are already feeding; also give it the following preparation where it can obtain it contsantly: One part of sulphur, two of salt, three of charcoal and two parts of wood ashes. Look it over carefully to see if it is affected with vermin. If so, wash it in a 2 per cent solution of any of the coal tar disinfectants.

---

**Decay of Tin.**

The most remarkable example of allotropic disintegration of metals is perhaps that of tin. The investigation has shown that the disease can only occur in a temperature not exceeding 64.5 degrees Fahrenheit. Tin decay is, therefore most prevalent in cold climates.

# Difficult Agricultural Problem

## *Before the World to Find Sufficient Supply of Meats*

Addressing the Washington State Editorial association, in Spokane, President Holland of Washington State college, at Pullman, said the big and difficult agricultural problem before the world today is to find a sufficient supply of meats and that problem, he thought, would continue long after the ending of the war. Australia and Argentina, he added, would probably provide a measurably quick solution of the world's wheat supply, but the live stock outlook was far more discouraging.

This subject is engaging the thought of many observers and authorities. It is ably discussed in a carefully prepared article by the Latin-American division of the bureau of foreign and domestic commerce at Washington. For nearly a decade, says that article, the number of cattle in the world has not been increasing in proportion to the demands of the growing population. Russia, which before the war had 50,000,000 head of cattle and two-thirds as many sheep as Australia, has ceased to be a factor in the European trade. The herds of western Europe, small before the war in comparison to the demands of the increasing population, are now greatly depleted, and can not be replaced for many years after the war. The situation in the United States is giving growing concern. Within the last 10 years the population has increased about 18 per cent, while the herds have decreased 20 per cent. The United States exported 80,522 tons of beef, mutton and lamb in 1916, and by extraordinary efforts of the food administration we are still able to spare a part of our scanty supplies to our allies; but it is obvious that if something is not done in a big and constructive way to build up the live stock interests of this country, the day is drawing near when the American people may also have to turn to foreign sources of supply.

The bureau of foreign and domestic commerce thinks that the big hope of the world for its future meat supply lies in South America. Argentina alone, in 1916, exported 436,405 tons of beef, mutton and lamb—more than five times as much as was exported from the United States. In the same year New Zealand exported 158,123 tons, Australia, 104,053; Uruguay, 43,895; Brazil, 33,571; Canada, 21,723; Patagonia, 11,986; South Africa, 7928; other countries, 17,441.

Argentina is today the most important meat producing country of the world. Brazil is beginning to appreciate its position, while Paraguay, Colombia and Venezuela are receiving careful consideration from far-sighted American and English packers.

These are interesting facts, but they throw no light on the problem as it concerns the live stock industry in the United States. Armour and Swift are already in the South American field with large plants, and can enlarge their holdings there from time to time; but that does not foster the live stock industry here.

### Needs Dairy Products.

A cablegram from the British ministry of food emphasizes the necessity for building up a food reserve and urges that there be no slackening of effort on this side of the Atlantic. "Supplies of butter and cheese," the cable states in part, "are still inadequate to meet the requirements, but it is hoped that imports from America will remove anxiety as regards our position in these commodities."

### They'll Have to Speed.

Two Orange county (Cal.) men due to entrain for cantonments recently pledged themselves to get a Hun for each letter in their names. One is T. Lambracapoulos. The other is N. B. Pappageorgogolos.

### Rubber Tree Seed for Oil.

A preliminary inquiry into the possibility of the commercial utilization of the seed of the rubber tree for oil production has been undertaken by the agricultural authorities in the federated Malay states.

### Arbor Day Compulsory in Spain.

By royal order, the celebration of Arbor day has been made obligatory in every township and municipality in Spain, and tree-planting is to be carried on upon a more extensive scale than heretofore.

# An Empire in the Making

## Jordan Valley, Malheur County, Oregon

### *"THE HEART OF THE RANGE"*

THIRTY-EIGHT thousand acres of standard grain, grass and alfalfa land, under an irrigation system now in construction that, when completed, will possess every feature of a first-class system, namely, plenty of water, reliably constructed canals, dams and waterways; a capable and experienced management, who **understand** that the **success** and **prosperity** of the **settlers** is the **success** of the **land** and **water company.**

### *The Irrigation System*

The irrigation system, which is already partially constructed, is being built under the general direction of the state engineer of Oregon and the work is in direct charge of one of the leading irrigation engineers of the northwest—a man who demonstrated his ability as chief engineer of both the north and south side tracts of the great Twin Falls (Idaho) country. The interests of prospective settlers are being carefully guarded by the laws of the state of Oregon and every effort is being made to secure an irrigation system for these lands that will be the most efficient and will render the best service to the farmers that can possibly be obtained. A reservoir with capacity of storing 127,000 acre feet of water, or sufficient to water 40,000 acres, is one of the features of the system. Large feeder canals, a system of main canals, headgates, diversion works—everything to insure a safe and efficient system—is being constructed.

### State Supervision

The construction company, a strong financial concern, is bonded to the state of Oregon for $100,000, and an experienced engineer, representing the state, is on the works in full charge of construction.

If you are looking for a location to engage in growing **Live Stock, Jordan Valley will suit you.** The mighty surrounding free ranges will furnish your stock spring, summer and fall feed, and the products of your farm will support them in winter, which means fat stock the year round.

### *We Want You to Investigate*

We want you to investigate Jordan Valley, then see it. Our automobiles leave Boise, Idaho, twice weekly and they are at your disposal. If you want to get into a new country where land is cheap, water plentiful and climate favorable, this is the place to go. We desire to continue our policy of colonizing this land with earnest, industrious people who will make dependable, permanent settlers. If you are interested, drop us a postal card right now and we will send you detailed descriptive matter. Address all communications to

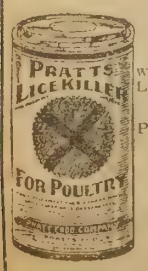
State ..... .....

Eat eggs and sell a load of alfalfa to pay the grocery and tobacco bills. Or, better, feed the alfalfa to cattle and sell the fat steers for shipment to the allies. In any event eat more eggs and save the red meats for the soldiers. Eggs are for eating rather than to be used as legal tender at the grocery. J. D.

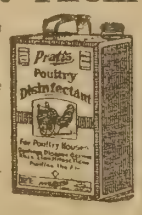
## Cost of a Dozen Eggs

The U. S. department of agriculture has published a statement giving the cost of feed per dozen eggs for a number of pens of fowls for the period from November 1, 1917, to April 17, 1918. The cost ran as follows for the different pens, with the egg yield per pen:

| | Egg Yield | Cost per Doz. |
|---|---|---|
| Crosses | 63 | 18.7 |
| Reds | 59.5 | 23 |
| Leghorns | 53.4 | 20.5 |
| Crosses | 50.7 | 23.8 |
| Barred Rocks | 47.7 | 26 |
| Leghorns | 45.8 | 32 |
| Reds | 44.4 | 25.4 |
| Crosses | 44 | 33 |
| Leghorns | 42.3 | 22.3 |
| B. Orpingtons | 37.3 | 36.8 |
| Reds | 36.2 | 32.5 |



These pens were fed different rations, which accounts for the great variation in cost. The difference in the breed also influenced the cost. It could be no breed test, however, for the same reason that the rations were different. As the egg yield was comparatively low it would indicate that the cost averaged high or higher than would have been the case with a higher production. J. D.



### Mite Exterminator.

"Concentrated lye (one 13-ounce can to 3 gallons water) is the cheapest effectual solution used at the western Washington state experiment station for exterminating mites. Use an old brush or broom and make a thorough application, giving special attention to cracks that are scarcely noticeable, hidden joints of wood and rough surfaces," says Mrs. George R. Shoup of Puyallup, Wash.

**Other Exterminators.**

Crude carbolic acid mixed with kerosene, 1 to 3, makes a good paint for the roosts and nests for mites. Carbolineum is also good. Kreso dip and Cooper's dip, mixed with kerosene, 1 to 3, are also effective as a paint. Crude oil is effective, but it will discolor white chickens. Straight kerosene will kill the mites, but is not as effective as other preparations. If used often enough, however, it will keep the mites in check. The mites are now hatching by the millions. Don't let them rob the egg basket. J. D.

## A Cheap Dry Mash

At present prices of feed stuffs the following will make a satisfactory mash mixture. It may be fed either dry or moistened, and the price is reasonable:

Bran, 10 pounds; shorts or middlings, 5 pounds; cocoanut oil meal, 3 pounds; meat scrap or fish scrap, 2 pounds.

Mix a little fine dairy salt with it at the rate of one-half pound to 100 pounds of the mixture. Feed in a hopper and never let the hopper get empty. Let the chickens eat it at will. This mixture will do for both growing chicks and laying hens.

Linseed oil meal may be used in place of cocoanut meal if price is about the same. If neither is available at a fair price, the mixture will give good results without it.

If milk is available, either skim milk or buttermilk, the mash may be mixed with it and less meat or fish scrap used. Milk takes the place of animal food. If plenty of buttermilk is available, use it also as a drink and give no water, Then cut out the scrap altogether.

Once a day feed whole grain at the rate of about two ounces per hen, or a pound to eight hens. Feed this preferably in the evening. This may be a scratch food of the commercial kind, or a good quality of screenings. Oats and corn, fifty-fifty, will answer the purpose. It is better to feed it in a deep litter of straw, to make the fowls exercise.

But the main part of the ration has not been mentioned; at any rate the one that is often under-estimated, and that is green food. This is a dry summer, and we are losing great quantities of eggs for lack or neglect of this food. J. D.

### THE HEN TO EAT.

### A Good Time to Begin Culling.

When the farmer is asked by his wife to kill a hen for dinner, he need not kill the laying hen. There are always a few hens in a flock that are not laying, and those that are not laying now are poor layers on the average. If the hens are of a yellow-leg breed a glance at the legs will tell pretty accurately whether the hen is laying or not. A heavy laying hen lays the yellow out of her legs; her legs will be pale, while the non-layer will have nice yellow legs.

The same happens to the yellow color in the beak.

So kill the hen with the nice yellow legs and beak, and the chances are you will kill a non-layer, and she will be better eating than the heavy layer.

This rule, however, will not work with breeds that have not yellow legs and beak. But with Plymouth Rocks, Wyandottes, Rhode Island Reds, Leghorns, and others that naturally have yellow legs, it works well.

The poultry-keeper is likely to have the hen with the nice yellow legs; she looks better, and it is the yellow in the legs that helps to win prizes in the show. Then why kill off the hen that looks best and has the show qualities at this season? Just because she is the poor layer.

When the hen stops laying the yellow reappears in the legs and beak, and it has been pretty thoroughly demonstrated that the hen that stops laying early in the season is a poor layer, while the one that continues to lay till late fall is a good layer.

It is a good time now to begin the culling of the flock and the making of chicken pie, and in culling use the color test in the absence of trapnests. J. D.

### Has Highest Pen.

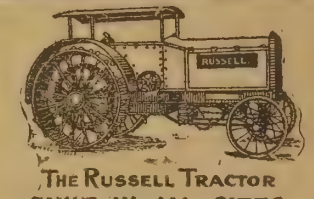
The Oregon Agricultural college has the distinction of having the highest pen at the end of eight months in three egg-laying contests, namely, British Columbia, all northwest, Pullman, Wash., and the international at Storrs, Conn. At the British Columbia contest the O. A. C. pen of Barred Plymouth Rocks has been first for most of the year. At Pullman another pen of O. A. C. Barred Rocks moved from second place to first, and at Storrs, a pen of Oregons moved up to first place from second. Some wag is likely to say that it pays to give the hens a college education. J. D.

## All-Northwest Contest

The report of the director of the all-northwest contest for June shows continued good laying. The following are the 20 leading pens on June 30, and number of eggs laid for the first eight months of the contest:

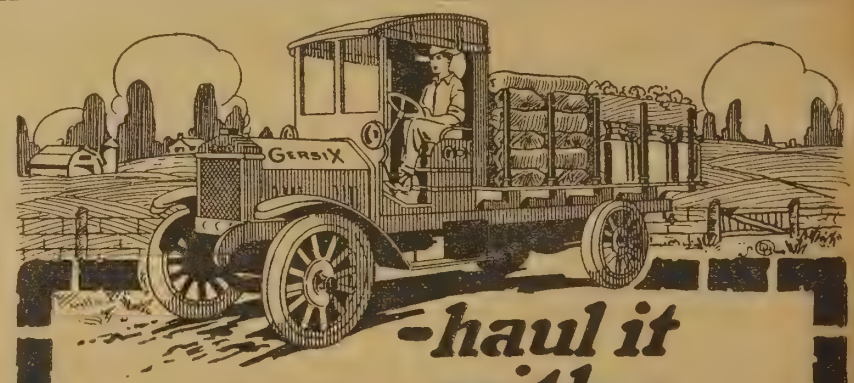
Oregon Agricultural college, Corvallis, Barred Rocks, 869 eggs; Paul E. Towne, Tekoa, Wash, White Leghorns, 861 eggs; F. W. Frederick, Phoenix, B. C., R. I. Whites, 858 eggs; H. Otto, Greenacres, Wash., W. Leghorns, 841 eggs; H. J. Kingsbury, Twin Falls, Idaho, R. I. Whites, 803 eggs; Mrs. Monona Van Cise, St. Marics, Idaho, W. Leghorns, 799 eggs; L. F. Harris & Co., Missoula, Mont., W. L., 793 eggs; D. Tancred, Kent, Wash., W. Leghorns, 788 eggs; Oregon Agricultural college, W. Leghorns, 782 eggs; C. H. Numsen, Centralia, Wash., W. Leghorns, 781 eggs; J. R. McRae, Milwaukee, Ore., W. Leghorns, 771 eggs; J. R. McRae, Milwaukee, Ore., R. I. Reds, 771 eggs; S. C. W. Leghorn club, 759 eggs; H. E. Caldwell, Canutillo, Texas, W. Leghorns, 758 eggs; C. F. Williams, Salem, Ore., W. Leghorns, 758 eggs; Hollywood farm, Hollywood, Wash., W. Leghorns, 749 eggs; C. D. Coolidge, La Grande, Ore., W. Leghorns, 741 eggs; C. C. Lamb, Kirkland, Wash., W. Leghorns, 740 eggs; B. O. Longsdorf, Lebanon, Ore., W. Minorcas, 738 eggs; La Vista P. F., Baker, Ore., W. Leghorns, 735 eggs.

The contest is very close between the first four pens, all of them having made excellent records. The O. A. C. pen of Barred Rocks has averaged 173.8 eggs per hen, or 21.7 eggs a hen per month. With a record like that for 8 months, before the end of 12 months this pen is likely to break some records at laying contests. In fact all of the 20 best pens should average over 200 eggs per hen in 12 months.



The best pen for June was the pen of Hollywood W. Leghorns, which laid 128 eggs. C. C. Lamb's W. Leghorns, second, with 122, and Paul E. Towne's Leghorns, third, with 121 eggs. The highest individual hen to date is the C. F. William's W. Leghorn, with record of 210 eggs. H. J. Kingsbury's R. I. Red hen was second with 195 eggs, and J. R. McRae W. Leghorn hen with 192 eggs. J. D.

**Meat for Meatless Day.**



One Cadillac (Mich.) restaurant solved the meatless day edict by serving bear meat to its patrons. The bear was killed near that city and weighed 200 pounds. There was no federal ban on meat obtained outside the usual sources of supply.

## KNOWLEDGE USELESS

### If Possessor Does Not Apply It.

By GRANVILLE LOWTHER.

There are thousands of men who do not know how to irrigate and lose hundreds of dollars annually because that part of the work is not done in a proper manner. James Anderson knew; but he did not do the work as he knew he should because it required more labor than the way he did it. In other words, he followed the lines of least resistance.

I was walking down the road one day, and, passing Anderson's field, I saw that some young trees he had set last spring were dying. I said, "Anderson, what is the matter with those trees you set last spring?"

"Well," said Anderson, "to tell you the truth, I guess they need water.

"Have you not had your regular quantity of water this year?' I said.

"Yes, I guess I have, but I made the ditches for the big trees, and the roots of the little trees did not reach far enough out to get the water."

Now, the fact is that Anderson knew the water was not reaching his small trees. He knew, furthermore, that he was sustaining a loss in the time and labor required to set the young trees that were dying. He knew, furthermore, that these trees cost money and that either he would have to replace them the next year, or lose the space in the orchard these trees were expected to occupy. I did not tell him all this, because he knew it just as well as I, but he did not do the best he knew.

I said, "Anderson, I like to examine orchards and learn what I can about the orchard business; would you take a walk with me across your orchard and see if there are any peculiar conditions that might give me some information?"

"Certainly," said he, "I would be glad to do so."

We went diagonally across the field and found that he had made the ditches about three to four feet apart, except the sections in which the tree rows stood, and there the ditches were six to eight feet apart. In those sections a strip of land from two to six feet wide near each and every tree row had not been wet this year, and perhaps not for several years. The result was that all the ants, all the gophers and field mice that infest orchards had gathered on this dry land, in order to avoid the wet sections between the trees. I would say that at least one-fifth of his land was not irrigated, and that this part of the orchard was a rendezvous and breeding place for orchard pests.

I did not feel called upon to lecture Anderson, it was his business, not mine; but I said: "What do you think, Anderson, is the best way to get rid of ants and gophers?"

"Oh, I guess the best way is to irrigate their nests and make it so wet they won't stay around there."

I thought so, too, but I did not say so; because Anderson already knew and there was nothing gained to either of us if I told him. But why did Anderson not do the best he knew?

He was also sustaining a loss in the fact that plants take their food in solution, and the tree roots could draw no food from the dry section. Anderson doubtless knew that, too, but he did not use his knowledge.

## CODLING MOTH BUSY.

### Wenatchee District Is Victim.

A report by P. S. Darlington, district horticultural inspector for the Wenatchee section, says that a vigorous fight must be put up against the codling moth to avert serious damage to this fall's apple crop. In his report Mr. Darlington says.

"Last winter was a very mild one and the mortality of the overwintering larvae was extremely light. Another factor that caused trouble was the coming of the first brood moths this year at the earliest time known here. However, peculiar weather conditions in May split up this brood so that a portion came unusually early, with the rest coming after June 1. This scatters the first brood worms out over a long period and also gives the second brood an early start. The worms of the late moths will be coming strong during the next two or three weeks.

"Wherever a lack or water makes it impossible to spray at this time a great deal of good can be done by picking off all the wormy apples and destroying them before the worms leave the apples. To do this thoroughly may require a good deal of work and time, but if proper thinning is done it can be handled rather easily.

"Spraying at this time will keep the newly hatched worms from entering the apples, but can do nothing with those already in, so that the removal of infected fruit is very important.

"The worms which have already entered the apples, unless destroyed, will get their growth, leave the apples, turn to moths, and each female will lay from 40 to 100 eggs, and the little worms from these will be ready to enter the apples in August or later."

## Must Use Boys

### Youngsters Will Help Harvest

Indications are that boys from 12 to 16 years of age will play a much greater part in harvesting this season than they ever have before. This is due not only to the need for their services, owing to a more or less acute labor shortage, but to the fact that the boys have been stimulated to undertake farm work as a patriotic duty. It is also noticeable that farmers are taking much more kindly to the boy movement than they have in the past. Many who refused to accept the services of inexperienced boys a year ago are willing to try them out this year, and many who tried them out last year are ready to take on more this season.

James Hayes of Waverly, Wash., is a believer in boy laber, though he agrees that their possibilities are limited and that much of the work and direction must be done by older persons. Mr. Hayes told a meeting of farmers recently of five boys 12 to 14 years old, who, after finishing work thinning apples in a nearby orchard, applied to him for work shocking peas. He said the boys looked mighty small to him and that it was with some misgiving that he gave them a trial. He took them into the fields and spent an hour or two showing them how to handle their pitchforks and how to shock the peas. The result was that they became valuable hands to him.

"I believe that those boys did almost as much work as the average laborer that you pick up at this time of year," said Mr. Hayes. "Of course I have seen the time when I did as much work as three of them, but you must remember that boys are boys and that you have to deal with all kinds of labor when you are hiring men." F. L. Kennard, county agent for Whitman county, Washington, heard Mr. Hayes' story and vigorously commended the method that he had used with the boys. "Too many of the failures with boy workers have been due to the way they have been handled," he said. "Too often a farmer says to an inexperienced boy, 'Here's your pitchfork,' or 'here's your team, now got to it,' and sends him off into the field to do something that he doesn't know how to do. You have to show the boys, you have to teach them, and if you do and use a little patience and judgment, you will get value received for the wages you pay them."

B. A. Hunter of the federal labor department said that it was not only a patriotic duty for farmers to employ boys where they had work that they could do, but that it was a wise thing to do with next year's work in view. He said that there was a greater possibility of labor shortage next spring and summer than this harvest, and recommended that boys be trained this season for that shortage if it occurs.

The Y. M. C. A.s throughout the country have been listing boys who are willing to go to the fields this season. In most instances they have turned these lists over to the state or federal labor bureaus where applications can be made for their services.

**Another Move for Peace.**

"I compel my daughter to practice four hours a day."

"Heavens, man! You'll make her hate music so that she will never want to go near a piano."

"That's what I'm hoping."

From The Twice-a-Week Spokesman-Review.

**THOMAS L. LINEHAM, Camas, Wash.**—Enlisted January 8, 1918, at Seattle in the hydroplane division of the navy. He is at present at Balboa park, San Diego, Cal., at the naval training station. He is 21 years of age, a Canadian by birth, and only son of Mr. and Mrs. James Lineham of Camas, Wash.

**SERGEANT HARVEY J. BOYERS, Lamont, Wash.**—Entered military service December 14, 1917. He is now serving at Camp Taylor, Ky., in the 342d machine shop truck unit. His parents are Mr. and Mrs. A. J. Boyers of Amherst, Neb., but his wife and daughter live at Lamont, Wash.

**ARTHUR A. KALLMAN, Almira, Wash.**—Enlisted in the U. S. navy June, 1917, and was sent to Mare Island, Cal. He is now on the U. S. S. Monterey at Honolulu. His parents are Mr. and Mrs. F. A. Kallman of Almira. He is a brother of Charles Kallman, who is also in the navy.

# Down With Dogs!

## County Agents Want Them Taxed

The dog question is up again. If the county agents of eastern Washington and northern Idaho carry out the object of a resolution adopted at their conference in Spokane last week, the useless dog that roams around the country will have to have a strong lobby in the next legislative sessions of Washington and Idaho or submit to taxation. It all came to a head because marauding canines again entered the pasture of the University of Idaho stock farm recently and destroyed several head of valuable sheep.

W. B. Kjosness, assistant county agent leader for northern Idaho, suggested that the conference should consider the dog question. Dean E. J. Iddings of the university, who feels deeply the loss of $1200 worth of purebred sheep in less than a year, offered a resolution that the conference go on record as favoring the enactment of a law taxing dogs, the proceeds from the taxation going to compensate owners of live stock destroyed by dogs. Ira P. Whitney, manager of the Waikiki dairy farm, near Spokane, was chairman of the meeting, being an active member of the agricultural bureau of the Spokane Chamber of Commerce. He put the question before the conference with a vim, remembering how dogs infected with rabies destroyed a large number of the farm's choice dairy cows only a few years ago. The agents present to the number of about 25 voted without dissenting voice in favor of the resolution.

Dean Iddings said that he objected to the purposeless dog on two counts: First, that he was destructive to live stock, and, second, that he consumed food that is needed to help win the war.

It is probable that the anti-dog sentiment will crystallize into a definite effort to enact legislation that will guarantee the stockmen protection.

# Gives Grain Schedule

(Continued from page two.)

odor, except of smut, garlic or wild onions, or is very sour, or is heating, hot, infested with live weevils or other insects injurious to stored grain, or is otherwise of distinctly low quality, or contains small, inseparable stones or cinders, is to be known as sample grade.

The following special requirements are published by the government:

The wheat in grade No. 1 dark northern spring and grade No. 1 northern spring may contain not more than 5 per centum of the hard red spring wheat variety Humpback.

The wheat in grade No. 1 shall be bright.

The wheat in grades Nos. 1 to 4, inclusive, shall be cool and sweet.

The wheat in grade No. 5 shall be cool, but may be musty or slightly sour.

For each of the subclasses of the classes hard red spring and hard red winter, grade No. 1 and grade No. 2, may contain not more than 2 per centum and 5 per centum, respectively, of common white, white club, and durum wheat, either singly or in any combination.

For each of the subclasses of the class Durum, grade No. 1 and grade No. 2, may contain not more than 2 per centum and 5 per centum, respectively, of soft red winter, common white, and white club wheat, either singly or in any combination.

For each of the subclasses of the classes soft red winter, common white, and white club, grade No. 1 and grade No. 2, may contain not more than 2 per centum and 3 per centum, respectively, of durum wheat.

PLEASE find enclosed $1 for one year's subscription to The Twice-a-Week Spokesman-Review and The Washington Farmer for three years. Please send me a farm service war flag, there are four of us.

Outlook, Wash.

## Cricket Control.

The coulee crickets are practically under control for the season, says H. R. Vercler, Grant county agricultural agent. A few are still alive, but are surrounded by cricket fence in a scab land area. A large number of the crickets were destroyed before the egg-laying season. It was hoped that all might be handled in this manner. However, the task proved too large. I believe that enough of the crickets have been destroyed to materially reduce the work next year. Fencing, trapping, then burning has proved to be the only effective method of control. Poisons proved expensive of application and gave very poor results.

## Sows Returned to the Farms.

Summarized report of the number of sows returned to Spokane county farms which were intended to be slaughtered shows that all cooperating agencies have actual record on 782, says J. R. Shinn, county agriculturist. An estimate of the number kept on farms which would have been shipped in to slaughter had not this campaign been launched adds 400 to 500 to this list. Work has been started to secure a recalling of order made by the food administration to the effect that no more wheat is to be ground in the northwest until after harvest.

## Carlton's War Activities.

To the Editor of The Washington Farmer: During the first Red Cross drive Carlton, Wash., raised $326 in one hour; $529 in the second Red Cross drive; $5100 in third Liberty loan bonds. We are 25 miles from the railroad and have just a small place, but the people in this community are all patriotic. In this last war stamp drive we have sold $1800 war stamps, and that is going some for Carlton. Our quota for the last Liberty bond drive was $2300. C. I. LEWIS.
Carlton, Wash.

Your Local
**HOME PAPER**
and
Your State
**FARM PAPER**
at a Special Club Price

A special clubbing arrangement has been made with a number of newspapers throughout the northwest. We can now offer you a one-year subscription to your local home paper with a one-year subscription to your state family farm paper at a special rate for both.

**YOUR HOME PAPER** is of great value to you. It brings you all the local happenings and news of the affairs of your community and keeps you posted on the gossip of the social and commercial life. It brings you the news of the home boys at the front and prints many interesting letters from them.

**YOUR FARM PAPER** brings you each week interesting facts of the agricultural development of your state, all the farm news, features for every member of the family, including color comic pages, women's and children's pages Departments devoted to every phase of farming and farm life.

We can now send you your local home paper and your state family farm paper for one year each at the special clubbing rates as quoted below:

| | | | |
|---|---|---|---|
| The Daily Journal, Bellingham, Wash., and Washington Farmer. | $3.00 | Cashmere Valley Record, Cashmere, Wash., and Washington Farmer. | $1.50 |
| The Blaine Journal, Blaine, Wash., and Washington Farmer. | $1.15 | Twice-a-Week Spokesman-Review, Spokane, Wash., and Washington Farmer. | $1.00 |
| The Bee-Nugget, Chehalis, Wash., and Washington Farmer. | $1.50 | The Spokesman-Review, Spokane, Wash., (Daily only), and Washington Farmer. | $5.50 |
| The Spokesman-Review, Spokane, Wash., (Sunday only) and Washington Farmer. | $2.50 | | |

Take advantage of these special prices by sending in your order today to your local home paper or by mailing it direct to

# Wheat and Alfalfa Grow Together

## *Poor Alfalfa Plot Is Producing Light Crop of Grain*

Instead of plowing up a two-acre plot of alfalfa last fall, W. H. Willins of Latah, Wash., disked the ground and sowed wheat on it. There is now a light crop of wheat and a light crop of alfalfa waiting for harvest together. The wheat is of good quality and both Mr. Willins and John H. Dow, who is operating the farm for Mr. Willins, believe that the alfalfa is probably as good as it would have been had the land not been sown to wheat.

Here are the facts as nearly as could be gathered by a representative of the Farmer who visited the farm to see the result of the double cropping of the land:

**The Land and Locality**—Latah lies in the northern extreme of the Palouse country. The Willins place nestles in a foothill cove, protected from the east and south and southwest. The soil is of a general clay character, being medium heavy and medium fertile. Owing to the mountains about it the rainfall is probably in excess of the open country. The land on which the experiment of growing wheat and alfalfa is being tried faces to the west, with a gentle slope. There is no surface irrigation of any character. There is a tendency to slight sub-irrigation, there being a little evidence of natural springs coming near the surface in the vicinity.

**The Alfalfa**—It was sown in May, 1917. Owing to weather conditions it did not set as well as desired, being probably not more than half a stand. It suffered greatly from the hot, dry summer of 1917, as a result making little progress. It is now somewhat spotted, some small areas being from a quarter to half a stand and others being a full stand. It is about two feet tall, and when observed on July 10 was a little past the stage for cutting.

The plot is in the form of a strip running across a narrow wheat field. With the grain ripening, little difference could be noted from half a mile away except that the strip showed a little greener. It is impossible to estimate accurately the amount of hay that the alfalfa would make if it were possible to cut it separately from the wheat, but it probably would cut something like a ton to the acre, a little less rather than more.

**The Wheat**—Following the disking of the alfalfa land it was seeded to Gold Coin wheat in September, 1917. The seeding was done before any rain had fallen, and the grain lay in the ground unsprouted for several weeks, barely getting up to cover the ground by winter. It now stands four to six inches taller than the alfalfa or about two and one-half feet tall. It is maturing well, though the dry weather and the heat have reduced the size of the heads and the number of grains to the mesh. It is a reasonably good stand on the ground, and will yield probably 15 to 20 bushels if the weather is fairly favorable until harvest time. There appears little difference between the quality of the grain where the alfalfa is thinnest and that where it is thickest. The number of heads is considerably greater where the alfalfa is thin, however, and there are more kernels to the head. In the spots where the alfalfa would make the best yield, the wheat probably would yield at the rate of four to eight bushels to the acre. At the time observed all the grain promised to be of No. 1 quality. There is comparatively little difference between the quality or quantity of grain on the alfalfa ground and on the ground along side, which was not cropped last year, except where the alfalfa is thick enough to crowd the grain.

**The Harvest Question**—It would appear difficult to harvest a twofold crop like this one. The wheat heads do not stand high enough above the alfalfa to permit harvesting separately without taking off the top of the latter. Except for hay, they could not be harvested together until after the alfalfa had passed the usual cutting stage. If cut together with one sickle at the time the wheat was ready for grain, the alfalfa would be too ripe for good hay and probably yet green enough to interfere with the curing of the grain in the shock. To cut them separately at one operation would require a two sickle machine, the one part heading the grain and the other cutting alfalfa and wheat straw together. If cut together and threshed together the alfalfa would undoubtedly make the straw excellent winter stock feed.

---

In its issue of June 6 the Farmer published an article touching upon a custom more or less successfully practiced in parts of England of growing a grain crop on meadow pasture or hay land, thus getting two crops instead of one. With a view to learning the opinion of agricultural authorities on the possibilities of such method in the northwest, a letter was written asking for a discussion of the subject. The following are some of the expressions of opinion:

**GEORGE R. HYSLOP,** Oregon Agricultural College—Mr. Hyslop does not think the plan feasible for dry lands anywhere in the northwest, owing to lack of moisture and plant food in the soil. He also considers the difficulty of securing a grain crop that would ripen at the time the forage crop was ready for hay a serious one. He says: "I believe that possibly the best method is to thicken up stands of clover or alfalfa or meadow by sowing in some grain. This will help to keep down the weeds in thin spots and to improve the tonnage. For the most part, I thing this sowing of barley or other crops in the fall is more valuable for hay and for silage purposes than for grain."

**E. F. BENSON,** Washington state commissioner of agriculture—Mr. Benson thinks the plan of very doubtful value. He thinks it would be difficult to get machinery to do the double harvesting, even if the crops could be grown successfully together. He urges that the farmers stick to proved methods of production until the war is over in order that the food production may be the greatest possible.

**GEORGE SEVERANCE,** Washington State college—Mr. Severance considers the plan impracticable except where there is considerable rainfall during the summer months, and is not certain that it would be practicable even there. Irrigation also offers a possibility, he suggests. Even the Coast sections, he says would not have enough moisture in the meadows in the summer to bring up a crop of grain and give it a start.

---

### Rural Motor Express.

The highway transport committee of the national council of defense urges the establishment of the rural motor express, saying: Heretofore the farmer has done his own hauling to market, but adoption of the rural motor express will enable him to delegate his hauling and to devote his own time to farm operations. An enormous waste of time and labor of both men and teams can be prevented by consolidating the small loads from a number of farms into a single load to be carried by a motor truck.

The same circular adds that the development of this system of transportation has been particularly rapid in Maryland. A detailed survey was made of 23 routes, leading from agricultural sections into Baltimore, Md., and Washington, D. C. On these records 30 trucks were found in operation; the total capacity of these trucks was 73 tons; the mileage traversd daily was 1574 miles; the average length of the routes was about 50 miles for the round trip. Most of these routes are operated by truck owners living at the outer terminal, making daily round trips into the marketing center. Many of these routes are operated by farmers who first learned the advantages of motor truck transportation by using trucks for their individual needs.

---

### Athletics in the Navy.

All forms of athletics are encouraged in the navy. All of the larger ships and all stations have complete athletic equipment, as well as a regularly appointed athletic officer and instructor. The navy is a service of high ideals and requires the highest standard of physical fitness. To define the social status of the navy man today is unnecessary. A man in navy uniform is welcome everywhere. The navy's blue shirt is a badge of courage and distinction.—Boston Globe.

I AM sending you one year's subscription for Mrs. Caskey in response to your offer No. 1. Please put in seven small stars as there are eight of us on this farm working for the cause. Enclosed find money for subscription and farm service war flag for Mrs. Caskey.

MRS. J. W. BROWN.
Sequim, Wash.

# SUBSCRIPTION PLAN SAVES YOU MONEY

**RATES**
For Subscriptions to The Washington Farmer
**25c**
For One Year
**50c**
For 3 Years
**$1**
For 5 Years

We are holding open our direct-to-the-reader subscription plan during the summer months. It means a real saving at a time when most things cost more.

The central idea of the plan is to deal direct with our subscribers in securing and renewing subscriptions, thus eliminating the middleman and giving our friends the benefit of every penny saved.

It is gratifying to know that the new cooperative system has had the heartiest kind of backing; and that it has been put on a successful basis. We could not have got along without the assistance of well wishers who have told their neighbors about the plan and passed along copies of the paper.

There are many things of value which your state farm paper can bring you and your neighbors during the summer months. The various departments will be full of helpful hints, instructive articles and entertainment. Send in the orders!

## Farmers Deserved Higher Wheat

### *Congress Was Right When It Passed the $2.40 Measure*

Congress was right in its bill for $2.40 wheat and should have stood its ground against the presidential veto. It was unfortunate that when the issue came on the veto nearly half the members of the house were absent. Uneasiness over their own political fences had the same effect on nearly 200 congressmen that the peace negotiations with the Germans had on the soldiers of the Russian armies. They got uneasy and restless and bolted for home.

The president's veto message shows that his action sprang from a misunderstanding of the facts. This is not to be wondered at, and the president is not to be blamed, for his intentions were undoubtedly good; but he has to weigh and pass upon so many difficult problems that he finds it a physical impossibility to get to the heart of all of them.

For example, the president is manifestly in error when he says that "a fixed minimum price of $2.40 would . . . add $2 per barrel to the price of flour; in other words, raised the price of flour from $10.50 to $12.50 at the mill."

Why should a 9 per cent increase in the price of wheat lead to a 19 per cent increase in the price of flour? The cost of milling would not increase, nor the cost of the bag, nor the expense of selling the product. The proposed increase of 20 cents a bushel for wheat could not by any possibility justify an increase in flour price of more than $1 per barrel.

It now takes 264 pounds of wheat under the regulations of the food administration, to make a barrel of flour. The proposed increase in the price of wheat, which congress passed, and the president vetoed, would have added only 20 cents a bushel, or one-third of a cent a pound, and a third of 264, the number of pounds of wheat in a barrel of flour, gives exactly 88 cents. A little more capital would be needed to buy and carry the wheat, but reasonable allowance for that could not exceed a few cents per barrel.

"I dissent upon principle," says the president, "because I believe that such inelastic legislative price provisions are insusceptible of being administered in a way that would be advantageous either to the producer of the consumer, establishing, as they do, arbitrary levels which are quite independent of the normal market conditions."

But that objection applies with equal force to the present price-fixing standard. The present wheat price is an arbitrary level "quite independent of normal market conditions." Of necessity there can not be at the same time government price-fixing and normal market conditions, for government price-fixing sets aside the normal law of supply and demand.

As a matter of fact, there need be no greater rigidity in a congressional price of $2.40 than in a food administration price of $2.20. In either case the price is set for the current year's crop, and the fact that the president has vetoed the increase measure indicates a purpose to keep the present government price rigid for this season.

The president's belief that "the present method for determining the price of wheat has had the most stimulating effect upon production" is open to question. The department of agriculture's preliminary estimate of this year's acreage for harvest gives a total for spring and winter wheat of 58,872,000 acres. Many observers believe that Secretary Houston is unduly optimistic in his estimates and that his figures exceed the real acreage. But accepting them as reliable, the fact remains that while they are higher than the five-year average, they fall short of the acreage that was harvested in 1915, when the American farmers were growing wheat under the normal law of supply and demand and there was no patriotic appeal to them to speed up production as an outstanding national duty.

From the beginning of this problem of wheat price fixing the growers and their advocates have had to fight an uphill battle against heavy odds. When the government grain corporation last year announced plans and prices that left our northwestern growers without a basic coast market, and deducted from the Chicago base price the burdensome freight rate from this region to Chicago, it seemed an almost hopeless task to persuade the food administration to reconsider its action. But organizations and individuals that had at heart the welfare of the farmers took a courageous stand notwithstanding and won out against seemingly insurmountable obstacles. They won in the end because they were right.

They were right again in their stand for $2.40 wheat, and might have defeated the veto Saturday if a full vote could have been had in the house. Unfortunately too many representatives had left their post of duty and gone home to stump their districts for reelection.

The farmers of the Pacific northwest feel that they have not had intelligent and just treatment in the government's food laws and regulations. Wheat, their chief product, was singled out for price-fixing, and a price set that is undoubtedly below the price that wheat would have brought in open market if it had been left to the law of supply and demand as was the case with corn, cotton, oats, tobacco and many other farm products.

As a result the wheat grower of the northwest has had to sell his product at controlled prices and to buy feed for the live stock at uncurbed prices.

These handicaps, coming upon him at this time, with short crops in 1917 and again in 1918, should have had more sympathetic consideration at Washington.

Yet, notwithstanding this unfortunate situation, the farmers of the Pacific northwest will not waver one jot in their loyalty. They will protest against obvious mistakes and injustices, in a hope that the mistakes will yet be rectified, and go on doing their utmost to help their government win the war.

**Chance for Organization.**

Messengers in India are only paid about 9 cents a day.

## A Poem for Today

To the Editor: Enclosed you will find a copy of a poem which has been in my scrap book for nearly 18 years and I am sending it to you in the hope that you will have it printed in our paper, as the sentiment seems to me so fine and so particularly suited to the present time. MAY H. WILCOX.
Burley, Wash.

### Prayer of the Republic.

Oh! thou God that holdest nations in the hollow of thy hand,
We implore anew thy blessing on our loved, our native land.

Far and wide our flag is waving over peoples old and new—
Men who scarcely knew its symbols, red and white and starry blue.

On the field of strife and carnage, strewn with wounded and with dead,
Bathed in blood of dying heroes, waved a banner, flaming red.

Tears of children, wives and mothers, waiting, watching day and night,
Washed upon the flag of battle, stripes of peace in virgin white.

Steadfast hearts for God and country made a field of truest blue,
And to guide a nation's footsteps stars of light came shining through.

Red for courage, honor, glory, white for justice, peace and love;
Blue for faith and loyal virtue, stars for light from God above.

In this sign we've lived and conquered mountain, plain and trackless sea;
Peaceful gains and warlike triumphs, all, O God, we owe to thee!

From a weak and struggling people thou hast raised us up to might.
Oh! thou God of hosts, we pray thee, make our strength a shield of right.

Thou hast built this great republic, outflung over land and sea;
Hold it ever in thy keeping, sacred refuge of the free!

—Russell M. Seeds.

## SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

## "Rough Stuff" in Wheat and Other Cereals Really Vital

Perhaps Luther Burbank's announced discovery of a wheat 18 per cent rich in gluten arrived in the nick of time. The clock struck 12 on too refined a wheat flour long before Mr. Hoover commandeered 40 per cent of wheat and stopped the pernicious practice, namely, of robbing wheat of its nutritious and necessary "rough stuff."

Dr. Hirshberg.

When our troops across the seas are separated from fresh foods, especially lots of good, coarse, whole wheat in the form of bread and cakes, when a large measure of their rations are more or less canned goods and other supplies far from rich in those necessary food elements —vitamines—because sterilization, pasteurization and other methods of preservation have deprived them of it, there is danger of beri-beri, scurvy, pellagra and other evil laming ailments.

**Avoid Overrefined Flour.**

The presence of lameness and leg troubles, independent of trench-foot and similar maladies, makes the alert army surgeon particularly watch out for beri-beri and scurvy. When the diet consisted of canned foods and white bread or biscuits made of wheat, it was found that these properly called "food deficiency" diseases were often responsible.

In spite of a large variety and plenty of food, the vitamines of whole wheat, unpolished rice and unrefined flours were so quickly missed by living tissues that one or more of these various disorders arose.

By various well-considered experiments Drs. Harriette Chick and Margaret Hume brought to light some of the nutritive properties of the common cereals. They proved, apparently, that in the wheat as well as the rice grain the vitamines so much needed by mankind to ward off and to cure joint and limb symptoms is concentrated especially in the whole grain, the fruit or embryo of the cereal. A small quantity is also present in the bran. Both of these are omitted in white, refined wheat flour.

Obviously, unless bread, biscuits, cake, crackers and other products of the bakery are made of whole cereal, with its bran and germ stuff, the human fabric will, so to speak, have "dropped a stitch" by loss of vitamines.

To prevent beri-beri, polyneuritis, scurvy and similar ailments, rough, unmilled flour is to be added to the diet. This maintains the weight, health and vitality of those who eat it, whereas polished wheat or rice inaugurate the various swellings, aches, pains, bruises and troubles of beri-beri and scurvy.

The vitamines in the different fresh foodstuffs, their absence or deficiency depend upon dryness, heat, moisture, sterilization and freshness.

Exposure of the whole wheat germ to boiling temperatures for two hours does not seem to injure the vitamines very much. If, therefore, it is included in the flour of the bread, it can be relied upon to prevent these diseases after it is baked.

If yeast, which contains 35 per cent of solids, is heated even for an hour at boiling temperature there is some loss of vitamines.

Ten grammes of dried peas will cure beri-beri or scurvy. Most seeds of plants and the eggs of animals are opulent in vitamines, but they are most abundant in fresh cereals.

In the early stages of siege of Kut-el-Amara beri-beri was common among the troops. They were eating a ration of whole wheat flour. After the first two months one-third to one-half of the wheat bread was barley flour and coarse milled wheat. Scurvy and beri-beri then disappeared as if by magic.

### How to Succeed.

Fix the goal of your ambition
Far beyond the common vision.
Struggle upward; keep on going;
Feed the mind; continue growing.
If you reach your heart's desire,
Keep advancing, higher! HIGHER!
On! and on FOREVER.
—Granville Lowther.

## Sidelights

**The Education Controversy.**

Teacher—Now, Patsy, would it be proper to say. 'You can't learn me nothing"?

Patsy—Yis'm.

Teacher—Why?

Patsy—'Cause yer can't.

**Vain Imaginings.**

"What's de meanin' of dese workless days?" asked Meandering Mike.

"I dunno," replied Plodding Pete. "I'm kind o' hopeful dat mebbe we've got de government back of us at last."—Washington Star.

**Unappreciated.**

'I'm in a fix," declared the manager of Plunkville's Op'ryhouse. "How's that?" "Got a big feminine star signed up for a week." "Well?" "And here comes the same star in a film drama and gets all the business."—Louisville Courier-Journal.

**Sensibilities.**

"Aren't you slightly mixed on your European geography?"

"I'm afraid so," replied the highly elegant person. "I try to study the maps, but the color scheme gets on my nerves terribly."—Washington Star.

**His Delusion.**

She—What an atrocious necktie! I wouldn't trust you to select anything, you have so little taste.

He (chuckling)—You forget that I selected you, dear.

She—You think you did, but you didn't really.—Boston Transcript.

**No Offense Whatever.**

Counsel—Come, sir, do you mean to tell me you didn't see the complainant's cow on the land? How near should you be to a beast to recognize it?

Witness—About the distance I am from you.—Everybody's Magazine.

**Convincing Proof.**

"Is it true that women lack a sense of humor?"

"Certainly not."

"Why are you so positive?"

"I escorted a young woman of my acquaintance to see a motion picture comedy the other day."

"Yes?"

"And when the fat comedian sat down in a tub of water I assure you she laughed as heartily as I did."—Birmingham Age-Herald.

**Theory and Practice.**

The pupils were being examined on the subject of personal hygiene. A boy was asked: "What have you to do in order to keep your teeth sound and white?"

"Clean them," was the prompt reply.

"When ought you to clean them?"

"Morning, noon and night."

"What are they to be cleaned with?"

"With a toothbrush."

"Very good! Have you a toothbrush?"

"No, sir."

"Has your mother a toothbrush?"

"No, sir."

"Then how do you know about the use of toothbrushes?"

"We sell them, sir."—Harper's Magazine.

**His Preference.**

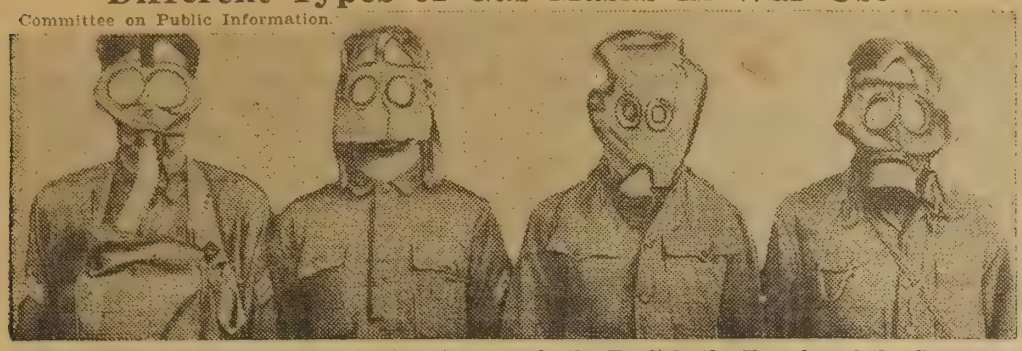
A young lady sat next to a distinguished bishop at a church dinner. Awed by the bishop's presence she hesitated to speak to him, waiting for what she considered a favorable opportunity. Finally, seeing some bananas passed, she turned to him and said:

"I beg your pardon, but are you fond of bananas?"

The bishop was slightly deaf, and leaning forward, replied:

"What did you say?"

"Are you fond of bananas?" repeated the young lady, blushing.



The bishop thought for a moment and then said:

"If you want my honest opinion I have always preferred the old-fashioned night shirt."—Exchange.

# All the World's a Stage, and All the Men and Women Merely Players

## Different Types of Gas Masks in War Use

Committee on Public Information.

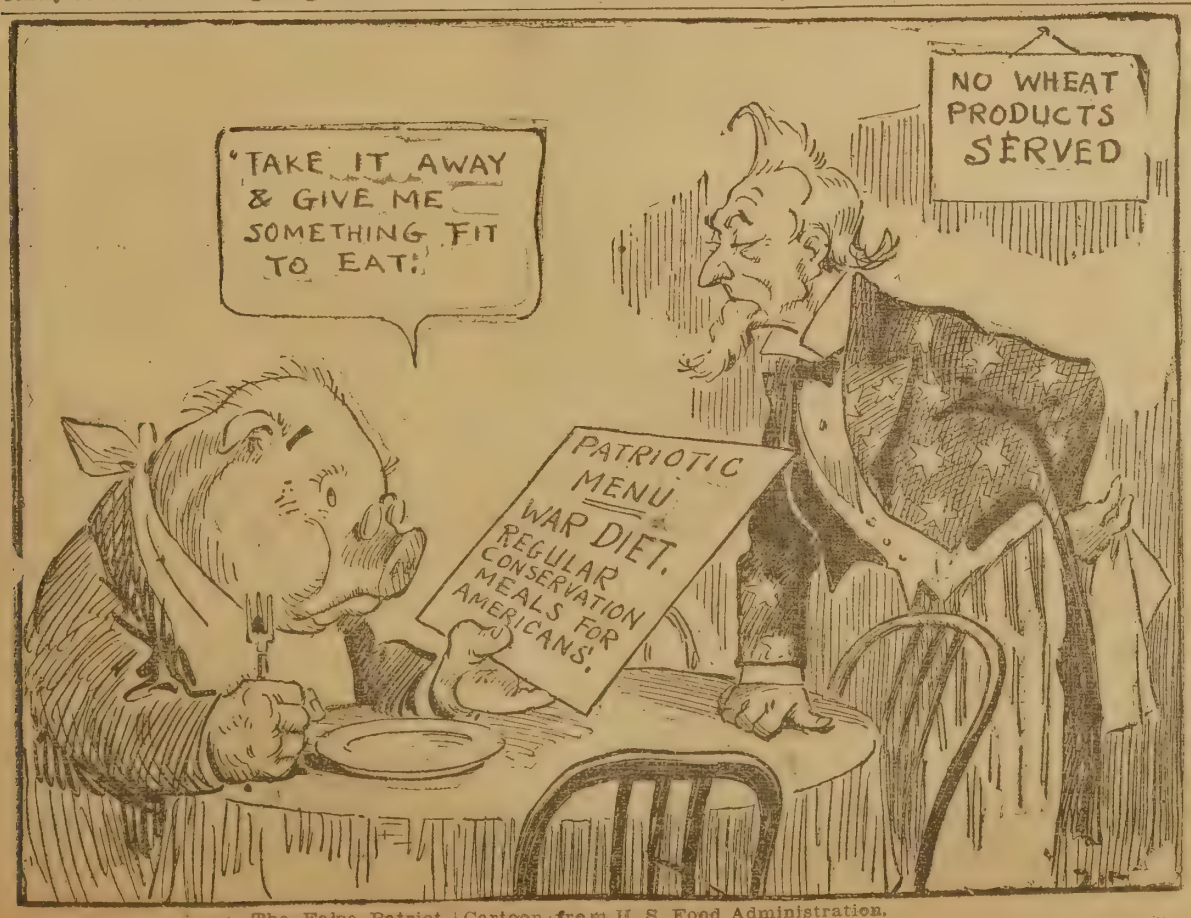
From left to right are shown the American mask, the English, the French and the German.

## Apples for French Orphans

Distributing apples to French orphans of the Toul refuge by the American Red Cross. The children were taken from invaded areas.

## Lead Our First Army Corps

Major General Liggett, leader of the first American army corps recently formed on the fighting front in France, and his aides.



## Women in National Naval Service School

Committee on Public Information.

National Service school of the Woman's Naval Service at Conduit and Little Falls Roads, Washington, D. C. The uniforms of the women in this school are practically the same as those of the Girl Scouts of America, except for the insignia, which in case of the Girl Scouts is a pin with a clover and an eagle above it, whereas the girls in the National Service school wear the letters U. S. S. on the hat. The uniform is a khaki skirt, stout boots, a brown flannel shirt and a service hat. The uniforms vary a good deal in both these organizations.

Twenty uniforms for women in war work are officially recognized in the United States at the present time. The women wearing them are munition workers, telephone and radio operators, yeomen, employes of the shipping board and the food administration, Red Cross workers and the Y. W. C. A. workers abroad, Woman's Motor corps of New York, Girl Scouts and students in the National Service school of the Woman's Naval service.

The False Patriot—Cartoon from U. S. Food Administration.

## A Pair of Real Farmerettes

## CHAPTER XXVI.

### By a War-Dancing Village.

As the fugitive dropped downward, the young voyagers sprang to their feet in their excitement. The warriors, stopping at the cliff's edge, stood with drawn bows, waiting for him to strike the water.

Ben and Jodo, too, were waiting breathlessly. The man's life depended largely upon the depth of the river. If it was shallow over there, he would be crippled, and doubtless killed. But if the river was deep—

A booming sound, as the figure drove down into it, meant that the stream was very deep there. Several seconds passed—perhaps as much as a minute before the man came to the surface. He had been swimming under water, and was now 40 or 50 yards out in the river.

Scarcely had the two Indians caught sight of the swimmer when they yelled and drew their bows far back. Ben had foreseen that, and now threw up his rifle and fired!

The arrows struck the water, but not the swimmer. He kept coming. The crack of the unexpected rifle may have startled the bowmen and spoiled their aim. And when Jodo, taking a more deliberate aim, sent a bullet at the Indians, they suddenly turned and disappeared.

After a few seconds on the surface, the swimmer had dived again. Ben and Jodo were reloading their rifles as fast as they could.

"Come this way—swim this way!" Ben called, as soon as the swimmer's head had appeared the second time. And the swimmer heard and changed his course. Soon he had reached the shallowed water.

Seeing that the Indians were no longer in sight, Ben put down his rifle and paddled to meet the man in the water. The three heavily laden canoes could not be driven fast, but the swimmer, plainly much at home in the water, was coming hand over hand.

"Keep loading, Jodo!" ordered Ben, realizing that both their rifles were empty. He himself stood ready to reach a helping hand to the fugitive.

When the man was close enough, Ben got hold of him. After no little trouble, the two in the canoe had half dragged the drenched, streaming stranger into it. The man was exhausted, kept gasping for breath, and could not utter a word. Ben and Jodo likewise said nothing. The two Indians had reappeared on the cliff, bows in their hands, and it was important that the white men get their rifles loaded quickly.

When his priming-powder had been poured into the pan, Ben dropped down, rested his elbow on the edge of the canoe, and tried to take careful aim, but the light was not good, and before he could shoot the current had swept the canoes out of rifle-shot. Now the voyagers turned their attention to the wet stranger.

"Who are you? and how do you come to be running from the redskins?" demanded Jodo.

"They'd captured me, but I'd got away from 'em. When I'd nearly run my laigs off, they caught sight of me ag'in. Then there was another race till the cliff stopped me. After that it was jump or be nabbed, and I took the big jump. Of course I didn't know how the water was, or what would become of me. Lucky you fellers was down here. Don't know whether I could have clumb out of the river or not, I was that near used up. How do you come to be here?"

"We've been up on the Big Niangua, trapping, and are on our way back to St. Louis," Jodo explained.

"I live down at Cote sans Dessein, on the Missouri. The redskins over in this country, I'd heard tell, was rather soured on the whites; but I crossed over to the south side of the Missouri to hunt. Game wasn't any too plenty along the Missouri, or leastways I didn't find much. So I got my canoe and kept paddlin' up the Osage. I stopped above where you folks seen me jump. There I lands, ties my canoe, and strikes off through the woods on track of game. When I'd tramped three or four miles, without findin' anything worth wastin' lead on, two sneakin' red varmints pops out of the bushes behind me and grabs my arms and that before I could fire a shot or git a holt of my knife. But I watches my chance, and before long I breaks away from 'em. I'm counted a bully-good runner, but they give me the race of my life."

"What tribe did the two Indians belong to?" questioned Jodo.

"The Sacs and Foxes. They told me that much. One of 'em could talk a little of our talk."

Now Ben asked: "Did they tell you what they expected to do with you?"

"Not exacly. The one that could talk hinted that they might make short work of me when they got me some'r's—to their village I guess it was. I didn't wait to find out."

"How far is it to the mouth of the Osage?" Jodo inquired.

"Just guessin', 50 miles as the river runs."

By this time the canoes were about to drift out of the shadow that darkened the west bank. Ben steered them back into the shadow.

"What now, Ben?" demanded Jodo.

"We'd better tie up and wait a while. With at least two blood-thirsty redskins patrolling the banks, it's safer for us to lie by till the moon hides itself."

They approached the bank and made fast to a bush. Martin—that was the settler's name—soon got chilly, and had to slip off his outer clothes and wrap himself in blankets. When the moon had set, the canoes moved on down the river again, and he was glad to use Jodo's paddle to warm himself. Jodo sat, rifle in hand, watching the banks, and especially the left bank, as closely as he could in the dim light.

The paddlers paddled hard, but with as little noise as possible. They hoped that the two Indians, being already weary from chasing their escaped prisoner, would, if they tried to keep up with the canoes, be left far behind before morning.

While day was dawning, Ben and Jodo paddled the canoes up into the mouth of a little stream. Martin was dry and asleep by this time. But he awoke while they were kindling a fire. On this they broiled meat enough for both breakfast and supper. And they were very careful to put out the last spark of their fire before the smoke could be seen.

The three took turns at sleeping and watching during the day, one being on guard while the others slept. They expected to remain in hiding, not only till night, but till the moon had set. But late in the day the sky became overcast with clouds, and as night came down a slow drizzle set in. And in that drizzle the three men paddled out into the Osage and began to drift and paddle down stream.

All the canoes were now covered to shed the rain. And the men themselves wore blankets as they drove the canoes forward. A third paddle had been made during the day, and Martin was using it.

Silently the three plied their paddles, while the slow rain kept pattering on the water around them. As long as the moon was still shining, behind the clouds, there was light enough to make near objects dimly visible. But after moondown it was impossible to see one's hand before his face. But for the fact that there were known to be hostile Indians in the country, the canoemen would have tied up till a more favorable time. Now they paddled on, relieved rather than otherwise to be invisible.

But they were afraid to travel fast; and sometimes they ceased paddling and allowed the canoes to drift. At length Ben told Martin to crawl under the folded tent that covered their canoe and go to sleep. They would wake him later.

It was believed to be past midnight when Jodo stooped and woke the sleeper. Ben had ceased to paddle and was gazing ahead.

The settler sat up drowsily. "What's wanted, boys?"

It was Ben who answered: "We see lights and hear strange noises ahead, and don't know what to make of them. You've been along here recently, and we thought maybe you would know."

Martin stared at the lights and listened. "It's too much for me. Wasn't anything of the kind here when I come up. Seems to be some sort of a to-do on the river-bank. I'm wonderin' what."

The noise was mostly a sort of singing, though of a very rude kind. Soon the canoes had drifted near enough for the light—big fires—to be visible. Now numerous wigwams could be distinguished, scattered about in a thinly wooded valley.

"It's an Indian village," Martin said. "But they've camped here since I went by, three days ago. I wonder what on earth they're up to."

"They're dancing and singing. My guess is that it's a war-dance," Ben remarked.

"That's just what it is: I'd bet my socks on it!" the settler declared. "They've moved over here from some'r's, and now they're workin' their dander up, so's to be ready to start out after white scalps."

And that was just what the strange spectacle appeared to be. Around a big fire as a center a large number of warriors were dancing furiously, while they kept up a kind of weird, wild chant. And very fierce and blood-thirsty that war-song sounded to the white listeners.

On all sides except on the dangers were surrounded by a crowd of spectators—mostly squaws and children. The open side was the river-bank, and the canoemen had a good view of the wild scene while drifting by.

As the canoes passed, numerous dogs, either seeing or scenting the white men, swarmed along the river-bank and barked clamorously. But such was the wild tumult and the frenzied excitement among the dancers that nobody noticed the dogs. From very prudence the canoemen sank down as low as they could.

One thing the white men noticed, though not till they were past the dancing circle. At one side, and looking on, stood a little group of men who wore hats or caps, and seemed to be dressed in civilian garb.

"They may happen to be traders," Martin said. "But they're 10 times more likely to be some Britishers or Frenchies, representin' Great Britain."

And Ben remarked: "If that's who they are, they're here to supply the redskins with guns and powder and lead. And maybe they're dosing them with fire-water to get them chuck full of fight. Nice way for civilized people to act!"

Soon the Indian village, with its dancing, its wild, fierce chanting, its lights and its wigwams, and its barking dogs, was left behind. Now the voyagers were in thick darkness again. The rain grew harder, but, being anxious to get as far as possible from the dangerous locality, they sat under their blankets and kept all their paddles going.

When at last daylight had dawned, the rain had ceased and the clouds were breaking away. The canoes were now drifting along between wooded hills, which looked fresh and green after night-long watering. Ben stopped paddling and said to Martin:

"How far would you guess we are from the Missouri now?"

The settler studied all the surrounding landmarks. "Between 10 and 15 miles, would be my guess.

"Now the question is: Shall we go into hiding till night comes again? Or shall we push right on, danger or no danger, till we reach the Missouri and the French settlement?"

"It would be safer, of course, to wait for dark. But I believe we can run the rest of the way without any great sight of risk. If the varmints show up on one bank, why, we can crowd over ag'in' the other bank, and git purty night out of bow-shot."

"But the danger is that they won't show up," spoke out Jodo. "More likely we won't catch sight of 'em at all. We'll hear a crack, and see a smoke, and feel a bullet. That's what we've got to look out for if we drift along down in broad daylight."

Martin answered: "Still, I don't feel that there's any great danger of that. Nobody lives up here to be comin' down; and the red boogers won't think to lay in ambush for us on the banks. The biggest risk, as I foresee it, is that we may meet some of 'em in canoes, or that some of their canoes may overtake us."

"I think we can paddle so fast that their canoes won't be very likely to overtake us," Jodo suggested. "If we meet a lot of redskins on the river—"

"If we meet a lot of redskins on the river, there's nothing for it but a fight," Ben said.

The settler sighed regretfully. "But don't I wish to my soul I had my old rifle back? She was a mighty old weepon, but she al'ays shot mighty true when I kep' her clean. Unlucky hunt for me, that was. Be many a long day before I own another gun as good, I reckon." He sighed again.

"I'd feel safer if we had three guns instead of two," Ben admitted. "But unless we meet a British agent, with guns to give away, not much chance for us to find the third gun. So we shall have to do the best we can with the weapons we have. Do we all agree, then, to take the risk and paddle right on?"

"That suits me all right," Jodo answered. "I don't believe we're likely to have any trouble. Of course, there's some risk. But then, for that matter, there's some risk that the red boogers may smell us out if we hide ourselves."

"I'd like mighty well to reach home before the old woman and the young uns miss me and begin to worry," the settler told them. "So, risk or no risk, redskins or no redskins, I'm ready to run the gantlet if you boys air."

Jodo said: "I'd feel braver if I wasn't quite so hollow. Can't we have a bite to eat as we drift along down? Rowing all night whets a fellow's appetite."

"Of course we can eat something if we want to," Ben answered. "But I was thinking we'd make a swift run and get to the village in time for a civilized breakfast. I'd like to try some French cooking."

"And try some French cookin' you shall!" declared the settler. "I spliced up with a Frenchman's daughter. And if I do say it myself, she certainly does know what to do with a skillet and a fryin' pan. And she'll do herself proud for you boys when I tell her what a nasty scrape you helped her old man out of."

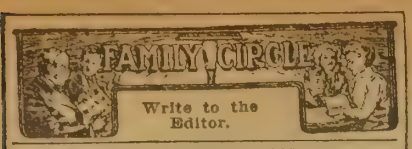
"Oh, that'll be fine," declared Jodo. "But let's try a snack of hunters' cooking first. I'll work up another big appetite by the time we've paddled another 15 or 20 miles."

Ben and Martin agreed to this. And they allowed the canoes to drift while they ate some dried meat and some honey in the comb. And while eating they watched both banks closely. It would be no fault of theirs if Indians surprised them.

Once they noticed some deer on the bank; and Martin declared that he could always find plenty of game when he didn't dare shoot it. Later they saw several elk emerging from the stream, and might have killed one. But prudence forbade them to make the attempt.

"The thing for us to do just now is to try to take ourselves out of this Indian country," Ben remarked. "That done, we can do all the hunting we want to do somewhere where we won't be hunted."

"You're right as to that," Martin agreed. "Foolhardy to risk our scalps for the sake of a little lean meat. Game hain't had time to fatten up yit since cold weather knocked off."



Their breakfast ended, the voyagers fell to paddling again. The river was swollen enough to have a brisk current; and heavily laden though they were, the canoes were soon traveling rapidly.

But for the dangers that threatened them, the travelers would have delighted in the scenery. On both sides were lofty hills already grown beautiful with their green forest covering. The river wound back and forth between, sometimes washing the base of one line of hills and sometimes of the other.

At length the current swept the canoes in close to a great rock, which rose out of the water. The rock was the point of an abrupt bend. The current fended off, and went rushing and rocking on. And scarcely could the canoemen turn their attention down stream, when they made a discovery that startled them very much.

Fifty yards below a party of Indian warriors, numbering more than a dozen, were in the act of fording the river. They were out in midstream—the river had widened here—and in water nearly up to their chins. And each was holding his gun and powder horn above his head.

(To be continued.)

## Iceless Refrigerator

A companion convenience to the fireless cooker for the hot summer days is the iceless refrigerator, or milk cooler, says the weekly news letter of the United States department of agriculture. This consists of a wooden frame, covered with canton flannel or some similar material. It is desirable that the frame be screened, although this is not absolutely necessary. Wicks made of the same material as the covering rest in a pan of water on top of the refrigerator, allowing the water to seep down the sides. When evaporation takes place the heat is taken from the inside, with a consequent lowering of the temperature. On dry, hot days a temperature of 50 degree can be obtained in this refrigerator. The following description will aid in the construction of this device:

Make a screened case three and one-half feet high, with the other dimensions 12x15 inches. If a solid top is used, simply place the water pan on this. Otherwise fit the pan closely into the opening of the top frame and support it by one-inch cleats fastened to the inside of the frame. Place two movable shelves in the frame, 12 to 15

Iceless Refrigerator.

inches apart. Use a biscuit pan 12 inches square at the top to hold the water, and where the refrigerator is to be used have the whole thing standing in a large pan to catch any drip. The pans and case may be painted white, allowed to dry, and then enameled. A covering of white canton flannel should be made to fit the frame. Have the smooth side out and button the covering on the frame with buggy or automobile curtain hooks and eyes, arranged so that the door may be opened without unfastening these hooks. This can easily be done by putting one row of hooks on the edge of the door near the latch and the other just opposite the opening with the hem on each side extended far enough to cover the crack at the edge of the door, so as to keep out the warm, outside air and retain the cooled air. This dress or covering will have to be hooked around the top edge also. Two double strips one-half the width of each side should be sewed on the top of each side and allowed to extend over about two and one-half or three inches in the pan of water. The bottom of the covering should extend to the lower edge of the case.

## To Encourage Use of Cottage Cheese

The picture shows most of the 47 women who are being sent by the United States department of agriculture, into 47 states to encourage the use as well as the production of cottage cheese. Their work is to be part of the national campaign undertaken by the department of agriculture to encourage the use of cottage cheese, which, experiments by the department have shown, is approximately equal in food value to meat.

The women cottage-cheese agents are to cooperate with federal and state extension forces. They are to demonstrate better ways of making cottage cheese, and also are to show many new and attractive dishes, using cottage cheese as a basis, which have been developed in Uncle Sam's food laboratories in Washington.

These are the first women ever used as field workers by the bureau of animal industry of the department.

## PRESERVING RECIPES.

### Use Corn Syrup and Sage Sugar.

Two articles by Claudia Q. Murphy, consultant in home economics in New York, on preserving with the use of corn syrup in order to save sugar, have already been published in The Farmer. Here are some recipes which Miss Murphy also sends:

**Rhubarb Jam.**

Six pounds of rhubarb, 6 pounds of syrup (3 pounds corn syrup to 3 pounds sugar), 2 ounces of root ginger.

Peel the rhubarb and weigh after peeling. Cut into pieces about two inches long, and put it into a preserving kettle with the syrup and the ginger, which must be bruised and tied in a muslin bag. Leave this for three days, stirring it gently each day to help the sugar dissolve. Strain the liquor from the fruit the third day, boil and pour the syrup over fruit while hot. Let it stand again for three days without stirring, then pour all into a preserving kettle, taking the ginger bag out, and boil from half to three-quarters of an hour after it comes to the boil. Pour into clean, dry jars and cover. Root ginger bruised and tied in muslin or ground ginger, is generally used for jams.

**Grape Jam.**

To each pound of grapes allow three-quarters pound of syrup (equal weight corn syrup and sugar). Stalk and wash the fruit, and put in a preserving kettle over very gentle heat till the juice begins to come from the grapes, then add the syrup and stir till it melts, then bring to the boil and boil fast until a little will jelly when put on a plate and allowed to get cold. Put into clean, dry, warm jars and cover. This should be made of unripe grapes.

**Gooseberry Cheese.**

Wash and pick six pounds of gooseberries. Put them in a large pan with about a teacupful of water, just enough to keep them from sticking, stir occasionally and cook till quite soft. Rub through a sieve, measure and weigh the pulp, replace in a clean pan with three-quarters pound of syrup (equal weight corn syrup and sugar) to each pound of pulp. Boil for about 40 minutes until a little tried in a saucer will set quite firmly; put into small pots and cover. Conserves, in which skin and seeds are rejected, are most wholesome for children as a spread.

**Spiced Apples.**

Peel the apples thinly and core. Have ready a boiling syrup made of equal weight of corn syrup and sugar; add 1-2 ounce each of ground cinnamon, ground allspice or cloves. Put the apples in the boiling syrup and cook gently until soft. Place in a jar and pour the syrup over and cover down at once.

**Apple Jam.**

Take four pounds of apples, peel, core and cut into slices. Place in a preserving kettle with equal weight of sugar and corn syrup, the rind and juice of two lemons, 3-4 ounce of ground ginger and six cloves. Boil from one and a half to two hours. Five minutes before taking off add a large wineglassful of whisky or brandy. Put in stone jar and cover down. The spirit is not necessary unless the jam is needed for long keeping.

**Jam of Apple and Lemon.**

The expensive item now is, of course, sugar, but even so, this jam is worth making on the score of economy. To every pound of peeled and cored apples add 3-4 pound of syrup (equal weight corn syrup and sugar), and the rind (grated) and the juice of one lemon. First, stew the apples until they become a pulp, then add the syrup, lemon rind and juice. Cook gently for 45 minutes. The apples must be good cookers.

**Apple Jam.**

For every pound of apples peeled and cored add 3-4 pound of syrup (equal weight corn syrup and sugar), the juice and grated peel of one lemon. Place the apples in a jar standing in a saucepan of water and stew until the apples are tender. Put the mash in a stewpan, adding sugar and lemon peel, and boil gently until thick, then add the lemon juice and boil up again. Put the jam into jars in the usual manner.

## Make a Fireless Cooker.

A fireless cooker may be simply and economically made by any one with a sense of the "fitness" of things.

The materials consist of any good-sized box or bucket with a tight cover; packing material such as soft hay, excelsior, or sawdust; a metal or enamel bucket and sheet asbestos to cover it; the cooking vessel, which means any vessel with a tight lid, which will fit into the nest lining; cardboard to make the collar; a cushion made of denim or muslin; two separate discs—purchasable at a hardware store.

The food to be cooked needs only to be heated to the boiling point, packed away in the fireless, and left to cook. Cereals, meats, including roasts, soup, and dried fruit and vegetables will be more tender and will better retain their flavor and juices when cooked by the fireless method.

Complete directions for making and using the cooker, some precautions in using it, and recipes for dishes easily cooked in the fireless cooker are taken up in U. S. Food Leaflet No. 13, which may be obtained by writing Extension Service, State College of Washington, Pullman.

## Cheerfulness Counts.

To the Editor: There are so many things that happen every day that are really a benefit that I am at a loss to know what is the most helpful thing I have learned in my housekeeping during the last year. I think trying to be cheerful through my most difficult problems has helped me more than anything else. Then, too, I try to get through with my work as soon as possible so I will have time to read or do fancy work without something bothering me.

Here is a new way I have learned to cook potatoes: Pile on a serving dish or casserole six cups of well-seasoned mashed potatoes, beat one-half cup of heavy cream until stiff, add one cup of grated cheese and season with salt and pepper. Spread over potatoes, place in a hot oven and bake until cheese has melted and the cream is a nice brown.

MRS. VIRGIL GEREN.
Carmen, Idaho.

**Canning Conveniences.**

A clock for timing cooking processes.

Scales, graduated from one ounce to 24 pounds.

A record book in which to keep records of club member or housewife.

Plenty of clean wiping cloths.

A sharp paring knife for each person working.

Plenty of table room, pans and containers, buckets, etc.

**Apple Pancakes.**

Three well-beaten eggs, two cupfuls milk, one-half teaspoonful salt, two tablespoonfuls water, two teaspoonfuls baking powder, two tablespoonfuls melted shortening, flour to make a thick drop batter, two cupfuls finely chopped apples.

Mix the batter for the cakes and add the apples last. Serve with plenty of butter and spiced sugar or with syrup.

RECORDS FOR ALL MACHINES

We carry all makes. Victors, Columbias, Edison and Blue Amerolas. RECORDS SENT TO YOUR HOME ON APPROVAL. Pay for only those you wish to keep.

Records sent parcel post prepaid to any address. Write for our monthly supplement, which carries all the new music. Sent FREE.

## FARM SERVICE WAR FLAG

(Patent applied for.)

**Designed by the Washington Farmer in connection with The Oregon Farmer and The Idaho Farmer for the farm and farm home that is increasing food production in helping to win the war.**

### OFFER NO. 2.

A farm service war flag, 9x22 inches, made of cotton felt (just the thing for the auto, front porch or the flag pole), will be mailed postpaid to any one sending us TWO SUBSCRIPTIONS TO THIS PAPER. Secure two of your neighbors under our special bargain rates and receive a bunting "Farm Service War Flag."

Send your subscriptions to

**The Washington Farmer**
617 Central Bldg.,
Seattle, Wash.
Review Bldg.,
Spokane, Wash.

**Just What You Want**
may be offered in this week's Want Ads at a bargain. It's a good idea to look them over every week.

# Patterns

2529—Dress for misses and small women. Cut in three sizes: 16, 18 and 20 years. Size 18 requires 5 3-8 yards of 36-inch material. The skirt measures about 1 7-8 yards at the foot. Price, 10 cents.

2367—Girl's dress. Cut in four sizes. Size 14 will require 4 3-4 yards of 36-inch material. Price, 10 cents.

2544-2534—Ladies' Costume. Waist 254 cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 will require 2 1-8 yards of 36-inch material. The skirt 2534 cut in seven sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. Size 24 requires 3 3-4 yards of 44-inch material. The skirt measures 2 1-4 yards at the foot. Two separate patterns, 10 cents for each pattern.

2525—Girl's dress with bloomers. Cut in five sizes: 4, 6, 8, 10 and 12 years. Size 10 requires three yards of 36-inch material for the dress, and 1 3-4 yards for the bloomers. Price, 10 cents.

2306—Girl's dress. Cut in four sizes: 8, 10, 12 and 14 years. Size 12 requires six yards of 36-inch material. Price, 10 cents.

2523—Ladies' combination. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 will require 4 7-8 yards of 36-inch material. Price, 10 cents.

2033—Play dress, with lower edge arranged for romper style. Cut in four sizes: 1, 2, 3 and 4 years. Size 4 will require 2 3-8 yards of 36-inch material. Price, 10 cents.

2526—Ladies' apron dress. Cut in four sizes: Small, 32-34; medium, 36-38; large, 40-42; and extra large, 44-46 inches bust measure. It requires 4 7-8 yards of 36-inch material for a medium size. Price, 10 cents.

2338—Girls' dress. Cut in four sizes: 2, 4, 6 and 8 years. Size 6 requires three yards of 36-inch material. Price, 10 cents.

2162—Ladies' two-piece house dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires for a 38-inch size 5 3-8 yards of 36-inch material. The skirt measures about 2 5-8 yards at the foot. Price, 10 cents.

2296—Ladies' dress. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Size 38 requires 6 1-4 yards of 36-inch material for the dress and 1 1-2 yards for the jumper. The skirt measures a little over two yards at the foot. Price, 10 cents.

2522—Girl's dress. Cut in four sizes: 4, 6, 8 and 10 years. Size 6 requires 2 1-2 yards of 36-inch material. Price, 10 cents.

## Canning Terms Defined.

The following list of canning terms has been prepared by the United States department of canning experts to aid the beginner in recognizing the ordinary terms used.

**Scalding**—To dip in boiling hot water in order to remove the skin.

**Blanching**—To boil quickly in water by placing the vegetables in a cloth bag, which is to be lowered entirely under water. This is done in order to eliminate acids and bitter substances from the fruit or vegetables.

**Exhausting**—(Sometimes called parboiling). To boil fruit or vegetables for a few minutes in order to drive out of the fruit and container all gasses and surplus air and permit expansion before sealing the venthole. Exhausting is not practiced by all canners, but is important, especially when using the hot water bath outfit.

**Processing**—Means the same as sterilization, cooking or boiling. This is to completely destroy all bacteria, spores, germs, etc., in hermetically sealed cans and packages by hot water, steam, or steam pressure.

Just a Bit Different

than anything else for flavoring summer dainties is

MAPLEINE
The Golden Flavor

For summer drinks, for ice cream, for all desserts, just a drop or two will surely please you.

2-oz. bottle, 35¢.
Grocers sell it.

Cooking Convenience

All the convenience of gas—that is the meaning of a New Perfection Oil Cook Stove installed in your kitchen.

Easy to operate. A touch of a match and in a jiffy your stove is ready for cooking.

No smoke or smell; no dust or dirt.

More convenient than coal or wood. Better and more economical cooking all the year round. A cool kitchen in summer.

And you have all the convenience of gas.

In 1, 2, 3 and 4 burner sizes, with or without ovens or cabinets. Ask your dealer today.

A New Perfection Oil Cook Stove means kitchen comfort and convenience. Ask your friend who has one. Used in 3,000,000 homes. Inexpensive, easy to operate. See them at your dealer's today.

STANDARD OIL COMPANY
(California)

NEW PERFECTION OIL COOK STOVE

My Dear Corner Children: The contest is ended and the names of the winners are given below, with the roll of honor. The roll of honor, you will notice, has grown, but with so many good letters it was hardly fair to have it so small. You have no idea how hard it is to decide between letters. I find a splendid letter, written by a girl of 14, and another not so good, of course, but very good for the age, written by a little one of six. I find a letter beautifully written, without a misspelled word or a fault of grammar, but it does not say very much, and another that is written with a lead pencil, scrawled hurriedly, full of mistakes, and still it is very interesting. So pity Aunt Nellie when judging letters is to be done.

Would you like to know what things count most of all in my judgment? While we learn a good many things in our Corner, still it isn't a school. I fear if it were a school, we should not have nearly as large an attendance. But it isn't a school and so, while good writing, neatness, correct spelling, good grammar and such things are considered, I think that for our Corner letters, other things come first. Evidences of great care in preparing a letter counts for a good deal with me; I like to see that my nieces and nephews try to improve; the letter that talks interestingly to us is the kind that I like, too; the letter that shows thoughfulness for others we all love; the letter that breathes patriotism (and nearly all of them do) is one that I read over again, and I know we all do.

I wished for about 30 of you to help me read and judge the letters. Nearly nine hundred of them, and every one must be read and graded carefully and always, after I have picked the prize winners out and the roll of honor letters, I find that instead of three prize winners I have eight or nine and about a hundred roll of honor letters. How I do hate to go over them and take them out! Sometimes I can hardly decide. But it has to be done. There is not one of you who may not win a prize, if you are willing to pay the price, not in money, but in taking care and writing from your heart.

What shall we have for subjects next time? How will these do? But if you think of better ones or ones that suit you better, you do not have to take these:

The most interesting thing in the world.
The hardest thing I have to do.
Which of the five senses is best?
The county agent.

And now, dear girls and boys, I have been here, being Auntie to you for a year and not deserting my post once. Tonight I am going to put on my hat and coat and take my suitcase and bag and bundles of all sorts and sizes and shapes, and I am going down to the train and away I'll go for a whole long week on my vacation. I'm going home. Some day I think you will know how I feel about it; now you are at home all the time and a vacation would be to get away and go somewhere else. But I haven't been home for a long, long time, and I think I shall have a lovely time. I do not know what I shall do all the time or just where I shall go, but you may be sure I shall not forget you—I wish you could all go with me. What a racket we would make, and think of buying 900 tickets and giving them all to one poor conductor. Maybe I shall go to the beach for a day or so, but I am not sure. There would be plenty of room for you all there on the sand.

But at the end of my week I'll be back again at my desk, reading your letters, and glad to get back. I hope you have a lovely time this summer, with work and play. Whatever we do, let us do it cheerfully and happily and just as well as we know how. With lots of love to you all.

AUNT NELLIE.

**"Little Sunshine's" Story.**

Dear Aunt Nellie: I am writing on the subject "Sunshine." I have written to you several times and have subscribed for the Farmer for three years, so you may expect to hear from me again. I am 14 years old and my birthday is May 30. Our Corner is certainly growing. The sun was setting in a sky tinted with beautiful colors of light blue, pink and orange. The little sunbeam folks were all meeting to tell of their day's adventures. Ray, who was the first one there, said he had had the finest time. But before he had time to say anything more, little Sunshine came running up and every one always listened to her. She had big blue eyes and golden curls. "Oh," she began, "I've had the loveliest time today. The first thing I did this morning was to peep through the leaves of the trees and awaken all of the little birds. Then I called to the flowers and they began nodding their pretty heads. I crept to the windows of the farm houses next and awakened the little children. They were soon up and scrambling for their clothes. I went on and soon I came to a lone little cottage and looked through the open doorway. A little baby sat there all alone and tried to amuse herself with a cup and spoon. She was very happy when she saw me and I played with her until her mother came home. I hastened from there to the forest and seeking out the dark places cheered all the pale little flowers and ferns that grew there. Beyond the forest I came to a small building with only one window in it. Across this window were iron bars. I looked in and saw a middle-aged man sitting on a cot in one corner, with his head in his hands. He came to the window and looked out and it cheered him to see what a beautiful day it was. When I left he was still standing there. The last place I visited was a large, well-lighted room with rows of white beds in it. Whenever the little children there see me the roses appear in their cheeks and they are happier than they would be if the day was cloudy and I could not come. I am so glad I can help them." "And the little children are just as glad for you to help them," said the sun as she finished, " but come, it is time for those children to go to bed and they will not until we leave." So they all slipped quietly away behind the hills and the sky was beautiful as the bright colors slowly faded away.—Gladys May Plemon, Brubank, Wash.

**Makes Pretty Paper Flowers.**

Dear Aunt Nellie: I will try to help a little to make the Corner larger. I certainly wish it was larger, but hope it will grow and think it will. I have so much to write I don't know for sure if I can get it in one letter, but will try. It is very windy today. We live on a ranch of 320 acres. I love to live on a ranch. I would not trade places with a city girl for anything. I prefer the ranch. We get from 15 to 30 eggs a day. I have written to the Corner once before. I will describe myself: I am a little over five feet tall, have dark hair, gray eyes and a light complexion. I was 13 years old last February. I was born and raised to the age of 8 in Ohio, then came out to Washington. I like to typewrite and hope to get a typewriter soon. My mother is very small. She is not much taller than I. I am going to raise a garden this year. I can make paper flowers, such as roses, carnations, sweet peas, and can tat, crochet, knit and sew. Last night I made my big doll an apron. I had a fine time on April 1, which was April fool. I fooled many people and got fooled myself. I am in the sixth grade at school. My teacher's name is Miss Florence Foltz. I hope she will teach school next year. I go to Woldale school, district 13. We had a good time at school on St. Valentine's day—Margaret Thompson, box 71, R. F. D. 4, Ellensburg, Wash.

**Flower and Vegetable Gardens.**

Dear Aunt Nellie: This is the first time I have ever written to the Corner. I will be 13 years old November 3. Have I a twin? Is so I wish he or she would write to me. I can crochet, embroider and knit. I have one sister and her name is Ida. She wrote to Doris Miller, who is her twin. My brother is in Montana. His name is August. I have a dog. His name is Rover. We have a flower garden which we water by hand. We also have a vegetabble garden. We planted muskmelons, pumpkins, onions, radishes, lettuce, pink beans, white beans, string beans, and lima beans. Everything has come up nicely except the lima beans. We have 10 horses, three cows and four calves. The horses' names are Bell, Jack, Charley, Rock, Duke, Snip, Flash, Star, Ben, Dick and a little colt. The cows and calves have no names. I am in the sixth grade. Papa takes the Farmer and we like it fine. I wish some of the cousins would write to me. I will close for this time and if Aunt Nellie wishes I will write again.—Florence Crocker, Centerville, Wash. (We will expect another letter from our new Cousin Florence, so don't disappoint us, will you?—Aunt Nellie.)

**Two Uncles at War.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I hope it will not be the last time. I am 10 years old and my birthday is June 27. I was born in Tacoma in 1908. Have I a twin? I have blue eyes and brown hair. I live on an 80-acre farm and we rented 30 acres across the road. The name of our farm is Shady Grove farm. I have three brothers and one sister. My sister's name is Anna. She is 7 years old. My brothers' names are Jens, Oliver and Philip. Jens is 14 and Oliver is 13 and Philip is 2 1-2 years old. Three of us go to school. My biggest brothers work on the farm. I have two uncles at war now. I have joined the Junior Red Cross. I bought four war savings stamps for $16.56. We have five horses and seven cows. Our cows' names are Queen, Lady, Buttercup and Starlight, Rocelia, Midnight and Lorindia. Our horses' names are Prince, Nellie, Dick and Queen and Dolly. We have one cat and four kittens. We used to have one dog. His name was Jack, but he died. We have about 16 chickens and we have a lot of wheat this year, and oats and fruit. I will tell the Corner children some riddles: What has ears and can't hear? What has eyes and can't see? What is as black as an engine and has a tail on it? Low at both ends and high at the middle? What state is that? Our school let out May 17. We are only going to have two months' vacation. I have one-half of a mile to go to school. We live two and one-half miles from town. We have manual training every Friday for an hour and a half. I like the children's letters. I wish you would write some more letters.—Clarence Svinch, Route 2, Chehalis, Wash.

**What Ellen Does All Day Long.**

Dear Aunt Nellie: The subject of my letetr is what I do. I get up in the morning, dress, make lunches for six, eat my breakfast and sometimes help with the dishes. Then I put on my hat and coat, get my lunch and books, get in the stage and go to school. When I get there I take off my coat and hat, put my books in my desk, go out and play till the bell rings. Then I come in and we have singing. Then we have our reading and arithmetic. Then it is recess. In 15 minutes the bell rings and we go in and have geography and have just time to study our spelling before noon. I eat, then go to the post-office, then I play for about 15 minutes when the bell rings. We go in, have some singing, spelling and language. The recess bell rings and we go out and play. When the bell rings we go in and have our history. Then teacher reads out of book called The King and His Wonderful Castle. Then we are let out. I get my coat and hat on, get in the stage and go home. I sweep the floors, help get supper, eat, then my sister and I do the dishes. I study my lessons and then I go to bed. This is all that I do.—Ellen Secrest, Neppel, Wash.

**Has a Soldier Boy Doll.**

Dear Aunt Nellie: I am 7 years old and am in the third grade. Our school was out April 9. I have a pet hen that is setting. She will follow me all around until I feed her all she wants to eat, then she will go to her nest again. I have two dolls and a soldier boy doll that I like very much. I have two cats, Tom is 6 years old and Max is just a kitten. Tom catches mice and gophers and brings them to Max, who enjoys eating them very much. We have six horses, two colts, four calves, two cows, eight hogs, 75 hens and 145 little chickens. I have three sisters and two brothers. Trinna is the oldest and she is in Cheney normal. Edna is going to high school. Carolyn is cooking for papa and the boys, Curtis is 16 and is driving the drill. Allen is 10 and is driving the disk. Papa is building a fence. I help mamma work and read stories to her while she sews. I love to read the Children's Corner very much. Nora May King, Bonita, Wash.

**Sent Some Bottles Down Stream.**

Dear Aunt Nellie: Aunt Nellie, this is my first time to write. I live on the farm and I have a good time. I go to school. I am in the seventh grade. My teacher's name is Miss Alma Kitely. She is a good teacher. I am 13 years old and my birthday is November 24. I have seven brothers. Their names are Joe, Thomas, Frank, Henry, Willie and Louis. I have two sisters, Mary and Anna. I had another sister, but she died. I am knitting for the Red Cross and my sister is, too. My sister knitted a sweater. My father has a car. I have one horse. His name is Dock. One winter my chums and I sent some bottles down the stream, but I don't know whether anybody got them or not. I went coasting and skating this winter. I know a girl, Necia Hire, who said she wrote to the Corner. We have about 52 chickens and about 24 horses and five colts.—Agnes Celia Sophia Havlican, R. F. D. 3, box 16, Odessa, Wash.

**Hair and Eyes Are Brown.**

Dear Aunt Nellie: This is the first time I have written to the Corner. I am 8 years old. I was born March 3, 1910. I am the only child in the family, and I get awfully lonesome, sometimes. I go to school and I am in the second grade. My teacher's name is Miss Tinker. We have 16 pupils in our school. I belong to the Junior Red Cross. I can crochet and want to learn to knit. We have nine months of school. We have 22 horses and colts. We have five cows and two little calves and we have about 100 chickens and two geese, one dog, Jip, and two cats, Snowball and Tiger. We have two big pigs and five little ones. My hair and eyes are brown. Have I a twin?—Juanita Maston, Pullman, Wash.

**Peacock Struts Past the Window.**

Dear Aunt Nellie: I have been writing to my brother who is in the army at Camp Lewis, Tacoma, and now I am writing to you. I have another little niece named Leola Irene Venneberg. I should have told you in my other letter that we have a peacock and two guineas on our farm, too. Whenever the peacock gets hungry he will come up by the window and then we will have to feed him bread because he won't eat anything but that. He sometimes struts by the window. How many of the Corner cousins have seen a peacock strut? We get from 18 to 20 eggs a day. Mama is going to put them down in water glass to keep them for winter. It is very pretty in this valley where I live. There is a mill up above our place. They just ran it not very long ago. There was a mill up here before this one. It got on fire and we didn't know how it happened. We are going to work pretty hard this summer. Isn't this war awful? Can I still be a Corner cousin? I can tat and crochet but I can not knit yet. I crocheted a yoke for myself and I took it to the fair and got the second prize on it last fall. We have three cats and their names are Tabby, Tom and Skinny. Skinny is a little cat and is very cute. She does a lot of tricks, too, such as standing on her hind legs and fighting with Tabby. We have 10 calves to feed every morning and night. We have been shooting with my uncle's gun and I shot at the target that my brother George made, about four inches from the center, and all of the boys shot the rest. If I have a twin I wish they would write to me. How do you like my letter?—Luella Venneberg, Manson, Wash. (We are surely glad to hear from Cousin Luella. Come again soon. Aunt Nellie.)

**"Life by the Ocean Waves."**

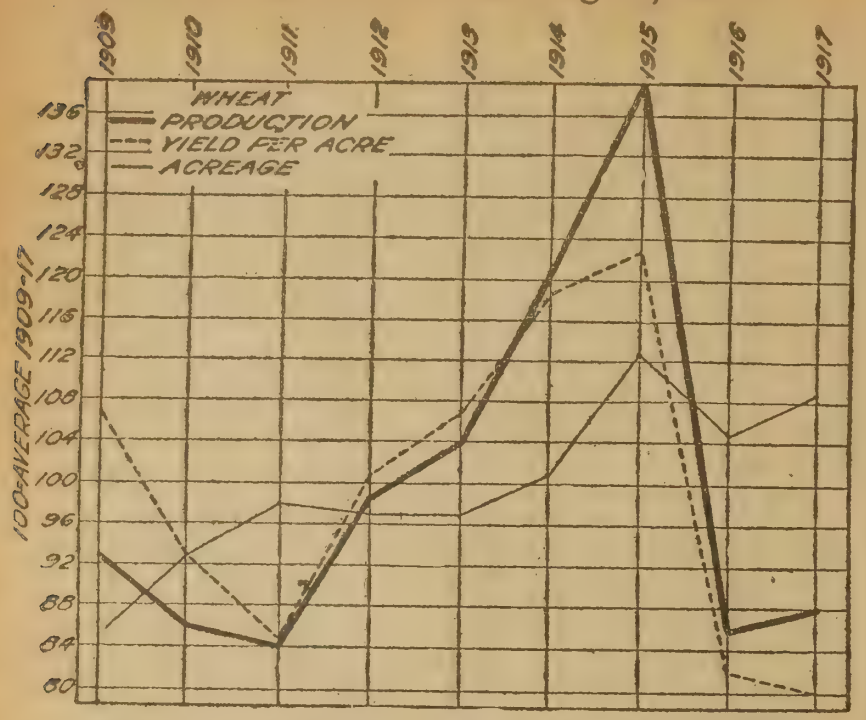
Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I live on the peninsula with the ocean on the west and Shoalwater bay on the east. Whenever we get hungry for some mud clams we put on boots, take a shovel and bucket and go about six or seven hundred feet and begin digging. The clams have a black, hard, thick shell. The ocean is about two and one-half miles from our farm. When we want to go razor clamming on the beach we get up early, take the shovel and buckets and get in the car and start off so you can get there before the tide is coming in. The beach is covered with logs and boxes out to the hard sand and there are jelly fish, sea cookies and other things that come in with the tide. Every once in a while a whale comes in. I am in the seventh grade and am 12 years old. My birthday is March 22. Have I a twin?—Hazel Wade, Nahcotta, Wash.

**Knitted 20 Blocks for a Quilt.**

Dear Aunt Nellie: I have been reading the Children's Corner and enjoy the letters very much. I am going to describe myself so you will know who I look like. I was 13 last September 1, 5 feet one inch tall, red curly hair, brown eyes and fair complexion. I weigh 86 pounds. If I have a twin I wish she or he would write to me. I have five brothers and four sisters. Their names are Dortha, Velma, Grace, Gladys, Roscoe, Loyd, Cecil, Lester and Marvin. I have been going to school at Pleasant Valley, district 32, but our school is out now. Our school organized a Junior Red Cross last fall and worked all winter. I knitted 20 blocks for a quilt and all of us knitted five quilts.—Beulah Garner, R. R. 1, Rice, Wash.

**A Quilt for the Red Cross.**

Dear Aunt Nellie: This is my first letter to the Corner and I would like to join it. I am 8 years old and will be 9 years old August 23. I have one brother and two sisters. My brother's name is George. Have I a twin? If I have I would like to hear from her or him. I enjoy reading the Corner letters. We have an incubator and a brooder. We have a cow and one calf. We have seven pigs and one cat and 18 horses. My brother and I have a Shetland pony. His name is Captain. My school closed April 25. I live on 508 acres of land. We made a quilt at our school for the Red Cross. We had a Junior Red Cross at our school. I hope the Corner will grow.—Saloma Zier, Box 241, Odessa, Wash.



**Annie Writes to Us Again.**

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I enjoy reading the letters. My letter was in print the first time. Every week I look for the Farmer. We have nine cows. Their names are Rosey, Goldey, Fanny, Minna, Lillie, Brownie, Beauty and Star. The heifer's name is Babe. We have four calves: Midgy, Bessie, Nancy and Buster. We have 24 little chickens and about 150 hens. Our cats' names are Snake and Frank. The dog's name is Bessie. I have blue eyes and brown hair and a light complexion. Have I a twin?—Anna Pearson, R. F. D. 3, Ferndale, Wash.

---

During the past week Aunt Nellie has received letters from the following cousins: Agnes Boman, Zennie Stauffer, Agneta Brulin, Esther Phinney, Dorothy Phinney, Bertha Schoepke, Gladys Faulkner, Beatrice Smith, Jane Osborn, Mary Strand, Mary Teagarden, Philinda Frisk, Alice Watson, Lillian Litzenberger, Gladys Leak, Stella Lambert, Velma Johnson, Alice Knapp, Nellie Ruark, Anna Sanwick, Olive Cummins, Elizabeth Brown, Alma Fender, Bertha M. Lundberg, Lois Manchester, Hilda Thompson, Dornie Nowlen, Lena Nowlen, Malvina Benner, Evelyn Olsen, Pearl Olsen, ——— Chalenor, Bessie Ross, Sophie Havlicak, Alice Gronewald, Esther Jensen, Eunice Martin, Ruth Zwaschka, Orleana Easterling, Adeline Thompson, Ruby Brown, Irene Pearson, Anna Blanche Chambers, Violet Dingerson.

# Yield Per Acre Is Dominating Influence

The valuation in total production of a crop in one year as compared with another is due to change of acreage or to change of yield per acre. Of these two factors the yield per acre is the more important, says the Monthly Crop report of the department of agriculture in considering the yearly fluctuations in production in the United States.

This fact is shown graphically in the accompanying chart, not only for wheat production, but for other leading crops, such as hay, oats, cotton and so on.

## Write for Information.

The readers of this paper are again reminded that a great information bureau is maintained for them at Washington, D. C., the national capital, and that it will serve them free of all charge except postage. It is maintained as one of the means this paper takes of serving its subscribers. If there is any question upon which you desire information, simply write to the address given below. If you want a personal letter in reply, enclose a 3-cent postage stamp but no other money. No pay is asked or accepted for the service. If you want any one of the bulletins or pamphlets that the bureau has on hand enclose a 2-cent stamp but no other money. Here are some of the booklets that you may receive:

Book on Canning.
"German War Practices."
Book on Colds.
Garden Book.
Book on Knitting.
War Cookbook.
Book on Navy.
Book on Drying Fruits.
Book of Recipes.
Bread Book.
"How War Came to America."
Book on Household Pests.

Don't address your inquiry to the state office of The Farmer, but be sure to address it as follows:

**THE WASHINGTON FARMER INFORMATION BUREAU, Washington, D. C.**

# To Have Heros' Corner

Through the bureau of navigation the navy department is now collecting photographs of all men of the service who have lost their lives in service against the enemy. To perpetuate the memory of these men who have made the sacrifice their pictures are to be preserved in the various training stations of the country. Secretary Daniels has requested that these photographs be sent to the department by the next of kin.

As rapidly as these pictures are received copies are made and the originals returned to the owners. A photograph of each man is then forwarded to the training station where he began his career in the service. There, a memorial gallery of honor or a hero's corner is formed so that for all time the faces of the men of the navy who have made the supreme sacrifice may be honored by the youths of the future sent to the station for training.

Relatives of men who have been lost in the present war who have not received requests for pictures are asked to mail them to the department for this memorial. All pictures should be securely wrapped after they have been marked with the name, branch of service and training station the young man entered after enlistment. These should be addressed to the Recruiting Division, Bureau of Navigation, Navy Department, Washington, D. C. When copied, the photograph will be returned to the sender with one of the copies.

## Depths and Areas of Oceans.

| Names | Greatest Depth in Feet | Area Sq. Miles. |
|---|---|---|
| Atlantic | 27,366 | 24,536,000 |
| Pacific | 30,000 | 50,309,000 |
| Indian | 18,582 | 17,084,000 |
| Southern | 28,200 | 30,592,000 |
| Arctic | 9,000 | 4,781,000 |

# Faces Feed Problem

(Continued from page three.)

he had been able to receive indicated satisfactory results, with a corresponding increase in the pork production in these districts.

W. S. Thornber of the Washington State college extension department urged upon hog producers that they feed only those things not valuable for human food; that they never try to raise hogs without pasture to carry them until finishing time, and that every effort be made to grow and fatten them on the cheapest food possible, even though it required a longer time.

Professor Thornber urged that the county agents prepare shows where the boys in pig clubs may compete with each other for honors. He also urged that the agents cooperate with the boys in marketing their pigs and that they instill the idea of community cooperation by assisting them in shipping cooperatively to market.

He presented figures showing that 1127 boys in the state of Washington were known to be raising pigs under the supervision of the state college extension department. Each of these boys has at least one brood sow and several of them have as high as three to five. Yakima county leads the number that have reported, with 116. The following is the way the pig club boys are distributed throughout the state by counties: Pend Oreille, 18; Spokane, 109; Asotin, 3; Garfield, none; Columbia, 6; Walla Walla, 34; Whitman, 52; Adams, 7; Lincoln, 3; Stevens, 66; Ferry, 2; Okanogan, 23; Douglas, none; Grant, 10; Franklin, 18; Benton, 89; Klickitat, 28; Yakima, 116; Kittitas, 2; Chelan, 42; Whatcom, 55; Skagit, 60; Snohomish, 48; King, 42; Pierce, 86; San Juan, 3; Island, 19; Kitsap, 6; Clallam, 4; Jefferson, none; Grays Harbor, 55; Mason, 3; Thurston, 22; Pacific, 19; Lewis, 53; Wahkiakum, 11; Cowlitz, 18; Clark, none; Skamania 5.

### Raise Hogs Here, Says Iddings.

Dean E. J. Iddings of the college of agriculture of the University of Idaho told the county agents that it was a mistake for the farmers of the Inland Empire to feel that hog production should be left to the corn belt of the middle west or that hogs should be grown in the west and finished in the middle west. He said that the Inland Empire has the natural advantages for the complete and successful production of pork, and urged that the industry be stimulated widely though conservatively. He urged that those beginning the hog business on a small scale should be urged to begin it along the best lines possible. Strictly first-class animals should be used as foundation stock, and the best known methods of handling and feeding should be followed. He expressed doubt as to the advisability of raising fall pigs, feeling that fall pigs required grain or other concentrated feed at a period in their lives when their growth should be made on pasture.

R. B. Bean, representing the United States reclamation service on the Tieton irrigated project of the Yakima valley, told of successful hog production in that section by the use of alfalfa pasture and a small grain ration. Mr. Bean urged upon all raisers of hogs that they provide clean quarters, with clean water and plenty of shade. A relentless war, he said, should be waged against vermin of all kinds, and he especially urged the necessity of feeding regularly and properly balanced rations.

E. F. Rinehart, field animal husbandman for the University of Idaho, told of conditions affecting the hog industry in southern Idaho, where much of his work is done. He expressed the conviction that farmers should always raise a little grain to supplement pasture. He especially recommended barley for this purpose. He also urged that a small ration of grain feed of some kind be given while the hogs were on pasture, and cited figures to show how a little grain increased the value of forage.

As a result of the conference of county agents, which was held under the auspices of the Spokane Chamber of Commerce, it is probable that the agents of the Inland Empire, including eastern Washington and northern Idaho, will at an early date form an Inland Empire county agents' association. The meeting at Spokane was of much value to the agents, as it enabled them to discuss numerous problems together and approach solutions for them. A resolution was adopted thanking the Spokane Chamber of Commerce for making possible the conference. The agents were the guests of the chamber at a noonday luncheon on Friday, following which the discussions of the morning session were continued.

## New Dairymen's Association.

As a result of a dairymen's meeting called some time ago by the Grays Harbor county agricultural council, a dairy organization to be known as the Grays Harbor Dairymen's association, has been organized at Satsop, Wash. This association was formed on invitation from the United Dairy association of Washington, which has for its purpose the upbuilding of the dairy industry in this state. It has 150 members. Directors have been elected as follows: W. F. Darby, Montesano; W. J. Wharton, Satsop; Ransom Minkler, Elma; Lee Foster, Satsop; David Dey, Porter; E. E. Sweitzer, Oakville; J. Porter, Porter; O. M. Gordon, Summit, and John Murphy, Montesano.

Mr. Ashur Hobson, state director of farm markets, assisted the organization, by request from the farmers.

## System and Order Count.

To the Editor: I have learned that order and system count most in housekeeping. Also that when each member does his share toward keeping house, labor is lessened.

MRS. G. H. FULLER.
Caldwell, Idaho.

### Food on Transports.

Two hundred and ten thousand meals were served on a United States transport on a recent voyage. One hundred and eighty varieties of food were used in making up the menus, and this ship carried 750,000 pounds—3750 tons—of food. Flour, potatoes and beef were the three big features on the menu.

## News for Breeders

It is said that the community cattle breeding associations in Washington and Oregon numbered more than 100 in 1917. They are claimed to represent more than 100,000 head of cattle.

Joseph P. Cotton, head of the live stock department of the national food administration, has announced that hereafter the government will accept beef carcasses for army use weighing as low as 400 pounds. A movement is being made to get the British government to take like action. The food administration says that hereafter the condition of the animals offered will be first consideration. One in prime condition weighing 400 pounds would be preferable to one weighing more, but in less satisfactory condition.

George J. Cannon, who resides 14 miles north of Spokane, Wash., is a believer in good stock, though his principal business is not stock-raising. He has a small herd of good Berkshires, and has placed an order for a purebred boar with a New York breeder to head his herd. Mr. Cannon's idea of the utility cow for the average farm is reflected in his own stock. They are the kind that produce both meat and milk. When he has a calf that he does not wish to keep for either milking or breeding purposes, he can develop it for meat marketing. Another thing about Mr. Cannon is his policy of making friends with his stock. He goes up to them anywhere and they seem to enjoy a little chat with him.

The Breeders' Gazette says that the horse shortage is a reality, not a fiction. It says that there is a tendency for farmers to buy rather than raise their horses, and then argues that "one farmer can not buy a horse unless some other farmer bred a mare four or five years before and raised the colt." It is also pointed out that the only thing that delays large exportation of horses to the European battlefields is lack of ship space. Give us shipping space, says the Gazette, and farmers will have to compete against the allied governments when buying horses. It adds: "The breeder will profit by this condition."

## Herd Pasturing on Clover

The photograph above shows the Jersey herd of E. Jernstedt, near Carlton, Ore. Mr. Jernstedt purchased his foundation stock at the Bert Pease sale a few years ago. These cattle were of Ed Cary breeding and Mr. Jernstedt has used a Cary bred bull, a son of Rosaire Olga Lad, for a herd sire on both his purebred and grade cattle. He will soon eliminate all his grades and will then have a very high class Jersey herd. As soon as practical he will do official testing. Mr. Jernstedt pastures on clover until June. Then he turns the cattle in the orchard, which at that time furnishes fine pasture for about 15 days. He then cuts green vetch and oats until they are ripe enough for silage. Mr. Jernstedt feeds summer silage when pastures are dry. He gets better results than with poor pasture but not as good as with good pasture. For winter silage, however, Mr. Jernstedt says there is nothing so good as corn and he is depicting a good crop this year. H. A.

### Will Show Guernseys.

C. L. Hawley & Son of McCoy, Ore., will show Guernseys for the first time this year. It must be remembered that the son in this firm is still only a boy, but he is quite a dairyman and will be the principal showman. Mr. Hawley's hay crop is short and his rape crop is short, but his hay is of excellent quality and he expects to have his stock in good show condition, as every calf from his old herd sire, Gold Finder, is a show animal. Mr. Hawley will also exhibit a few Lincolns this fall and has a choice lot to pick from. H. A.

### Willamette Valley Jerseys.

Mr. and Mrs. George Connor of Albany, Ore., have 14 Jerseys on official test. All but two will go away over the requirement for the register of merit and they have a good chance to qualify, though the dry weather has a deterrent effect. All the Connor Jerseys are milked only twice a day and are stalled in rigid stanchions. Silage was fed until in June. Unfortunately the pastures are at their worst where the silage is gone. Mr. Connor has recently purchased a young bull, a son of Zamolia Nutwood, that has made a world's record for milk at 15 years old.

### Hundred Pounds Fat in Month.

To the Editor: I note in your recent issue an article entitled "Olson Has Honor Cow"—a native bred with the production of 96 pounds of fat. This is certainly wonderful for a native-bred animal, but it is not the highest in the state for April, as Goldie'e Nehalem Beauty, according to the reports of the American Jersey Cattle club, made over 100 pounds in April. CLIFFORD F. REID.
Portland, Ore.

**Cattle Killed by Road.**

A notice posted along the route of a certain southern railroad states that during 12 months 2792 head of cattle, horses and sheep were killed by the trains. This is the equivalent of one million pounds of food, and would be sufficient to feed 70,000 soldiers for 30 days.

## SHEEP

### SHEEP FOR SALE

Registered Shropshire, Oxfords, Lincoln, Hampshire and Cotswold rams; 50 head registered Shropshire ewes; 3000 stock ewes, Lincoln, Cotswold and Shropshire breeds; 500 ewes, lambs, Cotswold and Lincoln ram lambs. Write for prices.

**EARL WOOD.** **Silverton, Oregon.**

### SHROPSHIRE SHEEP

**Shropshire and Hampshire Rams**

Registered stock. Spring lambs and yearlings. No ewes for sale.
**GRANT B. DIMMICK, Oregon City, Ore.**

**SHROPSHIRE SHEEP.**
SHORTHORN CATTLE.

Choice yearling and lamb rams. A few high class young bulls.
**FELZER BROS.,** **Tangent, Ore.**

### CHESTER WHITE SWINE

REGISTERED
O. I. C.
**SWINE**

A few good gilts also choice young pigs. Write me. Ringgold Farm, J. H. West, Prop., Centralia, Wash., R. 1, Box 157.

### RED POLLED CATTLE

**Red Polled Cows**

Registered stock. A few head now offered for quick sale. Best for beef and milk.
**F. H. PORTER,** **Halsey, Ore.**

### HEREFORD CATTLE

**Highland Stock Farm**

offers for sale Hereford bulls, 1 or 2 years old. One or a carload.
**PLATT BROS.** **Genesee, Idaho.**

# Breeders' Department

## JERSEY CATTLE

### High Producing Jersey Stock

**Golden Maid's Prince,** sire of three Register of Merit daughters. One, beginning at 1 year 10 months, produced 341.27 pounds 85 per cent butter in one year; two junior yearlings, 480.40 and 450.08 pounds. Five more, over six months on test, will average over 600 pounds. He was grand champion Oregon State fair, 1913.

**Monmouth Noble**—4 Register of Merit daughters. Three 2-year-olds produced 482.10, 401.30 and 377.07 pounds butter, and one, beginning at 1 year 10 months, 427 pounds.

**ABOUT 25 HEIFERS**

From 8 months to 2 years old. Several to freshen this fall. All daughters of above bulls and nearly all out of Register of Merit cows. Heifers are well grown, typy, best of udders and some are extra fine show animals. Write for full particulars or call and see them. Will be sold very reasonably.
**WM. SCHULMERICK,** **Hillsboro, Ore.**

### From High-Producing Ancestry

Registered Jersey bull, eight months old, light fawn, from register of merit dam. Sire St. Mawes Noble. Good straight type. Price very reasonable.

**J. C. BROWN & SONS,** **Shedd, Ore.**

### DUROC-JERSEY SWINE

**OVER 150 SPRING PIGS.**

Sired by our grand champion Richards Defender, Richards Pathfinder and Cherry King Orion Jr., and out of our big type prize winning sows.

In the last three years at the Utah and Idaho state fairs our hogs won 76 champion and first prizes.

Can furnish unrelated pairs. Satisfaction guaranteed or money refunded. Priced very reasonable.
**Richards Live Stock Company, Virginia, Ida.**

### Registered Duroc Jersey Pigs

My herd contains the blood of old "Defenders," "Pathfinder," "Illustrator," and Burl's Good E. Nuff. Big type prize winning sows. Guaranteed to please.

**V. R. FISHER,** **Oxford, Idaho.**

**REGISTERED DUROC-JERSEY HOGS.**

Some good spring litters Richards Defender and Pathfinder breeding; big type. Send out nothing but high class stock. Guaranteed to please. Write me for prices on these pigs.
**ERIK W. OLSON,** **Virginia, Idaho.**

**OTTO'S DUROC JERSEYS.**

Get in line for a real boar pig for Sept. delivery. Also gilts and sows bred and open. The kind that is up to date.
**L. S. OTTO,** **Filer, Idaho.**

**AVONDALE STOCK FARM.**

Registered Duroc-Jersey hogs. Inspection invited. Correspondence solicited.

**H. C. POLLY.** **Route 3, Burley, Idaho.**

**DUROCS.**

Boars and open or bred gilts of excellent breeding.
E. E. PRICE, CABINET, IDAHO, OR
**JAMES N. PRICE.** **Yakima, Wash.**

### POLAND CHINA SWINE

**Big Type Poland Chinas**

Peter Mouw and John B. Lawson strains. Young boars and bred or open gilts. Good individuals.

**CLIFFORD RIGGS,** **Touchet, Wash.**

**GREENLEAF STOCK RANCH.**
Big type Poland China, either sex, for sale at all times.
**Wilson Bros., A. L. Wilson, Mgr.**
Greenleaf, Idaho.

**BIG TYPE POLAND CHINAS.**
Herd headed by Sammy (79833). Correspondence Solicited.
**Fruitland Stock Farm, C. Royston, Mgr.**
Payette or Fruitland, Idaho.

### TAMWORTH SWINE

**ROUND KNOLL RANCH NO. 3.**
Herd headed by Knoll Slope Colonel, assisted by Jolly Lad IV. Correspondence solicited.
**Bliss, Idaho.**

### BERKSHIRE SWINE

**Berkshire Hogs for Sale**

Have a number of sows, 18 months old; will farrow second litter this fall. Also young gilts and boars of all ages; all from prize winners. Write for prices.

**EARL WOOD.** **Silverton, Oregon.**

**Riverby Orchard Berkshires**

Riverby Orchard Berkshires won 12 out of 15 first prizes at the Washington state fair, 1916, also many prizes, including grand champion sow at the Panama-Pacific world's fair. We offer for sale a few good boars and young sows.
**D. C. BUNN,** **Prosser, Wash.**

**FOR SALE VERY REASONABLY**
or exchange, registered Jersey bull, Jonquil of Lebanon, 134649, dropped April 18, 1915. Also a yearling, Taurus of Lebanon, 155275, dropped Feb. 2, 1917. Both of these have good pedigrees.
**V. K. FROULA, R. F. D. 3, Lebanon, Oregon.**

## HOLSTEIN CATTLE

### 365-DAY HOLSTEINS

23,667 lbs. milk—1026 lbs. butter—is the 8 O. advance registry, yearly, record of the dam of the yearling bull we are offering for sale. Fine individual. Good breeding. Ready for service.

THE HERD WITH YEARLY RECORDS.
**WESTERNWOLD RANCH, Prineville, Ore.**

### HOLSTEINS

Steno Farm is now offering a few high class reg. Holstein bull calves. Out of ARO cows and sired by one of the finest bulls in the west. Priced right.

**STENO FARM,** **C. F. Williams, Mgr.**
Mead, Wash., R. No. 2.

**Registered Holsteins**

Finely bred bull calves for sale at prices that are an inducement for you to finish raising them.
**H. R. BOOMER.** **New Plymouth, Idaho.**

### HOLSTEINS

Well-bred young bulls for sale.
**THOS. CARMICHAEL.** **Gaston, Ore.**

**REGISTERED HOLSTEINS.**

Bull calves for sale, with good A. R. O. backing.
**BEEBE BROS., R. F. D. 2, Rupert, Idaho.**

## GUERNSEY CATTLE

### ROSE CITY HERD

Yeksa, Gov. of the Chene, Sequel and May Rose strains. More prizes at Oregon state fair, 1916 and 1917, than any other exhibitor for number of cattle shown. A few choice animals of both sexes now offered.

**W. A. GOODIN,** **Cornelius, Oregon.**

**Yearling Guernsey Bull**

GOLD FINDER'S TITAN, out of imported dam; splendid milker. A sturdy, vigorous young bull, with strong individuality and splendid breed type.

**HAWLEY & SON, McCOY, Ore.**

## SHORTHORN CATTLE

### LELAND BROTHERS

Breeders of top registered Shorthorn cattle. Correspondence solicited.

**WENDELL,** **Idaho.**

**REGISTERED SHORTHORN COWS.**

Young bulls and heifers, sired by Scotch bulls; liberal terms.
**CALDWELL CATTLE CO., Caldwell, Idaho.**

## AYRSHIRE CATTLE

**EDGEWATER FARM**

Only one bull left, calved Dec. 14, 1917, with high producing dam; grand dam and great grand dam both world's record cows.
**ELBERT M. CHANDLER, Burbank, Wash.**

## ABERDEEN ANGUS

**Aberdeen Angus Cattle**

**A. H. EAGLESON & SONS.**
Boise, Idaho.

**In writing advertisers, be sure to say that you saw their advertisement in this paper.**

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, July 22.—Pronounced weakness developed in the corn market today owing principally to bearish crop reports and to big receipts. The close was unsettled, 1 7-8c to 2 5-8c net lower, with August $1.48 1-4 to $1.48 1-2, and September $1.49 3-4 to $1.50. Oats finished 7-8c to 2 1-8c off. In provisions the outcome ranged from 2c decline to 10c advance.

Field conditions for corn were almost ideal and arrivals of about 625 carloads here were far above the average for this part of the season. The market accordingly began to decline at the outset, but an unexpected scarcity of selling orders made shorts uneasy and led to covering, which lasted until mid-session and brought about material upturns. After the demand from shorts had become exhausted, however, the market weakened rapidly.

Oats reflected the action of corn. Rural offerings were larger and threshing advices favorable

Announcement of the placing of big orders from the government gave firmness to provisions and so, too, did higher prices on hogs

## Seattle Wheat.

SEATTLE, July 20.—The primary Coast terminal price of $2.20 against $2.26 at Chicago, fixed by the grain corporation, is causing a readjustment of conditions which will govern the wheat trade of Washington this year, according to statements of millers and grain dealers today. Millers state that it will be practically impossible for them to grind Washington wheat and sell their flour in competition with eastern manufacturers in the southeastern territory, which they invaded three years ago with telling effect.

It is expected that some Washington wheat flour will be sold in the southeast this year because of its preference for pastry, but no big volume of the past will be moved. California's terminal rate being the same as at Seattle, competition there will be difficult. Wheat in that state will be exhausted before the middle of the season and California millers will be compelled to buy either wheat or flour here. This will ease the problem of finding an outlet for Puget sound flour.

The government will buy on the open market, purchasing from the lowest bidder. Millers do not expect that as much flour will be needed for the allied armies as last year, and the government's purchases then were less than 50 per cent of the total output. There remains to the Coast millers only the markets of Alaska, Honolulu and the Philippines, and the oriental markets are being well taken care of by the Japanese.

There is a well-defined feeling among dealers that the government, en being assured that the wheat crop will be near to normal, will remove all substitute restrictions and open the flour and wheat distribution to commercial avenues entire.

It is expected that not only the wheat crop of Washington and Idaho, but 30 per cent of the Montana yield will enter through this port because of its superior loading and shipping facilities. Crop reports this week, as based on reliable field estimates by millers' agents, are more encouraging. It is estimated that this state will produce 45,000,000 bushels, with 55,000,000 for the three states. Not to exceed 10,000,000 bushels above 1917 is the expected yield for the three states. No blight or rust has yet appeared.

## Portland Market.

PORTLAND, Ore., July 22.—Two leading city creameries are in a butterfat fight and are paying as high as 53 cents at country points; where the competition is not so keen, the old price of 51 cents prevails. The local market on prints is unchanged. Cubes drag and the undertone of the market is weaker.

Egg receipts are falling off steadily and the market is moving up. As high as 47 cents is being quoted on selects With the laying season over poultry is coming in in large quantities and the market on hens is very weak. Veal receipts are also liberal and prices are weak with 16½ cents the top. Pork is steady at 23½ cents.

Oregon peach receipts are increasing, but the demand is good and prices hold up, ranging from 85 cents to $1.50, according to quality. New potatoes are in moderate supply and moving at 3½ cents

There was no valuing of wool the last week owing to the absence in California of Administrator Green, but small lots were distributed to the mills.

Eggs—Oregon ranch, current receipts, 41c; candled, 44c; selects, 47c per dozen.

Poultry—Hens, 23@25c; broilers, 26c; ducks, young, 30c; geese, nominal; turkeys, nominal.

Veal—Fancy, 16@16½c per pound.

Potatoes—New, 3½c per pound.

## Spokane Market.

With the arrival of two carloads of new potatoes from California Monday, wholesaling at $4.25 per hundred pounds, and the announcement that three more carloads are on the way, the threatened shortage of tubers in Spokane is being relieved.

"At this time it is usual for the Spokane market to depend largely for its potato supply on Walla Walla," said R. M. Rutledge, assistant in market surveys.

"This year that district has been unable to supply its own home demand, hence, the dislocation of the Spokane market."

**Peaches**—Rail arrivals unreported. Washington-Snake river district, boxes, Triumph, some unwrapped, $1.25; App Beauty, $1.25; Oregon, Freewater district, boxes, Triumph, few sales at $1.50.

**Apricots**—Arrivals unreported. Market steady. Washington-Snake river district, 4-basket crates, $1.75; small size, $1; peach boxes, medium size, $1.25. Wenatchee district, 4-basket crates, $1.75, few at $1.90.

**Cantaloupes**—No fresh arrivals reported. Market strong. California, green meat, unwrapped standard 45s, $5; pony 54s, $4.75; flats, 12s and 15s, $2.

**Blackcaps**—No fresh rail arrivals. Market steady. Home growns, 24-pint crates, $3.50.

**Radishes**—No fresh rail arrivals. Market steady. Home-grown, 25@35c per dozen bunches. Mostly 25c, few 40c.

**Raspberries**—Express arrivals, 21 crates, Idaho. Washington arrivals unreported. Market steady. Washington, Puyallup district, 24-pint crates, quality and condition good, $3.

**Dewberries**—No fresh arrivals. Market steady. Home growns, 24-pint crates, $2.50.

**Pears**—Rail arrivals unreported; market steady. Wash-Hoover district, Bartletts, $2.50.

**Plums**—Express arrivals, nine crates Washington; market steady. California: Four-basket crates, all varieties, $2.25. Oregon-Dalles district: Four-basket crates peach plums, quality and condition good, $2.00. Washington-Snake river district: Four-basket crates peach plums, $1.50.

**Tomatoes**—Express arrivals, 60 crates, Oregon; market steady. Oregon-Dalles district; Moving slow, 20-pound box No. 1, $3.00; No. 2, $2.50. California: Four-basket crates, repacked, $1.75. Washington-Yakima district: Twenty-pound box, $2.00. Freewater district: Twenty-pound box, $2.50.

**Peppers**—Rail arrivals unreported. California: Few sales; per pound, 15c. Washington-Snake river district: Quality and condition good; peach box, $1.00, $1.50.

**Wholesale Meats.**

**Beef**—Beef steers, 13½@20c lb; cow beef, 11½@15½c lb; heifers, 16½c lb; best loin, 25@30c lb; steer chucks, 11½@12½c; prime ribs, 22c lb; rump and round, 19c lb. round, 19c lb.

**Mutton**—Breakers, 21c lb; wethers, 20c lb.

**Lambs**—Diamond T. C. lambs, 28c lb; lambs, 27c.

**Pork**—Packer dressed hogs, 26@27c lb; pork loins, 31@32c lb; legs, 30c lb; shoulders, 25c lb; leaf lard, 28c lb; tenderloins, frozen, 40c lb; spareribs, 15c lb; country dressed hogs, with head on, 21c lb to producer; country dressed veal, 14c lb to producer.

**Smoked Meats**—Washington hams, 34c lb; T. C. hams, 35c lb; T. C. bacon, 48½c lb; Washington bacon, 39½@43½c lb; picnics, 24c lb; English bacon, 35c lb.

**Star Brand**—Hams, 35c lb; Shield hams, 33@34c lb; picnics, 24c lb; bacon backs, 25@34c lb; Star bacon, 46½@48½c lb; Shield bacon, 49@43½c lb; Simon Pure lard, $17.50 case; Shield lard, tierces, 26½c lb; White Cloud compound, tierces, 26½c lb.

**Dry Salt Meats**—Clear bellies, 26½@27½c lb; loin backs, clear, 27½c lb.

**Lard**—Tierces, 26½c lb; $13.99@14.74 case; Diamond T. C. pure leaf lard, $15.50 case, $7.90 half case; Snowcap compound, tierces, 23c lb.

**POULTRY.**

**Live Poultry**—Live hens, 18@20c lb; spring chickens, 28@30c lb; roosters, 12½c lb to producers, f. o. b. Spokane.

**GASOLINE, LINSEED OIL, ETC.**

**Barley**—Rolled, $70 per ton.
**Oil Meal**—$75 per ton.
**Hay**—Timothy, delivered, $37 by carlad; alfalfa, $30 per ton delivered, $29 by carload.

## Portland Wheat.

PORTLAND, Ore., July 22.—Millers are preparing to place mixed feed, or mill run, on the market in place of the bran, shorts and middlings heretofore sold. This mill run will contain all the above products and will sell at the fixed government price of $24.44 bulk net at mills in carlots. The sacked price will be about $31.25 or $31.50 at mill doors. The present best price on bran is $31 and on middlings and shorts $33.

Several cars of new crop wheat have been received. The mills are working on a small quantity of old wheat to supply local flour requirments.

The coarse grain markets are weak in sympathy with the declines east. At the local exchange, $61 was bid for sacked oats $56@58.50 for bulk oats; $66@68 for bulk corn; $53 for feed barley and $55 for brewing barley.

## Butter and Eggs.

PORTLAND, Ore., July 22.—Butter: prints extra 49@50; cubes extras 45½; prime first 44; dairy 33. Butterfat, Portland delivery: No. 1 sour cream 51.

SAN FRANCISCO, July 22.—Butter, 47@52. Eggs, fresh extras 48; fresh extra pullets, 45c. Cheese—young American not quoted; new firsts 24½.

CHICAGO, July 22.—Butter steady; creamery 38½@43½. Eggs, higher; receipts 13,913 cases, firsts 38@38½; ordinary firsts, 35½@36½; at mark cases included 35½@38.

**HOPS.**

NEW YORK, July 22.—Hops, quiet; state medium to choice, 1917, 35@43c; 1916, nominal; Pacific coast, 1917, 20@23c; 1916, 14@16c.

**COTTON.**

NEW YORK, July 22.—Spot cotton, quiet; middling, 33.15c.

**LINSEED.**

DULUTH, July 2.—Linseed, spot, 456; arrived, 440.

**CORN HARVESTER** Self Gathering for cutting Corn, Cane and Kaffir Corn. Cuts and throws in piles on harvester. Man and horse cuts and shocks equal to a Corn Binder. Sold in every state. Price only $25 with fodder binder. The only self gathering corn harvester on the market that is giving universal satisfaction.—Dexter L. Woodward, Sandy Creek, N. Y. writes: "3 years ago I purchased your Corn Harvester. Would not take 4 times the price of the machine if I could not get another one." Clarence F. Huggins, Speermore, Okla. "Works 5 times better than I expected. Saved $40 in labor this fall." Roy Apple, Farmersville, Ohio: "I have used a corn shocker, corn binder and 2 rowed machines, but your machine beats them all and takes less twine of any machine I have ever used." John F. Haag, Mayfield, Oklahoma. "Your harvester gave good satisfaction while using filling our Silo." K. F. Ruegnitz, Otis, Colo. "Just received a letter from my father saying he received the corn binder and he is cutting corn and cane now. Says it works fine and that I can sell lots of them next year." Write for free catalog showing picture of harvester at work and testimonials.

# Profits for the Farmer

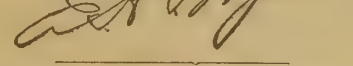
## Will Check the Drift to Cities

There is a profound significance in the rise and fall of rural life. It was a dream of certain of the ancient Greeks that they could keep their citizens poor and compel them to live the simple life and thus retain that high courage, strong physique and simple virtue which would insure the stable and endless state. But they, too, like all the rest, bowed their stubborn necks to the sword of the conqueror and perished as an independent state.

The young life, the pioneer life of any people, is without much doubt the wholesomest and best. It is in truth "The Golden Age" of any race, which, just as in the traditions, is always in the past.

We are apt to err in trying to compare the small, isolated state of an earlier day with the great world-wide nationalities of today, with their minute divisions of labor and their complex civilizations. Man "does not live by bread alone," and the meeting of his wants, and his needs, too, requires functions which seem to preclude the simple organization, political and economic, which once may have sufficed.

Nevertheless, the maintenance of a large rural population is now and always will be of the highest importance to the stability and longevity of the state. Although "not by bread alone" is a wise dictum, yet nothing will create social and political unrest so quickly and so radically as the lack of bread.

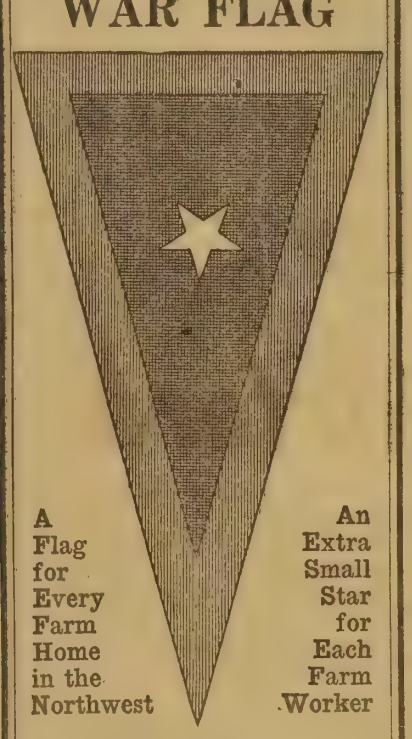


**Man, hungry, without the means of a supply, becomes a savage beast, and all social and political forms give way to his fury.**

The story of the rapid and dangerous movement from country to town, in America, belongs chiefly to the last 50 years. The census tells the story. Our census uses the terms "urban" and "rural," classifying as rural all those living in the open country, also those living in towns of 2500 population or less, and as urban those living in cities and towns of over 2500 inhabitants. This division, therefore, does not classify the farmer and all others, for in the village and small town, the merchant, the skilled artisan class, and the professions of law, medicine, the ministry and teaching are well represented in the smaller towns, and are in the class of consumers of agricultural products and are not producers.

The "urban" population has increased since our first census as follows: 1790, 3.35 per cent; 1800, 3.97; 1810, 4.93; 1820, 4.93; 1830, 6.72; 1840, 8.52; 1850, 12.49; 1860, 16.13; 1870, 20.93; 1880, 29.5; 1890, 36.1; 1900, 40.5; 1910, 46.3. In the hundred years constituting the 19th century, our urban population thus increased more than 1000 per cent, and our rural population decreased almost 500 per cent of the whole population. If one applies the correction to ascertain the truly agricultural population he is startled to ascertain that it is but barely over 40 per cent. And the conditions of life and the alluring profits which have led men from the country to the town, from farming to anything else, are still in full force and effect and the end is not yet. I am no prophet of evil and not a pessimist by nature or practice, but I say that unless this movement is checked, it spells disaster to our country.

The one positive check is profits. "What, not profits when the cost of all food stuffs is already so high?" "Yes, more profits to the farmer. Similis similia curantur. 'Like cures like,' as the homeopaths say." It is the only cure, and it will be effective if properly applied.



A square deal is what the farmer needs and is what he has not had. Will he get it? If he doesn't, we must send a few more lawyers to congress to get it for him.

**43 Bill Granted Rhode Island.**

The smallest bill against the state of Rhode Island to appear in the house was passed recently, the measure being a resolution for the payment of sundry accounts to a company amounting to 43 cents.

THIRTY REGISTERED GUERNSEYS.
Owing to the unsatisfactory labor conditions, we have decided to sell 30 head of our Guernseys. This consignment consists of a few good aged cows in calf, 12 heifers, two years past, now on test, average production for May 1078.5 pounds milk. These heifers are bred true to type, nicely marked fawn and white and show splendid udder development; most all safe in calf and are from high producing dams. They are sired by LANGWATER EMIGRANT 14076. His dam has A. R. record of 13,352 lbs. milk, 625 lbs. butter fat. They are also granddaughters of imported KING OF THE MAY 9001. There are six heifers coming two, bred, six bull calves and several heifer calves, six months or under; also one bull of serviceable age, whose four nearest dams average 13,934 lbs. milk, 677 lbs. butter fat. These Guernseys are of the GREAT MAY ROSE FAMILY, are direct descendants of imported May Rose King and Dolly Bloom. This is the banner show herd of the northwest, having won first prize in get of sire, produce of dam and breeder's herd at the various fairs of Oregon and Washington, 1916 and 1917. These Guernseys are good specimens of the breed and are priced to sell. For further description and prices write
MIDDLEDALE FARMS, GOSHEN, ORE.

# Garford MOTOR TRUCKS

## A Farmer Recommends Garford

The Garford Motor Truck Company, Lima, Ohio.

Gentlemen: We are glad to recommend the Garford Motor Truck. We have been a user of this motor truck for nearly a year and have had no expense whatever, except for oil and gasoline.

We use it to haul farm products to Baltimore. In busy season it is on the road every day. It is a ton truck and I have hauled 60 bushels of potatoes in one load, going to the city in less than an hour. We live 16 miles from the city.

I am glad to know that you take an interest in the motor trucks after they are in the hands of the user.

We are well satisfied with our Garford, and it has given us satisfaction in every respect. It is well built and runs nice and smooth as a touring car.

The Garford Motor Truck is just what the manufacturers claim it to be, a good "Motor Truck."

PETER ROHDE.

# Harvest Is On

## Northwest Yields Vary Widely

Harvest is rapidly getting into full swing throughout the northwest and the results are about as predicted. Some sections are reported to be yielding fair crops while others are almost failures. For the northwest as a whole the yield is probably about half normal. Probably the best report comes from the Lewiston, Idaho, section, which draws its wheat principally from the Grangeville and partially from the Moscow and Genesee districts. The yield in those districts is claimed to be almost up to normal and the increased acreage over previous years is believed to be bringing the total output to even above normal. The showers of the last few days have served about Moscow, Genesee and Grangeville to add considerably to the yield of the late grains.

Reports from Walla Walla, Wash., indicate fair yields, some fields going as high as 25 to 30 bushels to the acre. In the foothill districts of the mountains some yields are going as high as 40 bushels to the acre, but yields are low in the lighter lands.

Reports from the Winona and La-Crosse section of Washington indicate wheat running something like 10 to 15 bushels to the acre, though some fields yield higher than this and others lower.

Ritzville, Wash., reports wide variance in the yields, some fields being hardly worth harvesting and others producing from 15 to 25 bushels to the acre. A report from Colfax indicated that the yield of the Palouse country may average somewhere around 18 bushels, though it is a little early as yet to give definite figures on that section.

The Big Bend country is reporting wide differences in yields. Many crops are considered scarcely worth harvesting, while others yield 15 to 20 bushels.

# Crop Yield Very Light

OTHELLO, Adams county, Wash., July 20.—Looking at the crops in this vicinity, one would feel as though it was a total failure. The spuds failed to materialize and none will be dug. Combines are cutting some fields and the yield is from one and one-half to three bushels per acre, and the combines in use are mostly of the two men size. It is rumored that there will be no threshing machine start here as the fields that are being cut and put in stacks have without exception only one stack in a field.

When a man puts 320 acres in one stack it is going pretty near the raw edge of nothing. There is plenty of labor to care for all the work, and farmers are exchanging work. There is going to be a great shortage of feed here if snow comes early and the stock will have to rustle their

living amoung the thistles. Some are talking of putting up thistle hay during August, and a ton of it is far better than a snow bank.

A. O. LEE.

## BEETS A HALF CROP.

### Yakima Fields Not Total Failure.

Contrary to reports that were recently sent abroad the sugar beet crop of the Yakima valley will produce a yield well worth caring for this season. Owing to the unusual drouth and hot weather, it appeared for a time that the beets were so seriously damaged as to render many fields worth no further cultivation and irrigation. But later reports indicate that they have revived to considerable extent and it is now predicted by C. B. Wood, county horticulturist, that an average yield of 12 tons to the acre will be harvested throughout the valley. This is only about half a first class crop. Some of the crops that were sown early will be approximately as good as last year, it is stated.

## PEA CROP SHORT.

### Seed Should Be Saved This Year.

The shortest garden pea crop in years is apt to be the net result of this year's activities. Lack of sufficient soil moisture at the critical growing time, together with aphis infection probably not equaled in 15 years, accounts for the shortage. Two practical conclusions suggest themselves to the farm family fortunte enough to have anything like a normal crop: First, can or dry all the peas possible for this winter's use; and second, save seed from the best producing vines for next year's planting.

## Australia Has Much Wheat.

The national food administration has received information showing that nearly 300,000,000 bushels of wheat are stored in Australia at the present time. The total guaranteed price to the farmer in Australia is 95 cents a bushel, it is stated. The Argentina guaranteed price is $1.44. With the increase in shipping, due to the tremendous efforts made by this government and the other allies, it will be possible for much of the Australian wheat to be transported where needed by the allied army, but at the present time comparatively little of it is being transported, because of inadequate transportation.

**Builders of Prosperity**

The great irrigation project adds to the country's wealth by making arid land fruitful. The "Caterpillar" Tractor achieves a similar result by providing cheaper, more efficient power for cultivation. Both are builders of prosperity.

Cheaper, more efficient power means bigger profits, less work, less worry. The "Caterpillar" Tractor excels in this respect because of correct design, correct construction, correct choice of materials, backed by thirty-five years' manufacturing experience. These make the "Caterpillar" Tractor a most profitable investment.

Vol. 41. No. 31 THE RANCH PACIFIC DAIRYMAN HORN AND HOOF August 1, 1918

## Increase Fall Wheat Acreage

### *Maximum Production Is Urged by Government*

The farmers of the United States are asked by the government to sow 45,000,000 acres of fall wheat this year. This is an increase of about 7 per cent over last year's acreage, when the fall wheat sown was 42,170,000 acres.

Northwestern farmers are asked to increase last year's fall acreage as follows: Washington from 422,000 to 754.000 acres, an increase of 80 per cent; Idaho from 302,000 to 377,000, an increase of 25 per cent, and Oregon from 562,000 to 590,000, an increase of 5 per cent. Montana is asked to duplicate last year's acreage of 775,000 acres without increase. These acreages are the least that are required, and the government is anxious that they be increased in all cases possible. The increase asked of the state of Washington is the largest percentage of any state. Iowa is next with a requested increase of 31 per cent. While the minimum acreage urged for the entire nation is 45,000,000, it is hoped by the department of agriculture that this will be increased to 47,500,000 when actual planting is done.

From the smaller acreage a harvest of 636,000,000 bushels might be expected, it is estimated, and from the larger acreage 667,000,000, based upon an average yield of 15.7 bushels an acre and an abandonment of 10 per cent of the area sown on account of winter kill. The plan fixes definite acreages by states, and in a campaign to be launched immediately by the department, the state agricultural colleges, farm organizations and leading farmers throughout the country, growers will be asked to make good their state quotas. The recommendations regarding the planting of spring wheat and other spring crops and regarding live stock will follow later.

In announcing its wheat production program the department considers the growing needs of this country and its allies for this essential food. The last crop report forecasted a 1918 harvest of 890,930,000 bushels of winter and spring wheat.

Although this forecast is gratifying, it is pointed out that the reserve supply or carry-over of wheat this year is practically exhausted and is the smallest on record. The need of building up reserves of wheat is evident. It is pointed out that although this country produced a small wheat crop in 1917, the total exports of wheat in excess of imports, including flour in terms of wheat, amounted to approximately 100,000,000 bushels for the year ending June 30, 1918. This is in comparison with 178,000,000 bushels exported in 1917, 236,000,000 bushels in 1916, and 331,000,000 bushels in 1915. It was only possible for the United States to export wheat in large quantities in 1915 and 1916, because of the large wheat crops of 1912-13-14-15, which gave this country an accumulation of stocks of this grain. The 1916 and 1917 crops both were smaller than any crops since 1911.

Moreover, it must be borne in mind, says the department, that the carry-over in all the 10 importing countries of Europe was practically exhausted this year before the new harvest; that the normal consumption requirements of the exporting countries are increasing with the growth of population instead of diminishing, that some losses in storage and transit may be expected to continue, and that it is highly desirable that a surplus should be accumulated as insurance against partial crop failure next year. To provide for these additional requirements it is, therefore, extremely desirable that the maximum acreage of winter wheat recommended be planted by the farmers in the United States this fall.

### Smut Bulletin Is Issued.

Professor G. E. Thornton of the department of engineering at the State College of Washington has prepared a new bulletin entitled "Prevention and Protection From Smut Dust Explosions and Fires in Grain Separators." This bulletin is now ready for distribution and should be secured by all farmers and threshermen who have any smutty grain to thresh this season. The bulletin is illustrated so that the devices for carrying away smut and preventing electric igintion may readily be understood by those who study it.

### Makes No Investigation.

The state council of defense at its recent meeting did not begin the investigation of the situation that arose at the convention of the state grange at Walla Walla in June, as had been planned. Owing to the fact that the matter had been called directly to the attention of the federal government, the state council decided that it would leave the investigation to the federal authorities if one were to be made.

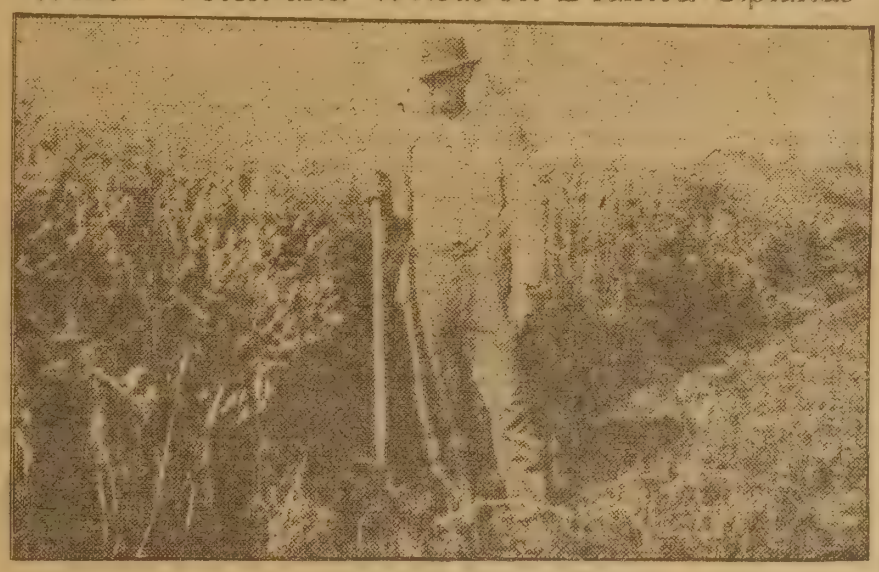
### Selling Mole Skins.

The Castle Rock high school class reports that the members have sold $75 worth of moleskins, says L. S. Keyes, Cowlitz county agriculturist.

**THE BALANCED RATION** includes something besides corn and silage and hay. It includes a moral element, an element of peace and contentment. A frightened or angry animal can not extract the nutriment from silage nor assimilate it even when extracted. The farmer who produces tons of feed, but fails to give it with a liberal portion of peace to every forkful has missed one of the first principles of successful feeding.

### PASTURES ARE SHORT.

### Milk Production Is Cut Down.



Deputy State Dairy Commissioner Van Houten has been investigating milk marketing conditions in Seattle, and as a result of his activities half a dozen or more dairy stores have been formally charged with selling milk without a license.

Dairy conditions throughout western Washington reflect weather and labor conditions, the former forcing dairy farmers to begin feeding silage and hay to splice out pasture shortage in what is usually the best pasture season, and the latter forcing some of the producers to cut down their herds for want of milkers. Several city retailers report considerable difficulty in securing enough milk for their trade.

### Special Articles Begin in Orchard Department

Every orchardist and every farmer who has a few fruit trees should begin reading the series of articles by Dr. Granville Lowther in the orchard department of this paper. The series deals with the diseases and pests of orchards and their remedies. The first instalment will be found in this issue. They will run regularly for several weeks. It would be well for those readers who do not keep a permanent file of The Farmer to clip these articles as they are published and paste them in a scrap book for reference as needs arise.

## Winter Vetch and Wheat on Drained Uplands

"This fall I am going to plant all my drained upland to winter vetch and wheat," is what Pete Munson of Ferndale says. "I believe more farmers in this locality could grow this crop to an advantage. Last year I planted my winter vetch and wheat in the month of October. In the spring, when hay is scarce and pasture is short, I feed it direct from the field to my milch cows. This spring I fed it to my horses. What I don't use as a green feed I make into hay or let ripen for seed. I seed it at the rate of 80 pounds each to an acre. I don't believe it would produce a large yield on bottom land that is not drained. It is likely to drown out during a wet winter. However, if one can not grow the winter variety, why one can raise spring vetch."

The accompanying photograph of Mr. Munson's field of winter vetch and wheat shows what a heavy yield he obtains on his farm. Some of the vetch plants measure eight feet in length, but do not grow strictly perpendicular.

## To Aid Farmers

### Federal Loans for Those in Need

Word comes from Washington, D. C., that the government is setting aside $5,000,000 to aid farmers who have suffered unduly from the drouths of this season and last. Details of the conditions under which the loans will be made are lacking at this writing, but it is understood that no loan will be made where a farmer has security that would enable him to get money from private sources. The object of the action is to tide needy farmers over their present stress and thereby overcome any tendency there might be for some of them to leave their farms.

### PEARS IN DEMAND.

### Season Opens With Good Prices.

The pear market promises satisfactory returns to the producer this year, according to reports that have already been received. The first carload of Bartlett pears from the Yakima valley, Wash., will go at $1.80 per box, according to a statement from Yakima. Reports from Wenatchee, Wash., indicate that there are many buyers in the field at the opening of the season and that competition has boosted the price materially. It is reported that there is a strong tendency to buy pears in bulk this season, owing to the difficulty of securing containers. Indications are that there will be a comparatively heavy crop throughout the northwest, though some districts have suffered a shortage as in other fruit crops.

### Coming Events.

August 19-25—Convention National G. A. R., Portland, Ore.

August 27-29—National Farmers' conference, Washington, D. C.

Fairs, Shows, Exhibits.

August 26-30—Southwest Washington fair, Centralia-Chehalis.

September 2-7—Spokane Interstate fair, Spokane, Wash.

September 16-21—Washington state fair, Yakima, Wash.

September 19-21—Roundup, Pendleton, Ore.

October 1-6—Western Washington fair, Puyallup, Wash.

November 7-13—Northwest live stock show, Lewiston, Idaho.

### Ridgefield Farm Makes Good.

Prunes and strawberries, together with other products of a diversified farm, have made the farm of A. P. Sutton of Ridgefield, in Clark county, a paying proposition, according to figures. He expects this year to harvest an excellent crop of prunes from his orchard and has already made a net profit of over $680 from his strawberry patch.

### Lindbergh Case Is Dismissed.

Following the action of the Minnesota state supreme court in dismissing the cases against A. C. Townley, president of the National Nonpartizan league, and Joseph Gulbert, a league organizer, the case against Charles A. Lindbergh has likewise been dismissed. Lindbergh was charged with the spread of unpatriotic sentiment, as were also Townley and Gulbert.

### Will Ship Many Sheep.

It is reported that the Yakima valley probably will ship 100 carloads of mutton sheep to the markets of the middle west during the month of August.

### Iron Ore in China.

Iron ore is found in almost every Chinese province, but it is mined extensively in only a few.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on acconut of disease in stock sold through these columns.

## *No Sacrifice Is Too Great*

We sometimes want to complain about regulations that we have to live up to during this war period. Sometimes we want cheaper things to eat; sometimes we want more pork than we are allowed; sometimes we think the food administration is too drastic in its sugar regulations. But these regulations require no sacrifice at all compared to what hundreds of thousands of people in Europe are daily and hourly making. No sacrifice we can possibly make is too great if it will help to hurry men and powder and steel to the battle front to blow Prussianism to the inferno prepared for the devil and his angels from the foundation of the world.

The fair season is coming on. Prepare to learn something of value from the exhibits and demonstrations.

## *The World Record Mistake*

Who holds the world record for mistake making? William Hohenzollern, emperor of Germany. He made the most colossal mistake of all history when he undertook to compel the civilized world to submit to inhuman brute force; when he undertook to terrorize France and England and Belgium and Italy and America into submission; when he cast aside all laws of God and man and slaughtered and maimed and outraged on every hand without cause and without reason. He is now beginning to pay the penalty for his error. Defeat, utter and humiliating defeat, awaits him. Had he been half human instead of 100 per cent fiendish in his methods of warfare, he would not have had the whole world arrayed against him, and the evidence indicates that mastery of Europe would have been his.

Cowless milk is the latest. It's made from rice and beans. We'll use the cream from it on our wheatless mush and our sugarless fruit.

## *Are Serving Nation at Home*

There are several occupations at home that afford those engaged in them opportunity to do more for the cause of world democracy than they could do on the battle front. One of these occupations is that of the county agricultural agent. As a rule the county agent is a young man, strong of physique and mind. He must be so if he is to be a successful agent. Some of them are eligible in every particular for service in France Many of them would actually prefer to be over there. But their duty is here. Their duty is to inspire greater food production on the farms and to assist the farmers in living up to the inspiration to the highest possible degree. Though the struggle in Europe may call them, and though they may long to heed the call, they are loyally serving when they stick by their posts of duty at home and help send wheat and meat to those equally fitted for service there but less fitted for this vital service here.

Before long the fourth Liberty loan campaign will be with us. It is now time to plan our investment. We must make it as large as possible.

## *Do Enough, but Not Too Much*

Now is not the time for enthusiasts to undertake to do big things in the line of food production. It is rather the time for hundreds of thousands to do little things. Comparatively few people are fitted either by training or circumstances to do things on a big scale, but nearly every one is fitted to do something and do it well. It would be a stupendous accomplishment for 10,000,000 families in the United States to produce a war garden, each sufficient to supply half of the vegetables the home requires. It would be a great thing for 50,000 farmers who have not been producing pork to raise the pigs from one brood sow. It would be immense for 100,000,000 people to save one ounce of food daily that would otherwise go to waste.

No man or woman should fail to have a legal will made and filed. We know neither the day nor the hour when we will find ourselves unable to attend to even this little bit of business.

## *Must Grow Both Wheat and Meat*

The county agents are right in their contention that the nation's thought must not become so concentrated on wheat production that the production of live stock will be seriously reduced. Every effort should be made to produce the maximum of both, for both are absolutely necessary for the feeding of the people of this country and those dependent upon us. Man can not live by bread alone.

It becomes a problem for deep study how to maintain the live stock industry on the best possible basis without interfering with the production of wheat. In the first place, every kernel of grain of any kind that might ordinarily go to waste must be saved, as must every straw of hay or forage. Every piece of land unsuited to the production of wheat, but upon which some feed crop can be grown, should be cultivated to the feed crop. Every effort should be made to stimulate pastures and meadows. Methods of fertilization should be studied. And then, when all this is done, every farmer should coldly calculate just to what extent he should sacrifice wheat land to the production of further feed for his stock. He should sacrifice as little of it as possible, but he should not lose sight of the crying need for the maintenance of the live stock industry on as efficient a plane as possible. Looking beyond the needs of the present war time it is not difficult to see a shortage of stock that it will take several decades to overcome.

If the boys of this country can give up their business life just as they are entering it and go to work for Uncle Sam on the battle front for $30 a month, surely those of us who stay at home need not complain if we have to pay taxes and buy Liberty bonds.

## *Away With German Peace!*

Germany is again offering to make peace, and the unfortunate fact is that there are many people in the war-tired world that are anxious to consider anything that looks like possible terms. Two features of Germany's so-called peace offer should make the allied world continue the struggle without a moment's relaxation, but with redoubled determination. Here are those two features: The disposition of Belgium shall remain a question to be settled at the conference of the warring nations, and the peace treaties now existing between Russia and Germany and Rumania and Germany shall remain intact.

Heaven forbid that any man or woman of any of the allied nations should give one iota of consideration to such diabolical suggestions! Allow Belgium, that little nation of heroes and heroines who stood between Paris and German vandalism while France rallied to the defense of civilization in the terrible days of August, 1914, to be a trader's pawn at the conference of nations? Not while God is in heaven! Allow Rumania, that faithful little ally who gave in only when her only friend at hand, Russia, fell a victim of treason and fanaticism, to remain the helpless slave of Teuton and Turk? Allow Germany to entrench herself in the vast and rich domain stolen from the disorganized people of Russia and thus insure the world in a few decades another epoch of agony such as that through which we are now passing? Not while the high sense of justice that brought England and America and France to arms endures! Germany fails to include the one all-essential condition of peace among her proposals: the utter abandonment of the Prussian system of government.

How many folks have looked up at the clouds that came with the cool weather and predicted a wet harvest?

## *There Will Be a Reaction*

There was never a time when there was so much money in the United States as at this time. It is a period of stimulation, caused by war activities. Then, should we not save in order to tide us over a period of reaction and hard times that is bound to come?

Is there any saving so safe as the government's promise to pay?

Did you ever know an action unless it were followed by reverse action, as in the case of a pendulum of a clock swinging to and fro, the bouncing of a ball when hitting a hard substance, the bending of the treetops in the wind? Did you ever overstimulate the emotions without a depression followed? Did you ever spend a night in carousing without "the morning after?" Did you know that the incoming tides always go out again? Do you know that calm always follows storm? Did you know that revolution is always followed by reaction, and that the tendency is toward counter-revolutions? This is what the allies are hoping for in Russia.

Of course you know all of these things, or at any rate, a considerable number of them. Then, if you do, you know that there will be a reaction following the overstimulation caused by the war, and you know it is the part of wisdom to prepare for it.

If the boys in France are to bring home the bacon, figuratively speaking, we must first ship it over to them. Therefore, "A sow on every farm" should be our motto.

## *We Must See the Unseen*

There are few farmers who grub their soil only for the living they may make. There are other motives behind their activities. What do we feel as we look at our fields well tilled, our full granaries, our clean, well equipped barns, our neat gardens, our sleek, productive stock? Our first and strongest feeling is one of pride. We have justified our choice of an occupation. We have made good.

The farmer looks at a stubblefield and he can see it, first, turned over by the plow, then worked up under disc and harrow; then in its first greenery; then in its harvest season. He sees in his imagination the grain that it will yield being ground into flour, and even the soldiers of our land and those of our allies eating the bread and pronouncing it good.

We do not mean that the farmer or anybody else should forget material values. A good living and a decent profit is what everybody should have; it is right. But let us not forget the other values beyond the physical, for without them there would be no progress. The man who realizes spiritual as well as material values in those things with which he works is worth most to the world and to himself.

If the slacker's conscience doesn't hurt him now he is probably too dead spiritually to fear to face the boys who come back from the front.

The difference between the allies and the Germans is that the allies are fighting to make the world safe for democracy while the Germans are fighting to make the world safe for Hohenzollernism.

# Four Years Ago the War Began

## *Events to Date Are Stupefying in Number and Complexity*

Four years ago this week the world was being plunged into war—a war the magnitude and horror of which was inconceivable to even the most prophetic statesmen at that time. Never in the world's history were so many staggering events crowded into one brief space of time.

On July 28, 1914, Austria-Hungary declared war on Serbia, ostensibly because that little country would not humiliate itself by an ignoble apology for the murder, supposedly by a Serbian subject, of an Austrian noble. Germany's lust for world dominion was the power back of that declaration, and Germany leaped at the chance it offered of bringing on the war. Events followed with startling rapidity.

Russia rallied to defend her sister people, the Serbians. On August 1 Germany declared war on Russia. On August 2 Germany sent an ultimatum to Belgium demanding free passage for her armies for an advance on France. Belgium refused to grant it. On August 3 Germany declared war on France and ordered her troops to march through Belgium. On August 4 England sent an ultimatum to Germany demanding that the neutrality of Belgium be respected. Germany refused to respect it, and on the same day England formally declared war on Germany. The same day President Wilson issued a proclamation declaring the neutrality of the United States. On August 6 Austria declared war on Russia.

Thus declaration followed declaration until France, England, Bussia, Italy, Serbia, Turkey, Rumania, Bulgaria and Belgium were engaged in a death struggle.

On September 6, three days more than a month after Germany's declaration of war on France, her armies had ravaged Belgium and northern France and had reached a point on the Marne river almost within siege-gun range of Paris. And there the heroic French proved their heroism by stopping the drive in a battle that will go down through all history as one of the world's greatest, the first battle of the Marne.

### The Second Battle of the Marne Is On.

That was almost four years ago. Then France stood alone on the Marne, defending not only herself but the civilization of the world. Today British, Italian, French and American soldiers are fighting side by side for civilization only a short distance from where that first great battle of the Marne was fought. And as France won then, the combined forces of human justice are winning today.

The eyes of the world are eagerly watching the struggle on the Marne salient of the 300-mile battle front. There the Germans are receiving their most staggering repulse of the war. They are fighting desperately not only to stave off this repulse, but to prevent the loss by capture of many thousands of their troops in the pocket between Soissons and Rheims. Reports seem to indicate that the allies have captured no less than 30,000 Germans since the beginning of the allied counter attack nearly three weeks ago, and upon the turn of the events of any day depends the possibility of the capture of large numbers more or of their escape through a successful retreat. The German losses in killed, wounded and captured since July 20 on the Soissons-Rheims line are estimated all the way from 100,000 to twice that number, though no official figures are available. It is estimated by military authorities that Germany has had her man power reduced by approximately 1,000,000 men since she launched her first great drive against the British the latter part of last March. In the meantime the allies have lost heavily. But the allied man power is gaining, not losing, for the Americans are sending troops across the sea at a marvelous rate. American forces in France now total approximately 1,300,000 men.

### Great Results Accomplished in a Year.

A year ago the number of American troops going to Europe had not begun to assume large proportions. A few regulars and some national guardsmen had been sent to France, but most of the big military training camps were still being built and the men selected as the first contingent to be called to the colors were still in citizens' clothes. Until the first day of August, 1917, the total number of American soldiers taken overseas was 26,967.

Soon after that date the movement of troops was accelerated. Thousands were dispatched across the Atlantic during the winter months, but it was not until the great German offensive was started late in March that the movement began to assume really noteworthy proportions. The figures for the months from August 1, 1917, to July 1, 1918, follow:

August, 18,323; September, 32,523; October, 38,259; November, 23,016; December, 48,840; January, 46,776; February, 48,027; March, 83,811; April, 117,212; May, 244,345; June, 276,382.

Official figures for July have not been announced, but the increase was even greater than that shown in previous months.

### Fighting Continues to Be Satisfactory.

During the last week the results of the fighting in the Marne sector have been satisfactory to the allies. No overwhelming gains have been made, but progress has been made consistently. The Germans have been unsuccessful in their counter attacks in more than checking the speed of the Americans, French and British. While most of the gains have been made on the Soissons side of the salient, the enemy has been compelled to retreat from the southern point of the pocket until all the gains made by his drive of three weeks ago have been lost again, and territory taken by the allies in addition north of the Marne. Vigorous blows have been struck by General Foch and his armies on both sides, threatening to cut the Germans off and result in the capture of all in the pocket. Just enough fighting has been directed at the point of the pocket to make it impossible for the Germans to retreat rapidly, thus aiding in the attempt to capture a large portion of them.

### Germany Offers Preposterous Peace Terms.

Unofficial reports say that Germany has sent suggestions for a peace conference to Spain to be delivered to the allied governments. The terms as reported are preposterous, and undoubtedly will receive no serious consideration at the hands of the allies. They leave the real terms to be agreed upon at the conference, though some of the requirements set down by the German government are wholly impossible of acceptance by the allies. The terms as reported are as follows:

First—Germany wants no annexations or indemnities in the west.

Second—The peace treaties with Russia and Rumania may not be questioned.

Third—The principle of self-determination of peoples has not been discussed, but may be settled at the peace conference, where the fate of Belgium also is to be settled.

Fourth—The Balkan question is to be settled around the conference table.

Fifth—The freedom of the seas, the dismantling of Gibraltar and the Suez canal and the right of Germany to use coaling stations.

Sixth—The colonial question is to be settled on the basis of the status quo.

### What Will German Strategists Do?

Some military experts are predicting that the Germans will strike a blow somewhere as soon as possible to divert the allies from their drive in the south. Some believe that this strike will be made against the British in Flanders or Picardy, in the north. Others believe that the Germans are not in position to make this strike, but that they have concentrated all their efforts on the drive toward Paris. It is claimed that approximately one-fourth of the entire German forces is engaged in the battle on the Soissons-Rheims front. It is known that as many as 52 divisions are engaged on this front.

### Americans Join the Italian Army.

It is officially reported that American troops have reached the battle front where the Italians are fighting the Austrians. There have been American aviators on this front for some weeks, but this is the first official report of American troops in any other department reaching the aid of the Italians. The last week has been one of gain for the Italians, though no spectacular advances have been made. Most of the fighting has been what might be called of minor importance, but it has served to improve the positions of the allied forces on that front.

### Herbert Hoover Takes Trip to Europe.

National Food Administrator Herbert Hoover is now on a trip to European capitals, conferring with allied authorities on the food situation. While he emphasizes the gravity of the food situation and urges the utmost effort on the part of producers and consumers alike to keep the available supply for the soldiers at the maximum possible, Administrator Hoover says that the efforts already made have averted the crisis. A continuation of the efforts toward both production and consumption will ultimately win the war, he declared in London last week.

### Strikers Must Go to Work or Fight.

Munitions workers to a number approximating 300,000 have been threatening to strike recently in England. The government has taken hold of the matter with an iron hand, declaring that every man of military age who strikes will be drafted into the army immediately.

### May Increase Excess Profit Taxes.

Steps are being taken by congressmen to make up the shortage of about $1,600,000,000 in excess profits taxes. It may be that the taxes on profits will be increased to make it up. It was the original intention that these taxes should raise $6.000,000,000, but they are falling far short of this amount.

### Get a Farm Service Flag.

The man, woman, boy or girl who stays at home and works hard to produce necessaries for the soldiers in Europe are entitled to real war service recognition. That is the idea back of the Washington Farmer's farm service war flag. It is pennant, shaped, made of the good old red, white and blue, and has a star representing the producing farm home. Small stars are added to represent each worker of that home.

.....

**Convenient Order Blank.**

THE WASHINGTON FARMER, ..... 1918.

Review Building, Spokane, Wash.

Enclosed, find five cents (5c), for which please send me a Farm War Service Flag (printed on enamel paper) with ..... extra small stars for farm workers.

Name .....

Box ..... State .....

## *Washington Gleanings*

Fifty ornamental trees and shrubs have been donated for Palouse's new park by individuals.

The Weavers' club of Kettle Falls recently presented the city with an elegant wool bunting flag, 9x15 feet.

Dr. Robert Prior of Yakima has been notified of his appointment as chief of the United States wool bureau in this state.

A canning club has been formed at Eatonville, with Mrs. Norwood, leader; Ida Hedborg, president, and Norine Norwood, secretary.

Grays Harbor County Game Warden L. J. Esses is now engaged in the distribution of 100,000 trout fry in the streams of the county.

The Lynden cannery paid out more than $7500 during the month of June for cherries, at the rate of four and five and a half cents a pound.

Centralia is endeavoring to raise a war chest fund of $60,000, from which the Red Cross chapter and all the various war charities will be supported.

The need of something sweet to substitute for sugar has already aroused unusual interest in bees, sugar beets for home sugar and syrup making and the like.

F. M. Audrain, emergency secretary in state club work, who has just finished inspecting the garden and pig clubs of Skagit county, reports splendid progress in the work.

Military drill will be a part of the high school curriculum in the second semester of the coming school year at Yakima, if plans outlined by the school authorities are carried out.

The Hoquiam Commercial club has undertaken the task of repainting all the signboards on the Olympic highway between Olympia and Hoquiam and to the beaches and Lake Quiniault.

The Grangers' Warehouse company at Ferndale has been organized with a capital stock of $3000. The incorporators are C. B. Legoe, C. C. Ireland, W. U. King, Fred M. Randall, Enos Strode, C. E. Flint and R. C. Bartruff.

In the river and harbor bill, which President Wilson has signed, is included an appropriation of $250,000 for the improvement of the lower Columbia, $18,000 for the Lewis river, $6000 for the Cowlitz river and $500 for Grays river.

Cooperation is receiving a boost from the necessities arising out of the labor situation. Reports are more common than ever before of communities cooperating in providing their own labor to meet the needs of the rush seasons.

The first car of Bartlett pears this season was shipped out of Grandview July 26. The price paid for the shipment was $45 a ton, cash to the grower. There is a large crop of pears and a considerable number of growers are contracting at $40 a ton for the crop.

Public schools in Vancouver are to open late this fall, September 16, in order that the students may assist in harvesting the fall crops, particularly the prune crop. Many of the Clarke county country schools are opening early in August with the expectation of closing again during the prune harvest.

With the quality as fine as the valley has ever produced, but the yield showing a decrease compared with last year, peaches are coming to Wenatchee shippers from the orchards in and around Wenatchee. The prevailing price seems to be 75 cents. During the season last year 233 cars were shipped from the valley.

Pend Oreille county farmers have organized a live stock association for the purpose of community shipping and buying of feed. The officers of the new association are P. J. Sullivan of Cusick, president; Olaf Lamon, Deer Valley, vice president; E. J. Bachelor, Newport, secretary-treasurer. These with D. M. Edens of Spring valley, and P. D. Tulles of Deer valley, constitute the board of directors.

"Every bushel of grain in this vicinity will be harvested whether the labor situation improves or not," is the answer of business men of Pullman to the request of the Whitman county farmers for assistance in solving the labor problem. Papers circulated by the agricultural committee of the chamber of commerce seeking pledges for farm work in case of emergency by the business men of Pullman are being largely signed.

The war department has sent Engineer Baker to examine the mouth of the Nooksack river, where a log and snag jam exists. This action is in response to a request that something be done to lower the level of the river so as to lessen liability of damage from overflow water. Engineer Baker says that a snagboat will soon remove the obstruction. It is estimated that the removal will lower the river's level about three or four feet.

Twenty-six millers and grain buyers of Lincoln county organized the "Big Bend Millers and Grain Dealers' association," with A. M. Applegate of Harrington as president, Charles Huffman of Mohler, as secretary. Basing their prices on federal rates it was decided to pay $2 per bushel for No. 1 hard white bulk grain, and $2.09 for sacked grain. Grain that grades No. 2 will be 3 cents less, and No. 3 will bring 7 cents less than for first grade wheat. This provides for a charge of 20 cents a bushel and of this amount 13 cents represents freight charges to the Coast.

# Must Combat Soil Washing

## *Losses From This Cause Severe in Many Districts*

While there are hundreds of farms throughout the northwest that have suffered severely from soil washing and where, therefore, remedial measures alone must first be resorted to, the fact remains that in general the elimination of the cause of washing should be the first consideration.

It would appear that washing occurs primarily because the soil lacks power to absorb water. If it were able to absorb and hold a large amount of water without the latter running readily through it the soil elements so vital to the production of vegetation would not be lost. Therefore, one of the big questions to ask is how can the soil be made to hold a large quantity of moisture?

While there is no absolute and certain remedy for all cases, the foregoing question can be answered in a general way as follows: See that there is a large amount of organic matter in the soil, see that it is plowed deep, see that furrows or implement marks run around the hills rather than up and down them, and see that the soil does not lie exposed and unprotected during the rainy season.

The rotation of crops in such a way as to keep a well rooted crop on land that is likely to wash is considered one of the best preventive measures against washing. This idea in a large number of cases can well be carried out during the fall and winter months by the planting of some crop that will get a start in the fall and serve as a protection to the land during the fall, winter and early spring. In some districts rye has been found successful for this purpose and in addition has proved of value as a forage crop during a portion of that time. Any crop adapted to the conditions of a given district might be used to serve the same purpose in a greater or less degree. Organic matter which is of the utmost value to the production of crops aside from the question of soil washing may be placed in the soil by a number of methods. No straw should be wasted on a farm where washing occurs. It should be worked into the soil and allowed to be transformed into humus, assisting in binding the soil together during the rotting process and greatly increasing the soil's absorbing power both then and later. Cover crops may frequently be turned under with the double result of increasing fertility and reducing the loss through washing. This is true especially of clover, alfalfa, rye or the like.

---

THOSE of us who stay at home and follow our usual easy going ways will take a Back seat when those who are winning the war come back. They are learning lessons of efficiency that will fit them for leadership. It will take some of us a generation to catch up with them.

# Dry Fruits and Vegetables This Year

The following are directions prepared by experts in the United States department of agriculture for drying peas, beans and berries:

**Berries.**

Berries for drying should be allowed to become fully ripe, but must not be permitted to become soft enough to crush in picking. They should be picked in the early morning hours, before they have become heated by the sun, and should be picked directly in the vessels in which they are to be taken to the drier, in order to avoid pouring from one vessel to another and the unavoidable crushing which this treatment produces. As rapidly as the vessels are filled they should be at once placed in the shade, as ripe berries quickly soften and mat together when heated by the sun or when allowed to stand in deep containers. For this reason berries should be taken to the drier and the drying process begun with as little delay as possible after picking.

To spread on the trays, hold the vessels of berries with one hand and slowly pour the fruit from it upon the tray, using the fingers of the free hand to spread them in a close, uniform layer one or two berries deep. Avoid unnecessary handling and rough treatment, which results in crushing and injury to the appearance of the product.

No attempt should be made to wash berries intended for drying, as the wet berries will soften and mat together in the drier. Nor should one attempt to pick out mature berries, bits of stem, leaves or other debris, as the berries will be crushed by such efforts. Such foreign material may easily be removed after the berries have become partially or wholly dry.

As rapidly as the trays can be spread place them in full sunlight if sun-drying, or in the warm evaporator if artificial that is employed. Start the drying at a temperature not greater than 130 degrees in the case of red raspberries or loganberries; for other berries the beginning temperature may be 140 degrees, and, in either case the starting temperature may be gradually increased by 10 or 15 degrees as the fruit becomes half or two-thirds dry. When the fruit is sufficiently dry to be stirred without crushing any thick masses of berries which are not drying properly should be opened up and spread out with the fingers.

Berries are sufficiently dry when they no longer show moisture when vigorously crushed between the thumb and fingers, but are still slightly elastic and rubber-like to the touch. Prepare a large wooden or pasteboard box by lining it with clean paper, place it in a warm, darkened room, and provide a cover of tightly woven muslin to exclude insects. Pour the warm berries directly into this box as they come from the drier, and stir the whole mass thoroughly together every time a new lot is added and at intervals of a day or two for 10 days after the drying is finished, meanwhile leaving the box open to the air of the room but protected from insects by a muslin covering. The berries will at first "sweat," becoming quite moist, but will then gradually lose moisture and become dry and hard to the touch, after which they may be permanently stored. Return them to the drier and heat up to 130 degrees for two or three minutes to destroy any eggs of insects which may possibly be present, and place in the permanent containers before the products have cooled.

**Peas and Beans.**

Pick garden peas for drying when the pods have attained their full size, but have not begun to turn yellow. Give the shelled peas a short dip into boiling water—one minute is sufficient for most varieties, and the time should never exceed two minutes—allow them to drain for a moment, then spread on trays as uniformly as possible to a depth of about three-fourths inch. When artificial heat is used start the drying at 115 to 120 degrees and increase this to 135 to 140 degrees as the peas become almost dry.

Don't make the mistake of thinking that peas or beans can be dried in a few hours; the thick outer covering of the seed allows water to escape slowly, and many hours are required to bring the interior of the seed down to such a degree of dryness as will insure keeping. Properly dried peas or beans will be uniformly hard and dry throughout, showing no moisture when crushed to bits with a hammer.

Lima beans should be picked when full grown but before the pods have begun to dry out, shelled and blanched three minutes in boiling water, stirring them thoroughly meanwhile. Spread three-fourths inch deep on trays and dry like peas with the difference that the temperature employed may be 10 to 15 degrees higher. Be sure that the beans are bone dry before you remove them from the drier, not merely dried superficially with a wet zone at center. String or snap beans intended for drying should be allowed to become at least two-thirds grown; to pick them earlier is simply to lose very materially in the food value of the product. After picking, prepare them at once for the drier, as they deteriorate rapidly on standing. String, break into pieces as you would for the table, and blanch for five to seven minutes in boiling water which has had two tablespoonfuls of baking soda added to each gallon. The use of soda in the water preserves the natural color of the pods, which is otherwise largely lost. Spread one inch deep on the trays and dry at 130 degrees, stirring occasionally and increasing the temperature to 140 to 145 degrees when nearly dry. Dry until pieces crushed to bits with a hammer show no moist central portion.

Peas and beans which are thoroughly dried can be placed in permanent storage containers directly from the drier. Such containers should be preferably closely woven muslin bags, which should be tied tightly at the neck and placed several together in a similar but larger bag, which is in turn tightly tied.

# Don't Put Off Seed Selection

By PAUL E. TRIEM

If you have not already begun to select your seed for next year's vegetable garden, don't wait another day before doing so. This does not mean that you are to go out into the garden now and pick the ripened seed. Nature has something to say about this matter of maturity, and you can't hurry nature. But now, during the time of vigorous growth, and particularly during the harvest time soon to come, you should, without fail, select the individual plants which you desire next year's crop to resemble.

In selecting seed it is well to keep in mind the distinction between cross-fertilized and close-fertilized plants. In most cases the structure of the plant provides and insures at least some cross-fertilization. Corn, for instance, must be cross-fertilized or the strain will rapidly deteriorate. Cucumbers, squash, all of the melons, corn, tomatoes, etc., are regularly cross-fertilized, and because of this fact the progeny of this year's crop will not necessarily resemble the plants from which seed was secured. The pollen which fertilized the flower contributed half of the biological elements found in the matured seed, and this pollen may have come from an inferior specimen. Unfortunately there is no way of entirely eliminating this possibility, but by rooting out distinctly inferior plants before flowering time comes something can be accomplished.

Close fertilized vegetables and grains, such as peas, beans and wheat, are probably more easily "bred up" than are those which must be cross-fertilized. This is the principle followed at the experiment station in Sweden where such remarkable results in cereal breeding have been obtained. Most of these improved grains are the progeny, each, of a single plant.

The theory back of this one-plant selection is that so fully worked out during recent years by DeVries and christened by him the "mutation" method of evolution. According to the mutation theory, improvement in a species does not take place by slight forward steps, but rather by leaps. Out of a thousand specimens of a given flower or plant, the vast majority will develop true to type. Nine hundred and ninety-nine may do so. The one thousandth, however, may prove to be a mutant—may have made a leap forward, and in that one leap acquired a new and valuable characteristic. If, now, this mutant belongs to the close-fertilized class of plants, all that is necessary, according to the theory of DeVries and the practice of many successful plant breeders, is to isolate the strain. If in a field of wheat, for instance, one plant is found which is markedly superior to its fellows in any characteristic, the seed from this one plant should be preserved by itself until the following season, when it should be sowed in a row or patch definitely marked off from its neighbors. This second season will do much to tell whether the superior plant was a true mutant, or whether its superiority was due to accidental favoring conditions.

Volumes have been written on this subject of plant breeding and seed selection, but the gist of the matter is easily arrived at:

Save your own seed and select for seed bearing plants only such as have unmistakably the characteristics which you consider ideal or "typical." In cross fertilized varieties, eliminate early all inferior specimens. In close fertilizing plants keep the seed from each superior specimen separate and test it out during the following growing season. By devoting a little time, observation and study to this matter of selecting seed it is possible in a reasonable time to breed up valuable strains.

# Hunger, the Last Extremity of Nations

An outstanding feature at a farmers' day gathering at Moscow, Idaho, last week, was an address by President W. J. Kerr of Oregon Agricultural college.

President Kerr's address was based on illuminating facts regarding the food situation of the allies the first of April. He gave life to facts often heard of the lamentable shortage of wheat supplies, of how the American people have been urged for a year to save wheat by posters, by circulars, by talks, by newspaper articles, and yet did not seem to grasp the situation; how the government had to take the initiative, and upon the crying appeal of Lord Rhonda for 75,000,000 bushels of wheat, and to the pleas coming from France and Italy, shipped 90,000,000 bushels at once, followed shortly by 40,000,000 bushels more; thus virtually telling the American people that it was up to them to save wheat or simply go without until the harvest.

That hunger is the last extremity of nations was profoundly impressed upon the audience. I never saw more hard listening to an address. There was no attempted oratory, and scarcely any cheering; the facts were too absorbingly serious to be interrupted by any demonstrations. President Kerr, with an earnestness backed by stupendous facts of the shortage of food, made it exceedingly plain that the overthrow of the Russian government was simply due to the famine-stricken populace; that the demoralizing repulse of the Italians by the Austro-Hungarian armies was due to the same fatal condition, the Italian soldiers being reduced to one meal a day. "You can not fight on one meal a day," was the significant utterance of the speaker.

Hunger riots were beginning in France, and had not the government summarily shipped those 130,000,000 bushels of wheat during April and the following weeks, the peril of Italy subjugated and France overrun by the Huns was by no means improbable.

In a great war like that now in progress there are so many unforeseen contingencies that the situation is mighty serious until final victory. This is why trust must be placed in the hands of those who are at the head of affairs. When high government officials make an appeal it is for the people to respond without asking explanations, for these explanations may reveal facts which will sustain and heighten the morale of the enemy.

President Kerr, who has been actively engaged in war work, making frequent trips to the national capital and campaigning tours over the country, declared that there had been a marvelous change in public sentiment during the last four months. The war has entered into the hearts of the people, and while American optimism remains a great factor in the final winning of the war, yet that optimism must not hide the tremendous seriousness of the situation.

The speaker declared that 1,300,000 Americans were in Europe today, and repeated the facts showing the present astonishing output of munitions and supplies. As I understood him, and making a note of the fact, nearly 75 ships now are landing cargoes of supplies on the French coast every 24 hours. While men must be shipped, and more men, yet food and other supplies remain equally important.

Let me repeat, that it has never been my privilege to witness a more profound impression made upon men and women by a speaker than did President Kerr, standing in an automobile and talking with the moral earnestness of a man who must tell great facts in a great way.

E.A.S.

## PATRIOTISM PROVED.
### Much Flour Returned to Markets.

The people of the state of Washington have returned to the markets the equivalent of 29 carloads of flour, or more than 7000 barrels, or more than 28,000 fifty-pound sacks since the food administration called upon them to return unnecessary supplies a few months ago. The following are reports compiled covering 25 of the 39 counties of the state, and showing the number of barrels returned to markets by the people of each county:

Yakima, 332 barrels.
Whitman, 789 barrels.
Skagit, 256 barrels.
Okanogan, 475 barrels.
Lewis, 200 barrels.
Pierce, 211 barrels.
Thurston, 20 barrels.
Ellensburg, 410 barrels.
Douglas, 163 barrels.
Pend Oreille, 30 barrels.
Puyallup, 265 barrels.
Pacific, 43 barrels.
Walla Walla, 61 barrels.
Lewis, 50 barrels.
King, 376 barrels.
Snohomish, 73 barrels.
Spokane, 137 barrels.
Chelan, 2 barrels.
Benton, 6 barrels.
Ferry, 4 barrels.
Franklin, 45 barrels.
Chehalis, 140 barrels.
Garfield, 843 barrels.
Mason, 50 barrels.
Grant, 22 barrels.

# Cleveland Tractor

## A Tractor That Does The Things You Want a Tractor To Do

The Cleveland Tractor is not confined to a narrow field of service. It does the things you want a tractor to do.

It plows, it harrows, it plants, it reaps. Its great power and small size enable it to work satisfactorily in difficult, awkward places. It works efficiently under and among small trees, close up to fence corners, around boulders, on hillsides, over ditches, gullies and rough ground.

With 600 square inches of traction surface, it goes through sand, gravel, gumbo, mud and even wet clay without packing the soil.

The Cleveland Tractor lays down its own tracks, crawls on them, and picks them up again as it goes along—just like the famous war "tanks."

It does *faster* and *better* work than was possible before. It plows 3½ miles an hour—eight to ten acres a day—equal to the work of *three* good men with *three* 3-horse teams under favorable conditions.

But the Cleveland is *far more than just a tractor.* With pulley and belt, it will saw, cut ensilage, pump—and do the things you demand of a stationary engine.

In addition it can be used for hauling the manure spreader, for grading, dragging logs and pulling road machinery.

It develops 12 horsepower at the drawbar and 20 horsepower at the pulley. Yet with all this power the complete machine weighs less than 3200 pounds, and can be housed in less space than is required for a single horse.

Rollin H. White, the well-known engineer, designed the Cleveland Tractor. It is built under his personal supervision, and is constructed for long service. The track sections are joined with hardened steel pins which have their bearings in hardened steel bushings. Gears are protected by dirt proof cases and are of the same high quality as those of the best trucks. The finest materials are used throughout.

Farming today demands the most comprehensive machinery obtainable—machinery that is useful in doing *many* different things—machinery that is adaptable to widely varying conditions.

Thousands of farmers are looking to the Cleveland Tractor in the present crisis. And the Cleveland is meeting the demands—severe as they are—and is *making more money* for its owners.

It is truly the tractor that does the things you want a tractor to do.

Nearly every farm can use one or more Clevelands to speed up production and cut down costs. Write *today* for complete information and the name of the nearest Cleveland dealer.

## Care of Separator

Poor cream is very often caused by negligence in the care of the separator. The many crevices and holes in a separator bowl make it difficult to clean. The careless separator agent will tell you that all you need to do is to rinse out with warm water, then with hot, but he is interested, particularly, in selling his separator. It is absolutely necessary to use a brush that will enable you to get into the "hard-to-get-at" places. At first use warm water with plenty of nonsoapy washing powder. Then rinse in boiling hot water, leaving the parts in the water for a few minutes. When taken out shake off the water and let them hang in a clean, airy place. Do not dry the parts of a separator bowl with a towel. The supply can covers may be kept bright by rubbing with a cloth, but to be strictly sanitary no utensil used for milk should ever be dried with a cloth. There should be enough heat left in the metal from the scalding water to enable the part to dry completely by evaporation.

The practice of washing the separator only once a day, merely rinsing water through the bowl the other time, is sure to have its effect on the cream. Good cream can not be produced by such a method. A. B. M.

## GIVE CALVES MILK.

### No Real Substitute Yet Known.

For the best result a calf must have real milk as a considerable part of its feed ration. There has not yet been discovered a substitute that will actually take the place of milk, though it is possible to prepare a supplement that may in some cases reduce the cost of feeding and at the same time produce fairly good growing results. The following preparation and directions for using have been recommended:

Fifty pounds of linseed oil meal, 33 1-3 pounds whole flaxseed meal, and 16 2-3 pounds low grade flour, making a total of 100 pounds for convenience. This may be made into a milky liquid by using about 2 1-2 pounds to each two gallons of water. First scald the mixture with boiling water. Afterwards add enough water to make the entire two gallons. It is recommended that a little salt and sugar be added and that the calf be gradually accustomed to the change from real milk to this substitute by mixing a little bit of the substitute with the whole milk at first, gradually increasing the amount from day to day until the whole milk is no longer used. The substitution, however, should not be begun until the calf is at least two weeks old.

Another mixture that may help in solving the calf feed situation is as follows: Twenty-two pounds ground oatmeal, 10 pounds flaxseed meal, 11 pounds well ground corn meal, six pounds flour middlings, one and one-half pounds of salt. This mixture should be used in the ratio of three or four ounces to a quart of water, first mixing with a little cold water to remove all lumps and then adding a quart of boiling water. This should be stirred and allowed to stand until only lukewarm. The calf should be accustomed to its use gradually and in the same manner as the mixture above outlined.

## COOL MILK AT ONCE.

### A Little Delay Means Loss.

State Dairy and Food Commissioner J. B. Mickle of Oregon issues a warning to dairymen when he says that milk and cream which does not reach the factory, or market elsewhere, in first class condition, has a baneful effect on the entire market, as well as upon the marketing of that particular lot of milk. He urges upon dairymen that they arrange some method of cooling the milk immediately after it is taken from the cow. Fresh milk is just the right temperature to develop the bacteria that are the cause of spoiling. The cooling process should be rapid and should be started as soon as possible—not more than a few minutes at most after milking. Mr. Mickle says that one common mistake made by dairymen is the mixing of the night milk and the morning milk, placing the latter in the same containers with the former, before the morning milk has been cooled. This, he says, has a tendency to influence the development of the bacteria in the entire quantity.

## On the Editor's Desk.

Lippincott's farm manuals are pretty well known as well printed, thorough and authoritative books on various subjects. The latest is "Injurious Insects and Useful Birds," and is by Professor F. L. Washburn of the University of Minnesota. It is a book for the gardener, orchardist, nurseryman and farmer. It is very elaborate, covering almost every phase of the subject with great thoroughness. Pests are becoming more and more a matter of concern to the man who grows food, for the losses annually in the United States alone from insects are estimated in millions of dollars. The codling moth is said to cost us $12,000,000 every year. Preventive methods are of great value, therefore, and Professor Washburn's book is a readable and practical one. The price is given as $2 net. It is issued by the J. B. Lippincott company of Philadelphia.
